

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

P R E F A C E .

No recent period of time has witnessed events of so much importance to mankind generally as those which occurred in Europe during the year 1870, of which this volume of the *ANNUAL CYCLOPÆDIA* treats. The overwhelming march of the combined German forces into the heart of France, and the rapid capture of her fortified cities and surrender of her vast armies, thereby casting her down from her preëminent position, to the feet of the conqueror; the occupation of Rome by the Italian Government, and the overthrow of the temporal sovereignty of the Pope, by which liberalism and authority have been brought to a final issue before the world, are some of the chief events. The great public questions of Europe, such as the Baltic and the Eastern, the relations of the various nationalities, such as those of race, population, military strength, financial ability, or national resources, and the new forms which public interests have begun to assume on that Continent, are herein stated and explained more fully and completely than is to be found elsewhere in any single volume.

Nor were the affairs of the United States of less interest or importance than in previous years. The census of 1870, completed during the year, for the States, counties, and principal cities of the Union, shows the rapid growth and spread of the population, and is herein contained. The new departure of the Federal Government under its National aspect has made rapid advances. All the States were restored to the Union, under constitutions approved by Congress, and the conduct of their affairs transferred to civil officers elected by the citizens. The ballot has been cast at all elections by every citizen, without distinction of race, color, or previous condition, who was exempt from the restraints imposed upon those active in the late hostilities. The progress of all the States, and especially the Southern, under the joint rule of the white and the colored man, as a citizen, a legislator, and a judicial officer, the struggles of factions, the local disturbances of citizens, with the rapid improvement of the people in general, socially and financially, are herein presented, and also the measures adopted by Congress under the altered condition of affairs,

the debates on the same, the numerous aspects of the incidental questions raised and discussed, with the final action of that body.

The details of the internal affairs of the United States comprise the finances of the Federal Government; its receipts and expenditures; the sources whence those receipts are obtained, and the principles upon which are based the mode and degree of taxation; the management of the public debt, and the steps taken to reduce it, or to diminish its burden; the modifications of the currency, its fluctuations; the changes in the system of taxation, with its effects upon the industrial interests and prosperity of the people; the banking system, with its expansions and contractions; the products of agriculture, and the extension of internal trade and commerce; the proceedings of the Southern States to improve and establish their social and financial affairs; the various political conventions of the year; the results of elections; the acts of State Legislatures; the rapid improvement of educational and charitable institutions under the care of the State governments; the rapid extension of the facilities for transportation, especially railroads; the resources and population of the several States, and all those facts which determine their rapid progress.

The Diplomatic Correspondence of the Federal Government, derived from the most authentic sources, is very fully presented in these pages, and the existing relations with all foreign nations clearly shown.

The progress of Mechanical Industry, although indicated by works less extensive and important than in the previous year, has been no less marked and useful.

The advance in the various branches of Astronomical, Chemical, and other sciences, with new and valuable applications to various purposes, is extensively described.

Geographical Discoveries have been actively pushed forward, in various quarters of the globe, with interesting results.

The record of Literature and Literary Progress is as interesting as during any previous year. The title of each of the more important works of various classes has been stated, with some remarks on the nature of its contents.

The history of the religious denominations of the country, with the results of their conventions, their branches, membership, views on public affairs, and progress of opinions, and numbers, are here given from official sources. The proceedings of the Œcumenical Council at Rome are fully narrated, and all the decrees adopted previous to its suspension, inserted.

The memory of deceased persons of note, in every department of society, is briefly noticed.

All important documents, messages, orders, treaties, and letters from official persons, have been inserted entire.

An Index, at the end of this volume, contains a list of all the subjects treated in the volumes of the ANNUAL CYCLOPEDIA, with a statement of the volume and page where each may be found.

THE
ANNUAL CYCLOPÆDIA.

A

AFRICA. The year 1870 has been one of remarkable quiet, which forms a striking contrast to the excitement produced in 1869 by the opening of the canal of Suez, and the difficulty between the Khedive of Egypt and the Sultan, and in 1868 and 1867 by the Anglo-Abyssinian War. The relations between *Egypt* and Turkey remained undisturbed, and even the serious complication which, in November, arose between Russia and Turkey, did not elicit from the Khedive of Egypt any intimation of a new movement in behalf of the independence of Egypt. The Suez Canal increased the commerce of Egypt, but failed altogether to fulfil the expectations of the shareholders.

Abyssinia relapsed into entire obscurity, neither its relations to foreign countries nor its internal condition attracting the least attention. Only occasional reports from Christian missionaries or travelling naturalists succeeded from time to time in keeping alive a religious or scientific interest in a country which a few years ago seemed on the point of being drawn into more intimate connections with the civilized world.

One of the most notable facts in the history of Africa during the past year is the rapid progress of Christianity in *Madagascar*. The collapse of paganism, as far as political power and influence are concerned, is complete, and the Christianization of the whole people only a question of time. The spread of popular education encourages the hope that, among the native states, Madagascar will soon occupy a front rank in point of civilization.

On the western coast of Africa, the Afro-American republic of *Liberia* continues to enjoy the blessings of peace, but its leading men appeal to the United States for further aid in the development of their country. During the summer months the President of the Republic himself made a visit to the United States.

One of the most important events for the

South of Africa was, the discovery of the diamond-fields on the banks of the Vaal River. Soon after their discovery, in May, 1870, the Transvaal Republic and the Orange Free States both claimed the territory as their own, and a war about its occupation and possession appeared inevitable. The diggers, then on the fields, remained neutral, however, and, as their number was daily increasing by new arrivals of well-armed men from all quarters, they soon became sufficiently strong to defy any attempt on the part of either of the above-mentioned governments to interfere with the pursuit of their labors. The diamond-fields may therefore be considered neutral territory. In the beginning, diamonds were found on the surface in goodly numbers and of various sizes. This, of course, did not last long, and the pickaxe and shovel were soon resorted to for regular digging. The yield of diamonds has, so far, been extremely liberal, and though some parties have been unfortunate, and returned from the diggings disappointed and in disgust, the majority of the diggers are doing well, while in some exceptional cases they have realized an independent fortune from the sale of their diamonds. In the commencement, during the months of June and July, there were about 500 white men at work on both banks of the Vaal River. The majority of the diggers were engaged on the northern bank, the southern bank being owned by the German missionary establishment at Pniel. The missionaries were unwilling to admit of any digging on their grounds, unless they could share in the proceeds of the labor to the extent of at least one-fourth. The feeling among the miners was, consequently, any thing but friendly toward the missionaries. During the quarter from June 1st to August 31st, considerably more than 1,000 diamonds were found, varying in value from 30 shillings to £1,000 sterling. Two steamers, which left Cape Town for

Europe during the latter part of August, took out diamonds valued at more than £10,000 sterling. The arrivals at the fields have continually increased ever since, the new-comers averaging about 1,000 per week. A regularly organized community of diggers has been formed at a short distance from the mission station at Pniel. A set of regulations has been drawn up, and is enforced by a vigilance committee elected by the white community located there. It is believed diamonds to the value of £500,000 sterling were found during September and October.* The diggers were all well-armed, and although some extensive Kaffre raids had been threatened, nothing of any serious consequence had transpired up to the latest dates.

Official papers, respecting the establishment of a responsible government for the *Cape Colony* and the withdrawal of troops from the colony, were issued in London on June 18th. Earl Granville, in reply to an address from the House of Assembly sent to him by Sir Philip Wodehouse, holds out no hope that the English Government will sanction any further delay in the removal of the troops beyond that already determined upon, and he earnestly hopes that the Cape Parliament will address itself seriously to the task of placing the finances on a proper footing, and making further provision for the defence of the colony.

Several attempts at insurrection were made in the *French possessions* in Algeria, as well as in the Senegal settlements; but all of them were quelled without difficulty.

The King of Combo entered a formal protest against the proposed transfer of the *Gambia* by England to the French, urging that the land does not belong to the English Government, but to himself, and that it was only rented to the English Government by his ancestors.

Simultaneous with this protest, numerous and earnest manifestations of the dislike of the English colonists to a transfer to the French reached the home Government, and a petition was sent to Lord Granville, embodying the views of the prominent settlers in the country. It appears that some fifty years ago the English Government commenced to send discharged soldiers from the West-India regiments to the Island of St. Mary, and to that part of the main-land known as British Combo. These people, living under English laws and protection, have brought up their families in feelings of loyalty to England and liking for her institutions. By their quiet habits and steady industry they have set an example to the surrounding natives, which has not been

lost on them; they have thus directly and indirectly contributed to the present prosperity of the settlement. They are unacquainted with French institutions, and would submit to almost any taxation in order to remain under the British flag.

The population of *Morocco* is variously estimated at from two and a half to five millions. According to the French consul in Mogador, M. A. Baumier, it is from four to five millions. M. Baumier is satisfied that the country is very thinly populated. During a six-days' journey on the main road connecting the principal seaport with the capital of the country, he did not meet over two hundred people. In *Algeria*, by an imperial decree of December 10, 1868, thirty-nine districts of the province of Constantine, which had been previously separated from the same and incorporated with the military district, were reunited with the province, increasing its area to 2,074 English square miles, with a population of 150,056, of which 55,056 were Europeans and 95,000 natives. The Catholic missionaries, in their "Annals of the Propagation of the Christian Faith," compute the population of *Tunis* at 15,558 Roman, and 800 Greek Catholics, 25 Protestants, 400,000 Jews, and 2,000,000 Mohammedans, making a total of 2,415,878. It is evident however, that the figures concerning the Jews and Mohammedans are vague estimates. Mr. Amos Perry, consul of the United States at Tunis until September, 1867, is of opinion that the population is not below 1,500,000 and not above 2,000,000. The population of *Egypt* proper was stated by the Sanitary Commission, on April 21, 1868, to be 4,976,280. The Year-Book of *Senegal* and its dependencies for 1869 states the population of the French possessions in Senegambia at 201,012, exclusive of 45,000 inhabitants in two provinces under French protection, and of the population of Bandon, Kamera and a part of Casamance, which, although not exactly under French rule, are governed by native chiefs selected by the French Government. The population of the Portuguese possessions, actually under Portuguese rule, is officially reported in 1870 at 8,500. The Journal of the Statistical Society of London (March, 1869) reports the population of *Natal* at 250,808, of whom 17,971 were whites, and 232,837 colored; the colored population comprised 6,298 Indian coolies. Since 1855 no census has been taken in the *Orange Free State*. The *Friend of the Free State and Bloemfontein Gazette* of August 14, 1868, estimates the white population at 37,000, of which 2,000 are British subjects, while the remainder consist of Boers, Germans, and Dutch.

According to the *Geographisches Jahrbuch* of Behm (vol. iii., Gotha, 1870), a standard work on geography and statistics, the population and area of the divisions and subdivisions of Africa* were in 1869 as follows:

* The indented names indicate subdivisions.

* Late advices from England and Holland, it is but just to state, throw considerable doubt on the genuineness of these diamonds. Some of the most eminent experts pronounce them quartz crystals, of remarkable perfection and beauty, but still only quartz. The fact probably is, that a few genuine diamonds have been found, though for the most part not of the first water, but that the greater part of the supposed gems were in reality only quartz crystals, which are often found in the vicinity of diamond deposits.

AGRICULTURE. As usual, we are unable to give any thing more than approximate estimates of the crops of 1870, in this volume, owing to the early date at which it is put to press. The estimates are, however, unusually full. We give first the returns of the crops in 1869 as obtained by the census of 1870, premising that most of them are yet only in round numbers, and hence only approximately accurate.

The year 1870 was, in general, one of fair though not excessive productiveness. The year was not a remarkably favorable one for *Wheat*, and the acreage was considerably less than that of the previous year. The quality is greatly superior to that of 1869. The entire crop is estimated at 216,000,000 bushels, a decrease of 48,000,000 bushels below that of 1869, but the quality is at least fifteen per cent. better.

Of *Indian Corn* the crop is the largest ever known, though the increase in the production of this grain is hardly keeping pace with the increase in the population. The yield of 1859, the year when agricultural products were in-

corporated in the census of 1860, was in round numbers 888,000,000 bushels. The increase in population in the ten years which followed was just about twenty per cent., and the crop of 1869 should have been 1,005,000,000 bushels. It was only 874,000,000, or but five per cent. increase. The crop of 1870 makes amends for this deficiency, being estimated at 1,100,000,000 bushels. Assuming, which is very near the truth, that the acreage of Indian corn was 39,000,000 acres against about 38,000,000 acres in 1869, the average yield would be about 28 bushels to the acre, against an average of 26.42 bushels in 1869.

The *Rye* crop was about 21,125,000 bushels, or about four per cent. below the crop of 1869. The quality was generally good. This grain is quite largely grown for pasturage in the Southern States.

Barley was also somewhat less in quantity than in 1869, the aggregate being about 27,600,000 bushels.

The *Buckwheat* crop was about 16,500,000 bushels, a slight falling off from the crop of 1869.

Oats were also a smaller crop than in 1869, the aggregate yield being estimated at about 275,000,000 bushels. The quality was better than the average.

Potatoes suffered to some extent from drought, and from the depredations of the Colorado potato-bug, "the ten-line spearman" as it is called. The product is believed to have been about 111,000,000 bushels—less by about one-fifth than that of 1869.

The *Sweet Potato*, on the contrary, was far more plentiful than usual in the States where it is grown. We have no means of estimating the aggregate crop, but it was very large.

The *Hay* crop was about fifteen per cent. below that of 1869, probably not exceeding 22,000,000 tons. The quality was excellent. The protracted dry weather of the early summer caused the reduction in quantity.

Flax and *Hemp* were produced in rather larger quantity than in 1869.

Fruit was generally much in excess of the previous year. *Grapes* were very abundant, and of excellent quality. Notwithstanding the great increase of wine production, the markets were for nearly two months glutted with the fruit. *Apples* were very plentiful in the Atlantic and some of the Mississippi Valley States, but deficient in quantity in the Northwest. *Pears* and *Plums* were more abundant than usual, especially on the Atlantic coast.

The *Tobacco* crop was materially above the average, and will probably aggregate not far from 310,000,000 pounds.

Sugar from the sugar-cane was a better crop than for several years past, the yield being above 120,000 hogsheads of 1,000 pounds each. The *Sorghum* sugar and syrup were produced in larger quantity than in previous years.

The *Cotton* crop is probably the largest since 1859. Careful estimates from full returns from all parts of the States in which it is cultivated, up to December 1, 1870, give an aggregate of 3,800,000 commercial bales, or 1,767,000,000 pounds, being eighty-two per cent. of the great crop of 1859. Of this amount probably not more than 30,000 bales were Sea Island or long-staple cotton.

The following table gives a detailed estimate of the number of acres in each of the cotton States devoted to that crop, the number of bales produced in each State (in round numbers), the percentage of increase over the crop of 1869, and the yield per acre:

STATES.	No. of Acres.	No. of Bales.	Product com. with 1869, p. ct.	Yield per acre
North Carolina...	451,714	170,000	118	175
South Carolina...	601,764	230,000	194	170
Georgia...	1,239,491	495,000	122	173
Florida...	140,909	50,000	126	165
Alabama...	1,487,273	510,000	112	165

Other States...	218,323	80,900	..	170

The market prices of farm produce differ of course very greatly at different points in our widely-extended country, and it has seemed to us that a record of the prices which were current in December, 1870, and January, 1871, of the principal articles of the products of our farms in New York, Chicago, Cincinnati, St. Louis, New Orleans, and San Francisco, would not only be interesting but instructive and profitable to our readers. They are compiled very carefully (see tables on pages 6 and 7), and as near the first of each of these months as practicable, from the prices-current of the respective cities.

It has been often urged that the "Plains," as the region extending from the eastern slope of the Rocky Mountains to the central portions of Kansas, Nebraska, the Indian Territory, and Northern Texas, is now designated (the old name—the Great American Desert—having been proved a misnomer), could never become an agricultural region from its constant liability to drought, and the supposed impossibility of obtaining, without excessive cost, the means of irrigating it. But in the spring of 1870 a colony was planted at Greeley, Colorado, in the very heart of these "Plains," and very little difficulty and but moderate expense were found necessary to establish a permanent system of irrigation, under the influence of which the soil has given evidence of almost miraculous fertility. There are very few portions of this wide, arid tract, a region large enough to cut up into a dozen large States, where irrigation is not possible, and at moderate cost. But recent experiments seem to indicate that the irrigation can be dispensed with. Mr. R. S. Elliott, of the Kansas Pacific Railway, during the year 1870, made several experiments, which were attended with triumphant success, in the cultivation of the unirrigated plains at Wilson, 236 miles west of the State line of Missouri, and 1,586 feet above the level of the sea; at Ellis, 302 miles west of the State line, and 2,019 feet above the sea-level; and at Pond Creek, 422 miles west of the State line, and 3,175 feet above the sea. The last-named point is on the extreme western border of Kansas, near the 102° of west longitude, four degrees west of the limit of arable effort without irrigation, heretofore assigned by eminent meteorologists. At these points were sown wheat, rye, barley, timothy, lucern, alsike, clover, sanfoin, vetches, etc., and the seeds and nuts of the burr-oak, pecan, chestnut, peach, and ailantus. All vegetated promptly, and grew rapidly and successfully.

Relative to tree-growth on the plains, Mr. Elliott lays down these propositions: 1. Forests can be established in all parts of the plains, even without artificial irrigation. 2. Much deeper ploughing will be required than for winter grains or forage plants. 3. The most rapid growers are the beech-trees for first planting. 4. Planting seed is better than transplanting young trees.

ALABAMA. This State seems to make good progress toward regaining and surpassing that degree of material prosperity which she enjoyed before the devastations occasioned by the late civil war. An indication of this improvement may be seen in the fact that the operations of that class of her citizens engaged in commerce appear to rest on a more solid foundation, and possess greater stability, than in preceding years. The annual report on the number and extent of the commercial failures for 1869, in Alabama, gave 16, with liabilities amounting in the aggregate to \$101,000; whereas, in 1868, they had been 83, with liabilities amounting to \$594,000.

Among the cotton-growing States, Alabama stands foremost, her soil being eminently well adapted to the cultivation of that plant. Besides, she possesses other natural resources in exceeding great variety and abundance. With a view to render these available, and make all branches of industry flourish within her limits, she invites immigration from the other States and Europe, and causes the advantages of settling upon her soil to be known abroad.

The State is about to enlarge her territory by the annexation of "West Florida." Under this name is meant "that portion of Florida lying west of the Chattahoochee and Appalachian Rivers, and west of a line running due north from the mouth of the Appalachian, bending west, so as to pass between the islands of St. George and St. Vincent." This portion is composed at present of eight counties in the State of Florida, named Calhoun, Escambia, Franklin, Holmes, Jackson, Santa Rosa, Walton, and Washington. Commissioners appointed for the purpose by the two States met and agreed upon the section of territory to be ceded, as well as its price, and the other terms of the purchase, to take effect upon their agreement being duly sanctioned by their respective States. The Legislature of Florida approved and confirmed the agreement soon after it had been entered into, a joint resolution for that purpose having been adopted by both Houses, and the act approved by the Governor on January 27, 1869. In the following June Governor Reed issued also a proclamation ordering an election to be held in each of the above-mentioned counties, that their respective citizens might express their sentiments in regard to the contemplated annexation, by voting "for" or "against" it. The election took place, and a large majority of the votes cast was for annexation. A letter dated December 1, 1869, from Pensacola, Florida, says: "We have voted nearly two to one in favor of the annexation of West Florida to Alabama, and hope for its speedy consummation." At the last session of the Legislature of Alabama a bill "to provide for the annexation of West Florida" was introduced in the Senate. By a message dated January 19, 1870, Governor Smith informed that body of the fact that "at the election previously

held in West Florida, on the question of annexation, the vote had been favorable to the annexation." This message was referred to a joint committee of the two Houses; but the principal matter itself was not finally determined upon at the last session. In the Senate, on February 21, 1870, a joint resolution was adopted, to the effect that, as the Legislature of Florida had adjourned, the bill before the Senate to provide for the annexation of West Florida to this State be postponed till the second Tuesday of the next General Assembly of this State."

Numerous lines of railway, intersecting the country in all directions, are in operation already, and many others are in course of construction.

By an act of 1867, State aid, in the shape of endorsed bonds at the rate of \$12,000 per mile, was granted to railroads built within the limits of Alabama generally, provided the first seventy miles were completed within three years, or by November 1, 1870. The amount of bonds per mile has now been increased to \$16,000, and in some of the roads to a larger sum, for exceptional reasons.

In connection with this act, a bill, commonly styled "The General Railroad Bill," was introduced in the Senate at the session of 1870, purporting "to furnish the aid and credit of the State of Alabama for the purpose of expediting the construction of railroads within the State." The bill, after long discussion, passed the Senate on February 11th by a vote of 29 to 1; and on the 19th of that month the Lower House also passed it with some amendments, which the Senate concurred in on the same day. The main provisions of this act are the following: "It extends the time, in which the endorsement of the State may be obtained to railroad bonds, to November, 1871. The endorsement is at the rate of \$16,000 per mile. The road applying for credit must be not less than thirty-five miles in length. Twenty miles of the road must be completed and equipped out of the fund of the company, not raised in anticipation of the endorsement. The road must be first class—proven so upon inspection by a committee, comprising at least one civil engineer not connected with the road." This matter was subsequently taken into further consideration by the House on February 28d. The special committee submitted a report and bill to explain and define the meaning and intent of the act to aid in the construction of railroads. (Endorses no bonds for roads less than thirty miles in length.) This House bill also passed the Senate on the 25th.

A special bill, to issue \$3,000,000 of State bonds to aid in the construction of the Alabama and Chattanooga Railroad, was introduced in the Senate early in the session, which aroused great excitement within the legislative halls as well as in a large portion of the press and people outside. Among other grounds, the opposition rested on the fact that this

road, though it traverses the State of Alabama and assumes her name, is not an Alabama enterprise, nor intended for her benefit, but is "a Tennessee, Georgia, and Mississippi road, for the benefit of Chattanooga and New Orleans. The road begins at Chattanooga, passes through Alabama, and proposes to terminate at Meridian; but the object is to swell the commerce of New Orleans at the expense of the commercial marts of Alabama, particularly Mobile, which is outflanked by this arrangement." Besides, the amount of aid to be given was computed to exceed the cost of the road within the State by \$1,151,920. The Senate passed the bill as proposed by an almost unanimous vote. In the Lower House it met with strenuous opposition, chiefly on the above-mentioned grounds; and on February 4th was defeated, having failed to obtain the required two-thirds of the vote. A motion "to reconsider" having prevailed, the bill was discussed anew on February 7th, variously amended during the debate, and then referred again to the committee, with instructions to report within fifteen minutes. At the appointed time it was favorably reported, with the amendment "to strike out \$3,000,000 and insert \$2,000,000." All of these amendments were adopted. The previous question on the passage of the bill as amended was then put, and the bill passed by a vote of yeas 62, nays 27.

The passage of this bill coming so close after its defeat gave occasion to a renewal of rumors and even specific charges of bribery, chiefly against those representatives who had always opposed the measure, and voted it down three days before. Long after the passage of the bill these charges were openly repeated against the Republican party during the campaign for the election in November, 1870.

Other bills, granting special aid to particular railroads, passed both Houses of the Legislature during the session of 1870—among these, the bill authorizing the Governor to endorse, on the part of the State, the first-mortgage bonds of the Montgomery and Mobile Railroad, to the amount of \$2,500,000.

By the end of September, 1870, several railroads in Alabama had been partly worked, which, under the operation of the general State aid act, would entitle them to have their bonds endorsed at the rate of \$16,000 per mile. Their names and estimated lengths are as follows:

	Miles.
Alabama and Chattanooga Railroad.....	800
Cincinnati and East Alabama ".....	150
Memphis and Savannah ".....	250
Memphis and Selma ".....	120
Montgomery and Euphonia ".....	90
North and South Alabama ".....	200
Selma and Gulf ".....	90
Vicksburg and Brunswick ".....	250
Total.....	1,400

The bonds to be endorsed for these roads amount in the aggregate to \$22,400,000, which, together with the six millions of special aid granted to three of them and the Montgomery

and Mobile road, make in all \$28,400,000. Besides the above-named, there are many other projected roads, of which those most likely to get State aid, on compliance with the provisions of the said law, are the following:

	Miles.
Decatur and Aberdeen Railroad.....	120
Elyton and Aberdeen ".....	150
Grand Trunk ".....	250
Selma and New Orleans ".....	100
Tennessee & Marion Rivers ".....	150

Their aggregate length of 740 miles is anticipated to be further extended by some other roads to 1,000 miles. The State aid on these would then be \$16,000,000 more, and the whole amount of her liabilities, on account of railroads, \$44,400,000. In this, however, it is thought she runs no risk, as competent judges affirm that "there is not one of the projected roads which, when completed, will not be worth more than \$16,000 per mile." On the contrary, it is confidently predicted that the roads in Alabama will add immensely to the wealth of the State, and be highly remunerative in time to their stockholders, as they are reckoned among the most important roads in America. "The shortest line between New York and New Orleans, between the cities of Cincinnati, Louisville, Nashville, and the Gulf at New Orleans, Mobile, and Pensacola, between Kansas City and Brunswick and Savannah, Georgia, between St. Louis and Savannah, Georgia, between Atlanta, Georgia, and Camden, Arkansas, between the Atlantic and the Pacific, is through Alabama, and over her various railroads."

One of the most important works of internal improvement, for which the Legislature was called upon to provide during the session of 1870, is the removal of certain obstructions in the Coosa River. The Coosa is formed by the Oostenaula in Georgia and the Etowah, and passes through "the most interesting, fertile, and productive regions of the interior South—abounding in coal, iron, marble, limestone, slate, and water-power of the first order, stone and lumber unsurpassed, with climate and soil adapted to the culture of grain, cotton, grass, fruits, and almost every plant in the vegetable kingdom." Its navigation, however, is impeded to a great extent by obstructions lying between Greensport and Wetumpka. The removal of these obstacles, and the consequent opening of a free passage to vessels on that river, are expected to confer inestimable benefits on Montgomery, Selma, and Mobile, particularly the last-named city, as the circumstance of cheap transportation by water would secure to her "some six hundred miles of interior trade, which now finds an outlet to other markets by more expensive haulage." A corporation styled "The Coosa River Slack-water Navigation Company" was formed under the provisions of an act "to amend the corporation laws of Alabama," approved on August 18, 1868, which required of them to file a declaration concerning the work to be

done, and the time of doing it. At the last session of the Legislature a bill was introduced in the Senate "to further the improvement of the navigation of the Coosa River," granting that company several privileges, the most noticeable of which is that they "shall be so far exempted from the operation of said act 'to amend the corporation laws of Alabama,' that four years shall be allowed them from the time of filing their declaration, in accordance with the provisions of said act, in which to commence work on said river, and actually in good faith to have expended thereon as much as ten per cent. of the capital stock asked for in the application aforesaid." Those who wished to see this work executed as soon as practicable censured the allowance of such a delay, regarding four years to be a long enough time to complete the intended work altogether. They suggested to shorten that period to one year, at the farthest, or the enactment of a law empowering the Governor "to contract with any company which comes forward with available means, and with a fair percentage of stock paid up, and which will commence work within a reasonable time—six or twelve months." The committee reported the bill to the Senate with some amendments on January 12th, when a debate ensued, and the bill passed. On the same day the Governor sent to that body a message, with the report of the commissioner to survey the Coosa River. In the Lower House, also, the bill was favorably reported by its committee on March 3, 1870, when the report was adopted, and the bill passed.

In this connection it may be noted that, in the judgment of practical men who have paid careful attention to the subject for many years, the advantages accruing to Mobile from the unobstructed navigation of the Coosa River would be increased a hundred-fold by the opening a canal sufficient to pass light-draught boats across a piece of land intervening between the Connasauga, a tributary of the Oostanaula, in Georgia, and the Hiawassee, a tributary of the Tennessee. The said piece of land at the points referred to is eighteen miles broad, and the place so well adapted to the carrying of trade and hauling goods from one of the regions into the other, that thirty-five years ago it was not unfrequently used for that purpose, notwithstanding the expense and loss of time incurred in unloading the boats employed in that trade on one side of the isthmus, transporting both the boats and their freight on wheels across the land, and then reloading on the other side, to pursue their course to their destination. By opening this short canal, the water connection of Mobile would be "extended to the head-waters of the Tennessee River, near Bristol, on the Tennessee and Virginia road, connecting the Gulf, by water communication, with 1,000 miles of interior, by a route 300 miles shorter than by the Tennessee, Ohio, and Mississippi Rivers route."

Of still greater importance to Mobile and

the whole State, is the improvement of the bay and harbor of that city. The improvement consists in clearing away the obstructions which exist between the bay and the town, and which are of such a character that large ships cannot come up to the wharves, but must remain at anchor some twenty-three miles off in the open sea.

That city is the commercial emporium of Alabama—the natural outlet of her produce—and having transactions, not merely with Europe, but with the West-India Islands. In the business season of the year, one sees—or could have seen before the war—seventy or eighty ships, giving employment to hundreds of baymen and seamen. Twenty or thirty small boats are plying between the ships and steamers, and speeding from ship to ship. Some of these ships are taking in cotton from the steamers, others are discharging their cargoes from Liverpool, London, Havre, New York, Boston, Stockholm, or Bristol. Mobile, owing to the superior depth of water in her bay, has always been the port for heavy cargoes of cotton; and of these the most valuable since the year of fabulous prices, in 1865, was cleared recently for Liverpool on board the American ship John Brice, of 1,968 tons. The cargo consisted of 9,908 bales, weighing 2,749,009 pounds, and valued at \$696,409.20, in currency, gold being then at 122.

At the session of 1859-'60 the Legislature of Alabama passed "an act for the improvement of the bay and harbor of Mobile," which was approved on February 21, 1860. The third section of that act defines the work intended, as follows: "Sec. 3. Be it further enacted, That said Board of Harbor Commissioners shall have, and are hereby given, power and authority to cause a channel, at least three hundred feet wide, to be opened and kept open from the place of anchorage in the bay of Mobile, known as the 'Lower Anchorage,' to the city of Mobile, of such depth, not less than fifteen feet at low water, as said Board shall deem feasible and desirable for promoting the commerce of the city of Mobile." In order to proceed with greater safety, the matter was referred for examination and judgment to the advisory council, consisting of General Totten, of the U. S. Engineer Corps; Professor Bache, Superintendent of the U. S. Coast Survey; and Commander Davis, of the U. S. Navy. They gave their report in the same year, 1860, saying: "The improvement of the bay and harbor of Mobile, contemplated by the act above-mentioned, is the excavation and maintenance of a channel, at least three hundred feet wide, and not less than fifteen feet deep at low water, in length about twenty-three miles, and extending from a little above Choctaw Point to the anchorage of the lower fleet. Our conclusion is, that the proposed plan of dredging the river and bay of Mobile is a feasible one; having arrived at the conclusion that the improvement of the bay and harbor

of Mobile, in the manner described in the act of February 21, 1860, is an undertaking fully authorized by observation and study, and may be entered upon with fair prospect of success." The probable cost of the work they estimated not to exceed half a million dollars. The civil war, which broke out almost immediately after these preliminary steps had been made, stopped all further proceedings, which have now been resumed. The Alabama representative from the Mobile district, at Washington, introduced a bill into Congress last year, asking "an appropriation of \$300,000 for the improvement of the bay and harbor of Mobile." The State Legislature also took the matter in hand during the session of 1870. On February 2d, a member of the Lower House introduced "a substitute for the bill for the improvement of the bay and harbor of Mobile." It provided "that the Governor may issue State bonds to the amount of \$500,000 in aid of that work." The matter was not finally settled at the last session.

Concerning the city of Mobile, a remarkable bill was introduced into the Senate early in the session, declaring all her offices vacant, and depriving her citizens of the right to hold an election for the purpose of choosing their municipal officers, until the city had been reorganized in accordance with the prescriptions of the bill. The advocates of the measure justified it as necessary on account of disturbances said to have taken place in Mobile at a previous election, negroes having been frightened from the polls by open, organized force. It was loudly condemned by many among the Republicans themselves, and more by the Democrats, who denied the charge and termed the bill "an insult to the Governor, an outrage to the people of Mobile, and a violation of the fundamental principles of self-government," a measure prompted only by partisan spirit to realize partisan ends. They said the Mayor of Mobile was a Republican, but had become obnoxious to some members of the Legislature, and must be removed; besides, the city of Mobile, having a large majority of white voters and being looked upon as Democratic, must be turned Republican; all which could not be effected except by declaring, as the bill declares, all the municipal offices vacant at once, and placing every part of the city government in the hands of persons most devoted to the Republican party, who, by redistricting the city (which is a distinct provision of the bill), and by other means, might succeed in moulding her so as to become Republican. The bill passed both the Senate and the Lower House, the latter having made some amendments which were concurred in by the former on February 2d. The Governor signed and returned the bill on the 8th, yet declaring in his message: "My mind is not entirely free from doubt as to the constitutionality of the bill. But, as this doubt does not amount to a positive conviction, I consider it right that the benefit of it

should be given to the General Assembly." A motion to print one thousand copies of this message was carried, though several Senators strongly opposed it as bringing the Senate into discredit. A resolution offered by another Senator, "That the thanks of the Senate are tendered to the Governor of Alabama for the terms in which his message is couched touching his approval of the 'act to reorganize the municipal government of the city of Mobile, and to provide for the election of the officers thereof,'" was also adopted.

Soon after this bill had passed the Lower House, and before it went to the Governor for his approval, it was fraudulently taken hold of by strange hands, and altered in two places. At the end of section 1, which declares all of the offices in the city vacant, an addition was made in the following words: "Provided this shall not apply to the city tax assessor and city engineer," and, in the body of section 11, the words "tax assessor" were erased. The discovery of the frauds created intense excitement, and each of the two Houses separately appointed a special committee to investigate the matter. Many witnesses were then examined, and facts brought to light which might spread suspicion on other acts of the Legislature of Alabama, besides the subject of that inquiry. The guilty parties, however, were not found out. The Clerk of the House testified that, the bill having passed on February 1st, he left it in his drawer, locked, and found it next morning lying on his desk, when he discovered the alterations; that he immediately showed them to a member of the House, and to the Speaker, who directed him to write a message and send the bill to the Senate as soon as the House was called to order. He testified further that this bill had disappeared from his desk, and been stolen out of his locked drawer, several times before the present occurrence, of which he had given notice to the Secretary of State, cautioning him to be on his guard and watch that bill. He made also the following statement: "I have frequently found my drawer unlocked, although I am satisfied of its having been locked by me. Frequent applications on my part, to the Speaker and Sergeant-at-arms, to have the locks changed, resulted in a change of locks at two different times. The lock has not been changed since the recess." The Sergeant-at-arms testified: "On the next morning I was requested by J. W. Squires to procure the bill for him for examination. I received the same, at my request, from the Assistant Clerk of the house, and handed the bill to Squires, and directed him to an unoccupied seat within the House, where he looked over the same. I was not with him during the time that he examined the bill. This was about half an hour before the House met. Squires returned the bill to me about the time that the House was called to order, or a little before, and I returned the same, without further examination on my part, to the As-

sistant Clerk." Suspicions arose against Mr. Squires, as he was the city engineer of Mobile, one of the two officers in whose interest the addition to the first section of the bill would have been made. He testified under oath that he had the bill in his hands and examined it for a few minutes, but knew nothing of the interpolations in it. Further inquiries were subsequently made by special committees of the two Houses, but with the same uncertain result concerning the author of the frauds. In the Lower House this second report, charging Mr. Squires with interpolating the bill, or being "cognizant of such interpolations," was submitted on February 23d, when a motion "to lay it on the table" was carried; and a resolution "forbidding its publication" adopted. In the Senate it was submitted on the 24th, "giving no opinion as to who are the guilty parties in making the interpolations in the Mobile municipal bill." A senator moved "that the first and second reports be printed, together with all the evidence," which motion was carried.

Concerning the validity of the bill after it had been fraudulently altered, a warm contention took place among the members of the Legislature, some saying the bill was now a dead thing, not to be resurrected; others affirming its force to remain unimpaired, as the fraudulent action of any person or party would not annul the intentions and acts of the legislative body. A supplemental bill "to define the meaning of the bill to reorganize the city government of Mobile" was introduced in the House on February 16th, providing "that the interlining and erasures in the original bill after its passage be declared null and void, and that the original bill be declared in full force and effect." On the 18th the bill was discussed, and after some opposition passed by a vote of yeas 44, nays 30. It was taken up and hotly debated in the Senate on the 19th. Notwithstanding several motions to stop its course, it went over to a third reading. This took place on February 22d, when the matter was discussed as *ad initio* during the whole day, and resumed at the night session, at which a motion "to indefinitely postpone prevailed by a vote of 13 to 12." One of the senators changed his nay to yea, for the purpose of moving a reconsideration of the vote on the next day, but the subject seems not to have been resumed up to the final adjournment on March 3d.

Many facts relating to the legislative body of Alabama at the session of 1870 were publicly announced which were unfavorable to its ability. Several dozens of engrossed bills were returned by the Senate to the Lower House, and others returned by the House to the Senate, for the purpose of having their gross errors in the spelling corrected. In some of them the word expressing the object of the bill was changed into another by mistake. Both Houses appointed committees to inquire into this matter.

The Lower House expelled one, and did all but expel another of its clerks on that account. A member of its committee declared, however, that the fault was not in the clerks, but in the members of the House, who could not spell correctly. Hence the appointment of a special clerk was proposed, whose duty it should be to revise the spelling of the bills, and attend to their correctness. In the Senate the committee reported that they could not find who the incompetent clerk was; and one of its members publicly averred that there were senators who could not write three lines correctly. During the session it was insinuated in the public papers that members of the Legislature could not write their names. The Democratic and Conservative State Committee averred the same, and other facts, in an address to the people of Alabama, saying: "You would find members of the General Assembly unable to read or write—incapable of understanding the meaning of a law after being enacted by their votes; and unable, perhaps, to explain what measures they had voted for or against."

A more serious charge was laid particularly against the Senate, as a body; Republicans joined the Democrats in making the charge. The Senate consists of thirty-three members, of whom thirty-two are Republicans, and one is a Democrat. The new organic law enjoined the Senators first installed in office to divide their number, as nearly equally as possible, into two parts or classes of four and two years' terms, respectively, and to draw lots among themselves to determine who should serve the long and who the short term. Those of the short term should vacate their seats at the end of the session of 1870, and their successors be chosen by the people, at the general election of November in the same year. The class of the long term should continue to occupy their seats for two years longer, which should be filled by the vote of the people at the expiration of that period. During the last session one of the Republican Senators urged his colleagues to comply with this constitutional provision, and, on February 16th, he offered a resolution "that it is the duty of the Senate to classify the term of office for Senators, as required by the constitution." This matter was made the special order for February 21st, when the resolution was debated and put to vote, and rejected; the nays having been 16, the yeas 10.

The Republican has been the dominant party in Alabama for several years. The Democratic party is more numerous, almost all the white people in the State belonging to it; but a large portion of them are still laboring under political disabilities, while many of both classes have voluntarily abstained from taking any part in political movements, even from voting. "A memorial and joint resolution to Congress, for the removal of the political disabilities imposed by the fourteenth amendment to the Constitution of the United States," were intro-

duced into the Senate shortly after the opening of the session last year. The debates upon this subject were frequent, long, and animated. Many among the Senators favored the measure as just and expedient. One of them averred that in a certain county of the State, not a few local offices could not be filled with competent incumbents, on account of the fourteenth amendment. On February 2, 1870, the matter was discussed again at the day and night sessions. A vote being finally taken, the memorial and resolutions were adopted—yeas 12, nays 9. The final action of the Lower House on this subject appears from the report of its sitting on February 18th, as follows: "Joint resolution to Congress for removal of disabilities, a motion to indefinitely postpone was defeated—yeas 57, nays 10. A substitute to remove disabilities from loyal citizens was offered, but not acted on."

On reports of outrages perpetrated on loyal citizens, especially negroes (which reports in some cases were ascertained to be false, and in other cases the charges were reversed), the Governor was urged by certain parties to call out the militia, and he issued a proclamation, threatening to do so; but he went no further. In the Senate also, the reports of outrages were made the basis of a resolution calling on the Governor for information in writing upon the subject; when he answered by a message dated January 27, 1870, which begins as follows: "I have received and duly considered your resolution requesting information as to what steps, if any, have been taken to organize the militia under the existing laws of the State. For the reasons set forth in my last annual message, I have not deemed it necessary, nor proper, to organize any portion of the State militia."

For the education of youth, there are in Alabama several male and female colleges, academies, and institutes, single or combined, in which various branches of instruction are taught. The East Alabama Female College, at Auburn, last year had 183 students registered on its rolls.

The public-school system, properly so called, rests on the basis of free tuition, and is carried out under the direction of a Board of Education, of which, the State Superintendent of Public Instruction is *ex officio* president, and which is composed of twelve members—two from each congressional district. This board is organized after the manner of a legislative body. It is, in fact, a small branch of the State Legislature, having the regulation of all matters concerning the public schools as its peculiar province; whereupon it holds regular sessions to deliberate and make enactments. The new organic law of the State declares the purpose and powers of this board, as follows: "The Board of Education shall exercise full legislative powers in reference to the public educational institutions of the State, and its acts, when approved by the Governor, or when

re-enacted by two-thirds of the board, in case of his disapproval, shall have the force and effect of law, unless repealed by the General Assembly." The members of this board sit also as Regents of the University of Alabama. For the immediate surveillance and management of the schools throughout the State, each county has a school superintendent appointed by the Superintendent of Public Instruction, with the consent of the Board of Education, and each township, three school trustees with a clerk, all appointed by the school superintendent of the respective county. There are in Alabama sixty-four counties, with 1,485 townships. This system is about the same as the previous one, the main difference being, that the old system had no board, vested with legislative powers, at its head, and the county school superintendents were chosen by the people at county elections; besides, that their salaries were beyond comparison smaller than at present, and the disposition of the county share in the school fund was not left to their discretion.

For carrying out her school system the State applies "the interest upon the sale of school and swamp-lands, escheated estates, militia fines, and special taxes upon railroad, navigation, banking, and insurance companies: "

For the same purpose she appropriates, besides, an annual sum of about \$700,000, derived mainly from the following sources, which during the last year yielded respectively as follows:

Amount of interest on sixteenth-section fund.	\$126,612 59
Interest on valueless sixteenth-section fund.	7,767 30
One fifth of annual revenue (as appropriated December 16, 1869).	187,290 30
Taxes on polls (at least 100,000, at \$1.00 each).	270,000 00
Amount appropriated by section 967, revised code.	100,000 00
Retail license, as per last report of Auditor.	26,514 25
From the Tascaloosa Aid and Alabama Mutual Aid Lotteries.	12,960 05

Total..... \$669,885 99

This school system, or rather the manner of its management, as conducted in these last years, was loudly complained of and denounced. Its officers were charged with wantonly wasting and misappropriating the public money destined for school purposes; above all, with doing gross injustice to the white children by depriving them of one-half of the educational means designed for their benefit, and closing one-half of the schools altogether.

At the session of 1870 "a resolution of inquiry into the unlawful application of the public money of any part of the school fund of Mobile County, or other public fund," was introduced into the Senate and referred to the Judiciary Committee, with power to send for persons and papers. For about two weeks the committee examined witnesses, inspected official books of account, and heard counsel who appeared before them in behalf of the State Superintendent of Public Instruction, and the School Superintendent for Mobile County on one side, and the School Board of Commissioners on the other. In March 3, 1870, they submitted the result of their investigation in

a rather lengthy report; from which it appears that considerable amounts of money, belonging to the school fund of Mobile County, had been illegally drawn and applied.

They concluded with recommending and suggesting some change in the system and order of officials.

This report was received, and five thousand copies of it were ordered to be printed; but no legislative action was taken.

Preparatory to the contest for the general election of November 8, 1870, the Republicans met in State Convention, where they renominated State officers, as follows: William H. Smith for Governor; Pierce Burton for Lieutenant-Governor; James T. Rapier for Secretary of State; Arthur Bingham for Treasurer. Their platform, accepted at the same meeting, was as follows:

Resolved, That President Grant has proved himself a pure patriot and a wise statesman; and that we pledge to his Administration our hearty support, recognizing in its ability, honesty, economy, and liberality, the guarantee of national peace and prosperity.

Resolved, That we congratulate the country on the reduction of the national debt by an honest collection of the revenue, and by large reductions in the expenditures of the Government, thereby relieving the people of the burden of taxation to a large extent, without impairing the national faith or honor.

Resolved, That we cordially endorse the administration of Governor William H. Smith, whose conduct of State affairs, under the unprecedented difficulties and troubles arising from the new condition of freedom and from reconstruction, plainly illustrates the benign effects of a just application of Republican principles.

Resolved, That we point with pride to the complete system of internal improvement established in Alabama by Republican legislation, which, wisely limited by existing laws, will afford the amplest means of development to all sections of the State without impairing her credit.

Resolved, That a tariff of revenue is indispensable, and should be so adjusted as not to become prejudicial to the industrial interest of any class or section of the country, while securing to our own home producers and laborers fair competition with foreign capital and labor.

Resolved, That, as the party of peace and of equal rights for all men, we favor universal amnesty and the removal of all political disabilities, and, while yielding obedience to law and order ourselves, we demand from our opponents submission to law and the cessation of all intolerance, violence, and outrage.

Resolved, That we favor a liberal and efficient system of public schools, extending the opportunity for education to the whole people.

Resolved, That we favor the elevation of labor, the stimulating of all the industrial interests of the State, the oblivion of past strife, the union of all in the great and good work of repairing, rebuilding, and rehabilitating our State in her new condition, and pressing Alabama onward and upward to the exalted condition of wealth and power for which God and Nature designed her.

The "Democratic and Conservative party of Alabama," in pursuance of a call addressed to the people by its Central Executive Committee, assembled in State Convention at Montgomery on September 1st. The following were the nominations made in this convention: For Governor, R. B. Lindsay; for Lieutenant-

Governor, E. H. Moren; for Secretary of State, J. J. Parker; for Treasurer, L. F. McCoy. They also adopted and declared as their platform:

1. That we stand ready to obey the Constitution of the United States and the laws passed in pursuance thereof, and the constitution and laws of the State of Alabama, so long as they remain in force and un repealed.

2. That we are opposed to the unjust, extravagant, and unnecessary taxation, both State and Federal, with which our people are now oppressed; to the wasteful squandering and embezzlement of the public money and public property; and we are in favor of the strictest economy in public expenditures, and of a rigid and prompt accountability of all public officers.

3. That we are in favor of law and order; fair and peaceful elections, free from fraud and corruption; and that we shall demand a fair count of the ballots cast.

4. That we are in favor of confiding the government of the State to our own people, to men of known capacity and integrity, who accept the office for the general good, and do not seek official position for public plunder.

5. That the party now in control of this State have obtained power by usurpation against the will of the people, and they have imposed enormous and unnecessary taxes; they have created unnecessary and useless offices for the sole purpose of feeding their needy followers; they have, by profligate extravagance and corruption, increased the debt of the State many millions of dollars, and have even refused to execute the provisions of their own constitution relating to the classification of State Senators and their tenure of office; and by numerous other enormities in legislation they have shown themselves unfit to govern the people of a free State, and they ought to be ejected, through the ballot-box, from the offices they hold in defiance of the wishes and in contempt of the interests of the people.

The contest at the approaching election was eagerly entered upon, and fought out by both parties with unusual vigor and animation. The voting at the polls went on throughout the State more peaceably than had been anticipated. It resulted in the election of the Democratic ticket, except for State Treasurer; instead of Mr. McCoy, who received but 123 votes, was elected Mr. Grant, another Democrat, with 76,902 votes. The Democrats elected, also, a large majority of members of the State Legislature in the Lower House, which consists of 64 Democrats and 36 Republicans, two of whom are Conservatives. The Senate remains, as it was, composed of 32 Republicans and one Democrat, they having refused to classify, and let one-half of their number be chosen by the people at this election, as has been before stated. The smallest number of votes cast for State officers by the two parties, respectively, was 72,538 for the Republican Secretary of State, and 76,902 for the Democratic State Treasurer; the largest was 76,292 for the Republican Governor, and 78,682 for the Democratic Lieutenant-Governor. Taking these two highest figures as representing the entire vote at the command of each party, the whole vote cast in the State at the election of November, 1870, would have been 154,923, with a Democratic majority of 2,389; whereas, at

the presidential election in November, 1868, the whole vote polled in the State was 148,452, consisting of 76,366 Republican and 72,086 Democratic votes, with a Republican majority at that time of 4,280.

Although the voting at the polls passed off quietly, its result was not as quietly submitted to by several among the defeated Republican candidates. The first who openly refused to acquiesce in it was the ex-State Superintendent of Public Instruction. The new Superintendent, having duly qualified at the office of the Secretary of State, presented his commission to the Board of Education on November 22d, in order to take his seat as president, when the incumbent, Mr. Cloud, refused to recognize him as his successor, alleging that Mr. Hodgson, at the time the votes were cast for him, was ineligible, because he had once sent a challenge to a certain J. G. Smith to fight a duel with deadly weapons. On November 28d Mr. Hodgson sent a formal communication to the Board, notifying them that, being the Superintendent of Public Instruction, he had entered upon the discharge of his official duties, and would recognize no act passed by them without him, who was their president *ex officio*. As to the alleged grounds of his ineligibility, he said Mr. Cloud had legal means at hand to contest his election; at the same time he denied and disproved the charge. The members of the Board, having held an informal meeting among themselves the same day, resolved to recognize Mr. Cloud as their president no longer.

More worthy of note is the resistance opposed to the result of the election by Governor Smith, as it very nearly filled the State with tumult and disorder. The organic law prescribes that, after a State election has taken place, the two Houses of the Legislature shall meet in joint convention within the first week of the session, when the presiding officer of the Senate shall open the sealed returns, and count and publish the vote before a majority of the General Assembly. The Legislature began their session according to law, on the fourth Tuesday, the 22d of November, 1870, and, in compliance with the said provision of the constitution, the Senators went in a body to the Hall of Representatives on the 26th, for the purpose of counting the vote cast for the State officers on the 8th, when the Secretary of the Senate read an injunction issued by one of the Judges of the Supreme Court of Alabama, upon a bill filed in chancery by Mr. Smith, complainant, on the 25th, and served on R. R. Barr, presiding officer of the Senate, defendant, "commanding and enjoining him to desist and refrain from opening and publishing the returns for Governor, of the election held on the 8th of November, 1870, in the State of Alabama, until the further order of the court." Mr. Barr announced, therefore, that he could not count the vote for Governor, and proceeded to count the vote for Lieutenant-Governor,

Secretary of State, and Attorney-General, when he declared E. H. Moren, J. J. Parker, and J. W. A. Sanford, duly elected to the said offices, respectively. Hereupon a resolution was offered by a Republican Senator, to the effect that the new Lieutenant-Governor, who had just been proclaimed elected, and is *ex officio* President of the Senate, should be installed in office forthwith, and then proceed to count the vote for Governor. The acting President ruled the resolution out of order. An appeal having been made from the decision to the convention, Mr. Barr declined to put the appeal to vote; but, ordering the Senators to return to their chamber, he left the House. The Speaker took his place as temporary President, and put the appeal from the said decision of the chair to the vote of the convention, when the chair was not sustained, and the resolution adopted. The new Lieutenant-Governor was then conducted to the chair, and assumed the presidency of the convention. After having ascertained that there were 74 members of the General Assembly present in the hall, which was ten more than necessary to constitute a majority, as required by the constitution, he counted the vote for Governor and Treasurer, which was: For Governor: R. B. Lindsay, 77,721; W. H. Smith, 76,292—Lindsay's majority, 1,429. For Treasurer: Grant, 76,902; Bingham, 74,376—Grant's majority, 2,526. Mr. Lindsay and Mr. Grant were declared by the President duly and constitutionally elected to the offices of Governor and Treasurer of the State of Alabama, respectively. On motion of a Republican Senator, a joint committee of three was appointed to inform Mr. Lindsay of his election, and conduct him to the hall. He was received with warm applause, as was also the speech which he addressed to the convention. Before adjournment a committee of three from the House was appointed to act with a committee on the part of the Senate, to conduct Governor Lindsay to the executive office on the morning of November 28th. Mr. Smith, however, refused to recognize Mr. Lindsay as Governor of Alabama. He regarded himself as the Governor elected by the people, and continued to occupy the executive office; whereupon a correspondence took place between them.

As if he feared that violence would be used to eject him forcibly from the capitol, Mr. Smith had also quartered United States troops in it, and caused them to guard the Governor and Treasurer's offices. Concerning this extraordinary measure, the following preamble and resolution were offered by a member to the Lower House at its sitting of November 28th:

Whereas, Article 4, section 4, of the Constitution of the United States, provides:

"SECTION 4. The United States shall guarantee to every State a republican form of government, and shall protect each of them against invasion, and, on application of the Legislature, or of the Executive (when the Legislature cannot be convened), against

domestic violence." And whereas, peace and order now prevail throughout the borders of the State of Alabama; and whereas, a military force belonging to the army of the United States has been quartered within the capitol of this State during the present session of the General Assembly, without the application, knowledge, or consent, of the General Assembly: therefore be it

Resolved, That, the Senate concurring, a committee, consisting of three of the Senate and three of the House, be appointed to ascertain without delay upon whose application, by whose order, and for what purpose, the said military force was quartered in this capitol; and that the General Assembly desist from all further proceedings until the report of said committee be received and acted upon.

A warm debate ensued, Republican members opposing the resolution, which they perhaps suspected to conceal some further object to their prejudice. They held a consultation among themselves on the subject during a short recess, which seems to have cleared their suspicions. The resolution having been taken up again after the recess, and put to the vote, it was almost unanimously adopted—yeas 83, nays 2.

The course pursued by Mr. Smith, who was joined in it by Mr. Bingham, the State Treasurer, created intense excitement throughout the State, not without serious apprehensions of public disturbances. It was generally condemned by all parties. Men conversant with the law also made formal arguments on the subject, either in speeches delivered at meetings held for the purpose, or in letters addressed to Mr. Smith in the newspapers. They said that the law furnished him with ready means of redress, if he thought himself wronged at the result of the election; but, instead of using them, he had recourse to a Court of Chancery, which has nothing to do in the premises; besides that, his bill of complaint, so far as it appeared from the injunction issued on it, did not make the only interested person a party in the case, but aimed at a third party, a stranger, and its avowed object was to prevent the counting of the vote, which yet was the very first, if not the only, thing necessary to be done for trying and ascertaining the truth in the case, as if the intention of Mr. Smith, by hindering the count of the vote, had been to shut up the very door to a trial, and keep himself indefinitely in office.

On November 29th Mr. Lindsay sent his message to the General Assembly, which was read in the Lower House, the Senate being then adjourned, it was said, on that account. He referred to "the remarkable and anomalous condition of public affairs, occasioned by the untoward events of the past few days," yet hoped that the present "embarrassing circumstances would soon yield to the combined efforts of patriotism and reason." Pointing to the hard condition of tax-payers, especially small farmers, he urged the Legislature to relieve them "to the utmost extent possible to the government," and recommended a suspension of the penalty incurred by delinquents,

to save them from the necessity of an immediate sale of their cotton-crop at great sacrifice. He also invited them to a review and modification of the entire system of taxation, which he characterized "as offensive and burdensome to the masses, and the mode of its enforcement oppressive." He concluded by saying that he would at a future time call their attention to other important matters, which he deemed then "proper to withhold." This message was sent by Mr. Lindsay to the Senate also on December 5th.

On this day Mr. Smith sent a short message to the Senate, saying: "At the time fixed by law for the commencement of your session, I had satisfied myself that, at the late election in this State, I received a majority of votes cast for Governor. Actuated by this belief, I determined to adopt a legal and peaceful mode to have a fair and impartial count of the vote thus cast. After consulting gentlemen who are recognized as among the ablest attorneys in the State, I was advised, and now believe, that the injunction obtained was a legal and proper remedy." Not doubting that the injunction would be obeyed by all concerned, he had withheld his annual message, that he might state in it the reasons of his action. But now that the vote had been counted in disregard of the injunction, and Mr. Lindsay recognized as Governor by the House of Representatives, he could not send the annual message in the usual way; yet proffering himself ready "to submit to either House any information called for by resolution." On the same day, and by the same person, however, he sent to the Senate and House of Representatives the other message also, submitting such information as he "deemed sufficient to show the condition of the State government."

The present bonded indebtedness of the State is \$5,382,800, the interest on which has been paid as soon as matured, and her credit fully maintained.

Under the general act authorizing the endorsement of first-mortgage bonds to railroads in the State, passed at the session of the Legislature adjourned on March 8, 1870, Mr. Smith had endorsed bonds of five railroad companies for the aggregate length of 465 miles, 250 of which belong to the Alabama and Chattanooga road. In accordance with special acts passed at the same session for particular roads, he had also issued bonds to several roads, as follows: Alabama and Chattanooga, \$2,000,000; Montgomery and Mobile, for the section extending from Montgomery to Texas, \$1,500,000; Montgomery and Euphania, \$300,000; Selma and Gulf, \$40,000.

Concerning charitable institutions, he commends the management and efficient working of the Insane Hospital at Tuscaloosa, and the Alabama Institution for the Deaf and Dumb and Blind at Talladega. He mentions also the Freedmen's Hospital near Talladega. It had been established since the war and conducted

at the expense of the Federal Government until the Freedmen's Bureau was discontinued. On that occasion the State assumed the charge of the hospital, and a law was passed forbidding the reception of new patients. A few helpless colored people still remain as its inmates.

On December 7, 1870, Mr. Lindsay commenced a suit against Mr. Smith to recover the books, papers, and other property, belonging to the Governor's office, but the difficulty was finally adjusted harmoniously.

The following is the Federal census of Alabama, by counties, for the years 1860 and 1870:

COUNTIES.	1870.	1860.
Autauga	11,623	16,739

ALSACE AND LORRAINE. The Governments of Germany, in union with nearly

the whole people of Germany, declared that one of the principal conditions of the conclusion of peace between Germany and France (*see GERMAN-FRENCH WAR*), would be the annexation of the province of Alsace, and at least part of the province of Lorraine, to Germany. Thus the history and the ethnographical condition of these two provinces attracted general attention, and their ultimate fate was awaited with considerable interest. In support of their claims, the German people stated that the province of Alsace and a considerable portion of Lorraine had always been inhabited by a German-speaking people, that they had been torn from Germany by fraud and violence, and that, in spite of all the efforts made by the French Government to denationalize them, they had preserved their native language up to this day. A German work, especially devoted to the investigation of the numerical strength of the German nationality in all the countries of Europe (Böckh, *Der Deutschen Volkzahl und Sprachgebiet in den europäischen Staaten*, Berlin, 1870), gives the following facts with regard to the gradual conquest and annexation of these two provinces by France: Up to the year 1648 France had, in consequence of former encroachments of German territory, annexed a German population of about 54,000. By the Peace of Westphalia, France, which in the religious war of thirty years supported the same Protestants who were so cruelly persecuted at home, against the Catholic Government of Austria and its Catholic allies, obtained a number of Austrian possessions, with a population of 227,000 inhabitants. At the close of the seventeenth century Louis XIV. instituted so-called Chambers of Reunion, which were to examine which districts within the bounds of the German Empire had at any previous period been under French jurisdiction; and the districts thus singled out, together with 226,000 inhabitants, were at once seized and incorporated with France, while at about the same time the Republic of Strasburg and the Bishop of Strasburg placed another tract of land with about 260,000 inhabitants under the protection of France. In the course of the eighteenth century France annexed the duchy of Lorraine, with about 178,000 inhabitants, and several dominions of German princes in Alsace and Lorraine. Finally the Republic of Mülhausen and a number of districts belonging to several German princes, with a territory now numbering 290,000 inhabitants, were united with France in and after the year 1790. Until the Revolution of 1789, but little effort had been made to substitute the use of the French for that of the German language. The present idea of compact nationalities, coextensive with the boundaries of the several countries, was then almost unknown. Germans remained unmolested in the use of their language, as the French subjects of several German princes in Alsace and Lorraine had always enjoyed full

liberty in using their idiom. But, from the time of the Revolution, the French Government has been incessant in its efforts to make the German population of Alsace and Lorraine a homogeneous element of the French Empire, and, by the gradual introduction of the French language into churches, schools, courts, and all other public relations, to extirpate the last remnants of the German nationality of the inhabitants. The results of these efforts, thus far, have not been considerable. Even to this day, there are a large number of communities where French is unknown. The number of churches and schools in which German is still used exclusively is very considerable, and, in nearly the whole territory which since 1648 has been torn from Germany, the German language is even to this day predominant. This territory of the German language embraced, in 1861, in Alsace a population of 1,007,477 inhabitants out of a total population of 1,093,876, and in three departments of Lorraine (Moselle, Meurthe, and Vosges) a German population of 351,681 in a total population of 1,290,585. Thus France has in its eastern provinces German-speaking districts with a population of 1,359,158. Besides these Germans, France has in the two departments of Pas de Calais and Nord a population speaking Flemish, the dialect of Belgian Germans, numbering together 341,917 inhabitants, who, added to the above number, give an aggregate German population of 1,701,175. Of these, about 200,000 are supposed to have more or less lost their nationality, and, with regard to their language, have become more French than German; leaving about 1,500,000 inhabitants, who, as far as their language is considered, are even to this day Germans.

In 1814 the hopes of the Germans, to have Alsace reconnected with one of the German states, were foiled by the opposition of the Emperor Alexander I. of Russia, who demanded that it remain with France. Only the fortress of Landau with an adjacent district was given to Bavaria; and Saarlouis, Saarbrück, with a few other places, to Prussia. When the war between

France and Germany took a turn surprisingly favorable to Germany, public opinion in the latter country declared itself very emphatically for the reunion of Alsace and the German districts of Lorraine with Germany. In accordance with this expression of public opinion, the Prussian Government began the reorganization of the conquered districts with a view to their permanent occupation. The new interest of Germany in the fate of Alsace called forth many new works on its history, the most important of which are Menzel, *Elsass und Lothringen* (Stuttgart, 1870); A. Schmidt, *Elsass und Lothringen* (Leipsic, 1870); Wagner, *Elsass und Lothringen* (Leipsic, 1870).

After the occupation of Northeastern France by the German troops, the two General Governments of "Alsace" and "Lorraine" were formed out of the occupied territory. They comprise the following districts:

	Square Miles.	Population, 1866.
I. General Government Alsace.		
1. Department of Lower Rhine.....	1,759	583,970
2. Department of Upper Rhine.....	1,012	530,285
3. Of the Department Moselle:		
Arrondisse. Diedenhofen (Thionville).....	.417	90,591
Arrondisse. Metz.....	.610	165,179
Arrondisse. Saargemünd.....	.587	121,976
4. Of the Department Meurthe:		
Arrondisse. Salzbürg (Chateau Saluis).....	.429	60,636
Arrondisse. Saarbürg.....	.436	71,019
Total General Government Alsace..	5,249	1,683,546
II. General Government Lorraine.		
1. Department Meuse.....	2,405	301,653
2. Department Vosges.....	2,348	418,998
3. Of the Department Moselle:		
Arrondisse. Briey.....	.458	64,511
4. Of the Department Meurthe:		
Arrondisse. Nanzig (Nancy).....	151,393
Arrondisse. Lunéville.....	1,487	84,393
Arrondisse. Tull (Toul).....	60,967
Total General Government Lorraine	6,696	1,061,906

According to an official work on the French census of 1866 (*Statistique de la France*, 2^e série, tome xvii., Strasbourg, 1869), the ecclesiastical statistics of the two General Governments were as follows:

DEPARTMENTS.	Catholics.	PROTESTANTS.			Jews.	Unknown.
		Total.	Lutherans.	Reformed.		
Upper Rhine.....	458,487	53,474	34,645	17,110	14,496	144
Lower Rhine.....	876,823	181,213	165,744	13,222	21,318	598
Moselle.....	429,609	5,310	3,459	1,833	7,337	15
Meurthe.....	410,644	7,237	4,303	1,936	5,240	35
Vosges.....	413,180	4,663	3,296	713	1,510	109
Meuse.....	295,777	663	195	336	801	27

Nationalities.—According to statistical researches, especially those of R. Böckh, in his work, "Der Deutschen Volkszahl und Sprachgebiet in den Europäischen Staaten. Eine statistische Untersuchung" (Berlin, 1870), the territory of the General Government of Lorraine is almost wholly French, while that of the General Government of Alsace is almost entirely German.

The following towns of the General Government of Alsace had in 1866 more than 5,000

inhabitants: Strasbourg, 84,167; Mühlhausen, 53,773; Metz, 54,817; Colmar, 23,669; Markkirch, 12,425; Gebweiler, 12,218; Hagenau, 11,427; Schlestadt, 10,040; Bischweiler, 9,911; Belfort, 8,400; Thann, 8,154; Diedenhofen (French name, Thionville), 7,376; Rappoltsweiler, 7,146; Saargemünd, 6,802; Ars on the Moselle, 5,860; Forbach, 5,619; Brumath, 5,619; Weissenburg, 5,570; Zabern (French name, Saverne), 5,499; Urbis (French name, Orbay), 5,431; Barr, 5,307; Ober-Ehnheim, 5,185.

	AREA, SQUARE MILES.			INHABITANTS, 1866.	
	German.	Mixed.	French.	German.	French.
I. General Government Alsace:					
In Alsace: Upper Rhine.....	57.14	7.68	9.78	444,000	86,000
Lower Rhine.....	82.18	0.08	0.48	582,000	7,000
Arrond. Diedenhofen.....	18.14	1.04	0.48	85,000	5,500
Metz.....	6.87	1.38	20.47	88,000	182,000

* The results of the census of 1870 had not been published when this page went to press.

No change in the territorial divisions of America took place during the year 1870. The proposed purchase of two Danish islands in the West Indies by the United States has for the present been abandoned. The annexation of the Republic of San Domingo to the United States, having received the full approval of President Baez, was warmly advocated by President Grant, but failed to receive the sanction of the United States Senate. In his message of December 5, 1870, President Grant again recommended the measure as one of vast commercial importance for the United States. The war of the Cubans for their independence continued throughout the year, although they were unable to hold control of any place of importance. In British America, a rebellion in the Red River settlements, against the incorporation of the Hudson's Bay Territory with the Dominion of Canada, maintained itself for several months, but was finally quelled.

The long-continued war between Paraguay on the one hand, and Brazil, the Argentine Republic, and Uruguay, on the other, was closed by the death of President Lopez of Paraguay.

Civil wars again raged in the Argentine Republic, Uruguay, and Venezuela, and insurrectionary outbreaks, though of short duration, occurred in a number of other states; but, on the whole, the reign of order in Spanish and Portuguese America is becoming more and more established. Many of the governments of these states are making earnest and successful efforts to promote education, encourage foreign immigration, develop the internal resources and facilitate the intercourse with foreign countries.

No progress was made during the year toward the adjustment of the claims of the United States against Great Britain growing out of the course adopted by that Government during the civil war. In his message of December 5, 1870, President Grant also complained that the policy of the Mexican Government, in exempting from import duties a large tract of territory on the borders of the United States (the "*zona libre*") had an injurious effect upon the commerce of the United States. The President also complained of the course pursued by the Canadian authorities toward the fishermen of the United States.

The long-deferred peace conference between Spain and the allied South-American republics, under the auspices of the United States, was opened in Washington, on the 29th of October, 1870, but had to be adjourned in consequence of the absence of a representative from Bolivia. In referring to this conference, President Grant, in his message of December 5, 1870, significantly expressed the expectation that the time when the connection of the European governments with American territory will cease is not far distant, that the commercial interests of the Spanish-American states will be more closely allied to those of the United States, and that thus the United States will receive all the preëminence and all the advantages

which Mr. Monroe, Mr. Adams, and Mr. Clay, contemplated when they proposed to join in the Congress of Panama.

ANDERSON, Dr. ALEXANDER, the father of wood-engraving in this country, born in New-York City, in 1774; died in Jersey City, N. J., January 18, 1870. His early advantages of education were good for the time and the condition of the country. He was from boyhood desirous of becoming an artist, but his father was determined that he should be a physician, and accordingly placed him, at the age of fifteen, in the office of Dr. Young, an eminent physician of New York, with whom he remained five years, and acquired a fair knowledge of the profession and of the art of dispensing prescriptions. But his heart was not in his profession, and, as soon as possible after the expiration of his apprenticeship to Dr. Young, he commenced engraving on wood, having read in an old paper a description of the art as then practised in Europe. His first engravings were executed in part on type-metal, and he was obliged to invent nearly all his tools, and to manufacture them himself. His first considerable performance was the copying of some of Bewick's cuts, in a volume called the "Looking-Glass." He could not have had a better master, and he acquired in a large degree Bewick's delicacy and truthfulness of expression in his engravings. To describe in detail the works which he illustrated would occupy too much space. Suffice it to say that, among the best known of his productions, are his forty illustrations of Shakespeare's plays, the illustrations in Webster's Elementary Spelling-book (of which over 40,000,000 copies have been sold), and Bewick's birds. He illustrated also the celebrated book on anatomy by Sir Charles Bell, and also engraved plates for paper currency, by order of the Government. He was, for about fifteen years, the only engraver on wood of note in New York; and, from 1812 to 1862, was a leader in his art, ever zealous for improvement, quick to perceive and ready to adopt any advance in the art from whatever quarter it might come. In his eighty-fourth year he prepared a new business card, on which was in Latin the motto "Bent but not broken." The last piece of his handiwork was the engraving of a large picture, done in the style of the old Belgian and French schools. He was a great proficient in instrumental music, and was especially skilful as a violinist. He was also a pleasant and graceful writer, with a keen sense of the humorous, and occasionally dabbled in poetry. In his habits, at a time when almost every one drank freely of intoxicating liquors, he was strictly temperate and exemplary. Mr. B. J. Lossing, himself eminent alike as an engraver, designer, and author, prepared a memorial lecture of this pioneer among American engravers.

ANGLICAN CHURCHES. The *Church Almanac* for 1871 gives the following statistical summary of the Protestant Episcopal

Church in the United States for the year 1869-70:

Dioceses.....	29
Missionary Jurisdictions.....	9
Bishops.....	52
Priests and Deacons.....	2,786
Whole number of Clergy.....	2,833
Parishes.....	2,605
Ordinations—Deacons in 26 Dioceses.....	105
Priests in 27 Dioceses and 1 Missionary Jurisdiction.....	103
Total in 31 Dioceses and 1 Missionary Jurisdiction.....	208
Candidates for Orders in 31 Dioceses.....	355
Churches consecrated in 24 Dioceses.....	49
Baptisms—Infants in 23 Dioceses and 3 Missionary Jurisdictions.....	25,768
Adults in 23 Dioceses and 3 Missionary Jurisdictions.....	7,214
Not specified in 6 dioceses.....	3,231
Total in 23 Dioceses and 3 Missionary Jurisdictions.....	36,483
Confirmations in 28 Dioceses.....	23,115

Communicants—Increase in 24 Dioceses and 2 Missionary Jurisdictions during the past year.....	9,536
Number reported in 29 Dioceses and 3 Missionary Jurisdictions.....	313,313
Present number in the whole Church not less than.....	220,000
Marriages in 27 Dioceses and 3 Missionary Jurisdictions.....	9,088
Burials in 27 Dioceses and 2 Missionary Jurisdictions.....	15,387
Sunday-school Teachers in 25 Dioceses and 2 Missionary Jurisdictions.....	23,031
Scholars in 25 Dioceses and 2 Missionary Jurisdictions.....	202,729
Contributions in 27 Dioceses and 2 Missionary Jurisdictions.....	\$5,002,721 88

The following table exhibits the number of clergymen, parishes, baptisms, communicants, teachers and scholars of Sunday-schools, and the amount of missionary and charitable contributions for each diocese:

The statistics of the bishops of other branches of the Anglican Communion were, in 1870, as follows:

I. THE CHURCH OF ENGLAND.—1. Province

* Taken from the Convention Journal of 1869.

of Canterbury.—Canterbury (archbishop), London, Winchester, St. David's, Llandaff, Norwich, Bangor, Worcester, Gloucester, Bristol, Ely, Rochester, Lichfield, Hereford, Peterborough, Lincoln, Salisbury, Exeter, Bath and Wells, Oxford, Chichester, St. Asaph, and

suffragan bishops of Nottingham and Dover, both appointed in 1870; total 23. 2. Province of York.—York (archbishop), Durham, Ripon, Chester, Carlisle, Manchester, Sodor and Man; total, 7.

II. THE CHURCH OF IRELAND.—1. Province of Armagh.—Armagh and Clogher (archbishop), Meath, Down, Tuam, Derry, Kilmore; total, 6. 2. Province of Dublin.—Dublin (archbishop), Ossory, Cashel, Killaloe, Cork, Limerick; total, 6.

III. THE CHURCH OF SCOTLAND.—Moray (Primate), Aberdeen, Argyll, Brechin, Edinburgh, Glasgow, St. Andrew's, and a coadjutor of the Bishop of Edinburgh; total, 8.

IV. THE CHURCH IN THE COLONIES AND DEPENDENCIES.—Adelaide, Antigua, Auckland, Barbadoes, Bathurst, Bombay, Brisbane, Calcutta (metropolitan), Cape Town (metropolitan), Christ Church, New Zealand (metropolitan), Colombo, Columbia, Dunedin, Falkland Islands, Frederickton, Gibraltar, Goulbourn, Grafton and Armidale, Grahamstown, Guiana, Huron, Jamaica, Kingston, Labuan, Madras, Maritzburg, Mauritius, Melbourne, Montreal (metropolitan), Nassau, Nelson, Newcastle, Newfoundland, Nova Scotia, Ontario, Perth, Quebec, Rupert's Land, Sierra Leone, St. Helena, Sydney (metropolitan), Tasmania, Toronto, Victoria, Wellington, Waiapua; total, 46, of whom 5 metropolitans.

V. MISSIONARY BISHOPS.—Central Africa, Honolulu, Jerusalem, Melanesia, Niger, Orange River, Zululand; total, 7. Another missionary bishop was to be appointed for Madagascar.

VI. RETIRED BISHOPS.—Norwich, Colombo, Tasmania, Rupert's Land, Victoria, Nelson, Gibraltar, Bombay, Mauritius, Winchester, Orange Free State, Labuan, St. Asaph, Honolulu, Wellington, Sierra Leone; total, 16.

The conventions of the Dioceses of Illinois and Pennsylvania have passed resolutions, providing for the division of each diocese. In Illinois, the proposed new diocese will contain 20,266 square miles, and a population of 1,137,708, while the old diocese will contain 25,224 square miles, and a population of 1,406,205. The new diocese will be bounded, as indicated in the Bishop's Convention address, by a line running east and west on the south line of Hancock, McDonough, Fulton, Mason, Tazewell, McLean, Ford, and Iroquois Counties, and the sum of \$40,000 will be raised as a fund for the support of the episcopate.

The institution of a Federate Council, consisting of the bishops and delegates of all the dioceses of one State has now been fully introduced into the Church. The Federal Council of the Dioceses of New York, Western New York, Long Island, Albany, and Central New York, was held in the city of New York in October.

In November, 1869, a conference of the Evangelical party of the Church, held in Philadelphia, adopted a resolution, requesting the bishops supposed to sympathize with the prin-

ciples of the party, namely, the bishops of the Dioceses of Ohio, Delaware, Pennsylvania, Massachusetts, Virginia, Kentucky, Iowa, Kansas, and Nevada, to consider whether there be grounds for presenting for trial any (High Church) bishop, or bishops, who may be alleged to hold and to have taught publicly, or privately and advisedly, doctrines contrary to those held by the Protestant Episcopal Church in the United States. Some of the bishops, to whom this request was addressed, in emphatic terms expressed their dissent from the spirit of the resolution of the Philadelphia Conference, and declined to be a party in its execution. The first to express himself in this sense was the Bishop of Delaware. The Bishop of Pennsylvania, endorsing the declaration of the Bishop of Delaware, addressed a letter to one of the members of the Philadelphia Conference, in which he says of the request: "After carefully weighing the subject-matter of your communication, I beg leave to say that I think the resolution submitted to me is unwise, uncanonical, and invidious, and injurious to the best interests of the Protestant Episcopal Church. I therefore decline, as one of the bishops named, to take action in the premises."

The thirty-fifth annual meeting of the Board of Missions was held in New York, October 24th, and the following days. The expenses of the Domestic Committee were reported to be \$127,854; the receipts \$95,987.80; leaving a deficit of \$31,866.71. The receipts of the Foreign Board were \$80,063.58; the expenditures, \$87,415.68. The report of the Commission of Home Missions to Colored People states that nineteen new schools have been established. The number of teachers employed, including clergy, is thirty-nine; the number of scholars is 2,069. The receipts up to October 1st, including balance in the treasury, are \$17,581.38.

The anniversaries of the Evangelical or Low Church party of the Church were held in New York, on October 18th, 19th, and 20th. Among those who attended them were Bishop Johns, of Virginia; Bishop Eastburn, of Massachusetts; Bishop Stevens, of Pennsylvania; Bishop Cummins, of Kentucky. The "Evangelical Knowledge Society" reported receipts, \$45,622; expenditures, \$43,487; property, \$82,242. The American Church Missionary Society, which held its anniversary on October 19th, reported its receipts at \$64,564; the expenditures exceeded this amount, leaving the Society somewhat in debt. The receipts of the Evangelical Education Society amounted to \$48,287.71; the expenditures to \$44,545.46; fund on hand, to \$3,742.25. The students enjoying the beneficiary aid of the Association are required to answer certain written questions relative to the cardinal doctrines of Evangelical religion, such as the Bible the sole rule of faith as opposed to the dogma; the Bible and tradition the joint rule of faith; justification by faith as opposed to justification

by sacraments; and the exclusive priesthood of Christ as opposed to a human priesthood.

The long-continued movement for an increase of bishops in the Church of England has proved so far successful, that in 1870 the Bishop of Lincoln and the Archbishop of Canterbury received suffragan bishops as assistants. They received the title of Suffragan Bishops of Nottingham and Dover.

The question of introducing lay delegation into the Church of England attracted great attention. The Convention of York adopted a resolution recommending the more extensive use of the unpaid services of accredited laity, and a committee was appointed to consider whether, "without invading the spiritual and constitutional rights of convocation," any methods might be devised for obtaining the sanction and assistance of the laity "in matters for promoting our holy religion or the welfare of the Church." This was adopted by way of amendment to a resolution moved by Archdeacon Churton, which asserted the right of the laity to be represented in Church councils by members of their own order. The foremost champion of the cause was the new Bishop of Salisbury, who read a paper concerning it at the Church Congress in Southampton. An influential meeting for the discussion of the subject took place in November in Nottingham, under the presidency of the suffragan bishop of the diocese. A resolution, affirming the principle of organizing a body of laity for united deliberation with the clergy, was proposed by Lord Belper, and seconded by Earl Manvers. Next, the Speaker of the House of Commons moved "that the proposed lay body consist of members of the Church of England, and be formed partly of official and partly of elected members, the official members to be the lord-lieutenant, peers, privy-councillors, baronets, knights having property in the county and boroughs therein, lay chairmen of quarter sessions, and mayors; the elected members to be chosen by the several rural deaneries, as the persons best qualified to represent the laity of the Church." The duke of St. Albans seconded the resolution, which was unanimously adopted. A letter from Mr. Gladstone to the bishop was read, saying that for many years it had been his special desire to see an organized coöperation between the bishop and the clergy on the one hand, and the laity on the other, and expressing his interest in the present movement for "lay organization in the Church."

The Convocation of the Province of Canterbury declared in favor of a revision of the English Bible; and two committees of revisionists, one for the Old, and one for the New Testament, were consequently appointed. The committee invited several distinguished scholars of other churches, as Principal Fairbairn, Professors Milligan and A. J. Davidson, Dr. Lindsay Alexander, Dr. Alexander Roberts, Dr. Angus, and Dr. J. H. Newman, to

take parts in its labors, and most of them accepted. The Convocation of York, on the other hand, was nearly unanimous in refusing to join in the revisionary movement, and Bishop Cox, of Western New York, published, in a Church paper of London, a remonstrance against a revision of the Bible by one convocation of the Church of England.

The presence in England, at the beginning of the year 1870, of the Greek Archbishop of Syra and Tenos gave a new impulse to the negotiations for establishing closer relations between the Anglican and the Greek communions. On the 4th of February, 1870, a conference took place between the archbishop, attended by the Archimandrite Stratalis and Mr. Lymbas on the one hand, and the Bishop of Ely, attended by the Rev. George Williams, and Rev. F. Meyrick, well known as prominent champions of the intercommunion movement, on the other. The archbishop classed the points, on which the two churches differed, under three heads, namely: things to be corrected; things to be discussed; and things to be tolerated. On the first head he ranged but one point, namely, the doctrine of the procession of the Holy Ghost, and he insisted that the doctrine of the Church of England respecting it must be corrected before there could be any hope of union between the two Churches. The Bishop of Ely handed to the archbishop a paper stating the doctrine of the Church of England on the procession, and the latter conceded that the doctrine set forth in the pamphlet was fully orthodox, and agreed with the doctrine of the Greek Church, which holds that the Holy Ghost eternally proceeds only from the Father, while she admits that in time he proceeded from the Son by means of *νεμεσις*. Nevertheless he declared that the removal of the *filioque* from the creed of the English Church was an indispensable condition of the union of the Churches, and that the Greek Church would not be satisfied, if, while retaining the word *filioque*, the English Church nevertheless anathematized the doctrine of the processions in the form of an anathema drawn up by the archbishop himself. Knowing, however, the orthodoxy of the Church of England, he promised to explain it to the Patriarchs of Constantinople and Jerusalem, and to the Holy Synod of the kingdom of Greece, and to try to stir up a desire of union among the people. In the latter part of the year, the intercommunion movement suffered a great check by the proselytizing efforts made in behalf of the Greek Church by the Rev. Dr. Overbeck, formerly a Catholic priest of Germany, who has joined the Greek Church and has been authorized by the Holy Governing Synod of Russia to open a chapel of the Greek Church in London. The Rev. George Williams, one of the principal promoters of the scheme, said, at the Church Congress at Southampton, that it was difficult to imagine language more bitterly hostile to the Anglican

Communion than that employed by Overbeck; and that his scheme for opening a chapel in London for the celebration of the Liturgy of St. Chrysostom in English could only result in a new schism. Chancellor Massingberd in like manner expressed his regret at learning that the Holy Governing Synod of Russia had authorized Dr. Overbeck to open this chapel.

The Free Church of England, an ecclesiastical body which originated in the dissatisfaction of some members of the established Church with ritualistic practices, is reported to assume larger dimensions. Established by the enrolling of its constitution in the Higher Court of Chancery in 1863, the new church has already a respectable number of congregations in different parts of the country, and has a regular ecclesiastical organization, with a bishop. The organ of the Church is the *Free Church of England Magazine*, and a convocation was held on June 29th. The Free Church of England has appealed to the public for an extension fund of £50,000, the subscriptions up to the time of the appeal having been £3,500. According to its manifesto, the object of the Free Church of England is, not to interfere with the labors of any Evangelical Protestant community, whether established or non-established, but to introduce the Gospel of Christ into those parishes in which the clergy, by excessive ritualism and departure from the faith, are leading the people to Rome, and to assert the right of the laity in all matters affecting the agency and the work of the Church, especially where the laity are suffering from an undue or arbitrary authority of the clergy; not to engage in religious controversy, but to conduct the public worship of the Church with a pure liturgy, in accordance with the doctrine of the Reformation. The promoters further declare: "We are free—free to go into any parish and preach the Gospel of our Lord and Saviour Jesus Christ. Free to use a revised book of Common Prayer. Free to unite laity with the clergy in the government and work of the Church. Free of all state support and control. Free to interchange services with the clergymen of all Evangelical denominations. And free to hold communion with all who, in every place, call on the name of Jesus Christ our Lord—both theirs and ours." Among other explanations of the scheme of the Free Church, is one that it adopts, with certain exceptions, the thirty-nine articles and rubric of the Church of England; that its government endeavors to combine the chief advantages which are offered by the three prevailing forms of ecclesiastical polity, as seen in Episcopacy, Presbytery, and Independency; that, in addition to the baptism of children, the Free Church of England, following the rubric of the Church of England, gives full liberty to its ministers to baptize adults, by immersion, on a personal profession of their faith; and that the Free Church of England is different from other religious bod-

ies, but does not separate itself either from the ministry or communion of any other part of the Catholic Church.

The disestablished Church of Ireland was actively engaged in the work of reconstruction. A general convention met at Dublin on February 15th, to decide on the draft of a constitution which had been prepared by a committee. It adjourned in March, met again on the 18th of October, and closed its deliberations in November. The Duke of Abercorn's motion for a separate House of Bishops, with the proviso that seven must agree upon any veto, passed. As regards the question of the length of time which the veto of the House of Bishops should operate, the Duke of Abercorn again prevailed with a motion, which was carried by 846 to 110, which allows the bishops' veto to be valid even at the next synod, whatever the majority of the other orders, provided that two-thirds of the bench are present, and agreed, and that they give their reasons in writing. The bishops will be elected by the diocesan convention, but the House of Bishops will in all cases be the court of selection, when the diocesan synod does not elect by a majority of two-thirds of each order a clergyman to fill the vacant see. The Primate (Archbishop of Armagh) shall be elected by the bench of bishops out of their own number. The property of the church is to be vested in a "Representative Church Body," which is to be permanent. It is to be composed of three classes—the *ex-officio*, or archbishops and bishops; the elected members, who are to consist of one clerical and two lay representatives for each diocese; and the co-opted members, who are to consist of persons equal in number to the number of such dioceses, and to be elected by the *ex-officio* and representative members. The elected members are to retire in the proportion of one-third by rotation. On motion of Master Brooks, amended by the Duke of Abercorn, a committee of twenty-four persons was appointed, one-half selected from the bishops and clergy, and one-half from the laity, "to consider whether, without making such alterations in the liturgy or formularies of our Church as would involve or imply a change in her doctrine, any measure can be suggested that may be calculated to check the introduction and spread of novel doctrines and practices opposed to the principles of our Reformed Church."

The income of the Church Society of the Scotch Episcopal Church, in 1870, amounted to £3,078, and the applications for aid were set down at \$4,289. With regard to the income of the clergy, the annual report stated that the minimum stipends of £150, which it was the desire of the society to attain, are still far from being reached.

The question of disestablishing the Anglican Church begins to be discussed in India. The government of India has, it appears, consulted

the Bishop of Calcutta and the Bengal government with respect to a scheme for relieving the state of the charge for chaplains at the presidency towns and some of the larger Mofussil stations; and it is stated that the opinion is growing that the time has come when the civil members of the English Church in India may fairly be asked to support their own clergy, leaving the state to provide for the spiritual need of the army.

The Anglican bishops in South Africa, in February, 1870, held a provincial synod to consider the constitution and canons of the Cape Church, which has selected the title of "The Church of the Province of South Africa." The chief discussion was on the question whether Bishop Gray (the Metropolitan) was to receive the title of archbishop or not. After a long debate, it was decided that his duties assimilate to those of an archbishop, but that he should for the present be known as the Metropolitan. Bishop Colenso delivered a long address at the fifth session of the Church council of his diocese on May 31st. It consisted for the most part of comments on the new "Church of the Province of South Africa"—an organization severed, as the speaker said, from the mother Church of England, and governed by rules which are in some respects directly at variance with the laws of that Church. Addresses to the Archbishops of Canterbury and York were adopted. A new missionary bishop was appointed for Madagascar. A correspondence took place between the Metropolitan of Capetown and the Archbishop of Canterbury concerning the consecration of the Rev. Mr. Webb for the vacant Orange Free State bishopric. The Archbishop of Canterbury insisted on the new prelate taking the oath of allegiance to him as English Primate, and not to the Metropolitan of Capetown. Bishop Gray objected that it would put it in the power of his new suffragan to create another Colenso scandal by making appeals to a court that disclaims having authority over unestablished churches. The matter was settled by causing Bishop Webb to be consecrated by one of the bishops of Scotland.

The attempt to make the Anglican Church a state Church in the Sandwich Islands, under the new name, "The Reformed Catholic Church," has met with a severe check. The members of the only church which has been established—the Cathedral Church in Honolulu—rebelled against their church rulers, and the ritualistic services which had been introduced. As a consequence, Bishop Staley returned to England, and tendered to the Archbishop of Canterbury his resignation as Bishop of Honolulu.

ARGENTINE CONFEDERATION, a republic in South America. President from 1868 to 1874, Domingo F. Sarmiento, born, 1811, at San Juan, and descended from an ancient noble family of Spain. In consequence of the part he took in the civil war in his country, he was

obliged in 1831 to flee into Chili, whence he returned in 1836. In 1840, he had to leave his country a second time, and was well received in Chili by President Manuel Montt. He devoted himself chiefly to the establishment of schools and newspapers, and for three years was the principal of a normal school. During a journey through the United States and Europe which he undertook as the commissioner of the Chilian Government, he gained the friendship of many prominent men, like Guizot, Horace Mann, Alexander Humboldt, etc. In 1857 he joined General Urquiza in his war against the dictator Rosas, and took part in the great victory of Urquiza at Monte Caseros. After the overthrow of the rule of Rosas, he was appointed at Buenos Ayres Inspector-General of Schools, and labored in this position with great zeal and success for the diffusion and elevation of popular instruction. In 1860 he was appointed Senator and a member of the Cabinet; in 1862, Governor of San Juan; in 1864, ambassador of the Argentine Confederation to the United States. He published after his return from Europe, in 1847, a work on "Popular Education;" and in later years a biography of Lincoln, a work on the public schools of the United States, and others. He is generally regarded as one of the most cultivated statesmen of South America, and as President has been chiefly intent upon introducing good public schools into all the communities of the republic, and upon encouraging immigration.

The following table is an abstract from the latest official documents concerning the area and population of the republic. The figures of the areal extent are taken from the *Registro Estadístico de la República Argentina*, while the population is given according to the official census of 1869. The provincial capitals have the same name as the provinces (with the exception of Entre Rios, the capital of which is Concepcion):

PROVINCES.	Square Miles	Population.	Population of Capitals.
Buenos Ayres	72,967	485,107	177,737
Santa Fé	20,837	89,218	10,324
Entre Rios	52,110	134,225	6,050
Corrientes	62,548	129,028	10,546
La Rioja	36,453	45,746	4,433
Catamarca	36,453	79,963	5,718
San Juan	34,400	60,819	8,353
Mendoza	67,758	65,418	8,134
Cordoba	62,548	210,506	28,522
San Luis	20,837	53,394	3,749
Santiago del Estero	36,453	122,586	7,745
Tucuman	16,371	105,904	17,428
Salta	52,110	68,968	11,716
Jujuy	31,274	40,368	3,072
Total	603,271	1,736,923	303,633

To the above number of inhabitants must be added: 1. An army of 6,220 men, who were engaged in the war against Paraguay at the time the census was taken. Besides, the republic claims the following territories: 2. Gran Chaco Argentino, with an area of 260,613 square miles, and 45,000 inhabitants; 3.

Patagonia, with 864,854 square miles, and 25,000 inhabitants; 4. Pampas Argentinas, with 98,823 square miles, and 20,000 inhabitants, which would make an aggregate area for the republic of 1,822,561 square miles, with a population of 1,833,212. The population of the cities was 610,482; the rural population, 1,114,160; the inland and river population, 12,830. According to the last census, the population of the city of Buenos Ayres was 177,787, 88,126 of whom were foreigners, namely: 41,937 Italians, 18,998 Spaniards, 18,402 Frenchmen, 2,139 Germans, 542 Austrians, and 608 born in the United States. The budget for 1869-'70 fixes the revenue as follows: Import duties, 10,990,000 pesos fuertes; export duties, 2,000,000; storage, 260,000; postal service, 105,000; stamp tax, 255,000; interest on 17,000 shares of the Central Railroad of Argentina, 116,620; various receipts, not specified, 50,000. Total, 18,776,620 pesos fuertes, or \$12,674,490. The expenditures during the same period were estimated at 1,297,990 pesos fuertes for the Department of the Interior, 111,440 for the Department of Foreign Affairs, 8,452,737 for the Department of Finance (including interest on State debt); 768,271 for the Department of Justice, and 2,757,646 for the Department of War and Marine. Total expenditures, 14,387,646 pesos fuertes, or \$13,286,634. Excess of expenditures over revenue, of \$562,144. The consolidated debt on December 31, 1868, consisted of:

	Pesos Fuertes.
British loan of 1834 at 6 per cent. interest.....	4,578,150
British loan of 1834 at 3 per cent. interest.....	5,257,210
Other foreign debt.....	2,080,403
British loan of 1868 (£23,490,000 sterling).....	12,201,000
Total foreign debt.....	22,916,763
Consolidated national funds, at 6 per cent. interest and 1 per cent. amortization.....	11,740,706
Consolidated national funds, at 6 per cent. interest, and 2½ per cent. amortization.....	2,293,345
Funds of the Province of Buenos Ayres:	
At 6 per cent. interest, and 3 per cent. amortization.....	744,000
At 9 per cent. interest, and 3 per cent. amortization.....	1,475,600
Total debt.....	40,145,313

Each of the fourteen provinces has, besides, a budget of its own, the above sums being mostly applied to the expenses of the General Government, for collection of duties, and for the War and Marine Departments. Buenos Ayres, the most important of the provinces, has an annual budget of expenditures of over 2,000,000 pesos fuertes.

The army consists in time of peace of 2,909 infantry, 2,861 cavalry, and 712 artillery. Total, 6,482 men; not including the militia and national guards of Buenos Ayres. It is under command of 29 generals, and 632 officers of all grades. The marine is composed of 7 vessels-of-war, one of which has an armament of 12 guns.

The imports and exports at the port of Buenos Ayres in 1868 were, to the United States and to Europe, and other countries of South America as follows:

COUNTRIES.	EXPORTS.	IMPORTS.
	Pesos Fuertes.	Pesos Fuertes.
Great Britain.....	2,870,000	9,790,000
France.....	6,650,000	11,040,000
Belgium.....	8,480,000	870,000
Italy.....	1,060,000	1,870,000
Spain.....	340,000	1,720,000
Germany.....	60,000	1,420,000
Holland.....	80,000	960,000
United States.....	2,810,000	2,180,000
Brazil.....	610,000	3,810,063
Uruguay.....	20,000	1,760,000
Chili.....	220,000	490,000
Argentina.....		2,110,000
Other Countries.....	780,000	810,000
Total.....	24,860,000	58,590,000
or.....	\$22,871,200	\$55,502,800

The principal articles for export, and their value, were: hides, 7,200,000 pesos; sheep, goat, and deer skins, 2,100,000 pesos; wool, 9,200,000 pesos; horse-hair, 800,000 pesos; tallow, 4,800,000 pesos; salted beef, 800,000 pesos; ostrich-feathers, 100,000 pesos. The entries at the port of Buenos Ayres, in 1868, consisted of 1,196 vessels, together of 842,016 tons; clearances during the same period, 1,806 vessels, together of 849,647 tons. Besides the above, which were all sailing-vessels, 1,083 steamers entered and cleared at the port of Buenos Ayres in 1868. According to the message of President Sarmiento, at the opening of the national Congress, the length of railroads in operation on December 31, 1869, was 534 miles; in course of construction, 70 miles; contracts had been entered into for the construction of 243 miles; and new concessions made for 487 miles. The telegraph-lines in operation, according to the presidential message, extended over 975 miles.

The number of agricultural colonies, established by the emigrants from foreign countries, is increasing, and most of them are in a very prosperous condition. Their population was, according to the latest dates (of 1867-'68), as follows: 1. In the province of Santa Fé: Esperanza, 1,648; San Geronimo, 1,210; San Carlos, 955; Helvetica, 550; Coronda, 275; Nueva California, 170; Colonia Francesa, 225; Sunchales, 164; Emilia, 608; San Justo, 106. 2. In the province of Cordova: Frayle Muerte, 140. 3. In the province of Entre Rios: San José, 1,770; Villa Urquiza, 582. 4. In the province of Buenos Ayres: Baradero, 1,311; Carmen de Patagones, 126; Chubut, 188. 5. In the province of Salta: Rivadaria, 825.

In April a formidable rebellion broke out in the province of Entre Rios. It was instigated by General Lopez Jordan, a son-in-law of General Urquiza, and its first act was to surprise Urquiza in his palace in San José, to murder him in the bosom of his family, to plunder and sack his palace, and to confiscate his property. The murderers then proceeded to the assassination of two of Urquiza's sons in the town of Concordia, the arms of one of them being pinioned by his own partner in business, while he was shot down on the verge of a

cemetery to which he had been beguiled. The leader of the insurgents, Lopez Jordan, forced the State Assembly to appoint him Governor; and he, accepting and approving of all this bloodshed and crime, issued proclamations in favor of liberty and freedom, and sought an immunity from punishment by appeals to the national Government, which were rejected with horror and indignation. "Liberty," replied President Sarmiento, in a proclamation issued to the people of Entre Rios, "has not the dagger for its instrument." According to the Argentine Constitution, the General Government cannot send troops into any of the confederated provinces unless on receiving a requisition from the legal government of the province. However, Sarmiento could not recognize a legal government based upon the murder of a governor, and was resolved to put down the rule of Jordan. Consequently, the President declared all the Argentine ports on the river Uruguay closed, and sent about 1,000 troops, with artillery, to Concepcion del Uruguay, which still held out against Jordan. The troops arriving from Paraguay had orders to stop at Rosario and enter the province of Entre Rios from that quarter, and every effort was made to raise forces sufficient to suppress Lopez Jordan and his supporters. "Be not deceived," said General Emilio Mitre, addressing the Entre Rians on landing in the State, "the war provoked by Lopez Jordan, the murderer of the hero of Caseros, is not against a party or circle, but against the whole republic, and against the national Government, which had inaugurated for us all an epoch of peace, progress, and industry." And in this spirit the most important States recognized the attitude of the President; Santa Fé, La Paz, and Mendoza, sent down contingents; and, wrote the Governor of the first-named State to Sarmiento, "Your Excellency may feel certain that the attempt of the rebels in Entre Rios will be fruitless."

Although the national Government collected an army of over 10,000 men to put down the insurrection, the nature of the country greatly aided Lopez Jordan in his defence. He was, moreover, aided by General Caceres, of the neighboring province of Corrientes. In July, Lopez Jordan surprised and captured, at the head of 2,500 men, of all arms, and fifteen pieces of artillery, after a stubborn resistance, the flourishing port of Encarnacion, in the province of Entre Rios, giving the city up to his soldiery for sacking and outrage. He captured 200 prisoners, and is reported to have put them all to death.

In August and September the insurrection assumed larger dimensions. Early in September the armies of the national Government, under Gelly y Obes and Ayala, operating in Entre Rios, had a general engagement with the whole rebel force, under Lopez Jordan, near Rosario, resulting in a rebel victory. The

Government forces lost heavily in ordnance, prisoners, and horses. The killed and wounded on both sides numbered over 1,500 men.

According to the official telegrams, Jordan offered battle on the 23d of September, at Santa Rosa, with 8,000 or 9,000 men in line of battle, and was attacked by the government army, under General Rivas. This commander announces that, after a long, well-contested, and bloody struggle between the contending armies, Jordan was completely routed, losing all his infantry and artillery, and only 600 cavalry escaping, which were pursued for twelve miles by the cavalry of the victors. In December the war was, however, not yet ended, and both parties claimed to have gained advantages.

In October President Sarmiento stated, in his message to Congress, that the revolt in Entre Rios "was nearly quelled. The rebels had to divide their forces, and commenced to disband. The war in Europe," he adds, "has rendered it impossible to negotiate loans, and, in consequence, many measures of public utility are retarded."

Congress passed a new tariff law, to take effect next year. The rates are as follows: All foreign merchandise is to pay 20 per cent. ad valorem, with the following exceptions: Spirits of wine, sugar, beer, coffee, liquors, tobacco, tea, vinegar, wine, and *yerba*, are subject to 25 per cent. ad valorem. Ploughs, coal, sheet and bar iron, iron wire, timber, gold and silver articles with or without precious stones, common salt, silks, and articles ornamented with gold or silver to the extent of half their value, are to pay 10 per cent. ad valorem.

The tariff on exports places 6 per cent. ad valorem on the following: Horns, cured meats, animal oil, hair, cowhides, horseskins, bones, bone ashes, salted tongues, skins in general (except sheepskins), ostrich-feathers, tallow, and grease. Sheepskins exported with wool and tallow are subject to 2 per cent.

On the 13th of October Admiral Petz, minister plenipotentiary and envoy extraordinary of the Austro-Hungarian Empire, presented his credentials, and was received with warmth, he being the first ambassador accredited by Austria to the Argentine Republic. His principal mission was said to be to negotiate a treaty of commerce between the two countries.

Foreign immigration continues to increase, and is becoming of great importance. The Central Committee of Immigration in Buenos Ayres has published a pamphlet on the subject, containing a number of interesting facts. From January 1, 1860, to December 31, 1869, the number of immigrants who arrived in Buenos Ayres was 150,440. During the year 1860 the number was only 6,000; in 1867 it exceeded 37,000, and, as during the first five months of 1870 there arrived 18,408, it was expected that for the whole year the number

would be at least 40,000. Should the increase continue at this rate, the arrivals of one year would, after the lapse of twenty more years, equal the total population of the most advanced provinces. Assuming that every immigrant increases the national wealth by 1,000 pesos fuertes, the total addition to the wealth of the country would, during the year 1869, amount to \$37,000,000. The largest number of immigrants in 1869 came from Italy (22,420 persons), 7,980 were French; 3,406 Swiss. The largest number of immigrant-vessels came from Spain; in other countries, it was chiefly the ports of Bordeaux and Genoa which furnished a considerable contingent. Thus far the national Government had paid but little attention to this important question, and left it altogether to the central committee. But of late the press of Buenos Ayres and other cities has strongly urged this subject upon the consideration of the legislators, and with some success, as the budget of 1871 contains, among the expenditures, 200,000 pesos for immigration.

ARKANSAS. The Federal census of 1870 shows the population of Arkansas to be 486,108. During the past year the people of the State have shown a disposition to give their attention mainly to developing the resources of the soil, inducing immigrants to settle upon their surplus lands, and to organizing and directing the interests of the Commonwealth for the protection and improvement of the citizens. There are still about 12,000,000 acres of public lands unsold within the limits of the State, subject to entry and occupation under the homestead acts of Congress. The State homestead law is very liberal, providing that 160 acres of land, and \$2,000 worth of personal property, shall be "exempted from sale on execution, or other final process, of any court, issued for the collection of any debt contracted after the adoption of the constitution" of 1868. It also provided, that "hereafter, the homestead of any resident of this State, who is a married man or head of a family, shall not be encumbered in any manner, while owned by him, except for taxes, laborers' and mechanics' lien, and securities for the purchase-money thereof. Every homestead not exceeding one hundred and sixty acres of land, and the dwelling and appurtenances thereon, to be selected by the owner thereof, and not in any town, city or village, or, in lieu thereof, at the option of the owner, any lot in a city, town or village, with the dwelling thereon, owned and occupied by any resident of this State, and not exceeding the value of \$5,000, shall be exempted from sale on execution, or any other final process of any court."—Further, "the homestead of a family, after the death of the owner thereof, shall be exempt from the payment of his debts, in all cases during the minority of his children, and also so long as his widow shall remain unmarried, unless she shall be owner of a homestead in her own right."

A Board of Immigration has been organized, and the commissioner has been active in sending abroad information and setting forth the advantages of the State as a place of permanent settlement—10,000 pamphlets in English, and 5,000 in German, have been published and disseminated throughout Europe. During the year 1869, and the spring of 1870, over 85,000 immigrants settled in the State, and the influx has been even greater during the latter part of the year. The Governor, in his last message to the Legislature, in speaking of the condition of the State, says: "The past year has been one of great prosperity. The crops have been most abundant, and the season for gathering and securing them remarkably favorable. The spirit of public improvement has awakened the liveliest interest among our people, and in many portions of the State has given substantial evidence of it, by the inauguration and rapid progress of important enterprises, which, when completed, will be of incalculable benefit to the State. Our population has been largely increased by a healthy immigration. The wealth of the State has been greatly augmented by the influx of capital from the older States, which our superior advantages and undeveloped resources have at length attracted to us. Our State credit has been established, comity and friendly relations exist between us and the other States of the Union, our relations with the Federal Government are harmonious and satisfactory, law and order, peace and security reign throughout our borders. Under the benign influence of our free institutions and the faithful enforcement of the laws, old feuds are rapidly dying out, old animosities are being forgotten, and old prejudices eradicated."

The financial condition of the State is represented to be "as prosperous and satisfactory as could be expected, taking into consideration the extraordinary expenses growing out of reconstruction and the reduced resources of the people." The following statement covers the period from July 2, 1868, to October 1, 1870:

General Revenue Fund.

Auditor's warrants and State scrip, issued from the 3d of July, 1868, to September 30, 1870.....	\$1,413,999 36
Auditor's warrants paid in United States currency.....	\$346,761 07
Auditor's warrants and State scrip received on account of the general revenue tax, etc., and cancelled by the Treasurer	688,370 10 — 935,181 17
Balance.....	\$478,803 19
Of this amount there was remaining in the Treasury, the amount received from the military tax, which is to be transferred to reimburse the general revenue for amount advanced to the military fund, which will be a reduction of the amount of State scrip and Auditor's warrants, outstanding, unpaid, of.....	69,311 36
Total amount outstanding and unpaid, October 1, 1870.....	\$409,556 83

Sinking Fund.

RECEIPTS.	
In State scrip.....	\$75,504 12
In United States currency.....	58,278 17
Amount transferred from general revenue in United States currency.....	4,678 23
Total.....	\$138,360 51

EXPENDITURES.	
Paid interest on public debt in United States currency.....	\$34,980 00
Transferred to general revenue in State scrip.....	4,678 23
Total.....	\$39,658 23
Balance in the Treasury, October 1, 1870.....	\$98,602 29
Which is composed of United States currency.....	\$27,976 39
State scrip.....	70,625 90

School Fund.

RECEIPTS.	
In United States currency.....	\$135,031 37
In State scrip.....	296,868 69
In Auditor's warrants.....	8,064 84
Total.....	\$429,449 90

EXPENDITURES.	
In United States currency.....	\$132,339 30
In State scrip.....	230,060 73
In Auditor's warrants.....	8,064 84
Total.....	\$370,464 95
Balance in the Treasury, October 1, 1870.....	58,994 95
Of which there is in United States currency..	\$2,691 96
In State scrip.....	56,302 97

Permanent School Fund.

Amount in the Treasury October 1, 1870:

In United States currency.....	\$22,201 37
In State scrip.....	12,991 13
Total.....	\$35,192 50

The following is an exhibit of the State debt:

Amount of indebtedness on account of the Real Estate Bank, after deducting the available assets of the State.....	\$3,287,735 21
October 1, 1870, amount of indebtedness on account of the State Bank.....	1,199,942 00
Total indebtedness on account of the State and Real Estate Banks.....	\$4,487,737 21
Deducting the amount retained by the Treasurer of the United States, up to January 1, 1870, from moneys due to the State of Arkansas, to pay interest on the State bonds held in trust by the Smithsonian Institution and Chickasaw Indians.....	169,714 47
Balance due on account of Real Estate and State Bank.....	\$4,318,022 74
Deducting the amount of old bonds exchanged for new ones under the provision of the Funding Bill.....	2,634,725 00
Amount of the principal and interest of old bonds outstanding.....	\$1,683,297 74
Of this amount, the United States hold, in trust for the Smithsonian Institution and Chickasaw Indians.....	1,562,225 00
October, 1870, amount of principal and interest remaining in the hands of individuals, not funded.....	\$131,072 74

An act has been passed, providing for the funding of the debt, and 3,000 bonds were issued for this purpose, of which 2,612 have already been exchanged for the old evidences of indebtedness.

Under the new system of public education very encouraging progress has been made in the establishment and support of common schools, as is shown in the following table of comparisons:

Number of children of school age, 1869.....	176,910
Number of children of school age, 1870.....	189,274
Increase.....	2,364
Number of children attending school in 1869.....	67,412
Number of children attending school in 1870.....	107,908
Increase.....	40,496
Number of teachers employed in 1869.....	1,335
Number of teachers employed in 1870.....	2,302
Increase.....	967
Number of teachers' institutes held in 1869.....	12
Number of teachers' institutes held in 1870.....	41
Amount paid to teachers in 1869.....	\$188,397 00
Amount paid to teachers in 1870.....	405,745 00
Increase.....	\$217,351 00
Number of school-houses built in and prior to 1868.....	633
Number of school-houses built in 1869 and 1870.....	657
Total.....	1,290
Number of persons subject to per capita tax, 1868.....	71,891
Number of persons subject to per capita tax, 1869.....	79,454
Increase.....	7,563
Amount of tax collected from this source in 1868.....	\$52,000 00
Amount of tax collected from this source in 1869.....	\$61,465 00
Increase.....	\$9,465 00
Apportionment of school tax in 1869.....	\$190,492 86
Apportionment of school tax in 1869.....	157,437 08
District tax in 1868.....	\$105,225 00
District tax in 1869.....	\$20,523 79
Increase.....	\$215,248 79

There is an efficient Board of Education which has been actively engaged in carrying into full effect the school law, which provides far better for popular education than any previous enactment. At the annual meeting of the board in January the consolidation of the schools established by the Freedmen's Bureau with those under the charge of the commissioners was recommended, an offer to assist in the matter having been made by General Howard. An important movement in the cause of popular education was also set on foot by the following resolution:

Resolved, That a committee of three be appointed to devise means by which a lecturer of acknowledged ability may be secured to visit the different parts of the State, to aid in constructing institutes and otherwise promoting the efficiency of teachers.

The charitable and penal institutions of the State have not yet been established on a very solid basis, though interest is shown for their improvement, and measures for their better management were recommended to the Legislature of 1871. In December, 1869, an agent was appointed by government to examine into the condition of the penitentiary and report the changes called for in the management. The number of persons under the charge of the institution in the course of the year was 346; of these, 165 were United States prisoners; 66 were released on the expiration of their term of confinement; 23 were pardoned; 45 escaped, and 13 died; leaving 199 within its walls at the end of the year. The support

of these convicts, under the present contract-system, costs the State \$128 a year for each person. It is now recommended that three commissioners be selected to take charge of the penitentiary, who shall reside at the capital, and have authority to appoint the superintendent and warden, and that they shall give the superintendent authority "to sublet the convicts for any kind of labor which can be performed within the walls of the building." No provision has thus far been made for the proper care of the insane. Those who are not under the protection of friends or cared for by private charity are confined in county jails like common malefactors. There is an institute for the blind, for which a new building has been erected, thoroughly adapted for its purposes. A similar building has been provided for the Blind Asylum, which is represented to be in a flourishing condition.

Considerable impetus has been given to railroad enterprises in the State by the operation of the act of the Legislature of 1868 granting State aid to different companies. In accordance with its provisions, aid has been awarded as follows:

To the Cairo and Fulton Railroad Company to the extent of 300 miles of its line, at the rate of \$10,000 per mile; the Memphis and Little Rock Railroad Company to the extent of 120 miles of its line, at the rate of \$10,000 per mile; the Little Rock and Helena Railroad Company to the extent of 30 miles of its line, at the rate of \$15,000 per mile; the Mississippi, Ouachita, and Red River Railroad Company to the extent of 130 miles of its line, at the rate of \$10,000 per mile; the Little Rock, Pine Bluff, and New Orleans Railroad Company to the extent of 120 miles of its line, at the rate of \$15,000 per mile; the Little Rock and Fort Smith Railroad Company to the extent of 150 miles, at the rate of \$10,000 per miles. State bonds have also been loaned to the following extent: To the Little Rock and Fort Smith Railroad Company to the amount of \$800,000; to the Memphis and Little Rock Railroad Company \$1,050,000; to the Little Rock, Pine Bluff, and New Orleans Railroad Company, \$600,000; to the Mississippi, Ouachita, and Red River Railroad Company, bonds to the amount of \$300,000. Partly as the result of this assistance, 20 miles of the Cairo and Fulton road have been completed. The Little Rock and Fort Smith Railroad has been opened to Lewisburg, 80 miles, and 50 miles more have been graded and furnished with ties. The whole line, it is expected, will be completed by the 1st of January, 1872. On the Memphis and Little Rock road, 115 miles of track are already laid, and about 16 miles remain to be laid. A substantial bridge is in process of construction over White River. The whole line will be finished early in the year 1871. On the Little Rock, Pine Bluff, and New Orleans road work was begun in January, and at the close of the year 55 miles had been graded,

bridged, and furnished with cross-ties, and 16 miles of track were laid. Six hundred men are employed on the line, and it was promised that it would be open for travel from New Orleans to Pine Bluff in March, 1871. About 50 miles of the Mississippi, Ouachita, and Red River Railroad, commencing at the Mississippi, had been graded and bridged at the end of the year, and about 20 miles of track laid. It will probably be completed to Camden in June, 1871. Besides these, there are numerous other schemes on foot, with greater or less probability of success. The construction of a bridge across the Arkansas River at the city of Little Rock was authorized in July last, and a company has been incorporated to accomplish the work. The whole number of miles of levee work completed upon the rivers of the State is 53, and 167 miles are in course of construction, comprising levees, railroad beds answering the same purpose, cut-offs, and other works securing land from overflow.

Although there was no general election for State officers this year, considerable spirit was displayed in the canvass for the choice of members of Congress, and of the State Legislature. Strenuous efforts were made by the Democratic party to displace the Republicans from power, who, it was claimed, had never represented a majority of the actual residents of the State. The claims of the two parties in the State are fairly represented in the resolutions given below.

The following were adopted by the Democratic Convention of the First Congressional District:

We, the Democrats and Conservatives of the First Congressional District, in convention assembled, declare as our deliberate conviction and settled determination:

1. That we consign the dead issues of the past to oblivion, and assert our willingness to meet the living issues of the day in a spirit of fairness and justice.
2. That we recognize the fourteenth and fifteenth amendments to the Constitution of the United States, as the law of the land, and will encourage obedience to them as well as to all other laws and the constituted authorities.
3. That ours is a government of law and order, and all changes must be peaceably made in accordance with the constitution and laws of the land. That force and violence are unbecoming a free people, and should not be countenanced or encouraged.
4. That the rights of each citizen under the laws should be enforced by public opinion, and not by bayonets nor private violence.
5. That for our people as for ourselves we proclaim the first duty of the citizen to be obedience to the laws.
6. That we encourage to come among us all good men who will assist us in developing the resources of the country.
7. That we reiterate the time-honored principle that all public officials are accountable to the people for their stewardship; and not the people to their servants.

The following were adopted in a Republican Convention held in Calhoun County on the 30th of July:

Resolved. 1. That we accept the civil and political equality of all men before the law.

2. That we are in favor of enforcing the law to the letter.

3. That we are in favor of sustaining the State and Federal Governments against all enemies and opposers.

4. That we are in favor of a reduction of taxes to the lowest figure, consistent with an economical administration of State and county matters under the law.

5. That we are in favor of public free schools arranged upon a proper basis with a reduction of expenses.

6. That we are in favor of encouraging railroads and other public improvements, consistent with our abilities.

7. That we are in favor of using every effort in our power to do away with all old party prejudices, and to encourage good feeling, and that we invite all, without respect to old or former political opinions, to join us.

8. That we are in favor of, and heartily indorse, the present national banking system.

9. That we are in favor of removing the political disabilities of all persons, and a general amnesty.

These declarations are similar to those put forth by the two parties in other parts of the State.

The registration provided for by the law of 1868 was ordered in September, and the registrars appointed by the Governor. His instructions to them were simply that they were to refuse registration only to those who were disfranchised by the provisions of the constitution. Accompanying the instructions was an opinion by the Attorney-General concerning the effect of the United States "Enforcement Law." His conclusion was, that "the registrars and judges of election, in the discharge of their duties, ought to act as though no enforcement act had ever been passed, because our registration and election laws do not prohibit any of the classes enumerated in the fifteenth amendment from voting."

Some complaints were made that applicants for registration were rejected on the ground that they belonged to some secret political association; had voted against the constitution; or had not brought their old certificates of registration; but no specific cases were brought to the attention of the Governor, and he refused to take any action in the matter.

The election took place on the 8th of November, and resulted in considerable gains for the Democratic party. Democrats were chosen for Representatives to Congress from the First and Third Districts, and a Republican from the Second. The Legislature is thus classified: 18 Republicans and 8 Conservatives in the Senate; 45 Republicans, 29 Conservatives, and 9 Liberals, in the House. Two Senators and eight Representatives are colored. There were allegations of fraud in the election in certain portions of Pulaski County, and a petition was presented in the Supreme Court to compel the county clerk to make correct returns, and an order was issued accordingly. The petition declared that in certain precincts "armed mobs seized and usurped the places designated as voting-places, and prevented the judges regularly appointed from holding the election, and appointed others in their stead, who held a pretended election," the returns of which were

made by the county clerk. In his response the clerk denied any knowledge of the armed mob spoken of in the petition, but a peremptory mandamus was issued, requiring him to certify to the Secretary of State the votes actually cast. The Governor was accused of using his personal influence, and the power given him by the appointment of registrars, to affect the result of the election.

In his annual message to the Legislature of 1871, the Governor recommends several amendments to the constitution. One of these is intended to remove political disabilities imposed upon those who participated in the attempt to establish a Southern Confederacy.

The following is the Federal census of Arkansas by counties. The population of 1860 is compared with that of 1870, by which there appears an increase of 47,479:

COUNTIES.	1870.	1860.
Arkansas	8,268	8,644
Ashley	8,042	8,590
Benton	13,821	9,306

Yell	8,043	6,853
Total	433,179	435,470

ARMY OF THE UNITED STATES. The work of reducing the military force of the United States has gone steadily forward during the past year. On the 1st of July, 1869, the number of officers in the service was 2,746, increased by the appointment during the year of 6 post chaplains, and 58 graduates of West Point, making in all 2,810. On the 16th of November, 1870, the whole number was 2,481, a reduction of 329. An act of Congress was approved on the 15th of July, making additional provision for the reduction of the army. The extent of the list of retired officers was thereby increased, and authority was given to the President to discharge at his discretion, with one year's pay, such officers as might apply therefor, and to transfer officers of the line to the list of supernumeraries. The Secretary of War was directed to appoint a board for the examination of the cases of officers reported by the department commanders as unfit for duty; and it was also enacted that all supernumerary officers remaining after the 1st of January, 1871, should be honorably mustered out of the service, with one year's pay and allowances. The time was afterward extended to July 1, 1871. Some of the examinations provided for by this act have taken place, and preparations have been made for carrying all its provisions into effect. The whole number of officers is ultimately to be reduced to 2,277, and the number of enlisted men to 80,000. On the 30th of November, there were still 211 supernumerary officers. The strength of the army at the same date was as follows: 1st cavalry, 1,023; 2d cavalry, 921; 3d cavalry, 986; 4th cavalry, 854; 5th cavalry, 1,123; 6th cavalry, 733; 7th cavalry, 1,094; 8th cavalry, 1,171; 9th cavalry, 962; 10th cavalry, 1,025; 1st artillery, 780; 2d, 944; 3d, 813; 4th, 801; 5th, 867; 1st infantry, 604; 2d, 718; 3d, 746; 4th, 600; 5th, 812; 6th, 664; 7th, 739; 8th, 558; 9th, 567; 10th, 828; 11th, 681; 12th, 831; 13th, 504; 14th, 657; 15th, 845; 16th, 665; 17th, 898; 18th, 472; 19th, 548; 20th, 810; 21st, 483; 22d, 778; 23d, 665; 24th, 431; 25th, 482; engineer battalion, 560; permanent and recruiting parties and recruits not available for assignment, 1,010; general service on duty in Bureaus of Department, 876; Ordnance Department, 706; West Point detachment, 261; signal corps, 82; hospital stewards, 333; ordnance sergeants, 121; available recruits at depots, 743; recruits sent from Fort Leavenworth to battalions of artillery, September 30 and October 7, 1870, 95. Total officers and enlisted men in the army, 34,870.

Recruiting for every arm of the service has been carried on throughout the year. Many of the rendezvous were closed in February, 1870, owing to the nearly exhausted state of the recruiting fund. Congress, however, having made a special appropriation of \$50,000 to defray expenses until the end of the fiscal year, recruiting was resumed under instructions issued on April 30th. By the 1st of July,

1871, the army is to be brought down to the legal standard of 30,000 enlisted men, as prescribed in the act of July 15, 1870, and in the mean time recruiting is to be continued only on a scale rendered necessary by casualties.

By an order issued in April, important changes were made in the military departments, and several of the commanders were transferred from one department or division to another. The Department of Alaska was broken up and added to the Department of Columbia, which includes the State of Oregon and the Territories of Washington and Idaho, with its headquarters at Portland, Oregon. The Department of Virginia was broken up and added to the Department of the East, which includes the New-England States, New York, New Jersey, Pennsylvania, Delaware, Maryland, and District of Columbia, with its headquarters at New-York City. It is commanded by Major-General McDowell. The Department of the Cumberland was broken up. This department consisted of the States of Kentucky, Tennessee, West Virginia, and the post of Jeffersonville, Ind. They are now all added to the Department of the South, which also includes the States of North and South Carolina, Georgia, Alabama, and Florida, with its headquarters at Atlanta, Ga. The Department is under command of Brigadier-General Terry. Major-General Schofield, who was previously in command of the Department of the Missouri, was transferred to the command of the Division of the Pacific, vice Major-General Thomas, deceased, with his headquarters at San Francisco. Brigadier-General John Pope, previously in command of the Department of the Lakes, was transferred to the command of the Department of the Missouri. Brigadier-General Philip St. George Cooke, previously in command of the Department of the Columbia, was ordered to the command of the Department of the Lakes. Brigadier-General Canby, previously in command of the Department of Virginia, was transferred to the command of the Department of Columbia, in place of General Cooke. Major-General Meade remained in Philadelphia, General Halleck at Louisville, and Lieutenant-General Sheridan in command of the Division of the Missouri.

The act of Congress of July 15th prescribed a new system of regulations for the army, but its preparation was not completed by the War Department at the close of the year. It will probably be submitted to Congress at the present session (1871), and, if approved, go into operation at once.

During the year 58 cadets of the Military Academy have graduated and been appointed second lieutenants in the army; 17 have been discharged for marked deficiency in conduct or studies; 6 have resigned; 1 has deserted, and 4 have died. New cadets to the number of 65 have been admitted, and the corps at present numbers 228 members, divided, for

purposes of study and scientific instruction, into four classes, and organized, for military instruction, duty, and discipline, into a battalion officered from among themselves. The reputation of the school was never better than at present, and it is sending out about 50 officers each year, well trained and disciplined, and usually equal to the duties which they are called upon to perform after graduating.

The appropriations of money for the military service of the country for the fiscal year ending June 30, 1870, amounted to \$37,538,852.08; those for the year ending June 30, 1871, were \$30,249,148.97. The expenses for the latter year, however, amounted to \$32,902,349.97, or \$4,686,508.11 less than for the preceding twelve months. The estimates on which the appropriations for the year 1871-'72 are to be based require \$29,883,998.

But little progress has been made by the railway companies in settling the debts contracted by them at the close of the war by the purchase of the material of the military railroads. The total debt remaining due and unpaid on June 30, 1870, was \$6,912,106.97, principally owing from Southwestern companies. Their payments during the year amounted to the sum of \$365,820.45, but owing to the amount of interest the entire reduction was only \$58,128.04. Action by Congress for their relief has been sought by some of the roads, while suits have in some cases been instituted against those defaulting.

Since the commencement of the present fiscal year (1870-'71) there has been realized, from sales of surplus arms and ordnance to citizens of the United States, the sum of \$5,600,000. More than 1,840,000 stands of arms of obsolete pattern, and unfit for issue, have been sold since the close of the war, and it is the intention of the Government to continue the sales as opportunity offers.

The military property of the United States at Harper's Ferry was sold in November and December, 1869, in accordance with the terms prescribed by law. The Secretary of War, in his last report, recommended that Rome Arsenal, New York, Champlain Arsenal, Vermont, Mount Vernon Arsenal, Alabama, Apalachicola Arsenal, Florida, and North Carolina Arsenal, North Carolina, be sold, and that the captured lands in Shreveport, Louisiana, and Marshal and Jefferson, Texas, and in Marion and Davis Counties, Texas, be also disposed of. There are many other arsenals throughout the country, which, in the opinion of the Secretary, should be sold, and the proceeds used, if necessary, for the erection of a principal arsenal for the Atlantic coast. Rock Island Arsenal, Illinois, has been established as the principal arsenal for the valley of the Mississippi. An arsenal of like character in the East, he thinks, could be erected from the proceeds of the sales of useless arsenals, without any appropriation of funds from the public Treasury.

Various surveys for military defences and internal improvements have been carried on during the year under the direction of the War Department, but no reports of completed work have been submitted. River and harbor surveys have progressed satisfactorily, and operations on the lakes have been carried on throughout the year. These will furnish material for the construction of charts and maps of great value in a commercial as well as a military point of view. Among the internal improvements under consideration or in progress, are a bridge over the Willamette River at Portland, Oregon, a bridge across the Niagara River, from Buffalo to Canada, a bridge across the Arkansas River at Little Rock, the construction of a canal from Green Bay, Wisconsin, to the Mississippi River, the improvement of navigation from Lake Michigan to the Mississippi, by way of the Wisconsin and Fox Rivers, and various other works for completing and improving water communications in different parts of the country. The labor of the War Department in connection with these consists mainly in making surveys and examinations, and submitting reports to Congress.

Among the new tasks imposed upon the army, in these times of peace, by the last Congress, was that of observing the weather at different points in the country, and making reports by telegraph "for the benefit of commerce." (*See METEOROLOGY.*)

The only active military operations in which the army has been employed during the year have consisted of a few attempts to repress or punish the depredations and outrages of the Indians on some portions of the Western border. A band of the Blackfeet tribe, known as the Piegiens, roaming about in the Territory of Montana, in the fall of 1869, were guilty of many lawless attacks upon the property of the white settlers, and an appeal was made to the military commander for protection. General Sheridan sent a detachment under Brevet Colonel E. M. Baker, to punish the marauders. They came up with the Indian camp on the Marias River, on the 28d of January, and, without parley, a furious attack was made upon it, killing 173 persons, many of whom, it has been alleged, were women and children. The following is General Sheridan's report of this affair:

General Orders, No. 1.

HEADQUARTERS MILITARY DIVISION OF THE MISSOURI,
CHICAGO, March 12, 1870.

The Lieutenant-General commanding this military division takes great pleasure in announcing to the command the complete success of the 2d cavalry and 18th infantry, under command of Brevet Colonel Baker, of the 2d cavalry, against a band of Piegan Indians, whose proximity to the British line has furnished them an easy and safe protection against attack, and who have hitherto murdered and stolen with comparative impunity, in defiance and contempt of the authority of the Government. After having been repeatedly warned, they have at last received a designed and well-merited blow.

In the middle of winter, the thermometer below zero, when experience had led them to believe they could not be attacked, the blow fell; one hundred and seventy-three Indians were killed, three hundred horses captured, and the village and property of the band totally destroyed. The Lieutenant-General cannot commend too highly the spirit and conduct of the troops and their commander under the difficulties and hardships they experienced in the inclemency of the weather, and, as one of the results of this severe, but necessary and well-merited punishment of these Indians, he congratulates the citizens of Montana upon the reasonable prospect of future security for their property and lives.

By command of Lieutenant-General SHERIDAN.

GEORGE L. HARTSUFF,

Assistant Adjutant-General.

The conduct of General Sheridan and Colonel Baker was severely criticised in some quarters, and the attack on the Piegans was characterized as a cold-blooded and indiscriminate slaughter of the guilty and the innocent. General Sheridan saw fit to take notice of these accusations in an explanatory letter written to General Sherman on the 18th of March, in which he said: "We cannot avoid being abused by one side or the other. If we allow the defenceless people of the frontier to be scalped and ravished, we are burnt in effigy, and execrated as soulless monsters, insensible to the sufferings of humanity. If the Indian is punished to give security to these people, we are the same soulless monsters from the other side. This is a bad predicament to be in, but, as I have said, I have made my choice, and am going to stand by the people whom the Government has placed me here to protect. The reservation is the last ditch of the wild Indian, but, to get him there, he must be forced on by the troops. Those who think he can be induced to go there by other means are mistaken. When on the reservation, he will have to be kept there by the presence of the troops, and thus become tangible for the good work of civilization, and he can only be protected in his rights while there by the troops keeping off the emigrants who encroach on his land."

General Sherman made a reply, in which he approved of what had been done, and expressed his disbelief of the stories which had been circulated about the "Piegan massacre." His words were: "It is, of course, to be supposed that some of our people prefer to believe the story of the Piegan massacre, as trumped up by interested parties at Benton, more than a hundred miles off, rather than the official account of Colonel Baker, who was on the spot, and is the responsible party. I prefer to believe that the majority of the killed at Mountain Chief's camp were warriors; that the firing ceased the moment resistance was at an end; that quarter was given to all who asked for it, and that a hundred women and children were allowed to go free to join the other bands of the same tribe known to be camped near by; rather than the absurd report that there were only thirteen warriors killed, and that all the rest were women and children, more or less

afflicted with small-pox. The Indians of the reservations are exclusively under the protection of the Indian Bureau, but the Bureau officers had officially notified you of their inability to restrain those very Piegans, and had called on you to punish them for their repeated and increasing robberies and murders, and you had as early as last October laid down a plan for a winter surprise and attack, which plan was immediately sent to the Indian Bureau, eliciting no remonstrances, so that there is no question at all of responsibility save and except only as to whether Colonel Baker wantonly and cruelly killed women and children unsuspecting, and this I never believed."

During the spring a general Indian war along the border was apprehended. The Sioux in Wyoming and Dakota Territories manifested a hostile disposition on account of their dissatisfaction at the encroachments made on their hunting-grounds, which they believed had been guaranteed free from the intrusion of white men by treaty. The Utes of Colorado and New Mexico also refused to go upon the reservations set apart for them, and loudly expressed their discontent at the violation of what they understood to be the provisions of past treaties. Nothing more occurred, however, than a few isolated attacks upon frontier settlements or surveying parties.

Two circumstances have tended materially to bring about a better understanding between the authorities of the Government and the Indian tribes. In the first place, the visit to Washington of two deputations of powerful chiefs, one of them headed by Red Cloud, the leader of all the Sioux, and a patient hearing of their grievances, have tended in some measure to allay their discontent, and since their return to the plains they seem to have labored faithfully for the preservation of peaceful relations with the Government. The other favorable circumstance is found in the humane policy of the President, who has appointed commissioners to visit the Indians, from the Society of Friends, and called upon the different religious denominations of the country to send some of their best men among the savages as missionaries, to induce them to live on terms of peace with the whites, and to adopt a mode of life more in accordance with the ways of civilized society. These propositions have been acceded to with alacrity, and nearly all the reports thus far received have been of the most encouraging kind. The idea that the Indian is incapable of civilization and cannot be dealt with according to the ordinary principles of justice and fairness which prevail among other men is fast becoming obsolete, and it is hoped that an era of kind treatment and wise policy in the management of these wards of the nation is now to be inaugurated.

The National Asylum for Disabled Soldiers has been in successful operation during the year. The number of inmates on the 1st of December was as follows:

Disabled soldiers and sailors supported or cared for by the Board of Managers during the year at Central Asylum, near Dayton, Ohio.....		2,101
At Eastern Branch, near Augusta, Maine.....		719
At Northwestern Branch, near Milwaukee, Wis.....		798
At Philadelphia Soldiers' Home, Philadelphia, Pa.....		451
Out-door relief.....		135
Total.....		4,194
Whole number supported or aided during the year ending November 1, 1899.....		3,808
Increase over last year.....		386

So far as reported, the disabled soldiers so supported in the general asylum come from the several States as follows: Maine, 72; New Hampshire, 51; Vermont, 44; Massachusetts, 186; Connecticut, 44; Rhode Island, 53; New York, 887; Pennsylvania, 729; New Jersey, 96; Delaware, 44; Maryland, 40; District of Columbia, 84; Ohio, 559; Indiana, 317; Illinois, 269; Wisconsin, 63; Michigan, 148; Iowa, 33; Minnesota, 30; Missouri, 43; Kansas, 86; California, 5; West Virginia, 8; Kentucky, 20; Louisiana, 5; Texas, 6; and Tennessee, 18.

Of those cared for at the regular asylums, 59 were under the age of twenty; 1,502 between the ages of twenty and thirty; 1,651 between the ages of thirty and fifty, and 406 over the age of fifty. Of the whole, 1,065 were married, with wives or minor children still living, and 2,558 unmarried; 1,455 were native-born, and 2,168 of foreign birth; 157 belonged to the regular army, 87 to the navy, and 8,418 to the volunteer service.

All of these are either partially or totally incapacitated for self-support, by injuries or diseases entailed upon them by active service in the late war. So far as reported, their condition is as follows: 8 lost both arms; 5 both legs; 2, each an arm and a leg; 809, each an arm; 888, each one leg; and 1,245 were disabled by other wounds received in the service; 118 were blind, the most of them totally; and 48 insane, made so in most cases by the cruelties to which they were subjected in rebel prisons. The remainder were disabled by sickness contracted in the service, as shown by the number treated in the hospital, which during the year was 1,667, and for the diseases following: Consumption, 217; rheumatism (acute and chronic), 182; diarrhoea and dysentery, 126; paralysis, 71; ulcers and old gunshot-wounds, 165; chronic bronchitis, 57; asthma, 24; epilepsy, 16; ophthalmia and other diseases of the eye, 28; disease of the heart, 85; disease of the ear, 13; dyspepsia, etc., 83; miasmatic diseases, 67; hernia, 27; chronic inflammation of the liver, 13; diseases of the urinary and genital organs, 83; diseases of the bones and joints, 22; other chronic diseases, 156; other acute diseases, 161, etc.

Those who are able to do any kind of work are employed in and about the asylums, and receive compensation, varying, according to their efficiency as laborers, from \$5 to \$25 per month. During the year there were so employed at the Central Asylum 866 inmates, who received \$32,617.19; Eastern Branch, 200

inmates, who received \$22,728.29; Northwestern Branch, 97 inmates, who received \$11,195.01; being a total of 663 disabled soldiers so employed during the year, who received from the asylum the sum of \$66,535.49.

Workshops have been established at each asylum, and the trades carried on are shoe-making, cigar-making, plumbing, gas-fitting, printing, book-binding, cabinet-making, basket and broom making, painting, trimming and knitting with machines, wagon-making, blacksmithing, and harness-making.

Farms and gardens are also cultivated, and there were realized from these sources during the year the following sums:

At Central the sum of.....	\$9,728 70
At Eastern the sum of.....	2,148 60
At Northwestern the sum of.....	10,430 08

Making a total of..... \$22,307 38

Each asylum has its library and reading-room, which are constantly used by the inmates with much zeal. The libraries are now as follows: Central, 3,264 volumes—number taken out and read during the year, 13,853; Eastern, 2,138 volumes—number taken out and read during the year, 5,725; Northwestern, 1,500 volumes—number taken out and read during the year, 4,990; making a total number of volumes of 6,902, and a total number of books taken out and read during the year of 24,568.

The reading-rooms are regularly supplied with the following newspapers and periodicals: Central, 30 dailies, 68 weeklies, and 80 periodicals; Eastern, 29 dailies, 149 weeklies, and 22 periodicals; Northwestern, 10 dailies, 48 weeklies, and 11 periodicals.

The books are mostly donated by friends of the institution, and the periodicals are generally supplied by publishers. Schools are also kept, where the more practical branches of education are taught, the instruction being, so far as possible, to fit for self-support such as are not totally disabled. The attendance during the year has been as follows: Scholars—Central, 272; Eastern, 50; Northwestern, 76; total, 398.

Of the whole number aided during the year, 142 died—14 while absent on furlough, and 80 (being more than one-half of the whole) of consumption; 891, having recovered health or been prepared in schools, workshops, or otherwise, to support themselves, were honorably discharged; 68, for repeated violations of the rules, have been dishonorably discharged.

ASHMUN, GEORGE, an American lawyer and political leader, born in Blandford, Mass., December 1804; died in Springfield, Mass., July 17, 1870. He graduated from Yale College in the class of 1823, and entered the legal profession, at Springfield, in 1828. While he rapidly attained a high position in his profession, from the wide range of his general attainments, as well as his thorough mastery of legal science, and his extraordinary tact and adroitness in the management of his cases, he early took an active interest in political affairs.

He was elected a member of the Massachusetts House of Representatives in 1838, 1835, 1836, and 1841, and was a State Senator in 1838 and 1839. In 1845 he was elected to the national Congress, and reelected for the two following terms, occupying his seat till 1851. Few members of the House have ever equalled him in valuable service to the nation. Though possessing fine oratorical powers, he was, in Congress, rather a debater than an orator. His knowledge of human nature, adroitness in meeting unexpected circumstances, and in dealing with the prejudices and passions of political enemies, rendered him a valuable man to the Whig party upon the floor of the House, and he was frequently put forward by his friends to manage a difficult case, or confront a clamorous opponent. Mr. Ashmun was a warm personal friend and ardent admirer of Daniel Webster. It is thought by many that this intimacy and admiration tended to interrupt his advancement in public life; though he did not follow Mr. Webster in his abandonment of the "Wilmot Proviso," and was, in fact, surprised and disappointed at the position assumed by the great statesman in his famous "Seventh of March Compromise Speech," Mr. Ashmun still defended Webster in the ensuing quarrels. His replies to Charles J. Ingersoll, of Pennsylvania, and Charles Allen, of Massachusetts, when they assailed Webster with personal and political bitterness, were among the strongest efforts of his career in Congress. He could not sustain, however, the position he had assumed, and retired from official political life. When he went to Chicago in 1860, he was heartily welcomed by the representatives of the new Republican party, and was elected chairman of the convention without much controversy. His fine manner and personal presence commanded order throughout the exciting proceedings. He was heartily a patriot, and his wonderful magnetic power over men was exerted, whenever occasion required, in his country's cause. A notable instance of this occurred in April, 1861, just after the surrender of Fort Sumter, when, in a conversation of extraordinary tact and earnestness, he convinced Senator Douglas, of Illinois, by his eloquent appeals and his conclusive arguments, that it was his duty to bring his great abilities and his extensive influence to the support of the Administration and the Union. The great Illinois Senator, never greater than then, was won by his irresistible magnetism, and rose up superior to partisanship, superior to disappointment and to rivalry, and took his stand with the country. "Now," said Mr. Ashmun, although it was very late in the night, "let us go up to the White House and talk with Mr. Lincoln. I want you to say to him what you have said to me, and then I want the results of this night's deliberations to be telegraphed to the country." That interview at the White House between these three men—Lincoln, Douglas, and Ashmun—was one of the most important events of that critical

time. Then and there, Mr. Douglas gave in, most eloquently and vehemently, his adhesion to the Administration and the country. Mr. Ashmun himself briefly epitomized the story, and it went by telegraph that night all over the country, to electrify and encourage every one on the morrow. Mr. Ashmun retired from public life soon after this event, and, though his pen and voice were always at his country's service in every time of danger, he mingled in public affairs only on extraordinary occasions. His health has been precarious for some years. Few men possessed so wide a range of general knowledge, or manners so felicitous in its use. He was at home in every department of physical science, and a complete connoisseur in all art topics; yet there was nothing assuming or pedantic in his manner of communicating his knowledge. He charmed alike the simplest and the most highly-cultivated intellects.

ASIA. The government of Russia, during the year 1870, was more intent upon consolidating and organizing than upon enlarging its conquests in Central Asia. A considerable portion of what was formerly Independent Tartary has now been fully reduced to the condition of a Russian province.

The hopes of the establishment of closer and more friendly relations between China and the civilized countries of Europe and America were sadly disappointed by the death of Mr. Burlingame. The Chinese Government did not find one capable of carrying forward his work. On the contrary, the greatest excesses were committed in several cities of China against foreigners, and, in particular, against the Christian missionaries and institutions, and it required the most earnest remonstrances on the part of the European Governments, especially those of France and Great Britain, to obtain redress for the outrages committed.

Japan, on the other hand, is making steady progress in civilization, and does not hesitate to adopt important reforms. The year 1870 is remarkable for the opening of several new schools, for the laying of railroads, and the appointment of ambassadors to the courts of Europe.

While Independent Tartary is becoming more and more dependent upon Russia, Chinese Toorkistan and Soongaria, which for many years have been in a state of revolt against the Chinese Government, are consolidating their independence. As early as July 13, 1869, the official gazette of Peking admitted the loss of Toorkistan. Mohammed Jakub Khan, Khushbegi, who bears the title Atalik Ghasi (Protector of the Combatants for the Crescent), has become the ruler of Cashgar and Yarkand, and subsequently conquered Khotan, and extended his power so far northward that Jli and Turumtse have become tributary to him. Thus Thian-shan-pelu, and the inhabited parts of Thian-shan-nanlu, the so-called Alty-Shehr, are lost to China and constitute an independent

khanate, the population of which is estimated by Dieterici at about one million inhabitants.

The Government of Great Britain has added to the British possessions the Nicobar Islands. In 1869 three islands of the chief group, Nangkowri, Karmorta, and Trincutt, were occupied, and all the islands placed under the commissioner of the Andaman Islands. According to

the reports of Austrian scholars, accompanying the Novara Expedition, the Nicobar Islands have an area of 725 square miles, and about 5,000 inhabitants.

The area and population of the states, divisions, and subdivisions of Asia, were in 1870 (according to Behm, *Geographische Jahrbuch*, vol. iii., Gotha, 1870) as follows, the indented countries being subdivisions:

	Square Miles.	Square Miles.	Inhabitants.	Inhabitants.	Inhabitants to a sq. mile.
Russian Territory.....	5,971,638	8,389,560	1.49

ASTRONOMICAL PHENOMENA AND PROGRESS. *Temperature and Physical Constitution of the Sun.*—Professor F. Zollner communicated to the Royal Saxon Society in June an elaborate paper in which he sums up his own and others' late researches into these problems as follows: The eruptive protuberances are explained on the supposition that they break forth from a layer of separation dividing the space from which these hydrogen-flames shoot up from the space into which they empty themselves. Respecting the physical constitution of this layer, the further assumption is necessary that it is in some other state than gaseous. It may be either solid or liquid. In consequence of the high temperature, the solid state is excluded, and the existence of an incandescent liquid is therefore conjectured. Concerning the mass of hydrogen enclosed by this liquid layer two suppositions appear at first sight possible:

1. The whole interior of the sun is filled with glowing hydrogen—a great bubble of that gas surrounded by an incandescent atmosphere.

2. The masses of hydrogen thrown out by the volcanic outbursts which cause the phenomena called protuberances are local aggregations contained in hollow spaces formed near the surface of an incandescent liquid

mass, and then burst through their outer shell where the increased pressure of the material in the interior reaches a certain point.

According to the first assumption, a state of stable equilibrium will only occur when the specific gravity of the liquid-dividing layer is smaller than that of the gaseous layer which lies immediately beneath it. As, however, the density of a gaseous globe, whose particles obey the laws of Newton and Mariotte, increases from the surface toward the centre, the specific gravity of the layer of division must necessarily be smaller than that of the mean specific gravity of the sun. If we assume that the highest limit of specific gravity of this layer is the mean specific gravity of the sun, we shall have to assume that all the deeper-lying layers, and therefore the still deeper-lying gaseous layers, have the same temperature. But the interior of the sun would consist, not of a gas, but of an incompressible liquid, which is the second supposition.

Professor Zollner estimates the internal temperature of the sun to be 68,400° C. at a depth of only 27" under the visible surface of the luminary, or at about $\frac{1}{4}$ of its visible semi-diameter. The probable minimum value of the temperature of the chromosphere, he puts at 27,700° C. Assuming the atmospheric press-

ure at the base of the chromosphere to be 0.180mm. (about seven inches of the mercurial barometer), he finds the pressure at the level of the nuclei of the spots to be about 184,000 atmospheres, and the pressure in the inner region before named to be not less than 4,070,000 atmospheres.

Sun-spots and Magnetic Storms.—A great magnetic disturbance was recorded at Kew Observatory, January 3d, which lasted for sixteen or seventeen hours, and during its continuance an aurora was visible. A smaller disturbance began January 8th, also accompanied by an aurora. During the early part of the month the extent of spots on the sun was larger than usual, as indicated by the photographic registration, as follows:

January 1	.. 6 groups, 2 of them rather large.
" 6	.. 5 " 2 rather large.
" 10	.. 5 " 2 large.
" 11	.. 6 " 1 large.
" 12	.. 5 " 1 very large, another large.
" 13	.. 5 " 1 large.
" 14	.. 4 " 1 large.
" 21	.. 5 " 1 very large, another large.
" 23	.. 4 " 1 large.

February 1st a very considerable magnetic disturbance was remarked, lasting about nine hours. An aurora occurred at the same time, and telegraphic wires were affected by earth-currents. February 11th another storm took place, continuing with more or less intensity for thirty hours, and an aurora appeared again. The following is the record of sun-spots for February:

February 5	.. 4 small groups, 2 large ones.
" 6	.. 5 " 1 rather large, 1 very large.
" 8	.. 5 " 2 large, 1 very large.
" 10	.. 3 " 4 large, 1 very large.
" 11	.. 4 " 2 very large.
" 15	.. 5 " 1 large, 2 very large.
" 20	.. 7 " 1 large.
" 21	.. 5 " 1 large.

Terrestrial Temperature and Solar Spots.—Mr. Cleveland Abbe, director of the Cincinnati Observatory, contributes to the *American Journal of Science* for November an interesting paper on the connection between sun-spots and terrestrial temperature. His conclusions are founded on an extended comparison of Wolf's tabular view of the relative frequency of solar spots during the past three centuries, with such meteorological tables as were accessible to the author. He also studied the series of observations made on the Hohenpeissenberg, extending from 1792 to 1850, with but five years omitted at intervals. Mr. Abbe finds that the comparisons indicate a decrease in the amount of heat received from the sun during the prevalence of spots—a result in harmony with the recent investigations into the nature of the solar photosphere. The mean of several years' observations, taken at the period of maximum and minimum frequency, makes this fact more strikingly apparent. Mr. Abbe adds: "It would be interesting to seek

for evidence of other temperature periods than that dependent on the eleven-year-spot period. There are, indeed, plain indications of such a period of about fifty or fifty-five years' duration—probably identical with Wolf's fifty-six year period—but our series of observations is not extended enough to justify any exact conclusion. If we acknowledge the probability of a connection between planetary configurations and solar spots, then we are at once led to make a direct connection between the former and the temperature variations. Such an investigation I have begun, and the indications are that positive results will be attained, and such as will demonstrate that the solar spots are but an imperfect index to the periodic changes in the solar radiation; these periodic changes being apparently more intimately and directly connected with the tides in the cool atmosphere surrounding the solar photosphere. The results of this investigation will be made known so soon as the recent observations on the Hohenpeissenberg can be incorporated into the work."

Relations between the Sun's Altitude and the Chemical Intensity of Total Daylight.—Messrs. Henry E. Roscoe and T. E. Thorpe laid before the British Royal Society in March the result of a long series of determinations of the chemical intensity of total daylight in a cloudless sky, made by them on the flat table-land southeast of Lisbon, Portugal, with the object of ascertaining the relation between the solar altitude and the chemical intensity. The method of measurement adopted was founded upon the exact estimation of the tint which standard sensitive-paper assumes when exposed for a given time to the action of daylight. The experiments were made as follows:

1. The chemical action of total daylight was observed in the ordinary manner. 2. The chemical action of the diffused daylight was then observed by throwing on to the exposed paper the shadow of a small blackened brass ball, placed at such a distance that its apparent diameter, seen from the position of the paper, was slightly larger than that of the sun's disk. 3. Observation No. 1 was repeated. 4. Observation No. 2 was repeated.

"The means of observations 1 and 3 and of 2 and 4 were then taken. The sun's altitude was determined by a sextant and artificial horizon, immediately before and immediately after the observations of chemical intensity, the altitude at the time of observation being ascertained by interpolation.

"It was first shown that an accidental variation in the position of the brass ball within limits of distance from the paper, varying from 140 millimetres to 230 millimetres, was without any appreciable effect on the results. One of the 134 sets of observations was made as nearly as possible every hour, and they thus naturally fall into seven groups, viz.:

"(1) Six hours from noon, (2) five hours from noon, (3) four hours from noon, (4) three

hours from noon, (5) two hours from noon, (6) one hour from noon, (7) noon.

"Each of the first six of these groups contains two separate sets of observations: (1) those made before noon, (2) those made after noon. It has already been pointed out, from experiments made at Kew, that the mean chemical intensity of total daylight for hours equidistant from noon is constant. The result of the present series of experiments proves that this conclusion holds good generally, and a table is given showing the close approximation of the numbers obtained at hours equidistant from noon.

"Curves are given showing the daily march of chemical intensity at Lisbon in August, compared with that at Kew for the preceding August, and at Pará for the preceding April. The value of the mean chemical intensity at Kew is represented by the number 94.5, that at Lisbon by 110, and that at Pará by 813.3, light of the intensity 1.0 acting for 24 hours being taken as 1,000.

"The following table gives the results of the observations arranged according to the sun's altitude:

No. of Observations.	Mean Altitude.	Chemical Intensity.		
		Sun.	Sky.	Total.
15	9 51	0.000	0.038	0.038
18	19 41	0.028	0.063	0.085
22	31 14	0.053	0.100	0.152
23	42 13	0.100	0.115	0.215
19	53 09	0.136	0.136	0.269
24	61 06	0.195	0.133	0.327
11	64 14	0.221	0.133	0.359

Curves are given showing the relation between the direct sunlight (column 3) and diffuse daylight (column 4) in terms of the altitude. The curve of direct sunlight cuts the base line at 10°, showing that the conclusion formerly arrived at by one of the authors is correct, and that at altitudes below 10° the direct sunlight is robbed of almost all its chemically active rays. The relation between the total chemical intensity and the solar altitude is shown to be represented graphically by a straight line for altitudes above 10°, the position of the experimentally-determined points lying closely on to the straight line.

"A similar relation has already been shown to exist (by a far less complete series of experiments than the present) for Kew, Heidelberg, and Pará; so that, although the chemical intensity for the same altitude at different places and at different times of the year varies according to the varying transparency of the atmosphere, yet the relation at the same place between altitude and intensity is always represented by a straight line. This variation in the direction of the straight line is due to the opalescence of the atmosphere; and the authors show that, for equal altitudes, the higher intensity is always found where the mean temperature of the air is greater, as in summer, when observations at the same place at differ-

ent seasons are compared, or as the equator is approached when the actions at different places are examined. The differences in the observed actions for equal altitudes, which may amount to more than 100 per cent. at different places, and to nearly as much at the same place at different times of the year, serve as exact measurements of the transparency of the atmosphere.

"The authors conclude by calling attention to the close agreement between the curve of daily intensity obtained by the above-mentioned method at Lisbon, and that calculated for Naples by a totally different method."

Spectrum of a Sun-spot.—April 9, 1870, Prof. C. A. Young, of Dartmouth College, investigated the spectrum of a large group of spots a little north and east of the sun's centre. He found the lithium, calcium, and titanium lines strongly marked, and the sodium lines clearly perceptible. The titanium lines were very well defined, a circumstance at which Prof. Young was surprised, as they are inconspicuous in the normal spectrum. The same remark applies to the calcium lines in the spot-spectrum. Many other lines, mostly faint, were affected to nearly the same degree, but the observer had not time to identify them. There was, at the same time, an exceedingly brilliant protuberance on the southwest limb of the sun (position angle 280°), near, but not over, a large spot which was just passing off. At the base of this prominence, which was shaped like a double ostrich-plume, the C line was intensely brilliant, so that the slit could be opened to its whole width in studying the form above described, but it was not, so far as he could see, in the least distorted. On the other hand, the F line, also very brilliant, was shattered all to pieces, so that at its base it was three or four times as wide as ordinary, and several portions of it were entirely detached from the rest.

Since the C line was not similarly affected, it is hardly possible to attribute this breaking up of F to cyclonic motions in the gas from which the light emanates, and it becomes very difficult to imagine a cause which can thus disturb a single line of the spectrum by itself. Prof. Young suggests that possibly this appearance may be the result of local absorptions acting upon a line greatly widened by increase of pressure or temperature.

The Kew Heliograph.—Mr. J. P. Sassiott, chairman of the committee of the Kew Observatory, has made a report of the work done at that institution during the past year. The heliograph in charge of Mr. Warren De La Rue continued to be operated in a satisfactory manner. In 237 days 351 pictures of the sun were taken. A paper embodying the positions and areas of the sun-groups observed at Kew during the years 1864, 1865, and 1866, as well as fortnightly values of the spotted solar area from 1832 to 1866, has been communicated to the Royal Society by Messrs. Warren De La Rue,

Stewart, and Loewy. A table exhibiting the number of sun-spots recorded at Kew during the year 1869, after the manner of Hofrath Schwabe, has been sent in to the Astronomical Society, and published in their monthly notices. M. Otto Struve, director of the Imperial Observatory at Pulkowa, visited England in the month of August last. He brought with him, for the Kew Observatory, some sun-pictures taken at Wilna with the photoheliograph, which was made some years ago, under the direction of Mr. De La Rue, by Mr. Dallmeyer. This instrument combines several important improvements on the original Kew model, the value of which is forcibly brought out in the superior definition of the Wilna sun-pictures. As, however, the series of the ten-yearly record at Kew was commenced with the instrument as originally constructed, it was not deemed desirable to alter it in any way until the series had been completed and reduced, and the corrections for optical distortion ascertained and applied. In the event of the sun-work being continued after 1872, it will be desirable to do so with a new and improved heliograph. M. Struve proposed to exchange the complete series of pictures obtained at Wilna for that made at Kew. He also stated that it is contemplated to erect a second heliograph at the Central Observatory at Pulkowa.

A Solar Phenomenon accounted for.—In a letter read before the Royal Astronomical Society, in March, Lieutenant Herschel gave a description of some singular object which he had seen traversing the sun's disk, October 17 and 18, 1869:

He was about to apply his spectroscope to the observation of a solar prominence when his attention was attracted to certain shadows traversing the disk of the sun, which became bright streaks when they had passed beyond it. At first he thought these appearances were due to sparks in the tube of the telescope, but the phenomenon lasted too long for this explanation to be available. He next thought that perhaps a system of meteors might be in transit, and prepared to subject the phenomenon to careful scrutiny. The equatorial was set in motion, the sun's disk being projected on a screen. The shadows were seen persistently traversing the solar disk, but at different velocities, the larger ones travelling most swiftly. There appeared to be two streams. He noticed that when the sun was in focus the objects were indistinct, and that they appeared very distinctly when he focussed on a distant cloud. At length, while he was attentively scrutinizing the phenomenon, he saw one of the objects come suddenly to a stand-still and then whisk off in a different direction; and then he perceived that the phenomenon he had been examining with such anxious care was not in reality an astronomical phenomenon at all, but consisted merely of a flight of locusts. He considered, however, that not only was the existence of so enormous a swarm of locusts as the duration of the stream indicated an interesting fact in itself, but that we might find in the occurrence the explanation of many statements which had been made respecting meteors supposed to have transited the sun, and also of some peculiarities noticed by astronomers in America during the total eclipse of last year. Mr. Stone said that it was important when appearances of this sort were noticed that the observer should examine, as Lieutenant Herschel had done, whether the objects seen

in transit required the same focus as the sun. This was the best way of determining whether the objects were terrestrial or not.

Photograph of a Solar Prominence.—Prof. C. A. Young, of Dartmouth College, thus records a successful attempt to procure a photograph of a solar prominence, at any time and without waiting for the favorable opportunity of a total eclipse. He writes to the *American Journal of Science*, under date of September 28, 1870:

"I have just succeeded, with the help of our skilful artist, Mr. H. O. Bly, in obtaining a photograph of one of the solar prominences, a copy of which I enclose. It was taken through the hydrogen line, near G, by opening the slit of the spectroscope and attaching a small camera to its eye-piece. As a picture of course it amounts to very little. It required an exposure of three minutes and a half, and the polar axis of the telescope being imperfectly adjusted, the clock-work failed to follow perfectly, so that no detail is visible, and the picture will not bear much magnifying. I am convinced, however, that by using a more sensitive collodion, and taking proper pains with the adjustment of the instrument, satisfactory photographs of these curious objects may be obtained.

"I may add that the spectroscope employed has the dispersive power of 18 prisms of flint, each with an angle of 55°."

Solar Prominences easily seen.—Mr. Ernest Carpmal, of Streatham Hill, England, has succeeded in obtaining good views of the solar prominences by the following simple instrumental agency: He fixed one of Mr. Brown's direct-vision spectroscopes (having seven prisms) on a board which also carried a two-inch object-glass belonging to a good field telescope, and mounted the instrument, thus arranged, on the back of an ordinary bedroom mirror, and directed it at the sun. The slit was set so as nicely to divide the D line, and a blue glass was generally interposed in front of the slit to sift the light. As the image of the sun traversed the slit at intervals, the flames appeared as bright prolongations of the F line extending beyond the sun's limb. It was also clearly seen at times that these prolongations were narrower than the F line, and were not in the centre of it, also that they were frequently detached from the sun's limb, and sometimes they were not straight: appearances depending, as is generally supposed, on the velocity and pressure of the gas in the flame. The flames were also readily seen in the C line. In observing the solar spectrum he has found colored glasses in front of the slit very useful to shut out as much as possible of the light from the parts of the spectrum not under observation. By using the spectroscope without its slit and collimating lens, and directing it toward the great nebula in Orion, it shows close together three bright images of the nebula exhibited on a continuous spectrum.

Pinkish Color of the Sun.—*Nature* received several communications during the year from correspondents, describing a pinkish color of the sun, which they had noticed. Mr. A. S. Herschel, who was favored with a sight of the phenomenon, at Cranbrook, England, May 23d, says:

The sun presented a round disk of a very unusual pinkish color, here and at Cranbrook (about five miles northeast from Hawkhurst), in Kent, between five and six o'clock p. m. on the afternoon of Monday, the 23d ult. It was so seen by myself at Cranbrook, in company with several others, who thought that the color was quite unusual, shining through a thick haze of apparently low cirrostratus, but which was perhaps rain-cloud, as the air at the time was light from the north, and cold, while the mist, or haze, seemed to be at no very great elevation above the ground, and considerably lower than those ordinary forms of cirrostratus in which halos and mock-suns are generally seen.

The color observed here was a pinkish buff, or such a mixture of pink and yellow as to suggest the abundance of more blue and violet, and the absence of more yellow light than in the orange and reddish tints, generally seen in the setting sun, so as to resemble the color of very pale blotting-paper, or a light flesh-color. While the disk was still clearly seen of this color, two or three sun-spots were visible upon it with the naked eye. These could no longer be distinguished at six o'clock, when the peculiar pinkish hue was also succeeded by the ordinary yellow of the sun's disk near the horizon, seen through a thick haze. On the same afternoon (of the 23d) the appearance of the sun's round disk through a thick cloud of haze in the sky was noticed, for a considerable time, as visible with rare and unusual distinctness at Tunbridge Wells, in Kent.

Another correspondent speaks of a similar appearance of the sun observed at Rohrback, on the Moselle, May 23d. The day had been warm, without wind. Soon after 2 p. m. the horizon became charged with mist, and rain threatened. About 3 o'clock, the sun lost its brilliancy, assumed a pale-yellow hue, and might have been taken for the moon but for its diameter. A mist then began to rise, and a north wind to blow, and at 4½ o'clock the sun became rose-colored, and soon after scarlet. In this case, as in that described by Mr. Herschel, the hazy state of the atmosphere was supposed to be one cause of the phenomenon.

Utilising the Sun's Heat for Motive Power. A Solar Engine.—Captain John Ericsson, the distinguished inventor of the calorific-engine, contributed during the year a series of remarkable original papers to the *London Engineering Journal*, descriptive of his long and thorough investigations into the dynamic value of the sun's heat for mechanical work, and of his method of utilizing it by means of a solar engine. He omits to give plans and a detailed account of the mechanism by which the sun's radiant heat is concentrated, in order to "prevent enterprising persons from procuring patents for modifications," experience having taught him the danger of early publications of that kind. He declares, however, that he does not intend to take out a patent for his invention, and purposes to devote the remainder

of his life to its perfection, and says that within a few years the entire engineering community of both hemispheres will be invited to take the matter in hand. The following are the more important parts of his statement of results and of expectations:

The several experiments that have been made show that the mechanism adopted for concentrating the sun's radiant heat abstracts, on an average, during nine hours a day, for all latitudes between the equator and 45 degrees, fully 3.5 units of heat per minute for each square foot of area presented perpendicularly to the sun's rays. A unit of heat being equivalent to 772 foot-pounds, it will be perceived that, theoretically, a dynamic energy of 2,702 foot-pounds is transmitted by the radiant heat, per minute, for each square foot; hence 270,200 foot-pounds for an area of ten feet square. If we divide this sum by the adopted standard of 88,000, we ascertain that one hundred square feet of surface exposed to the solar rays develop continuously 8.2 horse-power during nine hours a day, within the limits of latitude before mentioned. But engineers are well aware that the whole dynamic energy of heat cannot be utilized in practice by any engine or mechanical combination whatever, nor at all approached; hence I have assumed, in order not to overrate the capability of the new system, that a solar engine of one-horse power demands the concentration of solar heat from an area of ten feet square. On this basis I will now proceed to show that those regions of the earth which suffer from an excess of solar heat will ultimately derive benefits resulting from an unlimited command of motive power which will, to a great extent, compensate for evils hitherto supposed not to be counterbalanced by any good. Before entering on this task of estimating the results of utilizing sun-power, it will be well to scrutinize, as closely as we can, the mechanical devices by means of which we propose to avail ourselves of the fuel contained in that great store-house whence it may be obtained free of cost and transportation. The solar engine, we have seen, is composed of three distinct parts: the engine, the steam generator, and the mechanism by means of which the feeble intensity of the sun's rays is augmented to such a degree that the resulting temperature will exceed that of the lowest pressure of steam admissible in an efficient engine. As to the motor itself, it suffices to say that it is essentially a modern steam-engine utilizing, to the fullest extent, the mechanical energy of the steam generated by the concentrated solar rays. Regarding the steam generator, it will only be necessary to state that it is not exposed to the action of fire, clinkers, or soot, and therefore can only suffer from the slow action of ordinary oxidation. We have lastly to consider the efficiency of the mechanism by means of which the solar heat is concentrated and the temperature raised above that of the water in the steam generator. Regarding this mechanism—concentration apparatus it may appropriately be termed—it will be asked: Is it costly? Is it heavy and bulky so as to render transportation difficult? and finally the question will be put, Is it liable to derangement and expensive to keep in order? I will answer these questions in the same order in which they have been presented. The cost is moderate. The weight is small—indeed, lightness is the most notable peculiarity of the concentration apparatus. As to bulk, this apparatus is composed of small parts readily put together. Regarding durability, the fact need only be pointed out that certain metals, however thin, if kept dry, may be exposed to the sun's rays during an indefinite length of time without appreciable deterioration; hence, unlike the furnaces of steam-boilers, which soon become unserviceable, structures protected as the concentration apparatus is, by thin metallic plates, cannot be rendered unserviceable from the mere action of the sun's rays. Another question will be asked, whether the solar engine will

answer as well on a large as it does on a small scale! The following reply will effectually dispose of this pregnant query. It is not necessary, nor intended, to enlarge in future the size of the apparatus by means of which the solar intensity has been successfully concentrated, and the temperature sufficiently elevated to generate steam for the engines which have been built. The maximum size adopted has been adequate to utilize the radiant heat of a sunbeam of thirty-five square feet section. The employment of an increased number of such structures will therefore be resorted to when greater power is wanted, as we increase the number of hands when we desire to perform an additional amount of work. The motor itself, the steam cylinder and other parts, will obviously be proportioned as at present with reference to the pressure of steam employed and the work to be done.

Agreeably to our introductory remarks, it is not proposed, in the first instance, to apply solar engines in places where there is not steady sunshine. The isolated districts of the earth's surface suffering from an excess of solar heat being very numerous, our space only admits of a glance at the sunburnt continents. An examination of the extent of these will show that the field for the solar engine, even with the proposed restriction, is not very contracted. There is a rainless region extending from the north-west coast of Africa to Mongolia, 9,000 miles in length, and nearly 1,000 miles wide. Besides the Northern African deserts, this region includes the southern coast of the Mediterranean east of the Gulf of Cades, Upper Egypt, the eastern and part of the western coast of the Red Sea, part of Syria, the eastern part of the countries watered by the Euphrates and Tigris, Eastern Arabia, the greater part of Persia, the extreme western part of China, Thibet, and lastly, Mongolia. In the western hemisphere, Lower California, the table-land of Mexico and Guatemala, and the west coast of South America, for a distance of more than 2,000 miles, suffer from continuous intense radiant heat.

Computations of the solar energy wasted on the vast areas thus specified would present an amount of dynamic force almost beyond conception. Let us, therefore, merely estimate the mechanical force that would result from utilizing the solar heat on a strip of land, a single mile in width, along the rainless western coast of America; the southern coast of the Mediterranean before referred to; both sides of the alluvial plain of the Nile in Upper Egypt; both sides of the Euphrates and Tigris for a distance of 400 miles above the Persian Gulf; and, finally, a strip one mile wide along the rainless portions of the shores of the Red Sea, before pointed out. The aggregate length of these strips of land, selected on account of being accessible by water communication, far exceeds 8,000 miles. Adopting this length and a width of one mile as a basis for computation, it will be seen that the assumed narrow belt of the sunburnt continents covers 223,000 millions of square feet. Dividing this by the area necessary to produce 1-horse power, we learn that 22,809,000 solar engines, each of 100-horse power, could be kept in constant operation, nine hours a day, by utilizing only that heat which is now wasted on a very small fraction of the land extending along some of the water-fronts of the sunburnt regions of the earth.

It will be said that these extravagant figures are devoid of practical significance. Due consideration, however, cannot fail to convince us that the gradual exhaustion of the coal-fields will inevitably cause great changes in regard to international relations, in favor of those countries which are in possession of continuous sun-power. Upper Egypt, for instance, will, in the course of time, derive signal advantage, and attain a high political position, on account of her perpetual sunshine and the consequent command of unlimited motive force. The time will come when Europe must stop her mills for the want of coal. Upper Egypt, then, with her never ceasing sun-

power, will invite the European manufacturer to remove his machinery and erect his mills on the firm ground along the sides of the alluvial plain of the Nile, where sufficient power can be obtained to enable him to run more spindles than a hundred Manchesters.

(See also SUN, ECLIPSE OF.)

Heat from the Moon.—At the June meeting of the Royal Society the Earl of Rosse gave an account of more satisfactory experiments than those previously reported, to determine the amount of heat radiated from the moon. The three-foot reflector at Parsonstown was employed as on former occasions. Earl Rosse first ascertained the percentage of the moon's heat which passes through glass, and found the mean of nine observations, taken at various altitudes of the moon and distances from opposition, to be 11.88. Through the same glass, 86.8 percentage of the heat-rays of the sun were transmitted. It seems, therefore, to be clearly proved that there is no remarkable difference between the sun's and moon's heat in regard to their power of passing through glass. The experiment made during the previous season, to determine the ratio between the heating power of the moon and of the sun, was repeated with more care, and the value found, taking what appeared to be the most probable mean heating power of full moon, as determined on various nights, was: moon's total heat, 1; sun's total heat, 82,600.

The observations were examined with a view to ascertain how far the heating power of the moon's rays varies with her altitude. Owing to the interference of clouds, and the limited range of altitude within which the observations were made, the results were not given in detail, but Earl Rosse says that the heating power of the lunar rays appears to diminish with her altitude only about a third as fast as the intensity of the solar chemical rays, as ascertained by Roscoe and Thorpe. An attempt was made to ascertain, by comparing two measurements of the moon's light at different altitudes with two corresponding measurements of her heat, whether our atmosphere intercepts the heat-rays to a greater extent than the luminous rays. It was found that, while the light was diminished with the altitude in the proportion of about 8 to 1, the diminution of the heat was in the proportion of about 5 to 1. In consequence, however, of much of the moon's light and heat being intercepted by hazy clouds or condensed vapor, at the lower altitude, the experiment was inconclusive as to the effect of a transparent atmosphere on the dark rays of heat. The observations showed a general accordance between the variation of the moon's radiant heat with her phase, and the corresponding amount of her light, as deduced by calculation.

The Council of the Royal Society, at the Annual Meeting in February, after stating the results of Lord Rosse's earlier observations on Lunar Radiation (see ANNUAL CYCLOPEDIA for

1869) refer to other series of experiments, as follows:

Some later observations have been made upon the same subject in Paris, respectively by M. Baille, at the Ecole Polytechnique, and M. Marié-Davy at the Paris Observatory. The former employed a concave mirror of 39 centimetres aperture to condense the moon's rays upon his pile, and also made use of a Thomson's galvanometer. The one conclusion at which he arrived was, that the full moon, at Paris and in the summer months, gave as much heat to his pile as a radiating surface 6.5 centimetres square, maintained at boiling-water temperature and placed at a distance of 35 metres. M. Marié-Davy has published results of two series of measures secured during the lunations of October and November last. The first were made with a pile attached to a 9-inch equatorial refractor, the second with an 8-inch mirror; the object-glass in the former case having been found to intercept a large proportion of the heat-rays. M. Marié-Davy's measures confirm those of Lord Rosse. They show that the heating effect of the moon increases with the illumination of the visible disk. Between October 9, when the moon was four days old, and October 20, when it was full, the measured heat of the condensed beam of moonlight increased from $0^{\circ}.00017$ (centigrade) to $0^{\circ}.00287$. If this last number be divided by the ratio of the area of the concentrated image to the area of the object-glass, we have twelve-millionths of a centigrade degree as the direct heating power of the full moon at the earth's surface. This is the result given by the object-glass; that afforded by the mirror is about six times as great. It will be seen that M. Marié-Davy has converted his galvanometer indications into centigrade equivalents: how this conversion was effected, and how the constancy of the scale indications is secured, if it is secured, we are not informed. He confirms Lord Rosse's inference that the proportion of solar to lunar radiation is about as 80,000 to 1, and likewise concludes that the moon imparts to us no heat from an internal or cosmoical source. Further, he infers that the diffusive power of the lunar surface is considerable, at least equal to that of the least colored of terrestrial rocks: and he finds that the lunar heat, by reason of its large percentage of obscure rays, is far more impressionable by atmospheric humidity than that from the sun.

It will be remembered that Prof. Smyth, in his Tenerife experiments, determined the heating power of the full moon to be equal to one-third of that of a Price's candle at a distance of 14 feet 9 inches. M. Marié-Davy finds that such a candle at such a distance affects his pile to the extent of $0^{\circ}.00075$ centigrade, which he conceives to be the heating power of the moon upon the summit of Tenerife, upon the supposition that the heat emitted by the respective candle-flames was sensibly the same.

Apparent Changes in the Moon.—About the middle of the year, Mr. Birt, who has devoted much care to the observations of the moon, reported that the number of spots seen at that time on the floor of Plato was 35, 8 of which had been detected since September 27, 1869. Since then no less than 531 observations have been made. The degree of visibility of each spot is indicated in a table, regarding which Mr. Birt says that "the number of spots in which an increase of visibility has taken place is nearly equal to that in which a decrease has occurred, viz., 10 of the former and 11 of the latter. Spot No. 3, a craterlet, has manifested the greatest increase, and spot No. 19 the greatest decrease. The extent of variation of the separate spots is very irregular, and does not seem to point to the operation of any gen-

eral law. In one or two instances only have neighboring spots been similarly affected." He adds that "the observations of the twelve lunations ending in March, 1870, extend considerably the basis on which to form an intelligible explanation of the phenomena; it is, nevertheless, too narrow to hazard more than conjecture."

Mean Motion of the Moon.—In a paper read before the National Academy of Sciences, in April, Mr. Simon Newcomb discussed at some length the problem of the apparent inequalities of long period in the moon's mean motion, and stated that it was really no nearer such a solution as will agree with observation than when it was left by Laplace. The author remarks that we have reason to suspect that the motion of the crust of the earth is subject to inequalities of an irregular character, which in the present state of science can be detected only by observations of the moon. He says: "If we admit that the interior of the earth is a fluid, and also admit that general changes in the arrangement of this fluid are possible, we have all that is necessary to account for considerable changes in the rotation of the outer crust. That this fluid, admitting its existence, is not in a state of entire quiescence is rendered probable by the phenomena of volcanoes and earthquakes. If we suppose a large mass of it to move from the equatorial regions to a position nearer the axis, a mass from the latter position taking its place, the following effects will follow:

"1. A diminution in the angular velocity of the surface of the fluid, accompanied by a corresponding increase in the velocity of the axial portion. The velocity of the outer crust will then be gradually retarded by friction.

"2. The gradual transmission of the increased rotation of the central mass to the surface by friction and viscosity. The motion of the crust will then be gradually accelerated. The velocity of rotation finally attained will be greater or less than the original velocity, according as the radius of gyration of the fluid mass is diminished or increased by the change in the arrangement of the fluid.

"* * * This suspicion can be neither confirmed nor removed until we have more positive knowledge than we now have of the possible inequalities which may be produced in the mean motion of the moon by the action of gravitation.

"The operation of calculating these inequalities, though complicated and difficult, is certainly within the powers of analysis. When it is completely and thoroughly done, we may ascertain whether the result can be made to represent observations. If so, well; the length of the day is not variable, and the future positions of the moon can be safely predicted. If not, it will follow either that the motion of the moon is affected by other causes than the gravitation of the known bodies of the solar system, or the day is irregularly variable.

"By the end of the present century, if not sooner, we shall have an independent test of the latter hypothesis, in the agreement of the observed and theoretical times of the transits of Mercury and Venus. If the hypothesis is a true one, the irregularities may range over half a minute of time in the course of a century, and this quantity might be detected even by meridian observations of the planets in question."

The Lunar Eclipse of July 12th.—This phenomenon was carefully observed in many parts of England, and fully reported to the "Observing Astronomical Society." The following are some of the most interesting points noted. The Rev. Ralph Prowde, of Northallerton, Yorkshire, says: "I observed the eclipse of the moon on the 12th, but the only thing remarkable was the great contrast of shade between the darker and brighter penumbrae. I say penumbrae, for I suppose the real umbra of the earth's shadow falls within the moon's orbit. The darker interior cone of shadow obscured the edge of the moon and the object on its surface, as it passed over them, almost entirely, but its own edge did not seem to be nearly so regularly round as the lighter enveloping cone of shade." The Rev. J. J. Johnson, of Crediton, reports: "On the evening of the 12th I had a very favorable view of the lunar eclipse. The sky was clear at first, with a small amount of stratus near the horizon. I first caught sight of the moon at 8.41, but it was 8.49 before it got clear of the clouds. I paid particular attention to the degree of distinctness with which the eclipsed portion could be seen. When about four digits were covered, I just noticed the copper tint through the telescope. I fancy this would be a little sooner than in the last eclipse I observed (September, 1867), but in that of October 4, 1865, which was only of four digits, the copper tint was very decided in the telescope at the time of the greatest obscuration. When about six digits, or half the disk, were covered, the copper color could be clearly seen with the naked eye. I could not make out any particular parts of the moon's surface until 9.35, when I noticed the *Mare Tranquillitatis* and the *Mare Serenitatis* showed with beautiful distinctness through the earth's shadow in the telescope. A few minutes after the total was attained, I was struck with the obscurity of the eastern side of the moon being so much more than I had expected. At 9.55 at least half of its surface was as if blotted out, even when seen through the telescope, although I applied two different powers—70 and 150. Three of the seas at the western side were all I could make out. Possibly a thin coating of cirrus cloud, which covered all the sky about this time, might account in some measure for the invisibility of the moon. By 10.30 this had entirely cleared away, and the sky was everywhere covered with stars. The Milky Way very near the moon was about as distinct as it usually ap-

pears on a dark, clear night. At this period, being the middle of the eclipse, the upper portion of the moon was the invisible part, all those regions lying round the margin of the disk being alone to be seen, except at the vertex, where the margin itself was not discernible. At 11.23 the first streak of light was breaking forth at the eastern edge. At 11.45 the red color was nearly gone, and the eclipsed part appeared of a gray color. At 11.58 I noticed there was no trace of the Milky Way; at 12.24 the lunar circle was again complete." Mr. Oliver J. Lodge, of Hanley, reports that "the color of the moon during the totality was of a most peculiar copper hue, giving very little light indeed. But during the egress of the shadow it was almost as white and silvery as it usually is, although still under the penumbra." Mr. Edmund Neison, of London, says: "The color of the eclipsed disk was during the whole time a dull, yellowish olive-green, both in the telescope and out, but was never dark enough to prevent many of the chief markings and craters being seen. From 10.44, when the lunar disk was fairly above the fog banks, *Aristarchus* was quite distinct as a bright crater, and even before 11 *Grimaldi* was plainly discernible." At Bristol, Mr. William F. Denning observed the phenomenon, and remarks that even at the time of totality many of the most conspicuous objects on the disk were distinctly visible. The copper tint was also very evident. During a portion of the time the moon was overcast with clouds.

The Coming Transit of Venus.—Astronomers in different parts of the world continue to make suggestions to promote accuracy in the observations of the transit of Venus, which takes place in 1874. Mr. Simon Newcomb read a paper on this interesting subject before the National Academy of Sciences in April, in which he recommended two measures to be adopted for the more precise determination of the all-important points of ingress and egress. The first consists in having the observer occupy the entire time in making very careful measures of the cusps with a micrometer best adapted for this purpose. The second is to bring the observers at opposite stations together, both before and after the transit, and cause them to make observations on antipodal transits with the same instrument employed in observing the transit of Venus, in order to determine what corrections should be applied to the observations of one of them comparable with those of the other. Mr. Newcomb says:

It would be a comparatively simple operation to erect an artificial representation of the sun's disk at the distance of a few hundred yards, and to have an artificial planet moved over it by clock-work. The actual time of contact could be determined by electricity, and the relative positions of the planet and the disk by actual measurement. With this apparatus it would be easy to determine the personal errors to which each observer was liable, and these errors would approximately represent those of the observations of actual transit.

Still, it would be very unsafe to trust entirely to

any determination of ingress or egress. Understanding the uncertainty of such determinations, the German astronomers have proposed to trust to measures with a heliometer, made while the planet is crossing the disk. The use of a sufficient number of heliometers would be both difficult and expensive, and I think we have an entirely satisfactory substitute in photography. Indeed, Mr. De La Rue has proposed to determine the moment of internal contact by photography. But the result would be subject to the same uncertainty which affects optical observations—the photograph which first shows contact will not be that taken when the thread of light between Venus and the sun's disk was first completed, but the first taken after it became thick enough to affect the plate, and this thickness is more variable and uncertain than the thickness necessary to affect the eye. We know very well that a haziness of the sky which very slightly diminishes the apparent brilliancy of the sun will very materially cut off the actinic rays, and the photographic plate has not the power of adjustment which the eye has.

But, although we cannot determine contacts by photography, I conceive that we may thereby be able to measure the distance of the centres of Venus and the sun with great accuracy. Having a photograph of the sun with Venus on its disk, we can, with a suitable micrometer, fix the position of the centre of each body with great precision. We can then measure the distance of the centres in inches with corresponding precision. All we then want is the value in arc of an inch on the photograph-plate. This determination is not without difficulty. It will not do to trust the measured diameters of the images of the sun, because they are affected by irradiation, just as the optical image is. If the plates were nearly of the same size, and the ratio of the diameters of Venus and the sun the same in both plates, it would be safe to assume that they were equally affected by irradiation. But, should any difference show itself, it would not be safe to assume that the light of the sun encroached equally upon the dark ground of Venus and upon the sky, because it is so much fainter near the border.

If the photographic telescope were furnished with clock-work, it would be advisable to take several photographs of the Pleiades, both before and after the transit, to furnish an accurate standard of comparison free from the danger of systematic error. There is little doubt that, if the telescopes and operators practise together, either before or after the transit, data may be obtained for a satisfactory solution of the problem in question.

At the sitting of the Vienna Academy of Sciences on March 10th, Dr. Neumayer submitted a proposal for the preparatory arrangements for the observation of the transit. A map of the circumpolar regions shows that the best points in the southern hemisphere for these observations will be the region south of the Indian Ocean, near the circumpolar district. Dr. Oppolzer has established that the most favorable localities for observing the *immersion*, both as to parallax and altitude, can be connected by a curve passing by the great Gulf of Australia to the Macdonald Islands, and from these to a point situated in $36^{\circ} 52' S.$ latitude, $43^{\circ} 24' E.$ longitude. The points best adapted for observation of the *emersion* will also be found in a curve passing from the centre of the Indian Ocean to a point situated in $180^{\circ} E.$ longitude and $79^{\circ} S.$ latitude; and from there to another point, $64^{\circ} 55' S.$ latitude, and $244^{\circ} 39' E.$ longitude. The point of intersection of these two curves ($48^{\circ} 5' S.$ latitude,

$99^{\circ} 8' E.$ longitude) will evidently be the one most favorable for the observation of the transit in its totality. In this case, the factor of the parallax and of the altitude will be $0^{\circ}.67$, and $48^{\circ}.0$ for the immersion; and $0^{\circ}.47$ and $62^{\circ}.5$ for the emersion. The nearest station to this point will be the Macdonald Islands, situated nearly in $53^{\circ} S.$ latitude, and $12^{\circ} E.$ longitude (from Greenwich). M. Neumayer, who visited these islands in 1857, was struck with their relatively high temperature; and has ascertained, by a close examination of the tables of temperature published by the authority of the Dutch Government, that the current of Agulha must terminate near them. The summer and winter isotherms confirm these facts, and there can be no doubt that it is under the meridian of the islands of Macdonald and Kerguelen that the most favorable region must be sought for a route toward the South Pole, in the same manner as Sir James Ross followed, with the same object, a new current which set out from the shores of New Zealand. The map of the southern circumpolar regions, published by Petermann, furnishes very precise information for the equatorial limit of the floating ice, the curve showing two points of depression toward the pole; one under the meridian of Kerguelen's land, the other under that of New Zealand. It may, however, be said that, because floating icebergs have once or twice been found in a locality, these are not sufficient definitely to fix the relations of the floating ice, which depends especially on currents, and which secondary causes, such as winds, can draw into regions ordinarily free of ice. It is the frequency of the ice that must settle the limits in such cases. At the points which have been named, the limit of floating ice bends back upon itself as high as $60^{\circ} S.$ latitude; and this is an important fact for the determination of the warm currents setting from the north. The position of the limit of maximum density of sea-water, and the presence of spermaceti whales, which, as is well known, seek in preference warm waters, on the coasts of Termination Land, permit the supposition that the current in question continues toward the South Pole as far as that land and Kemp Island. Admiral Sir John Ross also saw spermaceti whales at the approach toward South Victoria; while Wilkes, Dumont d'Urville, and Ross, only met with few and isolated individuals in the intermediate seas. M. Neumayer thinks that it will be advisable to dispatch a small reconnoitring expedition without delay to these regions, and to establish a scientific station on the Macdonald Islands, the first object of which should be to determine the absolute longitude, to serve as a basis for Delisle's method. It would be occupied during the months of November, December, January, and February, with a series of meteorological observations, and with every thing relating to physical geography. He proposes that, for this purpose, the Academy

should make application to the Government for the fitting out of the expedition, the expense of which would amount to 35,000 florins (87,500 francs). This has been granted, and the expedition will sail equipped for physical and natural history observations.—*Nature*.

A New Comet.—Professor Winnecke, on the nights of the 29th and 30th of May, at Carlsruhe, discovered a new telescopic comet. Its position was as follows: M. T., at Carlsruhe, $14^{\circ}13'34''$. R. A., $0^{\circ}5'9.55''$. Decl. $+28^{\circ}52'18''$. Nogel found for the same comet at the Leipsic Observatory, M. T. at Leipsic, $18^{\circ}2'28.5''$. R. A., $0^{\circ}50'4.09''$. Decl. $+28^{\circ}58'17.4''$.

Dr. Peters, director of the Litchfield Astronomical Observatory, at Clinton, N. Y., writes under date of June 30th:

"The comet discovered by Professor Winnecke was observed here last night, now passing, with a southerly motion, through the constellation of Pisces. It is a bright object, and may be seen even in smaller telescopes. Approaching both sun and earth, it is still on

the increase, though remaining low above the eastern horizon in the morning hour. On the whole, globular in shape, there is a dilation or expansion on the side from the sun, which makes the form more like that of an egg. But most remarkable appears the internal structure of the comet. Without a distinct stellar centre, there is a concentration of light exactly as in certain nebulae, that have been found to consist of numberless small stars. The comet made upon my eye precisely the same impression as one of those nebulae, when on the point of resolvability—a sort of twinkling of countless bright dots. Its low altitude, however, at the break of day, forbade to use with advantage a higher power for separating the components. Since we know now the connection of comets with meteoric showers, the observation made seems interesting."

Asteroids.—Dr. O. H. F. Peters, of Hamilton College, Clinton, N. Y., discovered the 111th planet, August 14th. His first observation was as follows:

1870.	August 14.	h. m. s.			H. C. m. t.	A. R.	h. m. s.			Decl.	° ' "			10 comp.
	" 15.	12	38	81			21	25	20.21		—	18	10	
		9	5	40	"	"	21	24	32.88	—	18	12	29.6	5 "

The planet is of about $11\frac{1}{2}$ magnitude. It has received the name of Ate.

September 19th Dr. Peters discovered an-

other asteroid (planet, 112), his observations upon which are thus communicated to the *American Journal of Science*:

1870.	September 19.	Ham. Coll. m. t.			App. A. R.	App. Decl.		
		h.	m.	s.				
	20.	15	30	—	1 2 85	+10 16	—	(approx. by estimation).
	21.	14	57	23	1 1 51.54	+10 13	30.8	10 comp. W. 0 ^h 1079.
		10	48	22	1 1 12.24	+10 10	58.9	10 comp. Schj. 374.

It is of the 11th magnitude, and designated Iphigenia.

sected between the green and the yellow, and another in the blue. The spectrum accords with the green color of the planet.

The Period of Algol.—Mr. Penrose, of England, has lately observed the epochs when the star Algol has been at the minimum of brightness. He concludes that the period of 2.86727 degs., which has been assigned to the variation of this remarkable star, should be corrected to read 2.867284 degs. The first-named period was estimated from an epoch of the star for January 3, 1844, in connection with which Sir John Herschel remarked that a change of period was in progress, and that observed discrepancy may thus be accounted for.

The Star Eta Argus.—Spectroscopic observations upon this variable with the aid of the great Grubb reflector, at the Melbourne Observatory, show that a large part of its light is due to hydrogen flames.—This star, now scarcely visible to the naked eye, was of the first magnitude when studied by Sir John Herschel, and was then surrounded by light belonging to the great nebula in Argo. At present the space around it is dark. A scientific writer in the *London Daily News*, commenting on the discovery at Melbourne, remarks:

"Is it not conceivable that the brightness of the star may be intimately associated with the

The planet Lydia (No. 110), discovered by M. Borelly at the Marseilles Observatory on the 19th of April, had, at $10^{\circ}33'18''$ mean Marseilles time, the following position: Right ascension $12^{\circ}2'39.22''$; north declination $6^{\circ}50'38''.8$. Its horary motion has been determined as follows: In right ascension— $1''.77$, in declination $+2''.20$; its magnitude is between 12 and 13. M. Borelly had previously discovered two planets, bearing the numbers 91 and 99 in the system of asteroids revolving between Mars and Jupiter. These two planets had long been nameless, in consequence of the persistent refusal of M. Le Verrier to permit the astronomers under his jurisdiction to bestow any name upon them. The 91st has now received the name of Egina, the 99th that of Dike.

The planet which bears the number 109 in the series of asteroids, and which was discovered at Clinton by Dr. O. H. F. Peters, October 9, 1869, has received the name of Felicias.

Spectra of Uranus and Neptune.—Father Secchi, in the course of his spectroscopic observations on Uranus, has found absorption bands different from those met with in the solar atmosphere. In the spectrum of Neptune he discovers three principal bands; one is inter-

proximity of the nebulous matter, so that, when the doubtless systematic motions of that matter bring it again into the star's neighborhood, *Etā Argūs* will resume its ancient splendor? May it not be that the sun is affected in like manner, though to less extent, by the motions of those cometic and meteoric systems which circle around him? Some of these systems pass very near him, and many of them may be so related to the planetary motions as to be subject to periodic variations of orbital motion. Even others, such as the system corresponding to the November meteors, though now obviously not associated with the solar changes, may have their motions so changed as at some future epoch to generate solar spot-periods. Remembering how enormous must be the number of meteoric systems circling round the sun, little doubt can exist that meteors must fall upon his body in countless millions. Indeed, it has been thought not unworthy of credit, even by so exact a man of science as Professor Tyndall, that the whole of that supply of heat and light which the sun pours forth unremittingly to the worlds circling around him may be generated by the continual downfall of meteoric masses upon the solar surface; so that any disturbance of the meteoric motions must importantly affect the condition of that luminary."

Star-drift of the Central Sun.—Upon investigating the proper motions of the stars in Gemini, Cancer, and Leo, Mr. B. A. Proctor has found a community of motion more striking than that noticed by Mädler in Taurus, and regards the great double cluster in Perseus as far more likely to be an important centre of motion than the Pleiades, of which Alcyone had been named by Mädler as most probably the central sun of our sidereal system. Mr. Proctor remarks that Mädler required a star on the Milky Way as the centre of the galaxy, and Alcyone does not lie on the Milky Way, and also that he required this centre to lie 90° from the apex of the solar motion, which is not the case with Alcyone; but that the great cluster in Perseus fulfils both these conditions in the most perfect manner. The author says that these particular instances of star-drift are not the less remarkable; that the stars are drifting almost exactly in the direction due to the proper motion assigned to the sun, because the recent researches of the Astronomer Royal have abundantly proved that the apparent proper motions of the stars are not to be recognized as principally due to the sun's motion. "Mr. Stone has shown even that we must assign to the stars a larger proper motion, on the average, than that which the sun possesses. Looking, therefore, on the stars as severally in motion, with velocities exceeding the sun's on the average, it cannot but be looked upon as highly significant that in any large region of the heavens there should be a community of motion such as I have described. We seem compelled to look upon the stars which exhibit

such community of motion as forming a distinct system, the members of which are associated indeed with the galactic system, but are much more intimately related to each other. In other parts of the heavens, however, there are instances of a star-drift opposed to the direction due to the solar motion. A remarkable instance may be recognized among the seven bright stars of *Ursa Major*. Of these, five are all drifting in the same direction, and almost exactly at the same rate toward the 'apex of the solar motion,' that is, the point from which all the motions due to the sun's translation in space should be directed. If these five stars, indeed, form a system (and I can see no other reasonable explanation of so singular a community of motion), the mind is lost in contemplating the immensity of the periods which the revolutions of the components of the system must occupy. Mädler had already assigned to the revolution of *Alcor* around *Mizar* a period of more than 7,000 years. But if these stars, which appear so close to the naked eye, have a period of such length, what must be the cyclic periods of the stars which cover a range of several degrees upon the heavens?" There are many other interesting cases of the same kind.

Nature, commenting on Mr. Proctor's theory, remarks that the star-drift described by him serves to explain several phenomena which had hitherto been thought very perplexing. In the first place, it accounts for the small effect which the correction due to the solar motion has been found to have in diminishing the sums of the squares of the stellar proper motions. Again, it explains the fact that many double stars, which have a common proper motion, appear to have no motion of revolution around each other; for clearly two members of a drifting system might appear to form a close double, and yet be in reality far apart and travelling, not around each other, but around the centre of gravity of the much larger system they form part of. While mapping the proper motions of the stars, Mr. Proctor has been led to notice that the rich cluster around *Chi Persei* falls almost exactly on the intersection of the Milky Way with the great circle which may be termed the equator of the solar motion; that is, the great circle having the apex of the sun's motion as a pole. This circumstance points to that remarkable cluster, rather than to the Pleiades, as the centre of the sidereal system, if indeed that system has a centre cognizable by us. When we remember that for every fixed star in the Pleiades there are hundreds in the great cluster in Perseus, the latter will seem the worthier region to be the centre of motion. The author is disposed, however, to regard the cluster in Perseus as the centre of a portion of the sidereal system, rather than as the common centre of the galaxy.

Heating-power of the Stars.—In the proceedings of the Royal Society for January, 1870,

are given the details of Mr. Stone's later experiments upon this subject with the great equatorial of the Greenwich Observatory. In pursuing them, Mr. Stone constructed a thermopile believed by him to be superior to any other previously invented. His early trials convinced him that it was almost impossible to distinguish the feeble effects generated by stellar heat from the grosser effects produced upon the pile by exposure of one face within the telescope tube and the protection of the other face outside the tube. It was evident that, to maintain the pile in the thermal equilibrium, its two faces must be exposed to precisely similar atmospheric influences. He therefore made what may be described as a terre-star pile, the two pieces of which, being similarly presented to the object-glass of the telescope, were affected alike by disturbing causes, whether from currents of air or the cooling of the metals of the pile by radiation. By this arrangement the whole heat of a star's image cast upon either face of the pile manipulated itself *per se*. The amount of heat was measured by a reflecting galvanometer, and the indications then converted into Fahrenheit scale equivalents. It was found that the heating effect of Arcturus, after allowing for absorption by the object-glass, was 0.00000187 of a Fahrenheit degree, and that of Alpha and Lyrae about two-thirds of that amount. Otherwise expressed, the heat from Arcturus, at an altitude of 25° at Greenwich, is about equal to that of a three-inch cube of boiling water at a distance of 400 yards, while that from Alpha Lyrae is equal to the heat from the same cube at 600 yards. Mr. Stone conceives that the difference in the heating-power may be connected in cause with difference of color. He finds that the manifested heat diminishes rapidly as the amount of moisture in the air increases, and that all sensible effect is out off by the slightest cloud or haze. (*See ANNUAL CYCLOPEDIA for 1869.*)

New Theory of the Milky Way.—From a careful examination of the structure of various parts of the Milky Way, Mr. Proctor has been led to the opinion that the true figure of the system of stars constituting that zone is neither a cloven disk, as supposed by Sir William Herschel, nor a broad flat and in part cloven ring, as suggested by Sir John Herschel. He says that the existence of "coal-sacks," or dark places, in the Milky Way suggests an idea of its general figure. The coal-sacks cannot be supposed to be tunnel-shaped openings extending through the whole breadth of a wide, flat ring, without the "obvious improbability" spoken of by Sir John Herschel when dealing with the supposition that the nebular way is cylindrical in figure. If the coal-sacks are really openings through a star zone, that zone cannot in all probability have a much greater extension in the direction of the line of sight than at right angles to that line. According to this view, the section of the Milky Way

near the coal-sacks in Orux (and presumably elsewhere) would be roughly circular. Regarding the Milky Way as a ring of circular section—that is, as resembling in section an ordinary wire ring—one can understand many peculiarities of its structure which seem wholly opposed to either the disk or the flat-ring theory. For example, the great gap in the constellation Argo may be readily explained, and so may the yet wider vacant space in the fainter branch when the ring is double. Mr. Proctor shows how, by assigning to the Milky Way a spiral figure, nearly all the principal peculiarities of the zone can be very fairly accounted for.—*Popular Science Review.*

Distribution of Stars.—In a paper furnished by Mr. Proctor to the *Popular Science Review* for July, he gives the result of his inquiries into the proportionate distribution of stars in different parts of the heavens. The general results of a systematic survey of the stars of the first six magnitudes impel him to conclusions like these: 1. The southern hemisphere contains more stars of those magnitudes than the northern, in the proportion of about seven to five. 2. The stars of these orders are gathered into two definite regions, a northern and a southern, so markedly that the distribution within those regions is richer than that over the rest of the heavens, in the proportion of about five to two. 3. The stars of these orders are associated in the most intimate manner with the Milky Way, inasmuch that, when the Milky Way is included with the two rich regions referred to, it appears that stars in the single division thus formed are distributed about three times as richly as over the remaining portions of the heavens.

Apparent Size of Celestial Objects.—No two people would perhaps agree in attempting to convey an idea of the apparent size of any celestial object—say the moon. A peppercorn, a penny, a dinner-plate, a peck measure, a cart-wheel, are some of the familiar objects to which reference is made in the loose discussions of this subject. Mr. W. R. Grove writes as follows to *Nature*:

"About fifteen years ago I was looking at Venus through a 40-inch telescope, Venus then being very near the moon and of a crescent form, the line across the middle or widest part of the crescent being one-tenth of the planet's diameter. It occurred to me to be a good opportunity to examine how far there was any reality in the estimate we form of the apparent size of celestial objects. Venus through the telescope, with a magnifying power (speaking from memory) of 185, looked about the size of an old guinea, i. e., of a crescent cut off from that coin. The moon, to my naked eye, appeared the size of a dessert-plate. Having fixed their apparent dimensions in my mind, I adjusted the telescope so that with one eye I could see Venus through the telescope, and with the other the moon without the telescope, and cause the images to overlap. I was greatly

surprised to find that Venus, instead of being about one-sixth of the diameter of the moon, was rather more than double its diameter, so that, when the adjustment was made to bring the upper edge of the moon coincident with the upper point of the crescent of Venus, the opposite edge of the moon fell short of the middle of the crescent, a very palpable demonstration of the fallacy of guesses at size, when there are no means of comparison.

"On another occasion a lady was looking at Jupiter through my telescope, and having first put on a power of 60 I changed it for one of 140. To my question, what difference she observed in the size of the planet, she answered, 'I see no difference in size, but a good deal in brightness.' Here the area of the one image was more than five times that of the other.

"The fallacy of guesses at size without objects of comparison is most strikingly shown in the ordinary expression of an ignorant observer looking at objects by day through a spy-glass. If you ask, as I have often done, a person unacquainted with optics whether he recognizes any difference in size between an object, say a horse or a cow, seen with or without a telescope, he will always answer, 'No, but it' (the telescope) 'brings it much nearer.' This, of course, is really an admission of increased magnitude, but the observer is unconscious of it; a horse to him is as big as a horse, no larger or smaller, whatever be the distance.

"Suppose all objects had never been seen but at one and the same distance, then an observer, looking at a given object without any external standard of comparison, would probably make a fair guess at its size, for the picture on his retina would have a definite size, and his mind would estimate it by relation to other pictures of known objects which he had seen at other times; but, as we see all the objects with which we are familiar at all degrees of distance, we have no standard of comparison for an image on the retina.

"The common phantasmagoria effect, where a figure appears to advance or recede from us, though it really does not change its position, but its size, is one of the many illusions produced by representing things as they are seen under certain circumstances which have become habitual, and habit interprets the vision. So if one lie on his back in a field, and, throwing the head back, look at distant trees or houses, they will appear to be in the zenith, because when we ordinarily look at the zenith the head is thrown back.

"Is the apparent size of the sun or moon, as expressed in common parlance, any thing more than a reference to some standard which we have early adopted, and which, not having any means of rectifying, we assume? To me the moon at an altitude of 45° is about six inches in diameter; when near the horizon, she is about a foot. If I look through a telescope of small magnifying power (say 10 or 12

diameters), so as to leave a fair margin in the field, the moon is still six inches in diameter, though her visible area has really increased a hundred-fold.

"Can we go further than to say, as has often been said, that all magnitude is relative, and that nothing is great or small except by comparison?"

The Cordova Observatory.—The Congress of the Argentine Republic having voted to establish a national observatory at Cordova, Dr. B. N. Gould, of Cambridge, was invited to superintend its erection and take charge of it. He accepted the offer, and left this country for Cordova during the past summer, accompanied by a number of experienced assistants. Dr. Gould will there have an opportunity to extend the catalogue of the southern heavens beyond the limit of 30° , to which the zones of Argelander extend. The two largest instruments will be a Repsold meridian circle of 54 inches focal length, and $4\frac{1}{2}$ in. aperture, and an equatorial by Alvan Clark & Sons, provided with the 11-inch object-glass lately in possession of Mr. Rutherford. The Coast Survey, the Smithsonian Institution, the American Academy of Arts and Sciences, the Washington Observatory, and Nautical Almanac Bureau, as well as astronomers in England, Germany, and Russia, have taken much interest in the enterprise, and contributed valuable instruments and books. Dr. Gould writes of his plans as follows to the *American Journal of Science* for July:

"My hope and aim are to begin a few degrees north of Argelander's southern limit, say at 26° or 27° , and to carry southward a system of zone-observations to some declination beyond Gilliss's northern limit, thus rendering comparisons easy with both these other labors, and permitting the easy determination of the corrections needful for reducing positions of any one of the three series to corresponding ones for the other. It is, of course, impossible to arrange in advance the details of such an undertaking, but my expectation is to go over the region in question in zones 2° wide (except in the vicinity of the Milky Way, where the width would be but one-half as great), up to a declination of about 55° , after which the width would be gradually increased as the declinations became greater. Within these zones all stars seen as bright as the 9th magnitude would be observed, so far as possible, moving the telescope in altitude when no bright star is in the field until some one becomes visible, according to the well-known method of zone-observations.

"For reducing the observations, differential methods will probably be employed, inasmuch as the time now assigned for my absence from home would be inadequate for proper discussion of the corrections required for nice determinations of an absolute character. Still it is my present purpose, as far as possible, to make such subsidiary determinations as might hereafter be needed in any attempt at computing

the observations absolutely. But, as I hardly venture to anticipate any opportunity of making a thorough determination of the constants of refraction, or of the errors of graduation, it seems best to arrange for a differential computation at least at first.

"It is improbable that a sufficient number of well-determined stars will be found available even for this differential reduction, and the necessity may thus be entailed of determining the comparison-stars myself, this determination, however, itself depending upon standard star-places. So far as possible I propose employing those heretofore determined by me, and published by the Coast Survey, which form the basis of the star-places of the American Nautical Almanac.

"With these observations of position it is my hope to combine others of a physical character to some extent; but, in the presence of a plan implying so much labor and effort, it would be unwise to rely upon the possibility of accomplishing much more than the zone-work.

"The meteorological relations of the place are very peculiar, but I dare not undertake any connected series of observations bearing upon these, without self-registering apparatus, which is beyond my means."

AUCKLAND, ROBERT JOHN EDEN, D. D., third Lord, Baron Auckland, in the peerage of England and Ireland; from 1847 to 1854, Bishop of Sodor and Man, and from 1854 to 1869 Bishop of Bath and Wells, an English prelate and nobleman, born in London, in 1799; died at Bath, England, April 25, 1870. He was the third son of the first Lord Auckland, and was educated at Eton and Magdalen College, Cambridge. After his induction into holy orders, he was successively Rector of Eyam, Derbyshire, of Hertingtonbury, Herts, and of Battersea, Surrey, and was one of the chaplains to her Majesty. He was consecrated Bishop of Sodor and Man in 1847, and succeeded to the title of Baron in 1849, on the death of his elder brother, the Governor-General of India. In 1854 he was transferred to the See of Bath and Wells, on the death of Dr. Bagot. He held this bishopric till 1869, when, on reaching his seventieth year, he resigned. He was also visitor of Wadham College, Oxford. Lord Auckland was an able writer, and was not inferior in intellectual ability to the other members of his gifted family. His sermons, charges, and addresses, were much above the average of those of the English bishops generally. In 1860 he published a very interesting biography of his father, under the title of "Life and Correspondence of the First Lord Auckland." After resigning the bishopric, he continued to reside at Bath, where, in 1869, his sister, the Hon. Emily Eden (*see* ANNUAL CYCLOPEDIA for 1869) died.

AURORA BOREALIS. A very brilliant and widely-seen exhibition of the aurora took place on the night of October 24th. It was visible in the northern and western parts of

the United States, Canada, England, France, Germany, and most of Europe. In this country it was less striking in the beautiful variety of phenomena than the aurora of April 15, 1869. Its manifestations at New York, Cleveland, Cincinnati, St. Louis, and also in Canada, consisted mostly of variations from a pink to a deep-red light, producing the effect of a great conflagration shining up from the northeastern horizon. As seen from New York the auroral waves began to move up from the north about 11.30 P. M. At 8 A. M. a beautiful emerald arch was formed. During the continuance of the aurora the telegraph between Philadelphia and Harrisburg was operated without a battery; the Newfoundland lines were so much disturbed that they ceased working. In England the display was the most magnificent ever witnessed there. It commenced soon after dark and continued till past midnight, exhibiting all the play of colors, and the effects which at less favorable opportunities are seen, separately. While at its height a falling star in the constellation Auriga, covered by the aurora, was perceived, indicating that the aurora must have been quite near to the earth, as shooting-stars are believed to be generally within about 60 miles of the terrestrial surface. The planet Jupiter and the Pleiades showed distinctly through the crimson canopy, but stars of the third magnitude, such as the four stars in Cassiopeia, were rendered invisible. The ruddy light was so brilliant that a rosy tinge was cast on watch-faces, and other white objects. Telegraphs in England were much deranged during the display, and for previous hours of the day strong earth-currents had been noticed on all the northern and many of the northwestern and Irish circuits. In France the aurora was no less remarkable, and superstitious persons regarded its blood-red aspect as having some bearing upon the future of the war. The following account from a competent observer at Oxford sums up the general appearances of the aurora in England:

This evening, October 24th, occurred one of the grandest displays of auroral lights which has probably ever been witnessed in these latitudes.

As I was, at a few minutes after seven o'clock, passing through the observatory with the intention of observing with the heliometer, my attention was attracted by the brightness of the northern portion of the sky. On going out into the North Garden, I perceived that this was due to a general illumination of the sky of about that intensity which is produced by the rising of the full moon on the sky immediately above it, the moon itself not being visible. The contrast between this white illuminated sky and the deep ordinary blue on the south side of the zenith was very striking, the two portions being with moderate accuracy separated by the prime vertical.

On the south side of the zenith was observed what appeared to be an illuminated cloud, extending nearly from the zenith in a southeasterly direction for about forty degrees. Finally there was at this time a well-defined arch of light, corresponding pretty accurately in position with the equator, and visible from east to west nearly to the horizon; and, beneath this arch, the sky was unusually dark, the

darkness not being due to cloud or mist, as the stars were seen with their usual distinctness.

There was a small tendency at intervals to a display of streamers, but they were not conspicuous. From these phenomena I was led to expect, in the course of the evening, a grand display of aurora, and I was quite prepared for the summons, which I received from Mr. Keating, the assistant on duty, at eight o'clock, to come down and witness it.

The spectacle at this time was most magnificent. The northern portion of the heavens was nearly covered with crimson light of great intensity, and the sight was so fine that, for a few moments, I was occupied only with the admiration which it excited.

On proceeding to observe it more particularly, I saw that it consisted mainly of two large sheets of crimson light, one chiefly on the east side of the sky and the other on the west.

The eastern sheet extended generally from Polaris to Capella toward the zenith, which it did not, however, at this time quite reach. The most brilliant sets of streamers had their centres passing through these stars, and, after a few minutes, the extreme eastern portion was tolerably well defined by Perseus and Cassiopeia.

The western sheet was equally well defined, as lying between α Lyrae and α Aquila, but its brilliancy and the rapid change produced by the streamers were inferior to those exhibited in the other portion at the time when I observed it.

It is also worthy of remark, that the two portions seemed to be connected by an illuminated fleecy or cirrus cloud a little south of the zenith. This apparent cloud was, I believe, also a portion of auroral light, as I examined it a few minutes afterward when it exhibited more of the auroral character.

At this time the portion of the eastern sheet, which had passed through Polaris, became separated from its more eastern portion passing through Capella, and formed a distinct sheet, while the western sheet was apparently drifting still more toward the south-west.

In a few minutes the intensity of the light diminished rapidly, and, as it was fading, my attention was attracted to a very beautiful feature in the phenomena exhibited. Just below the red light of the most western position was a most brilliant bluish-white light, vaguely defined but very intense. It was most probably pure white, the bluish appearance being the effect of contrast with the red. The arch which I had observed earlier in the evening was now much brighter, and extended in the direction of the equator to the eastern portion of the heavens, where there was soon a similar effulgence of white light, but not quite so intense.

The darkness of the sky (perfectly free from cloud) beneath the bright arch was now much more conspicuous than it had been in the earlier part of the evening.

In a few minutes the whole faded away, and, excepting some small remains of the phenomena in the north, nothing unusual was visible. The grandest part of the phenomena continued for about half an hour, that is, from eight till half-past eight o'clock. Later in the evening a tolerably bright bank of auroral light was visible above the northern horizon, and another brilliant display occurred, as described by Mr. Lucas.

For a considerable time during the first display, Mr. Lucas was watching from the tower of the observatory, where he commanded a full view of the northern half of the heavens, and saw, at about 6° $15'$ to 8° $20'$, an ill-defined dark segment along the north horizon, from which white streamers issued through the whole extent, very much resembling an ordinary aurora, but which might be easily passed over in the grandeur of the display.

Mr. Lucas watched from 10 o'clock, but saw nothing except the white light extending under the Great Bear, till 10° $30'$, at which time white stream-

ers shot up to Polaris and Beta Cephei, changing to intense red. At 11° $10'$ two sets of streamers appeared, one near Alpha and Beta Ursæ Majoris, and the other a little to the east of Beta Draconis, the former going eastward to λ Ursæ Majoris, and the latter westward past Gamma Draconis. These were succeeded by some at Alpha Lyrae, combining with the last mentioned, and the mass, of an intense red color, travelled slowly to Alpha Aquila, where it remained for a considerable time, as did that of Ursæ Major, while the part of the heavens appeared perfectly clear. At 11° $30'$ streamers again shot up at Beta Ursæ Minoris, and between Gamma Draconis and Alpha Lyrae for a short time, and a few faint indications were visible till a little after 12, when the sky appeared to have regained its usual appearance.

From the relation of others it appears that another brilliant display took place still later in the night.

R. MAIN.

A gentleman, residing in Palestine, sent the following to the London *Times*:

About 9 o'clock in the evening of October 25th my attention was called by a servant to something peculiar in the sky. On going out I found the northern heavens, for about one-sixth of the distance between the horizon and zenith, of a deep-red color, not unlike that produced by a great conflagration. The color changed from minute to minute, being now brighter and more intense, now duller and paler, at times almost resembling that of blood. The middle of the colored space was immediately under the Polestar, and it extended about 35° degrees to the right and left of this point. At first it seemed to touch the horizon, but afterward the sky, which looked somewhat blacker by contrast, was visible below it. Stars could be seen through it, and its margins blended gradually with the natural sky. The evening was bright, and a great many stars were visible. Wind, N. W., 0.5, the air colder and sharper than usual at this season. The barometer had sunk 0.052 since 9 o'clock A. M. Unfortunately, no means of making magnetical and electrical observations were available. The phenomenon disappeared slowly, and at midnight only a very faint redness was perceptible. The eastern part faded away first, so that the aurora appeared as if moving in a westerly direction. The next evening the weather broke, and a large quantity of rain fell, accompanied by thunder and lightning."

AUSTRALASIA. The Australasian colonies of Great Britain include the colonies of Australia, namely, New South Wales, Victoria, South Australia, Queensland, and Western Australia; and, besides, the colonies of Tasmania and New Zealand. The area and population of these colonies according to the latest dates, were as follows:

PROVINCE.	Square Miles.	Population.	Year.
New South Wales..	308,560	475,574	1859
Victoria.....	88,451	728,353	1870
South Australia.....	890,608	178,398	1868
Queensland.....	663,359	107,437	1863
Western Australia..	975,824	22,733	1868
Northern Territory	523,551
Tasmania.....	30,315	100,706	1867
New Zealand.....	106,259	226,618	1867
Total.....	3,077,701	1,950,000	

To the population of New Zealand should be added the native Maoria, whose number in 1867 was estimated at 38,500, while in 1860 they still numbered 56,079.

In July a conference of delegates from nearly all the colonies of Australasia was held at Melbourne, chiefly for the purpose of establishing

an intercolonial customs union. The conference is regarded as an important step toward the consolidation of the colonies. The conference declared itself in favor of an intercolonial free trade policy, and bills establishing intercolonial free trade were, accordingly, introduced into the several colonial legislatures. In September a royal commission was appointed in Victoria to consider the expediency of inviting the coöperation of the other colonies in providing—1. For the extradition of offenders from one colony to another. 2. That the effect of insolvency or the granting of probate shall be extended to all the colonies. 3. The adoption of a system whereby execution in one colony upon the registration of the Superior Court may take effect in all the others. 4. The establishment of a court of appeal.

During the month of March the settlements of New South Wales and Queensland suffered from most distressing inundations. The overflow of the rivers and torrents, and the destruction of life and property, exceeded anything ever known before, even in Australia, the quarter of terrible floods. In New South Wales several of the great streams rose more than twenty feet above their usual level in a few hours, and swept every thing before them, swamping farm-lands, hamlets, and villages, and drowning men and cattle wholesale. In Queensland several of the larger towns were half submerged, and the inhabitants were compelled to seek refuge in the churches and school-houses.

An intercolonial exhibition was opened at Sydney on the 30th of July, and was a great success. The construction of a transaustralian telegraph commenced at both ends, and other sections were to commence immediately.

In April a new mail line of steam-packets, the California, New Zealand, and Australia Steamship Company, was established, to promote a closer communication between Australasia and the United States.

The emigration to the several Australian colonies, in 1868, is reported as follows: To New South Wales, 1,318; Queensland, 685; Victoria, 6,566; Tasmania, 18; South Australia, 351; Western Australia, 168; New Zealand, 3,703; total, 12,809. The total emigration to Australasia, during the thirty years, from 1838 to 1867, inclusively, amounted to 915,006. The Parliament in Melbourne, during its session from February 11 till December 28, 1869, passed the following most liberal law: "Each colonist and immigrant, no matter to what nationality he may belong, has the privilege of selecting for himself 320 acres of crown land, for which he pays an annual rent of two shillings per acre during the first ten years. At the expiration of that term he enters into the full and free possession of the land." It is expected that the enactment of this law will soon direct a liberal flow of emigration to the colonies.

The following is a condensed report from the official statistics of the colony of Victoria, for the year 1869: The total imports into the

colony were estimated at £13,320,662 sterling, against £11,676,080 in 1868. Of this amount, £6,250,000 came from Great Britain, and £4,500,000 from British colonial possessions. The total exports, during 1869, summed up £15,593,990, against £12,733,427, showing an increase of nearly 23 per cent. The entries at the ports of the colony comprised 2,067 vessels, together of 653,362 tons; the clearances 2,173 vessels, together of 685,207 tons. At the end of 1869 there were, in the colony of Victoria, 148,984 horses; 181,854 milch-cows; 571,828 heads of cattle; 9,756,819 sheep; and 186,206 hogs. The number of auriferous quartz-ridges, worked by miners and diggers, amounted to 2,651; the area of the alluvial quartz-diggings extended over 884 square miles. Of machines used for the digging, crushing, and washing operations, there were 6,068, of an aggregate value of £2,150,432 sterling. The total quantity of gold obtained was 1,657,498 ounces, of which 587,694 were from the quartz-ridges, and 1,069,804 ounces from the alluvial diggings. Besides, there were 9 silver-mines; 8 antimony; 1 copper; 2 tin; 14 coal; and 8 slate-mines.

AUSTRO-HUNGARIAN MONARCHY, now the official title of the empire formerly called Austria. Emperor, Francis Joseph I., born August 18, 1830; succeeded his uncle, Ferdinand I., on December 2, 1848. Heir-apparent, Archduke Rudolph, born August 21, 1858. In this article we treat of the affairs belonging to the Austro-Hungarian monarchy as a whole, and those belonging to Austria proper, or the cis-Leithan provinces, reserving the affairs of the trans-Leithan provinces for the article Hungary.

The area of the Austrian empire, according to the latest official statements, amounts to 240,881 square miles. The last census, of 1857, showed the population of the provinces now constituting Austria (Lombardy and Venetia have since been lost) to amount to 32,580,000. A new census was taken in 1869, the results of which, so far as published, are as follows:

Provinces.	Population
I. Cis-Leithan Provinces (Austria proper):	
1. Lower Austria.....	1,990,708
2. Upper Austria.....	786,519
3. Salzburg.....	153,199
4. Styria.....	1,137,748
5. Carinthia.....	337,694
6. Carniola.....	466,394
7. Goertz, Gradisca, Istria, and Trieste.....	601,931
8. Tyrol and Vorarlberg.....	595,406
9. Bohemia.....	5,140,155
10. Moravia.....	2,090,788
11. Silesia.....	516,232
12. Galicia.....	5,444,016
13. Bukovina.....	513,404
14. Dalmatia.....	466,781
Total cis-Leithan Provinces.....	20,942,835
II. Trans-Leithan Provinces (Hungary):	
15. Hungary.....	11,180,046
16. Croatia, and Slavonia.....	1,023,863
17. Transylvania.....	2,123,436
Total cis-Leithan Provinces.....	14,324,305
III. The Military Frontier (which is administered by the Ministry of War of the Austro-Hungarian empire).....	
	1,197,187
Total Austro-Hungarian monarchy.....	36,463,528

The numerical strength of the different nationalities in the Austro-Hungarian monarchy was, in 1869, as follows:

COUNTRIES.	German.	Northern Slavi.	Southern Slavi.	Western Roumanians.	Eastern Roumanians.	Magyars.	All others.
Austria.....	7,330,000	9,822,000	1,734,000	592,000	213,000	13,000	742,000
Hungary.....	1,766,000	2,210,000	1,509,000	1,000	2,501,000	5,408,000	611,000
Military Frontier.....	45,000	12,000	882,000	500	147,000	5,000	500
Total.....	9,040,000	12,044,000	4,175,000	594,000	2,862,000	5,431,000	1,354,000

Among the northern Slavi are 6,780,000 Czechs, Moravians, and Slovaks; 2,380,000 Poles, and 3,104,009 Ruthenians; among the southern Slavi 1,260,000 Slovenitz, 1,424,000 Croats, 1,520,000 Servians, and 26,000 Bulgarians. The western Roumanians are chiefly (580,700) Italians, who occupy the southern district of Tyrol and Trieste. The Germans have a majority in only eleven out of the seventeen crown-lands, namely, in Lower and Upper Austria, Salzburg, Styria, Carinthia, Tyrol, and Silesia. In the last-named provinces their majority is small, and in Styria, Carinthia, and Tyrol, they have about a two-thirds majority, while Lower and Upper Austria and Salzburg are wholly German. The northern

Slavi have a majority in Bohemia, Moravia, Galicia, and a plurality in the Bukovina: the southern Slavi a majority in Carniola, the Littoral, Dalmatia, and Croatia. The east Roumanians have a small majority in Transylvania, and the Magyars a plurality in Hungary. In the provinces represented in the Parliament of the cis-Leithan provinces (Reichsrath) the Slavi have a majority (56.78 per cent.); in the lands belonging to the Hungarian crown the Magyars contribute 38.61 per cent.; the Slavi, 26.55; the east Roumanians, 17.86; the Germans, 12.60.

The ecclesiastical statistics of the monarchy were estimated, in 1869, to be as shown in the following table:

CHURCHES.	CIS-LEITHANIA.		TRANS-LEITHANIA.		TOTAL, INC. OF MILITARY.	
	Population.	Per cent.	Population.	Per cent.	Population.	Per cent.
Roman Catholics.....	15,766	80.4	7,190	48.0	22,956	68.5
Greek Catholics.....	2,303	11.7	1,498	10.1	3,801	11.0
Armenian Catholics.....	4	9	0.1	13	0.1
Total Catholics.....	18,073	92.1	8,697	58.2	27,189	77.6
Oriental Greeks.....	490	2.5	2,630	17.9	3,126	9.0
Evangelical—Lutheran.....	351	1.7	3,088	20.8	3,439	10.0
Reformed.....	64	0.3	65	0.2
Unitarians.....	688	3.5	428	2.9	1,116	3.3
Jews.....	6	0.2	2	8
Other Sects.....
Total.....	19,608	100	14,890	100	34,964	100

In the budget of 1870, for the whole monarchy, the estimates of expenditure and receipts were as follows:

Expenditures.		Austrian florins.
1. Common Ministry for Foreign Affairs.....		4,239,471
2. Common Ministry of War:		
(1.) For the Army.....		78,778,356
(2.) For the Navy.....		9,683,265
3. Common Ministry on Finances.....		1,743,507
4. Common Chamber of Accounts.....		104,095
Total.....		94,738,695
Receipts.		
Receipts of Ministry of War.....	3,214,000	15,326,900
Receipts from Customs.....	12,000,000	
Receipts from Consulates.....	112,000	
Total.....		79,459,695

Of which sum the cis-Leithan provinces furnish 70 per cent., or 55,621,787 florins; and the trans-Leithan provinces 30 per cent., or 23,837,908.

The budget of 1868 for the cis-Leithan provinces was as follows: Receipts, 317,195,040; expenditures, 739,254; deficit, 3,544,214. The public debt of the cis-Leithan provinces on December 31, 1868, was 2,692,067,816 florins; on December 31, 1869, 2,680,896,744 florins. The common floating debt was, on December 31, 1869, 319,082,561 florins.

The army, in 1870, consisted of 246,695 on the peace footing, and 822,472 on the war footing.

According to the new military law of Austria, the obligation for military service is universal; the time of service in the line, three years; in the reserve, seven years; in the landwehr, two years. The navy, at the beginning of the year 1870, consisted of 44 steamers (of which 21 were iron-clads, together of 89,960 tons); 24 sailing-vessels, together of 14,162 tons; 9 tenders and relief ships, of 1,640 tons. Total, 77 vessels, of 105,762 tons.

The imports, not including metals, of the monarchy in 1869 amounted to 868,500,000 florins; the exports to 421,800,000 florins. The arrivals in the port of Trieste were 9,095 vessels, together of 1,087,268 tons; the clearances, 9,125 vessels, of 1,143,458 tons. The merchant navy at the beginning of 1870 consisted of 7,853 vessels, of 862,965 tons, and manned by 28,184 persons. The number of letters sent by mail was 99,400,000 in the cis-Leithan, and 28,600,000 in the trans-Leithan provinces.

The ministerial crisis in the cis-Leithan

ministry, which existed in December, 1869, the majority demanding an unflinching adhesion to the constitution, while the minority were willing to make concessions to the federalistic demands of the Slavi, was ended on January 15, 1870, by the resignation of the minority, consisting of the minister president, Count Taaffe, and of the ministers, Count Potocki and Dr. Berger. On January 26th, the Minister of the Interior made an explanation, in the Lower Chamber of the Austrian Reichsrath, of the policy of the majority of the Government which had remained in office. He claimed for the present ministry that they had done much to improve the position of Austria during their two years' tenure of office. "They did not ignore the fact that the constitution was capable of improvement, but they would not parley with those who took their stand of opposition outside of its lines. The policy will be to maintain the present constitutional arrangement, but to do every thing possible to conciliate the prejudices and aspirations of the nationalists." Minister Plener was, on January 17th, charged with the reconstruction of the ministry, but this work was not completed until February 1st. In the new ministry, Hasner was Minister President; Stremayr, Minister of Public Worship; Banhaus, Minister of Agriculture; and Wagner, Minister of the Defence of the Country. The efforts of the centralists were chiefly directed against the Chancellor, Count Beust, and, in their name, the President of the Chamber of Deputies, Herr von Kaisersfeld, violently attacked him. In reply, the Chancellor avowed his preference for a policy of conciliation, and his desire to arrive at an understanding with all the nationalities of Austria; but he categorically denied having used improper means to combat the members of the cis-Leithan Cabinet who did not share his views; he protested against the pessimism of MM. Kaisersfeld, Skene, and others of their party, who in their speeches had predicted a catastrophe—the complete ruin of Austria—if the constitution of December, 1867, was altered to make any concessions to the nationalists.

On March 22d, Minister Giskra offered his resignation, which was accepted. On the 31st, the adjournment of the discussion on the demands of Galicia caused the representatives of the Poles, of the Slovenitz of Istria, and of Bukovina, to resign. On April 4th a new ministry was formed, with Count Polocki as President. On the 14th, Count Taaffe rejoined the Cabinet as Minister of the Interior and of War. The other places in the Cabinet were temporarily supplied by the heads of the several branches of administration. On the 7th of May, the ministry was completed by the appointment of Petrino as Minister of Agriculture, of Holzgethan as Minister of Finance, and of Widman as Minister of War.

On the 23d of May imperial decrees were issued for the dissolution of the National

Reichsrath, and also of the Diets in the various provinces of the empire. New elections for these bodies were also ordered. In case any of the Diets should decline to choose deputies to the Reichsrath, the Government announced its determination to order a direct appeal to the inhabitants of the provinces for that purpose.

The Austrian Reichsrath was opened on the 19th of September, and the Emperor delivered the address from the throne. He said:

"I have called you together for the discharge of important duties. While a sanguinary contest is spreading devastation over vast territories in this quarter of the world, our empire enjoys the blessings of peace, and this peaceful character of our foreign relations will serve, above all, to place the constitutional institutions of the state upon a firm foundation. Toward the end of last year the regular discussions of the Lower House experienced some interruption. In order to remedy this, and at the same time to give to all parts of the empire an opportunity of expressing their wishes, I thought it my duty as sovereign to order new elections. I feel special satisfaction at seeing you assembled. I know that the Upper and the Lower House are both animated by truly patriotic feelings and sentiments for Austria. I will not ascribe it to a want of patriotism that I still miss the presence of the representatives of Bohemia; but I must all the more deeply deplore this since the government indefatigably exerts itself, amid the serious and momentous events of the present time, to lead opposing elements to cooperate in constitutional labors, and because I am impressed with the urgent necessity of bringing the internal organization of the empire to a prosperous conclusion. It will be the duty of the Government to invoke all legal remedies for the purpose of securing to the kingdom of Bohemia with all possible speed its participation in these important labors. It will be the duty of the Reichsrath to discuss, in a spirit of moderation, the justice of measures which will serve to secure a constitutional basis upon which the individual wants of every race may be satisfied in a manner compatible with the prerogatives of the monarchy."

The speech proceeds to enumerate the several matters to be dealt with by the Reichsrath:—namely, the election of delegations; the settlement of the relations between the Catholic Church and the state, which has become necessary through the abrogation of the Concordat hitherto existing with the Papal See, respecting which bills will be introduced by the Government; the completion of the legislative labors respecting the procedure in civil and criminal law, the reform of the universities, the examination of the financial estimates, the solution of economical questions, and, finally, bills sanctioning administrative steps already taken by reason of their urgency. The Emperor concluded: "May that power and strength which are engendered by concord spread from your midst to all the races of Austria, and lead them to such a course as will promote liberty, prosperity, and honor, for every race and country of the common empire!"

During the debate on the address to the crown, in the Lower House of the Reichsrath, the Polish delegates, apprehending a misconstruction of their motives, desisted from op-

position. The Tyrolese deputies adopted the same policy for similar reasons. After a long debate in the Lower House, the address was carried by a vote of 92 to 61.

Among the working-men of Vienna and other large cities socialistic views have found numerous adherents. Some of the leaders were prosecuted by the government for high-treason, and their trial, which was concluded at Vienna on July 19th, attracted great attention. The Public Prosecutor, in his opening address, explained that the prisoners belonged to a committee which was engaged in spreading a socialist-democratic agitation in Austria; that they were in communication with trade-unions in foreign countries, and, in conjunction with the latter, aimed at the overthrow of all social and state institutions. During the trial a large number of working-men gathered in front of the court-house, but there was not the slightest disturbance of order. One of the leaders, Oberwinder, was sentenced to six years', and three others to five years' close confinement for high-treason. Others were condemned to imprisonment for periods varying from two to six months for taking part in public disturbances. Oberwinder and Mos were ordered to leave the country on the expiration of their sentences. In October, another leader of the workmen was sentenced to five months' imprisonment for inciting a revolt.

Even since the reestablishment of constitutional government in Austria, the several ministries and the great majority of the Reichsrath have regarded the abolition of the Concordat of 1855 necessary, since in their opinion it granted to the Roman Catholic Church undue prerogatives. After the virtual abolition of several provisions of the Concordat by special laws, passed in former years, its total and official repeal was, in 1870, resolved upon in consequence of the doctrine of papal infallibility, adopted by the Council in Rome. The *Official Journal* of July 30th contained the following note: "In consequence of the definition of the dogma of infallibility, the Government has resolved no longer to maintain the Concordat with Rome, which will therefore cease to be valid. The Chancellor of the Empire has consequently taken steps to notify the Roman Curia of the formal abrogation of the Concordat, and the Emperor, by an autograph letter, has instructed the Minister of Public Worship to draw up the necessary bills to be submitted to the Reichsrath for that purpose." In consequence of the abolition of the Con-

cordat, Monsignor Falcinelli, the Papal nuncio, was, in August, recalled.

In June, the German teachers of the empire held a convention in Vienna, to express their views and wishes with regard to the organization of public instruction. The attendance was very large, and a novel feature was the presence of a number of female teachers, some of whom took an active part in the proceedings. The convention adopted a resolution in favor of the exclusion of doctrinal religion from the schools.

On the outbreak of the war between Germany and France, the Austrian Government declared itself in favor of a strict neutrality. The Germans of Austria were unanimous and enthusiastic in their demonstrations in favor of Germany, which the Government repeatedly disapproved and checked. The Poles sympathized more with France than with Germany, but their leading organs declared that in the progress of the war their attitude would be chiefly determined by that of Russia. They would, at all events, oppose that belligerent power which might be favored by Russia. The Czechs declared that in this, as in all other questions, they would pursue a policy which they would regard as most beneficial to the interests of their own nationality.

The demand of Russia for the abolition of the Treaty of Paris created a great commotion in Vienna. Baron von Beust, in his reply to Prince Gortschakoff, insists on the force of the obligations contracted in 1856, which are not to be evaded or annulled. Deference only exacts a reply. The fact that Turkey can sustain a fleet where Russia cannot, is not sufficient for arbitrarily dissolving the treaty. The action of Russia endangers all existing and future treaties. Turkey is not responsible for the union of the principalities. Turkey asks that we shall not give our sanction to a breach of the treaty. The occasional excursions of frigates into the Euxine, with princes on board, were perfectly harmless. Russia should have shown her dissatisfaction and spoken at the proper time. Austria deplores Russia's determination, and expresses her surprise at it. She points out to Russia the inevitable consequences of the step she has taken. In a second note from Von Beust to the Austrian ambassador, Count Chotek, he denies having taken any initiative in 1867. He proposed a joint action of all the powers, but no independent action. Now the greatest apprehensions exist. Excited as the Christian subjects of the Porte are, they will think the occasion is opportune to undertake the solution of the Eastern question.

B

BACON, EZEKIEL, LL. D., an eminent jurist and political leader in Massachusetts in the early part of the present century, born in Boston September 1, 1776; died at Utica, N. Y.,

October 18, 1870. Born in Boston in the natal year of the republic, he inherited patriotic instincts, and his knowledge of the events of the Revolutionary period was very thorough

and accurate. He claimed to have a distinct recollection of the treason of Arnold, and of the return of the soldiers from the war of the Revolution. He graduated from Yale College in 1794, studied law with Nathan Dana; was a member of the Massachusetts Legislature in 1805 and 1806; was a Representative in Congress from Massachusetts from 1807 to 1813, and part of the time chairman of the Committee of Ways and Means; was chosen Chief Justice of the Court of Common Pleas for the Western District of Massachusetts in 1813; and in the autumn of the same year appointed First Comptroller of the U. S. Treasury, which office he held till 1815; removed to Utica, N. Y., in 1816, his health having become so much impaired that he was obliged to resign his office. Here he became one of the leading citizens of that new section, and in 1821 was a delegate to the Constitutional Convention of the State. He was while in public life the associate compeer and friend, and afterward for years the correspondent, of Madison, Gallatin, Calhoun, Clay, Elbridge Gerry, DeWitt Clinton, etc. For many years he had been an invalid, but his mental powers retained their strength till his death. For some years past he had been the oldest living graduate of Yale College.

BADEN, a grand-duchy in South Germany. Grand-duke, Friedrich, born September 9, 1826; succeeded his father Leopold, as regent, April 24, 1852; assumed the title of Grand-duke, September 5, 1856; heir-apparent, his son, Friedrich Wilhelm, born July 9, 1857. Area, 5,912 square miles; population, according to the census of 1867, 1,434,970, of whom 981,007, or 64.9 per cent. (against 65.1 per cent. in 1864) were Roman Catholics, 475,918 Protestants, and 25,599 Jews. The grand-duchy is divided into the following provinces: 1. Constanze, containing 1,686 square miles, with 273,860 inhabitants; 2. Freiburg, 1,837 square miles, with 433,050 inhabitants; 3. Carlsruhe, 996 square miles, with 349,943 inhabitants; 4. Mannheim, 1,893 square miles, with 378,117 inhabitants. The public debt on January 1, 1870, amounted to 36,125,781 florins, exclusive of a railroad debt of 113,829,859 florins. Receipts for the year 1870, 28,884,607 florins; expenditures during the same period, 28,418,625 florins. The president of the ministry is Dr. J. Jolly, appointed February 12, 1868.

The Diet of the grand-duchy was closed on the 7th of April, after having adopted several reform bills, and expressed an entire sympathy with the desire of the Government to enter the North-German Confederation. A bill for the abolition of the death-penalty passed the Chamber of Deputies by a vote of 40 against 9, but the First Chamber, from considerations of expediency, refused to concur. On the outbreak of the war between the North-German Confederation and France, Baden at once took sides with North Germany. On the 15th of November a treaty was concluded, at Versailles, between Baden and the North-Ger-

man Confederation, by virtue of which Baden entered the Confederation. (*See GERMANY.*)

BALDWIN, Rev. THEODORE, D. D., a Congregationalist clergyman and writer, for twenty-seven years Secretary of the "Society for the Promotion of Collegiate and Theological Education in the West;" born in Goshen, Conn., July 21, 1801; died in Orange, N. J., April 10, 1870. He graduated from Yale College in 1827, and, after spending two years in Yale Theological Seminary, was ordained as a home missionary in 1829. He was stationed for two years at Vandalia, Ill., where he was active in procuring the charter of Illinois College, and in 1831 became the agent of the Home Missionary Society for Illinois. In 1838 he organized, and for five years conducted the Monticello Female Seminary near Alton, Ill., being at the same time pastor of the church adjacent. In 1843, on the formation of the "Society for the Promotion of Collegiate and Theological Education in the West," usually known as the Western College Society (the plan of which was his own), he became its Corresponding Secretary, and so continued until his death. No more earnest or devoted laborer in the promotion of education, and none wiser in council or more efficient in action, has been known to our age. It is largely due to his exertions that the West has now so many prosperous and growing institutions of learning, for, though his direct efforts were confined to those under the patronage of the Presbyterian and Congregationalist denominations, yet they were the means of stimulating other denominations to educational effort. Mr. Baldwin received the honorary degree of D. D. from Marietta College in 1862.

BALFE, MICHAEL WILLIAM, a musical composer, violinist, and vocalist, born in Dublin, May 15, 1808; died at his country-seat in Hertfordshire, England, October 20, 1870. He took violin-lessons when a mere child, and at the age of eight years played a concerto on that instrument at a public concert. At the age of nine he wrote the ballad called "The Lover's Mistake," which was introduced into the play of "Paul Pry" with success by Madame Vestris. After the death of his father, he went to London in 1823 with Mr. Charles Horn, where he became principal violinist in the Drury Lane orchestra, under Mr. T. Cooke. In 1826, he appeared on the stage as a vocalist, but at first made a signal failure, on account of his timidity. After studying further in Italy, which he visited under the patronage of Count Mazzera, who took an interest in him on account of a fancied resemblance to a lost son, he made a second and successful essay on the stage, first appearing in Paris, and subsequently in Italy, England, and other countries. His Paris *début* was as Figaro in "The Barber of Seville," with Sontag as Rosina, the opera then being under Rossini's own direction. In Italy he had already composed a ballet, "La Pèrouse," which was well received.

In 1835 he returned to London, accompanied by his wife, who had been Mademoiselle Lina Rezer, prima donna of the troupe in Sicily. He sang at the Ancient and Philharmonic concerts, and also appeared at Drury Lane in the "Siege of Rochelle," one of his earliest operas, "The Jewess," and other pieces. His "Maid of Artois" was written for Malibran, and the great cantatrice won in it one of her chief successes. In 1839 he undertook the management of the English Opera House, but the enterprise was unsuccessful, and he abandoned it for the more congenial and profitable work of composition. Within the next few years he produced, in rapid succession, "Joan of Arc," "The Bohemian Girl" (his most popular opera in England and America), "Rose of Castile," "Catherine Grey," "The Enchantress," "The Maid of Honor," "Satanella," "The Daughter of St. Mark," "The Bondman," "The Puritan's Daughter," "Blanche de Nevers," and other operas of less note. "The Daughter of St. Mark" ran at Drury Lane Theatre for one hundred nights. Many of these operas were performed successfully in this country, but Balfe's music was most popular in Germany, where it produced a great effect.

BALTIC QUESTION. The three provinces of Esthonia, Livonia and Courland, which are situated on the Baltic, are commonly called the "Baltic provinces" of Russia. Since the introduction of Christianity in the twelfth century, German influence has been in the ascendancy in these provinces, although the majority of the native population have never become Germanized. The constitution of the provinces, as sanctioned by the Government of Russia, recognizes and guarantees the German character of the administration. Of late, the Russian Government, in view of the importance which the nationality principle has gained in the international relations of the European states, has made great and often violent exertions to undermine the influence of the German element, and to hasten the complete Russification of the provinces. These efforts are strenuously opposed by the German population, and their resistance begins to awaken the warmest sympathy among the people of Germany. Thus the Baltic provinces have become an apple of discord between the Russians and Germans, and the "Baltic question," or the question of the ultimate fate of the Baltic provinces, constitutes one of the difficult European problems which either diplomacy or the sword will have to solve, before the reconstruction of Europe on a solid and lasting basis can be completed.

The original inhabitants of these provinces, the Esthonians, Livonians, and Lets, who constitute the majority of the population, belong to the race of the Finns; in Livonia, however, there are some Lets who are akin to the Slavic Lithuanians. Up to the invasion of Russia by the Mongols, the provinces are said to have been tributary to the Russians. In the twelfth

century, a lively commercial intercourse sprang up between them and the Hanse towns, which was followed by the establishment of a number of German settlements, and the introduction of Christianity. The order of Teutonic Knights, from being missionaries (from 1287), soon became the conquerors of the provinces, which from this time until 1561 constituted the state of Livonia. Then the rule of the order became untenable; Livonia and Courland were incorporated with Poland, and Esthonia became a dependency of Sweden. Gotthard Kettler, the last High-Master of the Order, received Courland (and Semgallen) as a secular grand-duchy in fief from Sweden; one of his descendants married the Empress Anna of Russia, who, after his death, caused, in 1737, the election of her favorite, the Courland Count Biron, as duke. A son of Biron reigned until 1795, when, at the third partition of Poland, Courland was united with Russia. Livonia was, in 1660, by the Peace of Oliva, ceded by Poland to Sweden; but in the Nordish War it was conquered, together with Esthonia and Ingermannland, by Peter the Great, who thus opened to his empire the Baltic Sea.

During the rule of the Teutonic Order over the Baltic provinces, the German element had become predominant. German civilization spread throughout the territory, but simultaneously with it spread the feudal system, in virtue of which the conquered Esthonians and Lets became serfs. The German nobility, still counting over 20,000 members, possessed the privilege of owning landed property, and of controlling certain courts. The Germans also became predominant in the towns of Revel, Riga, Dorpat, Libau, and others, and a marked difference was established with regard to legal position between German and non-German citizens, between privileged and non-privileged classes. In the Diets, the jurisdiction of which extended as well "to the rights, interests, and institutions of the nobility, as to the well-being of the whole country," only the nobility was represented; of the towns, only the town of Riga had a representative in the Diet of Livonia. The provinces have their own law, which is closely related to that of Germany, and their institutions have repeatedly been sanctioned by the Russian Emperor as well as by their former rulers, the Poles and the Swedes. Thus Peter the Great, on September 30, 1710, promised to maintain the *Privilegium Sigismundi Augusti*, according to which a German administration was to be preserved in the country. The same promise was repeated by all the following Czars, and even Alexander II., on February 17, 1866, engaged to leave the nobility undisturbed in possession of those rights which they held in virtue of the ukases of his predecessors. These rights include German government, German law, and German administration.

Soon after 1840 the first serious effort was made to prepare the way for the Russification

of the provinces. The Esthonian and Lettish peasants were to be transported into the interior of Russia, and their places to be supplied by Russians. The plan failed in consequence of want of money. The attempt was then made, by promises of land, and of exemption from military service, to induce the peasants to leave the Lutheran and join the Greek Church. Many thousands accepted the Russian offer; but they were soon cruelly disappointed, and ascertained, to their dismay, that neither they nor their children, nor even the children of marriages, one party of which was a member of the Greek Church, were allowed to return to the Lutheran Church. Their demand for permission to return to "their God" became so impetuous that the Emperor sent his adjutant, Count Bobrinsky, into the provinces, for the purpose of investigating their ecclesiastical condition. Count Bobrinsky, in April, 1864, reported that, of the 140,000 "orthodox" who were said to live in Livonia, hardly one-tenth professed the orthodox doctrine; and that as a member of the orthodox Church, and as a Russian, he was mortified to see with his own eyes the humiliation of Russian orthodoxy by the disclosure of this official fraud. This report was neutralized by another from the Archbishop of Riga, who soon after was called upon to investigate, likewise, the condition of affairs. In 1865, perhaps in consequence of Prussian influence, the so-called *rescrites* was abolished, by which all parties contracting marriages had to promise the education of all the children in the Greek creed, in case one party was a member of the Greek Church. The Greek clergy continued, however, to enjoy the support of the Russian authorities in their endeavors to force the peasants into the Greek Church. These efforts have, of late, not had any notable results, but appear to have increased the aversion of the rural population to the Russians, and strengthened their amicable relations with the Germans.

The efforts of the Russian Government were chiefly directed to the introduction and the diffusion of the Russian language. Nicholas I., contrary to the express stipulation of the *Privilegium Sigismundi Augusti*, decreed in January, 1850, that the official authorities of the three provinces might correspond among themselves, with the officers of other Russian provinces (governments), and with the imperial authorities at St. Petersburg, in the Russian language, if the necessary number of officers understanding the Russian language could be found. The decree was never executed, because, as was expressly declared by the ministerial committee, the requisite number of such officers could not be found. On June 1st a new ukase ordered the actual and immediate execution of the order of 1850, and the Russian officers at once began on their part to use the Russian language in their correspondence with the provincial authorities. Once more, the earnest and united protest of the Germans

made an impression upon the Emperor, but the Governor-General of the provinces, Albedinski, knew how to overcome the doubts of the Emperor, who, in February, 1868, discharged the civil governor, A. von Oettingen, and appointed in his place a pliant tool of the Russians, Lysander. Since then, extreme measures have been taken to force the Russian language into all public offices. An entire Russian gymnasium has been established at Riga, all the other gymnasia have been required to have the instruction in mathematics, and in history, given in the Russian language, and even into the public schools the Russian language was to be introduced; the latter plan, however, had to be for the present abandoned, as the peasants generally ejected the Russian teachers from the schools. Very effective, on the other hand, were the measures which the Russian Government adopted to silence the German press of the provinces.

The efforts to induce the rural population to emigrate into the interior of Russia were resumed in 1860 by Muraviev, who promised to the peasants the gratuitous transfer of land in the province of Samara. Many followed this invitation, as well as similar ones, in the years 1865 and 1868, inviting them to Novgorod and Mohilev. A few of these emigrants returned and reported that a large portion of their fellow-emigrants had wretchedly perished. Nevertheless, the Governor-General of Esthonia, Galkin, succeeded, in 1869, in organizing emigration to the crown-lands of the interior, on a still larger scale, and heavy taxes upon those who remained depopulated whole districts.

These harsh measures of the Russian Government produced in Germany a profound sympathy with the German interests of the Baltic provinces. On December 7, 1867, in the Prussian Diet, the Deputy Löwe interpellated Count Bismarck with regard to the forcible Russification of the Germans of Russia. Bismarck, in reply, declared it to be his "duty, in the name of a foreign and friendly government, to repel the attempt of meddling in its affairs;" but, in spite of this declaration, the organs of the Conservative party, in union with the papers of all other parties, continued to express a warm sympathy with the movements of the Baltic Germans to resist the plans of Russia; while, on the other hand, the Russian press regarded the declaration of Bismarck as any thing but sincere, and endeavored to arouse the national feeling in Russia against all that is German.

The following table shows the area, and the German and non-German population of each of the Baltic provinces:

	Area.	Total Popul'n.	German Pop'n.
Courland.....	10,531	573,865	77,100
Esthonia.....	7,624	312,119	14,700
Livonia.....	16,774	925,378	63,300
Total.....	36,929	1,812,347	155,100

The interest of two of the greatest European nations in the Baltic question has called forth a large number of works, discussing it in all its aspects. The ablest work, on the side of the Russians, is that of Junj Samarin (German translation and reply: "Juri Samarin's Anklagen gegen die Ostseeprovinzen Russlands, Eingeleitet und commentirt von J. Eckardt," Leipzig, 1869); the views of the Germans are advocated by Schirren, Lirland. Antwort an Herrn Samarin (Leipzig, 1869); Bock, "Der deutsch-russische Conflict an der Ostsee" (Berlin, 1869); Eckardt "Die Baltischen Provinzen Russlands" (Leipzig, 1869).

BANKS OF THE UNITED STATES. The national banks in the United States have increased in number from 507 in 1864, to 1,627 at the close of the year 1870. Their progress in number and capital for seven years has been as follows:

YEAR.	No.	Capital.
October, 1863.....	65	\$7,138,000
" 1864.....	507	86,780,000
" 1865.....	1,518	293,157,000
" 1866.....	1,643	415,278,000
" 1867.....	1,643	420,078,000
" 1868.....	1,646	420,634,000
" 1869.....	1,637	426,399,000
" 1870.....	1,627	426,478,000

Their combined movement in January, and in the month of October, 1870, was as follows:

LIABILITIES.	JANUARY 22.	OCTOBER 3.
	1,518 Banks.	1,627 Banks.
Capital Stock.....	\$426,074,854	\$426,399,301
Surplus Fund.....	99,174,381	94,061,489
Undivided Profits.....	84,300,420	88,008,618
National-Bank Notes.....	303,838,936	291,793,640
State-Bank Notes.....	2,351,988	2,158,548
Dividends unpaid.....	2,299,298	2,463,591
Individual Deposits.....	546,226,881	501,497,586
United States Deposits.....	6,750,139	6,807,978
Deposits of Officers.....	2,522,001	4,556,143
Due National Banks.....	108,351,300	100,843,298
Due other Banks and B's's.....	28,904,849	29,898,910
Notes and Bills.....	3,842,542	3,843,577
Bills payable.....	1,542,753	4,896,809
Total.....	\$1,546,261,354	\$1,510,712,230

Total.....	1,627	\$426,478,310	\$299,729,684

The total chartered bank capital of the United States at the close of the year 1870 was \$508,578,000, and the number of banks was 1,882, divided as follows:

DECEMBER, 1870.	No.	Capital.
National Banks.....	1,627	\$426,478,000
State Banks.....	258	67,100,000
Year 1870.....	1,885	\$508,578,000

The capital engaged in private banking in the United States is variously estimated at \$300,000,000 to \$400,000,000, in addition to the above sum.

The aggregate deposits in the savings-banks of New England and New York were, in 1870, upward of \$400,000,000, belonging to 1,441,581 depositors, as follows:

STATES.	No. of Depositors.	Aggregate Deposits.	Average Deposit.
Maine.....	29,527	\$10,490,368	\$355 40
New Hampshire.....	71,536	16,759,461	262 25
Vermont (1869).....	14,296	2,037,984	142 53
Massachusetts.....	431,799	112,119,016	259 67
Rhode Island.....	67,239	27,007,073	402 55
Connecticut.....	165,692	47,904,834	289 12
New England.....	790,068	\$218,378,665	\$278 41
New York State.....	651,474	194,860,300	296 80

The savings-banks of the State of New York are 188 in number; their deposits for January, 1869 and 1870, were as follows:

LIABILITIES.	1869.	1870.
Amount due depositors.....	\$169,808,719	\$194,300,990
Other liabilities.....	61,714	322,969
Excess of assets over liabilities.	12,088,216	14,023,880
Total liabilities.....	\$181,958,648	\$308,607,148
No. of institutions reporting....	110	123
No. of open accounts.....	588,558	651,474
Average to each depositor or account.....	\$268	\$297
No. of accounts opened during the last year.....	183,923	300,624
No. of accounts closed during the last year.....	139,813	142,145
Amount deposited (not including interest credited) during the last year.....	\$110,146,050	\$133,259,700
Amount deposited (including interest credited) during the last year.....	113,314,434	143,709,907
Amount withdrawn during the last year.....	101,123,308	119,108,499
Interest or profits received or earned during the last year....	11,383,418	12,918,009
Interest credited to depositors during last year.....	8,666,874	10,220,307

This exhibit of the marvellous growth of the savings-bank interest in New-York State, and of the wonderful proportions to which it has attained, requires no comment to render it impressive. The comparative growth in twelve years has been as follows:

Savings-Deposits in the State of New York, from 1859 to 1870.

The comparative capital of the national banks of the leading cities of the United States was as follows at the close of the year 1870. The places named are points of redemption, as provided by law.

CITY.	No.	Capital.
New York.....	54	\$72,485,000
Boston.....	46	47,800,000
Philadelphia.....	39	16,355,000

The anniversaries of the Baptist Societies were held in Philadelphia in May. The receipts of the *Publication Society* were \$200,953

—an excess of \$4,000 over the previous year. The report of the *American and Foreign Bible Society* shows that the expenditures were \$14,650, and the receipts \$16,054. A resolution was adopted, declaring, in regard to the intent and meaning of the sixth item of the basis of union with the American Baptist Publication Society, that the American Baptist Publication Society shall prosecute the Bible work as now carried on by the American and Foreign Bible Society, with such equitable modifications as may from time to time be directed by the Union Society, to the extent of means furnished, etc. The *Baptist Home Mission Society* has undertaken to raise half a million dollars, to establish a seminary in each Southern State, primarily for the benefit of the freedmen, but open to all. Upward of \$100,000 was reported to have been raised and properly invested. The twenty-seventh annual meeting of the *American Baptist Free Mission Society* was held in June, in Cincinnati. The Rev. R. de Baptiste, a colored clergyman of Chicago, and already president of the colored consolidated American Baptist Missionary Convention, was elected president, and resolutions favoring a union with the latter body were passed. The Baptist National Theological Institute and University held its annual meeting in the First Church, Washington City, June 21st. The prospects of the institute, which conducts seven schools, with three hundred adult colored pupils, in the city, were reported to be excellent.

The open-communion question caused a great deal of discussion within the Baptist communion. The Rev. C. H. Malcom, of Rhode Island, sent out a circular, inviting Baptists to sign a declaration of faith in the general Baptist doctrines, but allowing "entire freedom to each church to fix its own terms of communion." He says that about thirty Baptist ministers, including one or two college presidents and four doctors of divinity, have signed the paper. The circular is as follows:

"In the name of the Father, and of the Son, and of the Holy Ghost! Amen! We, whose names are hereunto affixed, deploring divisions in Christ's Church, do hereby solemnly pledge ourselves to advocate, and, as far as possible, to form a union of evangelical Baptists on the basis of those cardinal principles which they have for many generations asserted—namely: the word of God, the supreme rule of faith and practice in matters of religion; the headship of Jesus Christ as the only king in this kingdom, so that the civil power may not constrain the conscience in spiritual concerns; repentance and faith prerequisite to baptism; and immersion the only act of baptism. With these principles as a foundation of agreement, we earnestly promise and covenant to have toward each other a forbearing and loving spirit; to tolerate diversity in belief and usage in things not essential; to grant entire freedom

to each Church to fix its own terms of communion; to cherish soul-liberty; to seek for the indwelling of the Holy Spirit, for a blameless and devout life, for abundant labors in the cause of Christ, for the salvation of souls, and for an entire consecration of property, time, and talents, to the glory of God the Father, through Jesus Christ our Lord." The overwhelming majority of the Baptists of the United States declared themselves decidedly against the principle of allowing freedom to each Church to fix its own terms of communion. In December, a new Baptist paper was established in New York, the *Baptist Union*, to plead the cause of open communion.

The first *National Baptist Sunday-School Convention* met in St. Louis, in November, 1869, and passed resolutions requesting the American Baptist Publication Society to appoint a general Secretary for the Department of Sunday-school Work, recommending the organization of the Baptist Sunday-schools into State and District Conventions, the establishment of a Sunday-school teachers' paper, and the publication of a Baptist Sunday-school manual, and expressing the hope that the American Baptist Publication Society, in co-operation with the Sunday-school Board of the Southern Baptist Convention, will arrange the assembling of another National Sunday-school Convention. According to the *American Baptist Year Book* for 1870, the statistics of Baptist Sunday-schools were as follows:

STATES.	Schools.	Teachers.	Scholars.
Alabama.....	6
Arkansas.....
California.....	25	295	1,327
Connecticut.....	119	1,579	13,622

The *Baptist Year Book* for 1870 enumerates 46 Baptist periodicals in the United States and British North America, namely, 31 weeklies, 2 semimonthlies, 12 monthlies, 3 quarterlies.

The number of colleges was 26, of theological schools and seminaries 14.

The Rev. Thomas M. Westrup, of Monterey, Mexico, who accepted in 1870 an appointment from the Baptist Missionary Union, furnished to the *National Baptist* of Philadelphia a list of Protestant Churches in Mexico, which hold views substantially in harmony with the Baptist denomination. This list embraces the following churches: Monterey, established January 24 (1864); Caderita (1867); Ebanos (1863); Montemorelos (1869); Durango (1869); Santa Rosa (1869); Jerez (1869). Another was established at Guadalupe, in the State of Zacatecas, but the members have all removed. Rev. James Hickey was the pioneer in this work. He died in December, 1866, at Brownsville, Texas. "We enjoy," says Mr. Westrup, "full religious liberty, and the protection of the laws. All the members are Mexicans, with rare exceptions."

The Triennial Conference of the Baptist Missions on the Continent of Europe was held in Hamburg, on July 6th and the following seven days. About one hundred and thirty pastors and missionaries attended the Conference, from all parts of Germany, Holstein, Schleswig, Denmark, Sweden (although not in the Union), Holland, Switzerland, France, Poland, Russia, Courland, and Turkey. The statistics of the churches in the Mission had been collected and printed, and were distributed among the brethren. From these it appears that there are now in the Mission 101 district churches, 1,256 preaching-stations, and 18,218 members. In a letter to the *Baptist Union* of England, Rev. Mr. Oncken, the pioneer of the Baptist Church in Continental Europe, stated that, as the result of the mission, 50,000 persons were baptized, and 100 churches formed. "The persecutions," Mr. Oncken added, "from which we have had to suffer for more than a quarter of a century, have ceased, so that we can not only freely preach the Gospel throughout our fatherland, but a wide door is open to us throughout the Continent of Europe. The most interesting and promising connections are opening in Austria, Hungary, Poland, Russia, the Danubian Principalities, and even in Turkey, where we have, by the blessing of God, been able to form two churches. Russia, however, has of late become the most promising field of labor." Mr. Oncken spent, in 1870, several weeks in Southern Russia among both Russian and German colonists, and everywhere met a favorable reception. Forty Germans were baptized, and two new churches formed, numbering three hundred baptized believers. Twenty-eight Russians were baptized in Alt Dantzic; they have fraternal relations with the German brethren, but are formed into a separate church.

The first Baptist church in Spain was organized at Madrid on August 10th, by Professor Knapp, a missionary of the American Baptist Missionary Union. The new congregation

numbered at its beginning thirty-three members, all of whom had been baptized within the two weeks preceding. A second church grew out of a company of Plymouth brethren in Madrid who wished to be embodied as a regular Baptist church. In September the two churches numbered ninety-five members.

II. FREE-WILL BAPTISTS.—The *Free-Will Baptist Register* for 1871 gives the following statistics of this denomination:

YEARLY MEETINGS.	No. of Q. M.	No. of Churches.	Ordained Preachers.	No. of Communicants.

The "OLD SCHOOL" BAPTISTS, a small denomination of Christians, who are opposed to missions, Sunday-schools, and any class of agencies which is not distinctly mentioned in the Scriptures, have a periodical, called the *Signs of the Times*, published at Middletown, N. Y., on the 1st and 15th of every month, and edited by Elder G. L. Bebee. The Delaware River Association has 422 members, and the Warwick Association 213.

The Rhode Island and Massachusetts General SIX PRINCIPLE BAPTIST Association held its two hundredth anniversary, in the First Baptist Church in Richmond, October 7th-9th. Rev. Gilbert Tillinghast was Moderator. The few churches which still adhere to this association reported gains for the year.

The General Conference of the SEVENTH-DAY BAPTISTS was held in Little Genesee, N. Y. The new constitution was reported as rejected by a majority of the congregations.

* Showing an increase of 11 churches, 35 ministers, and 218 members.

BARNES, Rev. ALBERT, D. D., an American clergyman, scholar, and author, born in Rome, N. Y., December 1, 1798; died in Philadelphia, Pa., December 24, 1870. Mr. Barnes's father was a tanner, and he was employed in the same business until he was seventeen years of age, when he commenced preparing for college. He graduated from Hamilton College, Clinton, N. Y., in 1820, with high honors, and in the autumn of the same year entered Princeton Theological Seminary, where he passed through the usual seminary course. He was licensed to preach in 1824, and in February, 1825, was ordained pastor of the Presbyterian Church in Morristown, N. J. He remained in this charge for five years, and was remarkably successful in promoting the growth and extending the influence of his church. In 1830 he was called to the pastorate of the First Presbyterian Church in Philadelphia, and remained its pastor until the close of 1868, when he resigned in consequence of infirm health. His eloquence and fervor as a preacher were early recognized in Philadelphia, and when, in 1834, it began to be evident that there were two parties in the Presbyterian Church, holding different views as to the meaning and binding force of the standards of the Church (the Westminster Assembly's Confession of Faith and Exposition of Doctrine), Mr. Barnes at once took a prominent place among the leaders of the "New Side," or, as it was subsequently called, the "New-School" party. His prominence in this cause was greatly enhanced by his being personally put upon trial on a charge of heresy, preferred by partisans of the "Old School," and of which, after great excitement, he was adjudged guilty by the majority, which favored the "Old-School" views. This action led to the disruption, in 1837, the New-School party, on the excision of four synods holding its doctrines, withdrawing, and forming a New-School Presbyterian General Assembly. Of this body Mr. Barnes was often a member, and always prized as one of its ablest and most devoted ministers. His public labors were connected with that branch of the Presbyterian denomination throughout his active life; but he had the satisfaction of seeing, by the action of the two General Assemblies (Old and New School) in 1868 and 1869, a gradual and complete reconciliation effected, and in the autumn of 1870 a perfect reunion consummated in the city where he had so long dwelt, and no one of the ministers of either branch rejoiced more heartily in the result than did Dr. Barnes, who had, from the circumstances in which he was placed, been one of the moving causes of the disruption. While yet a pastor at Morristown, he commenced that course of careful study and exposition of the New Testament in his morning discourses which resulted in the publication of his "Notes on the New Testament" in eleven volumes, the most popular exposition extant (over a million volumes having been sold up to 1869). He subsequently carried the

same system of exposition into the treatment of the books of Job, Isaiah, Daniel, and finally, in 1868, of the Psalms. Meanwhile, notwithstanding the cares of a city pastorate, which he never neglected, he economized his time for other literary and philanthropic labors. He early took a decided stand, both from the pulpit and in his writings, against the injustice of slavery, and published his "Inquiry into the Scriptural Views of Slavery," and "The Church and Slavery," at a period when the views he held were very unpopular. Other theological and controversial topics were handled by him with great ability. Among these we may mention a very able treatise on "Episcopacy," "The Atonement in its Relations to Law and Moral Government," "Evidences of Christianity," and a "Life of St. Paul." Several other narrative and biographical works, and numerous published sermons and addresses, were among the results of the industry of this patient and indefatigable student and preacher. His "Notes on the New Testament" were republished and largely sold in Great Britain, and translated into French, German, and Chinese. He had received the honorary degree of D. D. from two or three colleges in the United States and at least one foreign university, and, notwithstanding his repeated disclaimers of the title from conscientious motives, it had adhered to his name.

BARTLEY, MORDECAI, an eminent citizen and pioneer of Ohio, prominent for many years in public life; born in Fayette County, Pa., September 17, 1786; died in Mansfield, Ohio, October 10, 1870. He removed to Ohio in 1809, served in the War of 1812 in the Northwest, under General Harrison, as captain and adjutant. In 1814 he settled in Richland County, and remained there till 1834, when he removed to Mansfield, and engaged in mercantile pursuits. In 1817 Mr. Bartley was elected to the Ohio Senate, and in 1818 chosen, by the Legislature, Registrar of the Land-Office of Virginia Military District School Lands; in 1823 he resigned his registrarship, having been elected member of Congress, his district comprising a large portion of Northern and Western Ohio, including Cleveland and Sandusky City, and extending to the southern border of Richland County. He remained in Congress eight years, and declined a reelection. In 1844 he was elected Governor of Ohio on the Whig ticket, over the late David Tod, by a small majority. He declined a second term, and retired to private life. He remained a staunch and active Whig until the final disruption of that party, and subsequently acted heartily with the Republican party. He left behind him a reputation for strict honor and sterling integrity which none had ever called in question.

BAVARIA, a kingdom in South Germany. King, Ludwig II., born August 25, 1845; succeeded his father, Maximilian II., on March 10, 1864; heir-apparent, his brother, Otto, born April 27, 1848. Prime-minister (since

March 8, 1870), Count von Bray-Steinburg; Minister of Finance, A. von Pfretzschner; Minister of Commerce and Public Works, G. von Schloer; Minister of War, Major-General S. von Prankh; Minister of Justice, J. von Lutz; Minister of Public Worship and Instruction, J. von Lutz; Minister of the Interior, P. von Braum. The Council of State is composed of the King, the Princes Luitpold and Adalbert of Bavaria, and the ministry. Bavaria is divided into the following provinces:

PROVINCES.	AREA	CENSUS OF DEC. 3, 1867.		
	Sq. Mls.	Males.	Females.	Total.
Upper Bavaria.....	6,580	420,558	407,111	827,669
Lower Bavaria.....	4,154	292,219	302,292	594,511
Palatinate.....	2,206	310,405	315,061	625,466
Upper Palatinate and Regensburg.....	3,730	236,616	254,679	491,295
Upper Franconia.....	2,712	259,908	275,157	535,065
Middle Franconia.....	2,917	263,054	296,634	559,688
Lower Franconia and Aschaffenburg.....	3,249	285,000	299,972	584,972
Suabia and Neuburg.....	3,064	297,307	297,053	594,360
Total.....	29,202	2,374,903	2,449,459	4,824,362

Of these 4,824,421 inhabitants, 3,441,029 (or 71.32 per cent.) were Roman Catholics; 1,328,713 (or 27.55 per cent.) Protestants; 49,840 Jews; 3,267 Reformed; 143 Greeks; and 4,696 Mennonites, Baptists, and German Catholics. The public debt on December 31, 1869, amounted to 425,855,554 florins, comprising a railroad debt of 168,428,800 florins. The annual revenue and expenditures for one year of the ninth financial period (1868 and 1869) are estimated at 87,144,606 florins.*

In October, 1869, the Second Chamber was dissolved, as the two great parties were equally strong, and the election of President of the Chamber was made impossible by an unchangeable tie-vote. A new election took place in November, at which the "Patriots" (Catholic party) received a majority of 6 (80 against 74, of whom 63 belonged to the party of progress, and 11 were independent [Wilde]). This result caused a ministerial crisis, the extremists of the Patriotic party demanding the formation of a new Cabinet, while the Liberals petitioned the King for the retention of the prime-minister, Prince Hohenlohe, who, in September, 1869, had in vain endeavored to bring about a compromise and reconciliation between the parties of the Diet. The new Diet met in Munich on the 3d of January, and organized by electing the ministerial councillor Weis President, Count Seinsheim, Vice-President, Dr. Jörg (editor of the *Historisch-Politische Blätter*), of Munich, first Secretary. The royal speech, which was delivered on the 17th of January, promised a new liberal electoral law; and, with regard to the question of the unification of Germany, announced that the treaties with the North-German Confederation would be

faithfully observed, and that the King desired a restoration of a national union of the German States, provided, however, that it would not endanger the independence of Bavaria. The addresses of the Chambers in reply to the royal speech strongly urged the formation of a new Cabinet, representing the majority of the two Chambers. The King refused to receive the deputation of the First Chamber, which was to present to him their address, but was finally (March 7th) prevailed upon to accept the resignation of the prime-minister, Hohenlohe: in his place he appointed, however, not a member of the Patriotic party, but Count Bray, who professed the same political views as the Prince Hohenlohe, and, in spite of the hostile majority in both Chambers, pursued the same policy.

With regard to the Council in Rome, the Government regarded the doctrine of papal infallibility as dangerous to the State Governments, and forbade its official promulgation by the Bavarian bishops. When, however, the Catholic papers generally published the text of the doctrine, the Government desisted from further measures against it.

On the outbreak of the German-French War, the Government at once showed a readiness to fulfil the obligations imposed upon it by the treaties of 1866. A large portion of the Patriotic party demanded the neutrality of Bavaria, but, after animated debates, a considerable majority of both Chambers granted the war-credits demanded by the Government. In the negotiations which subsequently arose concerning the union of the South-German States with North Germany, the Government showed itself favorable to the union, but demanded several concessions, which none of the other members of the Confederation possessed. A treaty which gave to Bavaria some of the required concessions was signed at Versailles, November 27th. A few days later the King of Bavaria took the initiative in a movement for the restoration of the imperial dignity of Germany, by writing the following letter to the King of Saxony:

Most Serene and Powerful Prince! Dear Friend, Brother, and Cousin! Victoriously led by Prussia's heroic King, the German races, who for centuries have been united in language, manners, science, and art, now celebrate a brotherhood of arms, which gives a glorious proof of the importance of the power of a united Germany. Animated with a desire to coöperate with them in their endeavors to effect this unity of Germany, I have not delayed entering into negotiations, calculated to bring about this result, with the Chancellor of the North-German Confederation at Versailles. I now address myself to the German princes, and especially to your Majesty, to propose that you should, together with me, urge upon his Majesty the King of Prussia that the exercise of the presidential rights should be united with the title of Emperor. It is for me a sublime thought that I can feel myself called upon, both by my position in Germany and by the history of my country, to take the first step toward crowning the work of German unity, and I entertain the joyful hope that your Royal Majesty will accord to me your friendly assent. While I thus have the pleasure of

* For a statement of the army, see AMERICAN ANNUAL CYCLOPEDIA for 1868.

asking your Royal Majesty, as well as the other Confederate Princes and Free Towns for their opinion, I am, with the assurance of my highest consideration and friendship, your Royal Majesty's friendly brother and cousin,
LUDWIG.

All the governments of Germany expressing their approval of this proposition, the King of Prussia was formally called upon to assume the title of Emperor, and complied with the request. (*See GERMANY.*)

BELGIUM, a kingdom of Europe. King, Leopold II., born April 9, 1835; succeeded his father, Leopold I., on December 10, 1865. Heir-apparent, the brother of the King, Count Philip of Flanders, born March 24, 1837; married April 25, 1867, to Princess Maria of Hohenzollern-Sigmaringen; has one son, Baldwin Leopold, born June 8, 1869. A new ministry was appointed on July 1, 1870, as follows: President, Minister of State and of Public Works, Count Anethan; Minister of Justice, Cornesse; Minister of Finances, Jacobs; Minister of War, Guilleaume; Minister of the Interior, Kervyan. Mr. Russell Jones was accredited minister resident of the United States, at Brussels, July 14, 1869, while Belgium is represented at Washington by its minister resident, Mr. M. Delfosse.

The area of Belgium is 11,873 square miles, with a population, according to the official calculation of December 31, 1868, of 4,961,644 inhabitants. Nearly the entire population of Belgium are Roman Catholics, the Protestants being estimated by Henschling, in 1862, at 10,000, and the Jews at 2,000; the greater half of the Protestants and Jews live in the provinces of Antwerp and Brabant. The following table gives the area of the various provinces and their population at the close of the years 1867 and 1868.

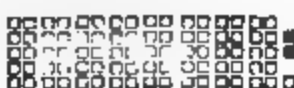

PROVINCES.	AREA.	NO. OF INHABITANTS.	
		December 31, 1867.	December 31, 1868.
1		472,308	478,810
2		832,329	840,858
3		648,207	654,145
4		812,739	821,178
5		869,919	872,738
6		587,090	570,426
7		196,455	197,137
8		201,618	208,081
9		305,735	308,891
10		4,897,992	4,961,644

The population of Belgium consists of various nationalities. According to the census of December 31, 1866:

2,406,491 inhabitants spoke Flemish only.	
2,041,784 " " French only.	
308,861 " " French and Flemish.	
88,356 " " German only.	
20,448 " " German and French.	
1,886 " " German and Flemish.	
4,906 " " all the three languages.	
6,234 " " foreign languages.	
1,873 were found to be deaf and dumb.	

Although, as this table shows, Flemish is the language of the majority of the people, the French language has been for many centuries

and still is predominant. Since 1832 there has been, however, a "Flemish movement," the object of which is to secure equal rights for the Flemish language. The movement is making steady progress; the number of Flemish societies is rapidly increasing, and in 1869 there already were in Belgium 76 political and 31 other periodicals published in the German language. The following table shows the combined number of Belgians speaking either Flemish or German in each of the Belgian provinces, and in the adjacent grand-duchy of Luxemburg:*

E. FLANDERS. 790,051	ANTWERP. 449,161	LIMBURG. 188,825
		
W. FLANDERS. 606,938	BRABANT. 548,505	LUTTICH. 29,734
		
NEENEGAU. 24,849	NAMUR. 1,900	LUXEMBURG. 28,923 194,700
		

The public debt of Belgium, on May 1, 1869, amounted to 706,446,214 francs. Although heavy sums have been expended for railroads and other public works, the aggregate indebtedness of the country is steadily diminishing, as will be seen from the following statement:

LOANS.	Original Amount.	Rate of Interest, per cent.	Present Amount.
Proportion of the indebtedness of the Netherlands at time of separation.....	16,931,300	5	16,931,300
Construction of Rail'rs. } 1869..	230,105,622	2½	230,105,622
War Indemnity.....	50,850,800	2	13,332,000
Loan of the City of Brussels, 1842.....	7,034,000	3	
Various loans from 1844 to 1869	6,000,000	5	6,000,000
Indebtedness for the Canal of Charleroy.....	524,961,123	4½	447,577,383
	2,450,000	4½	2,450,000
Total francs.....	825,222,764		706,446,214

Of these 706,446,214 francs, 9,916,000 francs were paid off from May 1, 1869, till April 30, 1870. The budget for 1870, as approved by

* Each square in this table denotes 10,000, the black squares being used for Flemish and German, the white squares for the French or Walloon nationality. Of the two figures given under Luxemburg, the smaller one refers to the Belgian province, and the larger one to the grand-duchy. The figures are taken from Böckh, *Der Deutschen Volkszahl* (Berlin, 1870). They slightly differ from the figures given above for the population of each province, as they are derived from an earlier census. The table which so conspicuously illustrates the numerical proportion of the two nationalities in the several provinces, was kindly furnished by Dr. Edwin Leigh.

the Chambers, fixed the revenue at 176,525,000 francs, and the expenditure at 176,812,836 francs; the estimate of revenue for 1871 amounts to 179,292,000 francs, and the expenditure for the same period to 169,293,395 francs. The standing army of Belgium, which, according to a decree of April 5, 1868, numbers 100,000 men in time of war, comprises 16 regiments of infantry, consisting of 64 field battalions or 892 companies, besides 16 reserve battalions, consisting of 64 companies. The cavalry consists of 2 regiments of chasseurs, 4 regiments of lancers, and 1 regiment of guides,

while the artillery comprises 6 regiments, with 68 batteries. The total strength of the army is as follows:

	Men.	Horses.	Guns.
Infantry.....	74,000
Cavalry and Gendarmes.....	7,908	6,573	..
Artillery.....	14,513	4,060	153
Engineers.....	2,354
Total rank and file, exclusive of officers	98,770	10,633	153

The exports and imports of Belgium in 1867 and 1868 were as follows:

	IMPORTS.		EXPORTS.	
	1867.	1868.	1867.	1868.
France.....	195,800,000	201,500,000	235,800,000	272,900,000
Netherlands.....	90,700,000	121,700,000	68,000,000	75,000,000
German Customs Union.....	93,800,000	99,700,000	78,600,000	95,900,000
Other European Countries not specified.....	13,000,000	13,900,000	36,800,000	11,900,000
England.....	181,100,000	141,500,000	121,600,000	119,900,000
Russia.....	48,400,000	47,800,000	15,400,000	13,400,000
Other Eastern Countries not specified.....	10,000,000	11,100,000	2,800,000	8,300,000
Southern Europe.....	27,000,000	39,300,000	18,900,000	38,800,000
Total Europe.....	612,800,000	674,100,000	567,900,000	681,000,000
America.....	149,900,000	181,200,000	28,600,000	24,700,000
Asia.....	9,100,000	6,000,000	400,000	200,000
Africa.....	2,400,000	3,000,000	500,000	700,000
Grand total France.....	775,200,000	864,400,000	597,400,000	656,600,000

The following table shows the development of Belgian commerce since 1841:

	Imports.	Exports.
In 1868.....	364,400,000	686,600,000
1867.....	775,500,000	597,900,000
1866.....	747,400,000	643,900,000
Avg per annum from 1861-1865.....	639,900,000	537,600,000
" " " 1851-1860.....	375,900,000	350,730,000
" " " 1841-1850.....	214,800,000	167,300,000

The tonnage of Belgian ports was as follows:

	TOTAL.		LOADED.		IN BALLAST.	
	Ships.	Tonnage.	Ships.	Tonnage.	Ships.	Tonnage.
1868.....	5,304	1,336,775	4,434	1,268,734	770	58,041
1867.....	5,105	1,238,166	4,303	1,245,373	812	92,793
1866.....	4,593	1,067,893	3,721	963,634	872	81,363
1865.....	5,150	1,234,575	3,473	730,876	2,677	590,199
1864.....	5,129	1,048,973	3,447	761,187	2,681	587,186
1863.....	4,478	1,020,113	3,415	647,443	2,063	381,171

The arrivals during 1868 comprised 836 vessels under the Belgian flag, of 85,165 tons; among the departures were 851 ships under the Belgian flag, together of 88,697 tons. The merchant navy of Belgium numbered as follows:

1868, 68 ships of 23,141 tons, and 11 steamers of 8,793 tons.
1867, 81 " 31,196 " 9 " 6,357 "
1866, 91 " 33,329 " 7 " 4,636 "

Of railroads there were on January 1, 1869:

	Completed	In process of Construction	Total	Cost of Construction.
	Eng. Miles	Eng.	Eng. Miles	France.
State Roads.....	544	187	731	241,553,138
Roads owned by Companies.....	1,449	43	1,491	515,111,000
Total.....	1,993	229	3,223	756,664,138

The number of post-offices amounted in 1868 to 414; private letters carried during the year, 38,362,727; newspapers, 38,966,382; official letters, 6,396,520.

The length of telegraph-lines summed up 2,565 miles, length of wire 7,906 miles; telegraph-offices 410, and number of dispatches sent 1,502,599.

The legislative session of the Belgian Chambers for 1869-1870 was closed on May 19th. The most important bill adopted by the Chambers was one on the administration of church property. The Government and the Catholic party concluded a compromise concerning this question, the former recognizing the necessity of a strict control over the administration of the church property by the state, and the Government limiting its bill to such provisions as directly concern this control. Only one new article was added, providing that in future those *fabriques* (church councils) which decline a control by the Government shall receive no subsidy from the state. In this shape the bill was adopted by 86 against 8 votes.

In July a new ministry was formed, of members of the Catholic party. New elections took place on the 2d of August, at which the Catholics obtained a decided victory. In the new second Chamber the Catholic party numbered 74, and the Liberal party only 50 members; the Senate has 84 Catholics and 28 Liberals. On the 8th of August, the King opened the Chambers, and in his speech thus referred to the all-important question of Belgian neutrality in the German-French War:

The Emperor of the French has written to me to

state that his formal intention—in conformity with his international obligations—is to respect the neutrality of Belgium. His imperial Majesty at the same time expresses his desire to be confirmed in the opinion he entertains that my kingdom will cause its neutrality to be respected by all means in its power. I was happy to be able to declare in my answer that his Majesty was not mistaken as to our intentions.

The King of Prussia's government has also hastened to give me a written assurance that Belgian neutrality shall be respected by it so long as the other belligerent parties shall not have violated the existing treaties.

Among the friendly testimonials which I have received from foreign powers, I am happy to cite, with a gratitude in which the whole country will share, the solicitude of the government of the Queen of Great Britain for the interests of Belgian nationality, and the generous supports which those sentiments have found in the Parliament and public opinion of England.

Belgium, on her side, in the position in which international law has placed her, will not forget what she owes to other states, nor her duties toward herself. She will know how, during the war, to maintain in her conscientious neutrality the honest and sincere character which she has always endeavored to give to her relations in times of peace. In conformity with the desire of the belligerents themselves, she will hold herself ready to defend herself with all the ardor of her patriotism and all the resources that a nation derives from the energies of its will. My government has already taken on its own responsibility the measures which circumstances demand, and to which the two Chambers will not refuse their approbation. In the midst of the anxieties which so naturally occupy your minds, the Government will only submit to you during your extraordinary session some bills of an urgent character, the adoption of which cannot be delayed till other times. Belgium, gentlemen, has already gone through more than one perilous trial. None has been of the gravity of that through which she is now passing. By her prudence, upright sentiments, and firm patriotism, she will be able to show that she is worthy of herself, of the esteem which the other nations accord to her, and of the prosperity which her free institutions have procured for her.

On the 11th of August the Chamber of Representatives elected Count Vilain XIV. President by 75 votes against 33, given to M. Rogier. The Chambers were prorogued on September 29th.

BERRI, MARIE CAROLINE FERDINANDE DE BOURBON, Duchess de, a princess of the elder branch of Bourbons, born at Naples, November 5, 1798; died at her castle of Brunsée, in Styria, April 18, 1870. She was the only daughter of Francis I., King of the Two Sicilies, by his first Queen, Marie Clementine, Archduchess of Austria. Her mother died when she was three years old, and under the management of her step-mother, who was an Infanta of Spain, her education was almost wholly neglected. Exiled from home by the conquests of Napoleon I., she passed a sad and un instructed childhood, and, almost as soon as the Bourbons were restored in France and Italy, her hand was demanded by Louis XVIII., for his son the Duke de Berri. She was married on the 16th of June, 1816, at Notre-Dame, and was most cordially received by the royal family and won the affections of her husband, though

he had previously contracted a marriage during his exile in London. This union, which promised to be so happy, had, however, speedily a sad termination. The duke was assassinated February 18, 1820, while leading the duchess to her carriage at the door of the opera. The assassin was a fanatical Bonapartist, and avowed that he wished to destroy the Bourbon dynasty in the person of the only member who could perpetuate the race. In this he was disappointed, as some months after the duchess was delivered of a son, who was baptized with great ceremony, and was regarded as destined to be the future King of France. During the Revolution of July she had resolved to go to the headquarters of the insurgents and present the claims of her son. The old King prevented this step by placing her under arrest and confining her to her own apartments. The revolution triumphed, and she followed the Bourbon family into exile. From the moment of leaving France she was resolved to return and attempt all means of restoring her son to the throne. This impelled her to promote a revolution in France. The arrangements had been made for a rising at Marseilles at the time of her landing there in April, 1832; but, this having failed, she directed her course toward La Vendée, and during her sojourn there she became the heroine of many adventurous scenes. Driven from place to place by the columns of troops on her footsteps in every direction, she took refuge in the city of Nantes, which she entered as a country-woman, barefooted, and carrying a basket of eggs and vegetables. A safe asylum had been prepared for her in that city; but she was betrayed by Simon Deutz, a professed convert from Judaism to the Catholic faith, a man who professed great devotion to her interests. M. Thiers and the other members of the Cabinet had stipulated to give him, it is supposed, 1,900,000 francs for the information which led to her arrest. Her imprisonment gave rise to great commotion in France, which was intensified by the admission that she had contracted a secret marriage with the Count of Luchessi-Palli, an Italian nobleman. Upon her release she left France, and from that time she lived retired from the political arena, and devoted her energies to training her son for the position she expected him to occupy. This son, now the Count Henri de Chambord, or, as the legitimists call him, Henri V., is the sole heir of the elder Bourbon line to the French throne, and during the present political and military convulsions in France has appealed to the French nation, in an exceedingly well-written paper, to recognize his claims. He has been very liberal to the French wounded, and might, in a possible contingency, have a large following. The duchess, since 1833, had resided at intervals at Venice, where she owned the beautiful Vendramin Palace, and in her princely castle of Brunsée, in Styria. A concourse of friends visited her constantly, and showed that

she was still popular among many of the French people.

BLOSSOM ROCK, THIRZ, at the entrance of San Francisco Harbor. It was blasted on the 24th of April, and has been so effectually destroyed that a depth of 88 feet at low water has been obtained. Extensive excavations were made in the rock, which was reached by means of a caisson, and the central shaft was bored to a depth of 25 feet from the face of the rock. Nine feet from the bottom of this shaft, radiating galleries were tunnelled in all directions, and altogether 40,000 tons of stone were removed. Twenty-three tons of powder were employed, placed in casks and iron tanks, made water-tight, and coated inside with tar. The barrels were ranged close to the sides of the galleries, while the tanks were deposited in the central chamber. To ignite this charge a piece of gas-pipe 2 feet 6 inches long was inserted in each barrel, and a piece 6 feet long in each tank; these were all filled with meal powder, and a fulminating cartridge placed at the ends. Insulated electric wires connected the different charges together, and were conveyed to the surface of the water through a tube placed in the shaft and thence to a vessel lying at anchor 1,000 feet south of the rock. When all was ready for the blast the caisson was removed and the water allowed to flow in and fill the excavation. It was intended to explode the charge from the vessel with which the connections were made, but in consequence of an unforeseen accident another wire had to be substituted, and the charge was fired 600 feet from the rock. The effect of the explosion was to raise a mass of water to a height of some 220 feet. The column rose majestically in the air, in the shape of a round or obtuse-pointed, truncated cone. This column was nearly 300 feet in diameter at a point some 80 feet above the bay. Its base was shrouded by another majestic and accompanying outburst of water, which rose to the height of 80 feet all round the central shaft, and rolled its flood outward. This base was over 500 feet in diameter at the surface of the bay. High above the upheaved mass, rocks of large size, *débris* of the interior works, and a great quantity of earthy matter, were thrown and scattered far and wide. The report that there was a second explosion is erroneous. Nothing of the kind occurred, but there was a second upheaval of a large column of water, to be accounted for as follows: The instantaneous displacement of so vast a body of water created an enormous vacuum, and formed a huge unoccupied gulf 500 feet in diameter, and nearly 40 feet deep. The surrounding ocean of waters plunged madly into this gulf, in equal volume and with equal density from all sides, and, meeting in the centre with terrific force, pushed upward another aqueous shaft to the height of some 70 feet. The superior height of the central column was due to the fact that there was much less resistance at that point, the overlying wa-

ter being only 5 feet in depth, while the walls, or sides, were covered by from 25 to 35 feet.

BOLIVIA, a republic in South America. President and dictator, since the abolition of the constitution in February, 1869, Mariano Melgarejo. The ministry in 1870 was composed as follows: M. D. Muñoz, head of the Cabinet, Minister of State and of External Affairs; M. de la Lastra, Minister of Finances and of Industry; M. J. Ribera, Minister of Justice and of Public Worship and Instruction; General N. Rojas, Minister of War. Mr. L. Markbreit is minister resident of the United States at La Paz, and I. M. Muñoz consul-general of Bolivia at New York. The area of the republic, which was formerly estimated at from 480,000 to 640,000 square miles, has been more accurately computed in 1869 by Lieutenant-Colonel J. Ondarza at 842,730 square miles. It is divided into eleven departments, as follows:

	INHABITANTS.		Bishoprics.	Inhabitants Last Report.
	Sq. Miles.	Old Rep't.		
Chuquisaca.....	72,796	223,698	Archbish- opric de la Plata.....	706,989
Potosí.....	54,300	261,229		
Oruro.....	21,601	110,921		
Tarja.....	114,439	88,900		
Atacama.....	70,189	5,273	Bishopric La Paz.....	519,465

Melgareja.....	842,730	1,742,352	1,811,368
Indians.....	245,000	245,000
Total.....	1,967,352	2,056,368
Inh. per sq. m.	2.35	2.44

According to a late (as yet unpublished) census, the population is reported to approach 3,000,000.

The standing army of Bolivia, consisting of 31 generals, 359 officers of higher grade, 654 subaltern officers, and 8,034 men, annually costs the republic 2,000,000 pesos. The public revenue for 1869-'70 was about \$2,500,000, and the public debt (all internal) amounted to \$7,500,000. The commerce of the country is estimated at from \$5,000,000 to \$6,250,000; the total imports during 1868 summed up \$4,500,000, and the total exports during the same period \$3,750,000. The country is rich in mineral productions, and the silver-mines of Potosí are considered almost inexhaustible. Gold is found on the Eastern Cordillera of the Andes. The State mint at Potosí coins annually about 2½ million pesos in silver. Peru pays to the Bolivian Government 506,250 pesos for duty levied at Arica on merchandise going to Bolivia. Concessions have been granted for two railroads, one to connect Cobija and Potosí, and the other to form a branch of the Peruvian railroad from Arequipa to Puno.

On the 1st of March, 1870, President Mol-

garejo issued a decree by which all political offenders, in exile or in hiding, were pardoned and restored to their forfeited rights as Bolivian citizens. This decree only excludes from the general amnesty Morales and Corral, the two officers who were the instigators of the last insurrection, without any ostensible cause, and who, after having caused much bloodshed, were put to flight by the Government troops.

A thorough system of highways throughout the republic is being constructed. An excellent mint is in operation near Potosi, the machinery having been imported from the United States, and, in place of the base coin now in circulation, an improved currency will soon be placed in the hands of the people. A bank established at La Paz progresses satisfactorily, and the Government, satisfied with the stability of the institution, and powerfully influenced by several loans obtained from it, has declared its notes to be legal tenders.

In July, Agustin Morales, the inveterate enemy of Melgarejo, again raised the standard of revolt, but it was soon suppressed. In the latter months of the year a great excitement was caused in the republic by the discovery of rich silver-mines in the Sierra del Limon Verde, fifteen miles from the small settlement of Calama, and seventy-five miles from the shore in the maritime prefecture of Cobija. In a short time 150 mining licenses were taken out at the prefecture, and there was a great rush from Cobija. The extent of the deposits is stated as being greater than any yet known in South America, and in richness the ore is compared to that of Potosi or Chafarcillo, in Chili. A commission of Chilean engineers, dispatched to the spot for the purpose of making an investigation, report that the rumors concerning the mines are not at all exaggerated, and advise the formation of companies for working them to good advantage. Señor Diaz Gana, the discoverer, obtained the most favorable concessions from the Government of Bolivia.

BONALD, LOUIS JACQUES MAURICE DE, a French Roman Catholic prelate, Cardinal and Archbishop of Lyons, and Senator of France, born at Milhau, Aveyron, October 30, 1787; died at Lyons, February 26, 1870. He was educated at Lyons and the Seminary of St. Sulpice, and entered into orders in 1811. He was for a time clerk of the Imperial Chapel, but on the Restoration became secretary to Monseigneur de Pressigny, Archbishop of Besançon, who was sent on a mission to the Pope to arrange the settlement of the Concordat. Failing in this, De Bonald returned to Paris, where his eloquence and the rank of his family soon made him popular as a preacher. In 1817 he was appointed grand-vicar and archdeacon to the See of Chartres; in 1819 Charles X. made him his almoner, and in 1828 he became Bishop of Puy when but thirty years of age. His administration was too severe and restrictive to be endured by the people of this newly-restored diocese, and he was obliged to

withdraw, being, as M. de Frayssinous said, too young to be tolerant. Protesting most vigorously against the laxity of the government of Charles X. in religious matters, he was not in favor with the party in power, and once or twice was on the point of being prosecuted. The Pope, however, regarded him with great affection. In 1839, on the death of Cardinal Fesch, he was made Archbishop of Lyons, rejecting the same year the archbishopric of Paris and that of Auch, both of which were offered him. He was created cardinal in 1841, and was for many years engaged in an almost constant polemical warfare with the University of France, M. Dupin, Villemain, and other friends of secondary education. After the Revolution of February, 1848, he instructed his clergy to give an example of obedience and submission to the republic, and, yielding gracefully to the wishes of the new administration, he ordered a grand requiem to be solemnized for the "citizens who had so gloriously fallen in Paris in defence of the principles of civil and religious liberty." After the events of December, 1851, he became a member of the Senate, by virtue of his title of cardinal. His years and ability gave him great eminence in the Catholic Church, but he did not assume a prominent place in the movements of late years.

BONAPARTE, JEROME NAPOLEON (PATTERSON), the eldest son of Jerome Bonaparte, by his marriage with Miss Elizabeth Patterson, of Baltimore, born at Camberwell, England, July 7, 1805; died in Baltimore, Md., June 17, 1870. The circumstances of Jerome Bonaparte's visit to this country in 1803, his acquaintance with the Patterson family, his betrothal to and marriage of Miss Patterson (the marriage service being performed by Bishop, afterward Archbishop Carroll), of their travels in this country, their voyage to Lisbon in one of Mr. Patterson's ships, the refusal of Napoleon to permit the young bride to enter France, his annulling of the marriage and marrying his brother to the Princess Fredrica Catherine of Württemberg, are all well known. Forbidden to enter France, Madame Bonaparte went to Holland and thence to Camberwell, England, where her son was born. She remained in Europe for several years, and with a most indomitable energy, but without success, sought to establish the rights of her son. She met Jerome Bonaparte but once during these years, at the Pitti Palace in Florence, but he escaped from her presence as quickly as possible, and immediately left the city. The son received an excellent education, partly in Europe and partly in the United States. He graduated with honor from Harvard College in 1826, and studied law, but never practised. He married a lady of large fortune in Roxbury, Mass., and the great property inherited from his grandfather made him the wealthiest citizen of Baltimore. He spent some time in France, during the reign of Louis Philippe, and, on the reestablishment of the empire in 1852, his mother again put

forward her claims for the recognition of herself and her son; an imperial council decided that he was entitled to the name of Bonaparte, but not to be regarded as one of the imperial family. He was, however, thenceforward on terms of intimacy with his father, and was welcomed at court. The mother was not recognized. In 1860, on the death of Jerome, her claims were again presented in behalf of her son, and Berryer advocated her cause. This suit was never decided. Mr. Bonaparte was a man of considerable ability. His only son, Jerome Napoleon, a graduate of West Point, is an officer in the French Army.

BOURBON, ENRIQUE MARIE FERDINAND, Prince de, Duke of Seville, Infante of Spain and Vice-Admiral of the Spanish fleet, a prince of the Spanish Bourbons, brother of Francisco d'Assis, ex-King-consort, and cousin of the ex-Queen Isabella II., born April 17, 1823; killed in a duel with the Duke de Montpensier, near Madrid, March 12, 1870. Prince Enrique was the second son of Francisco de Paulo Antoine Maria, Duke of Cadiz, and the Infanta Louisa Carlotta Maria Isabella, daughter of Francis I., King of the Two Sicilies. He received a very good education and was considered both morally and intellectually much superior to his brother the King consort. He married in May, 1847, Donna Helena de Castelv y Shelley, Fernandez de Cordova, at Rome. During part of the reign of Queen Isabella, Prince Enrique was the most important person of Spain. He did not, however, exercise the influence his ability and relationship to the King might be supposed to have secured him. The King preferred the counsel of others, and the prince and Queen Isabella disagreed in consequence of the partiality shown by her for Marfori and his friends. He once informed her that if Marfori, his agents, friends, and adulators, continued to be all in all in the palace, he would never return there in his life. At the age of twenty-seven he was Vice-Admiral of the Spanish fleet. In March, 1867, a royal decree

deprived him of that position, and his rank as Infante of Spain, but the deposition of the Queen led to his being restored, nominally at least, to the position. He was very poor, and had, a few months before his death, honestly, no doubt, avowed himself a republican. He had been generally considered an aspirant for the vacant throne, but had repeatedly disavowed any designs upon it. He had become embittered against the Duke de Montpensier, whose wife was a younger sister of Isabella II., both because he believed him to be a candidate for the Spanish throne, and because he regarded him as the cause of the persecutions which he had suffered.

BRAZIL, an empire in South America. Emperor, Pedro II., born December 2, 1825; succeeded his father, April 7, 1831; has two daughters: Isabella, married to the Count d'Eu, son of the Duke de Nemours; and Leopoldina, married to Duke Augustus of Saxe-Coburg Gotha; eldest son of the latter, Pedro, born March 19, 1866. The ministry, during the first months of 1870, was composed as follows: Senator Viscount de Itaboraay, President and Minister of Finances; Dr. P. J. Soares de Souza, Minister of the Interior; Niebas, Minister of Justice; Senator J. M. da Silva Paranhos, Minister of External Affairs; Senator Baron de Murityba, Minister of War; Senator Baron de Cotegipe, Minister of Marine; Velho, Minister of Public Works, Commerce, and Agriculture. The United States of America are represented at the seat of government by H. J. Blow, ambassador and minister resident at Rio de Janeiro; the Brazilian minister at Washington is D. J. G. de Magalhaes. Area, 8,281,000 square miles. The population was estimated by the Government, in 1867, at 11,780,000, of whom 500,000 were Indians. This estimate is, however, generally regarded as too high. E. J. Pakenham, secretary of the British legation at Rio de Janeiro, transmitted to his Government in October, 1867, the following statement of the population of the empire:

PROVINCES.	INHABITANTS.			
	Free.	Slaves.	Total.	Indians.
Amazonas.....	69,000	1,000	70,000	140,000
Para.....	290,000	30,000	320,000	
Maranhão.....	380,000	65,000	445,000	
Pernambuco.....	310,000	22,000	332,000	5,000
Piahy.....	535,000	25,000	560,000	
Ceara.....	310,000	30,000	340,000

Minas Geraes.....	135,000	15,000	150,000	15,000
Goyas.....	40,000	6,000	46,000	
Matto Grosso.....	
Total.....	8,184,000	1,674,000	9,858,000	200,000

According to the census taken in April, 1870, in Rio, the whole population of the municipality of Rio (not including Nitherohy, across the bay, which is supposed to have about 20,000), is a little over 235,000 souls, of whom 50,092 are slaves. Of the slaves, 26,398 are employed as domestic servants, 4,272 are farm laborers, and 5,959 are artisans. As the whole population of the municipality of Rio—some one hundred square miles of area—is included in the census, the population of the city proper can hardly much exceed 200,000, or only half what it was usually considered to be.

Some statistics have also been obtained in regard to the births and deaths of the slaves in Rio during the last ten years. By the records it appears that during that period the deaths were 29,717, and the births only 14,144. The books of the notaries public and justices of the peace also show that in the same period 13,298 emancipations took place.

According to the new census bill, in future a decennial census will be taken of the whole empire. The census bill also takes the registration of births, deaths, and marriages, from the priests, and gives it to civil officers, as the clerical registers were very badly kept, and, besides, take no record of any but persons born, married, or deceased, within the pale of the Church.

The *Almanak Administrativo*, of Rio Janeiro, for 1869, gives the following statement of the agricultural colonies at the end of 1867: * 1. State colonies: Blumenau, with 3,391 inhabitants; Itajahy, 1,448 inhabitants; Theresiopolis, 1,631 inhabitants; Santa Isabel E. Vargem Grande, 1,213 inhabitants; Príncipe Don Pedro, 467 inhabitants; Assungui, 310 inhabitants; Cananéia, 556 inhabitants; Mucury, 520 inhabitants; Rio Novo, 709 inhabitants; Santa Leopoldina, inhabitants not reported. 2. The provincial colony of Comandantuba, 156 inhabitants. 3. Private colonies: Santa Maria de Soledade, population not ascertained; San Lourenço, 1,500 inhabitants; Donna Francisca, 4,667 inhabitants; Dom Pedro II., 1,123 inhabitants. Public debt, including paper currency in circulation, December 31, 1869, \$289,891,550; revenue, 1869-'70, \$42,551,250; expenditure, 1869-'70, \$39,817,250; estimated revenue, 1870-'71, \$29,250,000; estimated expenditure, 1870-'71, \$35,375,000; imports, 1866-'67, \$80,450,000; exports, \$76,950,000.

The Brazilian Parliament was opened by the Emperor on the 6th of May. In his speech from the throne, the Emperor thus referred to the principal home and foreign questions:

With a feeling of the most lively pleasure at finding myself surrounded by the national representation, I render thanks to the All-Powerful, and I congratulate myself and you on the happy and glorious termination of the war we have sustained during five years, always with honor to our arms, against the ex-President of the Republic of Paraguay. The well-grounded

hopes which I manifested at the opening of the last legislative session have been realized, of seeing our valiant soldiers led to a final victory under the command of my much-loved and valued son-in-law, Army Marshal the Comte d'Eu. The trust which I reposed in the Brazilian firmness and patriotism has been amply justified, and history will bear witness in all time that the present generation showed itself constant and unshaken in the unanimous intent to avenge the honor of Brazil. The rejoicing of the whole population of the empire over the glorious events which have placed an end to sacrifices so noble, the enthusiasm with which it has shown its gratitude to the volunteers, the national guard, the army and the navy, are its due homage to heroism and the merited reward of their proved devotion to the national cause. The valuable and legal cooperation of our brave allies cooperated greatly to the results obtained in the long, stubborn struggle in which we were engaged.

AUGUST AND MOST WORTHY REPRESENTATIVES OF THE NATION: If Brazil laments the loss of many of her gallant children, there remains to her the memory of their deeds, illustrious examples of patriotism and bravery. The Government is engaged in realizing with the Republic of Paraguay, in accordance with the treaty of alliance of May 1, 1865, and the protocols annexed to it, the necessary agreements for assuring the permanency and advantages of peace: The public tranquillity continues unaltered. We maintain relations of the most perfect friendship with all nations. The progressive increase of the public revenues, an evident proof of the value of the productive powers of Brazil, enables the Government to present to you a budget in which the expenditures do not exceed the ordinary receipts of the treasury. The moral and material development of the empire depends essentially on the diffusion of education through all the classes of society, on facilities of communication, and on giving the aid of free labor to our agriculture, our principal fountain of wealth. I trust that you will give careful attention to these matters and also to electoral reform, to the improvement of the administration of justice, to the municipal organization and that of the national guard, to the providing of means to carry into effect the census of the whole empire, to the law of recruiting, and to the military penal and process code.

AUGUST AND MOST WORTHY REPRESENTATIVES OF THE NATION: If your devoted and patriotic coadjuvancy with the Government supplied it with the extraordinary means exacted by the war, your intelligence and love of your country will give a vigorous impulse to all the internal improvements promised us by the new era of peace.

A considerable portion of the Conservative party were dissatisfied with the omission of any reference to the question of emancipation. In July, thirty-five members of the Conservative party, under the leadership of Senhor Godoy, organized a parliamentary opposition and issued a manifesto declaring their want of confidence in the ministry, on the ground that the ministry was dividing the Conservative party, and was playing into the hands of the liberals by not bringing forward the measures of reform recognized by all to be a necessity, and by the neglect of measures to regulate emancipation. It seems that the slave-owners are thoroughly alarmed at the tide of feeling setting in against the institution, and which has been brought more fully into their view by a certain agitation perceptible among the slaves, and more especially by the discredit in which property in slaves or dependent on slave-labor is held in the money-market. They see that something must

* See AMERICAN CYCLOPEDIA for 1868, for an account of the Brazilian army, and commercial and navigation statistics.

be done, and are willing to accept any moderate measure of emancipation which would restore tranquillity and give them renewed credit. Some are even taking steps of their own, and are freeing slaves on condition of serving for a fixed term, or during the life of the owners.

The views of these Liberal Conservatives were, it seems, shared by the Emperor, and thus led to a ministerial crisis in August. According to a writer from Rio, the origin of the crisis was the difference of the views of the Itaboraí Cabinet from those entertained by the Emperor in regard to the emancipation measure reported by the special committee of the Chamber of Representatives. The conduct of the ministry in respect to the question before the committee was from the first plainly tinged with hostility, and it tried in various ways to prevent, or to delay, as long as possible, the report of the committee. Owing, however, to the exertions of three of the five members, the bill was reported, greatly to the disgust of the ministry, in time to be debated during the session if undue obstacles were not thrown in the way. To prevent action, and to shelve the bill, became then the Government policy, and in consequence of this the Emperor on August 24th put the question directly to the Visconde de Itaboraí whether the ministry purposed taking any action this session upon the committee's bill. On receiving the reply that the ministry did not intend to bring the bill up at this session, the Emperor showed much discontent, and told his minister that the conduct of the Cabinet in relation to emancipation was compromising him (the Emperor) greatly. The premier then said that the ministry had no intention to compromise his Majesty, but that it considered the provisions abolishing slave-births of so important a kind as to require long consideration, and that if his Majesty believed that the present Cabinet was compromising his word, it would feel it to be a duty to retire. His Majesty then simply said "Good," and turned away abruptly, putting an end to the interview for the time. Afterward he signified his desire that the Government should allow the bill to be taken up at an early date; and, if the ministry should refuse to agree to the implied ultimatum, it was understood that its resignation would be at once accepted, and that Visconde de S. Vicente, a Conservative Senator of emancipatory tendencies, would be charged with the formation of a ministry, which would adopt the committee's slave-bill, and, if possible, carry it through the Chambers at this session. The Visconde de S. Vicente is a man of very high reputation as a statesman and political and legal writer, and some years ago brought a bill into the Senate to promote the gradual abolition of slavery.

In September the ministry introduced a bill to authorize the Emperor to free gratuitously any or all of those "slaves of the nation" to whose usufruct he is entitled. Heretofore he could free them only by paying their value to

the national treasury, and in many cases he did so, although he did not avail himself of the usufruct of the hundreds under his control. The plea for the bill was the very fair one that his Majesty should be relieved from the necessity of paying the value of those he set free. At the second reading, a motion was made that the Chamber declare preference between it and the general bill of the Special Committee on Slavery. In answer to this challenge, given by the minority, the Minister of the Empire declared that they would accept or propose an amendment to authorize the Government to free gratuitously the remainder of the national slaves, and that it would also push on a bill of last year, ordering a registration of all the slaves in the empire. More than this the Government would not yield this session, and he declared that he would accept the vote of the House in regard to the question of preference as a vote of confidence or its want. With this understanding the vote was taken, and the Government secured its point by a majority of fifty-four to twenty-one.

Notwithstanding this vote of confidence in the ministry, in October a new Cabinet was formed, as follows: Minister of Foreign Affairs, Viscount de São Vicente; Minister of State, Oliveira; Minister of Finance, Homen; Minister of Justice, Barras; Minister of Commerce, Teixeira; Minister of the Marine, Souza-Franco; Minister of War, General Caldwell. It was expected that the new ministry would carry out the views of the Emperor concerning emancipation.

The long war with Paraguay was brought to a close in March by the death of President Lopez. A preliminary peace with the Provisional Government of Paraguay was concluded on the 2d of June. (*See PARAGUAY.*)

The emancipation of slaves is making steady progress. The 7th of September, the anniversary of independence, was kept in most of the provinces by freeing slaves. In Bahia the Emancipation Society freed forty-five, chiefly children. In St. Paulo a planter has liberated some two hundred slaves, probably, however, on condition of working for him during a term of years. A Masonic lodge, called the Segredo, attached to the Grand Orient of Brazil, freed twenty-one children on the 26th, and engaged to educate and take charge of them until able to gain their living. The Grand Master Councillor Saldanha Marenho appealed to the ladies present to form an emancipation society, and seventy-three of them at once signed a document organizing the Society of Liberation, pledging themselves to aid the cause of emancipation in every way consistent with right and modesty. The Grand Orient has pronounced decisively in favor of advocating and assisting emancipation.

Considerable alarm is caused by the great spread of cretinism and goitre. It was reported that a great number of the inhabitants of the

municipality of Goyaz, in the province of Goyaz, and of the municipalities of Pitangui and Curvello, in Minas Geraes, are disabled by the disease, and that it is appearing in the municipalities of Parahiba, Cantagallo, and Nova Friburgo, in the province of Rio Janeiro, besides in that of St. Paulo. Near Taboleiro Grande, in Minas Geraes, there are two hamlets, those of Almas and Sacko dos Papudos, containing 400 souls, wherein there is not an individual free from the disease, and a provincial deputy not long ago proposed the disfranchisement of the parish of Rio Vermelho, near Diamantina, "because it was composed only of cretins and persons with goitre." It is asserted that cretinism is due to the presence of dolomite in the water, and that this mineral has been found in large quantity in the water of the worst districts. Also that while the mineiros used the salt from the San Francisco salines, which contains iodine and bromine, they were free entirely from the disease, but that with the use of imported salt, which is reported to contain dolomite, the disease appeared, and continues to spread rapidly.

The reason why Brazil is so imperfectly developed is partially explained in a report of Mr. Hunt, the British consul at Rio de Janeiro. Brazil, says Mr. Hunt, is a purely agricultural country of wonderful fertility, but the consul discourages the idea of European immigration into it. Quoting Mr. Buckle, the historian of civilization, he says that "the forces of Nature are so formidable that man cannot make head against them or rally against their accumulated pressure. The progress of agriculture is stopped by impassable forests, and the harvests are destroyed by innumerable insects. The mountains are too high to scale—the rivers too wide to bridge." The land is principally in the hands of large holders, who cultivate but a small portion of it. The export and import duties are excessively high. A planter with an unembarrassed estate is as rare as a merchant who has acquired money in trade. Since the date of the final suppression of the slave-trade in 1851, the labor has diminished at the rate of 7,000 negroes a year. None of the settlements of European immigrants have proved successful, with the exception of one or two German colonies established in Rio Grande. In opposition to the glowing terms in which Brazil has been recommended as a field for immigrants, the consul says that a subscription is now in course of collection from the British residents, to enable a considerable number of their fellow-subjects to return to their own country. The North American citizen has not been more successful than the British subject in finding an opening for his industry in Brazil. There is no real security for human life, and, in consequence of the light punishment inflicted, assassination has come to be regarded as a venial offence. The Chinese are better fitted to prosper in Brazil—their patience makes them efficient, and their economy cheap laborers.

BREMEN, a republic belonging to the North-German Confederation. Burgomasters: C. Fr. G. Mohr (1869-'73), President of the Senate for the year 1871; Johann David Meyer (1867-'71), President of the Senate for the year 1870. Area, 74 square miles; population of the republic in 1867, 109,572; of the city of Bremen, 74,945. Total revenue for 1869, 2,422,796 thalers; expenditure, 2,117,968 thalers, leaving a surplus of revenue of 304,828 thalers; estimated revenue for 1870, 2,058,437 thalers; expenditure, 2,257,180 thalers, showing a deficit of 198,693 thalers. Public debt, 1869: 11,778,312 thalers, gold. The imports in 1869 were valued at 103,310,000 thalers, gold; the exports at 94,920,000 thalers, gold. The movement of shipping during the year 1869 was as follows: Arrivals, 3,032 vessels, of 436,423 lasts (one last 4,000 lbs.); of which 2,756 vessels, of 410,643 lasts, with cargo, and 276 vessels, of 25,780 lasts, in ballast. Clearances, 3,176 vessels, of 446,953 lasts, of which 1,889 vessels, of 301,582 lasts, with cargo, and 1,287 vessels, of 145,371 lasts, in ballast. The merchant navy, at the close of the year 1869, consisted of 300 vessels, together of 119,209 lasts, among which were 28 screw-steamers. The statistics of emigration from the port of Bremen, in 1868-'69, were as follows:

EMIGRANTS FROM	1868.	1869.
North-German Confederation...	42,370	37,594
South Germany.....	12,823	13,806
Austria.....	7,398	7,676
Other Countries.....	4,253	4,644
Total.....	66,488	63,519
Of whom went to the U. States.	64,663	62,763

BROGLIE, ACHILLE CHARLES SÉANCE VICTOR, Duc de, a French statesman, publicist, and cabinet officer, born in Colmar, November 28, 1785; died in Paris, January 17, 1870. His grandfather, Marshal of France in the Seven Years' War, had fled from France during the horrors of the Revolution, and died in exile at Münster in 1804. His father, a staunch advocate of a constitutional monarchy, refused to fly, and perished by the guillotine in 1794. The young duke, educated by the able professors of Strasbourg, under the direction of his step-father, M. Argenson, early entered upon public life both in administrative and diplomatic duties. Napoleon I. remarked his intelligence and industry, and employed him, young as he was, in several minor diplomatic missions. Never attached to Napoleon, he regarded the Restoration with satisfaction, and Louis XVIII. named him a peer of France. He attained the right to take part in the debates a few days before the judgment on Marshal Ney. The Duke de Broglie spoke many times during the trial in favor of the accused, but in vain; he was sentenced to death, and on the morning of December 7, 1815, he was shot. Soon after

this debate, he married the only daughter of Madame de Staël, as earnest a Protestant as he was a Catholic; but their union, which was one of sincere affection, was singularly harmonious and happy. She died in 1838.

Having placed himself, by his first act in the House of Peers, in the ranks of the opposition, the Duke de Broglie maintained his independence of the Government through all the years that followed; opposing laws restricting the press, or influencing and controlling elections; the law of censorship, of preventive detention, of imprisonment for debt or civil actions; advocating the suppression of the slave-trade, the payment of an indemnity to the United States, the modification of the revenue laws, etc. He came to be recognized as the friend and advocate of all liberal and statesmanlike principles, occupying very much the same position in France as about the same time Henry Brougham did in England. The Revolution of July, 1830, and the establishment of a strictly constitutional monarchy under Louis Philippe would seem to have been the consummation of his hopes and desires, but it is a remarkable fact in his history, as in that of Lord Brougham, that, immediately on the attainment of the objects for which he had so long and bravely contended, he began to become conservative. Without abandoning professedly any of the principles of a liberal government, he constantly sought to adjourn indefinitely their application. Such a man was invaluable to Louis Philippe, who was constantly harassed by the fear that his government would be too liberal, and hence he was soon offered a place in the Cabinet. Between 1830 and 1836, he was four times a member of the Cabinet, as Minister of Public Instruction, Minister of Foreign Affairs, and finally with the presidency of the Council added to this important portfolio. During these years he promoted and carried some excellent measures; notably among these were the suppression of the slave-trade, and, a little later, the preliminary steps for the abolition of slavery. He resigned in 1834 because the bill for American indemnity failed to become a law, and only returned to the Cabinet when its passage was pledged. But he had so far departed from his old liberal principles as to present, advocate, and carry through the Legislative Assembly, a law for restricting the liberty of the press. He retired finally from the Cabinet in February, 1836, and no persuasion could induce him to accept office again. In the Chamber of Peers he maintained an independent position, sometimes sustaining, but oftener opposing the ministry. The Revolution of 1848 occasioned him much sorrow, for he saw in it the destruction of a monarchy he had helped to found. After the election of Louis Napoleon, he entered the Legislative Assembly to promote monarchical views, but the *coup d'état* disappointed his calculations. In 1856 he was admitted into the French Academy, and signalized his admission by an avowal of

his hearty sympathy with the government of Louis Philippe and the men who had been the principal actors in it. He next appeared before the public in 1861, when he entered a prosecution against the Prefect of Police for the illegal seizure of a work on which he had been occupied, entitled "My Views of the Government of France." Finally, the work was given up by the prefect, and the duke desisted from his suit. In 1863 he published a collection of his orations and state papers, under the title of "Writings and Speeches of the Duke de Broglie," 3 vols., 8vo. He had early in his public career (in 1828) founded, and edited for a time, the *Revue Française*. In 1836, the duke had been promoted to be a Grand Cross of the Legion of Honor, and during his long public life he received many of the decorations of foreign orders. In private life the duke was a fine specimen of the accomplished French nobleman, genial, courteous, and refined in his manners, and always mindful of the rights and feelings of others.

BRUNSWICK, a duchy belonging to the North-German Confederation. Duke Wilhelm I., born April 25, 1806; succeeded his brother, Duke Karl, in 1830. (See GERMANY.)

BURLINGAME, ANSON, LL. D., an American statesman and diplomatist, minister plenipotentiary from the United States to China from 1861 to 1867, and ambassador from the Emperor of China to the Western powers from 1867 to 1870, born in New Berlin, Chenango county, New York, November 14, 1822; died in St. Petersburg, Russia, February 23, 1870. His parents early removed to Ohio, and thence to Michigan, where he was educated, first at the public schools of Detroit, and then at the branch University of Michigan at the same place. While a student he gave promise of ability which was afterward strikingly developed. In 1843 he came to Massachusetts and entered the Cambridge Law School. While at the law school he was first drawn into politics, and became an ardent Whig. About this time he married a daughter of Hon. Isaac Livermore, of Cambridge, and decided to become a citizen of Massachusetts. He opened a law-office in Boston, in association with George P. Briggs, Esq., son of Governor Briggs. He was president of the Young Men's Whig Republican Association in 1848. He visited Europe in 1849 and 1850. In 1852 he was elected to the Massachusetts Senate from Middlesex, and one of his principal acts in that body was his opposition to the party that elected him, on the Maine liquor law. He was elected in 1853 to the Constitutional Convention for the town of Northborough, and the records bear honorable testimony to his zeal in support of prominent measures. He was a member of the Thirty-fourth, Thirty-fifth, and Thirty-sixth Congresses, and won a good reputation for ability, both in general business and as a member of the Committee on Foreign Affairs. He won his elections to the House by means of

his personal popularity, and in a closely-contested district. In the opening of the Thirty-fourth Congress occurred that protracted struggle so notorious in our political history, in which for nine weeks the members of the House of Representatives balloted without result for a Speaker. In that struggle Mr. Burlingame took an active part. It was in the course of that Congress, too (in its second session), that, impelled alike by his friendship for the Massachusetts Senator, his strong sense of right and justice, and his abhorrence of the cowardice and ruffianliness of the assault on Senator Sumner, he uttered in the Hall of Representatives that eloquent but scathing invective which led to a challenge from Preston Brooks. Mr. Brooks a few hours after sent a demand for a withdrawal of his language or a personal encounter. Mr. Burlingame declined to withdraw it, and expressed himself ready to meet any consequences which might follow. The friends of Mr. Brooks were apprehensive of Mr. Burlingame's well-known skill as a rifle-shot, and they sought to obtain from him some explanation of his language which they might construe into an apology or excuse for not bringing the two parties into a duel. They did obtain a memorandum to the effect that it was not his purpose to degrade Mr. Brooks, but finding that this was used to give the impression that he was unwilling to fight, he promptly withdrew it in the columns of the *Intelligencer* and accepted Mr. Brooks's challenge, the place of meeting named being Clifton, Canada; but here Mr. Brooks's friends again objected that they could not have their principal go so many hundred miles through the enemy's country—viz., the States of Maryland, Pennsylvania, and New York; and thus the matter fell through. In the contest for the Thirty-seventh Congress Mr. Burlingame was defeated by Hon. William Appleton, and for a time it seemed as though his wish to retire from public life was to be gratified. But the Administration had employment for him. He was first tendered the mission to Austria, and accepted, but this power refused to receive him on account, as is supposed, of Mr. Burlingame's eloquent addresses in favor of Sardinia and the unity of Italy. President Lincoln thereupon offered him the appointment of Minister to China, a position which was promptly accepted. In the performance of the duties of this office Mr. Burlingame exhibited great and peculiar ability. He obtained the confidence of the Chinese authorities to an unusual extent. In 1865 he made a brief visit to this country, and was warmly received by all his personal and political friends.

In the year 1867 a new era began in Mr. Burlingame's career. Late in that year he announced to Prince Kung his intention of resigning the office of United States minister, and of returning to his own country. Efforts were made by the prince and all the Chinese officials to induce him to reconsider his deter-

mination, but in vain. Prince Kung then broached to him the plan, of which the Chinese embassy was the realization. It was at first proposed to have him transact a business unofficially at Washington for the Chinese Government. It was next suggested that he be empowered to treat officially in the name of that government with the United States authorities. Finally the Chinese officials offered to send him on a mission to all the civilized powers at the head of an embassy which should be on a standing of the highest respectability. This offer was accepted, and Mr. Burlingame placed his resignation at once in the hands of the secretary of the American legation. A week later he received his credentials from Prince Kung. Mr. Burlingame and his colleagues left Shanghai on the 25th of February, 1868, for San Francisco.

After he had accepted this diplomatic trust, and just before he left the shores of Asia, he saw a newspaper which bitterly denounced him for renouncing his American allegiance, as it charged, to take a lucrative appointment from a foreign power. In the weeks of his long journey across the Pacific, it often oppressed him with gloomy forebodings. Before he reached the Golden Gate they became, at times, almost unendurable. "Is it not possible," he reasoned to himself, "that Americans may regard my acceptance of this foreign trust as a selling out of my birthright?" He knew he had been conscientious in consenting to take it, in the interest of civilization, humanity, progress, and international good-will. But he knew, too, how harshly and unjustly public men are sometimes judged; and, when the steamer sailed up to the wharf at San Francisco, he was in a state of feverish excitement. The wharf was densely crowded. He looked from the deck of the steamer upon them, and wondered if it were possible that, inflamed by hostile criticism, they had come there to jeer and insult him. The first man who came upon the deck before the steamer had swung round to its place was a porter or baggage-man, who, of course, did not know him. Burlingame asked him, as coolly as possible, what all this crowd meant. "Why," answered the man, "the whole city is here to welcome the new Chinese minister, and the city authorities to proffer him its hospitalities." The suspense was over, and his heart never throbbed a sincerer "Thank God!"

The subsequent progress of the embassy is well known. It first visited this country, where it was received with the highest consideration; and it and its chief were made the recipients of a series of ovations which were hearty and enthusiastic. A treaty was negotiated at Washington between the United States and China, which was liberal and enlightened. The Chinese Government testified its appreciation of Mr. Burlingame's labors by promptly ratifying this treaty. The embassy then visited London, Paris, Berlin, and other Euro-

pean capitals, and lastly St. Petersburg, where the eminent diplomatist died after two days' illness, just as he had nearly completed his great diplomatic work. The reception of the embassy at the European courts was highly

flattering to its chief, and his success promised to be as marked as it was in the United States. His sudden death cut short a career as brilliant as it was useful, and excited the regrets of a host of friends in various countries.

C

CALIFORNIA. The Federal census of 1870 gives 556,615 as the population of California, a gain in ten years of 176,669, or about 46 per cent. The gain has been very unevenly distributed over the State, and six of the most important mining counties have lost over one half of their inhabitants. The gain has been chiefly in the agricultural districts and the larger towns. There are 50 counties in the State, 18 of which are comprised in mining districts. The total population of the mining region is 105,814, or an average of 5,861 to each county, while the agricultural and commercial districts have 451,399 inhabitants, or 20,513 to the county. The movement of the population, in six of the mining counties, in the last ten years has been as follows:

COUNTIES.	1860.	1870.
Calaveras.....	16,300	8,895
El Dorado.....	20,563	10,309
Mariposa.....	6,343	4,573
Sierra.....	11,387	5,619
Trinity.....	5,125	3,313
Tuolumne.....	16,226	8,150
Total.....	75,843	40,709

Four agricultural counties show the following result:

COUNTIES.	1860.	1870.
San Joaquin.....	9,435	21,050
Stanislaus.....	2,345	6,499
Merced.....	1,141	2,807
Fresno.....	4,605	6,336
Total.....	17,436	36,692

In 1860 the city of San Francisco had 56,803 inhabitants, now it has about 150,000, or more than one-fourth of the whole population of the State. A considerable portion of the increase throughout the State has arisen from Chinese immigration. The "Six Companies" have brought 138,586 Chinamen into the port of San Francisco, 41,000 of whom are now within the limits of the State, the rest having returned home, died, or migrated elsewhere. Of those remaining, only 4,800 are women, and 3,000 children. In no State of the Union are the products of the earth so great where the population is so small, and, outside of the cities, so sparse. It is true the State has had an existence of only twenty years, yet, at present, facts hardly indicate a great population in the future.

The following table is compiled from the United States census of the State:

COUNTIES.	1870.	1860.
Alameda.....	24,337	8,927
Alpine.....	685
Amador.....	9,533	10,930
Butte.....	11,408	12,106
Calaveras.....	8,895	16,299
Colusi.....	6,165	2,274
Contra Costa.....	8,461	5,383
Del Norte.....	2,023	1,993
El Dorado.....	10,309	20,563
Fresno.....	6,336	4,605
Humboldt.....	6,143	2,694
Inyo.....	1,956
Kern.....	2,925
Klamath.....	1,636	1,803
Lake.....	2,969
Lassen.....	1,337
Los Angeles.....	15,309	11,333
Marin.....	6,908	3,334
Mariposa.....	4,573	6,343
Mendocino.....	7,545	3,907
Merced.....	2,807	1,141
Mono.....	490
Monterey.....	9,576	4,789
Napa.....	5,331
Nevada.....	19,136	16,446
Placer.....	11,357	13,270
Plumas.....	4,429	4,363
Sacramento.....	26,331	24,143
San Bernardino.....	3,983	5,551
San Diego.....	4,974	4,331
San Francisco.....	149,423	56,803
San Joaquin.....	21,050	9,435
San Luis Obispo.....	4,772	1,759
San Mateo.....	6,635	3,214
Santa Barbara.....	7,734	3,543
Santa Clara.....	26,246	11,913
Santa Cruz.....	8,743	4,944
Shasta.....	4,173	4,950
Sierra.....	5,619	11,387
Siskiyou.....	6,848	7,639
Solano.....	16,871	7,169
Sonoma.....	19,619	11,897
Stanislaus.....	6,499	2,345
Sutter.....	5,080	2,390
Tehama.....	3,537	4,044

Tulare.....	4,533	4,038
Tuolumne.....	8,150	16,226
Yolo.....	9,599	4,716
Yuba.....	10,351	13,666
Total.....	556,615	379,946

According to the latest trustworthy statistics, there are in the entire State 120,947,840 acres of land, 80,000,000 of which are susceptible of cultivation; half of these still in the hands of the Federal Government. The number of acres actually enclosed at the present time is about 5,000,000, but only 2,000,000 acres are under actual cultivation. Public lands have been disposed of as follows: For schools and educational purposes, 6,765,404 have been granted; 6,080,814 have been taken under Mexican grants; 500,000 have been granted for internal improvements, 116,382 for railroads, and 6,400 for public buildings; 1,198,874 have been sold, and 368,821 have been taken under the Homestead Act, 470,452 under mili-

tary warrant, 580,572 under "scrip," 848,169 under swamp locations, and 28,129 under Indian scrip.

Besides these, 10,424,000 acres are now claimed by railroad companies as follows:

Central Pacific, 1,894,000; Western Pacific, 500,000; California and Oregon, 2,800,000; Copperopolis, 280,000; Southern Pacific, 6,000,000.

The State produces about 20,000,000 bushels of wheat, 8,000,000 of barley, 1,200,000 of oats, 10,000 of rye, 1,000,000 of maize, 10,000 of buckwheat, 64,000 of peas, 78,000 of peanuts, 150,000 of beans, 387,000 of castor-beans, 1,400,000 of potatoes, 75,000 of sweet potatoes, 70,000 of onions, 350,000 tons of hay, 570,000 pounds of hops, 90,000 pounds tobacco, 8,500 tons of beets, 5,000,000 pounds of butter, 3,000,000 pounds of cheese, 500,000 pounds of honey, 4,000,000 gallons of wine, 800,000 gallons of brandy, 220,000,000 feet of sawn lumber and 100,000,000 shingles annually. It has 25,000,000 grape-vines, 10,000,000 mulberry-trees, 1,200,000 apple-trees, 1,000,000 peach, 300,000 pear, 200,000 plum, 100,000 cherry, 43,000 nectarine, 40,000 quince, 52,000 apricot, 33,000 fig, 4,000 lemon, 25,000 orange, 20,000 olive, 6,500 prune, 25,000 almond, and 15,000 walnut trees; 10,000,000 strawberry-vines, 1,400,000 raspberry, and 172,000 gooseberry bushes; 209,000 horses, 24,000 mules, 500,000 neat-cattle, 2,200,000 sheep, 7,000 Cashmere goats, 412,000 hogs, 1,500,000 chickens, 150,000 turkeys, 25,000 geese, 80,000 ducks, 32,000 beehives, 62 steam grist-mills, 205 water-power grist-mills, 207 steam saw-mills, 161 water-power saw-mills, 360 quartz-mills, 874 mining ditches, with an aggregate length of 12,000 miles, and 720 irrigating ditches, which irrigate 70,000 acres.

The average crop of grapes is about 8,000 pounds to the acre, and some of the vineyards afford a net profit of over \$1,000 per acre every year. The mines of California are still prolific of the precious metals. The latest statistics are those of 1869, which give the exportation of gold from San Francisco as \$37,287,117, and the receipts as \$51,226,769, of which \$21,472,851 are from California mines. The annual coal product of the State is about \$1,000,000; quicksilver, \$1,500,000; silver, \$1,000,000; other minerals, \$500,000, making the total mining production of the State \$27,000,000. There are 421 quartz-mills, of which 206 are operated by steam-power. The machinery in these quartz-mills cost \$6,500,000. There are 158 grist-mills, costing \$2,600,000. Seventy of these are propelled by steam-power. Saw-mills count up 417, of which 281 are propelled by steam. They can turn out 4,800,000 feet of lumber per day. In 1869 there were 492 mining ditches, aggregating 4,842 miles in length.

The total value of the industrial products of the State for a single year is about \$182,000,000, of which \$89,000,000, or about 45 per cent., is

derived from agriculture, \$75,000,000 from manufactures, \$27,000,000 from mining. The assessed value of property in the State is \$247,000,000, which is said to be but one-fourth of the actual market value. More than two-fifths of the entire amount is in San Francisco. The number of vessels which arrived at San Francisco in 1869 was 8,524 from foreign ports, 146 from American Atlantic ports; and 2,904 from American Pacific ports. The total measurement was 1,145,106 tons—the vessels from the American Atlantic ports averaging 1,100 tons each; foreign ports 860 tons; and from domestic ports 190 tons. Nearly one-fifth of the total tonnage consists of steamers. The quantity of merchandise received from American Atlantic ports by sailing-vessels was 273,500 tons; while the Panama steamers, which had an aggregate measurement of 117,449 tons for the year, brought domestic merchandise from the Atlantic States valued at \$36,104,000 in currency. Of foreign merchandise \$15,500,000 worth was imported, including \$4,500,000 from Great Britain, \$2,600,000 from France, \$1,650,000 from China, \$1,120,000 from the Hawaiian Islands, and \$1,300,000 from South America. Among the articles imported are 58,000,000 pounds of sugar, 82,000,000 pounds of rice, 2,100,000 of tea, 8,870,000 pounds of coffee, 8,000,000 oranges, 26,000 firkins of butter, 814,000 taels of opium, 20,000 cases of olive-oil, 145,000 cases of coal-oil, 47,000 cases of oysters, 168,000 packages of candles, 51,000 cases of wine, 17,000 baskets of champagne, and 20,000 kegs, casks, barrels, and pipes of wine, 20,000 barrels of whiskey, 15,000 packages of tobacco, 70,000 packages of raisins, 6,715 cases of sardines, 18,000 boxes of starch, 47,000 packages of soap, and 30,000 cases of boots. Of the merchandise exports of the year, Great Britain took \$8,987,889; New York, \$5,552,942; China, \$1,816,100; Mexico, \$1,007,317; British Columbia, \$652,945; Hawaiian Islands, \$578,556; Japan, \$545,122; Central America, \$426,588; Australia, \$254,206; Peru, \$351,936; Brazil, \$207,000; and other places, smaller sums.

There are now about 800 miles of completed railroad in the State. The Pacific Railroad has its western terminus at Oakland, near San Francisco. From this place to Sacramento, 135 miles, it is known as the Western Pacific. The Central Pacific extends from Sacramento to Ogden—742 miles, of which 105 are in this State—where it connects with the Union Pacific, which stretches 1,032 miles, to Omaha, in Nebraska. The California and Oregon Railroad branches off from the Central Pacific at Roseville, 18 miles from Sacramento. It is now completed for about 60 miles, and is ultimately to extend to Portland, Oregon. The San Joaquin Valley Railroad, branching off from the Western Pacific at Stockton, is to run to Visalia, a distance of 160 miles. The Southern Pacific is 80 miles long, connecting San Francisco with Gilroy, by way of San José.

The California Pacific Railroad is 60 miles long, and connects Vallejo with Sacramento. There are also the railroad from Sacramento to Shays Springs, 45 miles long; the Los Angeles Railroad, 20 miles; and the Northern California, completed from Marysville to Oroville, a distance of 26 miles. Besides these, the Vallejo and Cloverdale road, 70 miles long, is in course of construction, and the Copperopolis road, running 83 miles eastward from Stockton, is projected.

The Legislature of California holds its sessions biennially. It met on the first Monday of December, in 1869, and continued in session until the first part of April following. On the 7th of January, Governor Haight submitted a special message on the question of ratifying the fifteenth amendment of the Federal Constitution. He opposed the ratification, on the ground that it gave the General Government jurisdiction in a matter which he believed should be left entirely to the different States. In concluding his message, he says:

"It is idle to suppose that the people of this State, or any other of the States, will be satisfied to have wrested from them the right to control their local affairs. They are not blind to the fact that it is this control which is but another name for liberty, and which is liberty. No system which violates the maxims and principles of freedom can be made permanent by political artifice, or by the use of military force. It is too much in conflict with the genius and traditions of the American people, and with that inextinguishable love of liberty which, though it may seem dormant for a while, will certainly revive and assert its irresistible power. It is not possible for an oligarchy of politicians, sitting in conclave at Washington, to continue long to exercise arbitrary control over the people of remote States in all the arrogance of conscious tyranny, violating that cardinal doctrine of all free government, to wit: 'That every people has the absolute and inalienable right to control its own destiny, and to form its own political and social institutions.' It is this principle, consecrated by the blood of martyrs of freedom in our own Revolution, and in all ages, which no political organization can safely violate, and which lies at the foundation of the struggle now in progress in this country. The attempt is made to transfer political power from the people themselves to legislators at Washington; to submerge the Executive and Judiciary under unlimited congressional control; to destroy all the checks and balances of our system, and convert it into one resembling the French National Convention, from which the people of that country gladly escaped by seeking refuge in the despotism of one man from that of an unscrupulous and tyrannical legislative majority. Such an attempt can never permanently succeed among a people educated to freedom as are the Americans from childhood. It needs but that they should see the contest as it is between liberty and local self-government on one side, and centralized power or despotism on the other, and to this they cannot long be blind. Peace in our distracted country is an object desired by all, but it is only attainable by recognizing the truth that Government derives its just powers from the consent of the governed, and that it is not possible to perpetuate arbitrary rule, in the hands either of a king or of a Congress. The right of self-government is as sacred to the people of Georgia as it is to those of Massachusetts, and the tyranny of political adventurers over the people of States whose representatives have been arbitrarily excluded from Congress, to whom all the promises of the Government have been falsified, and whose

liberties have been trampled under foot, will, at no distant day, be justly regarded as among the most wrongful of those which have defaced the annals of modern times.

The Legislature rejected the amendment, and, after its final ratification by two-thirds of the States had been proclaimed, the Attorney-General of the State rendered an opinion declaring that county clerks should refuse to register negroes until the State law had been changed, or Congress had taken some action in the matter. Among the acts passed by the Legislature was one revising the school law, and one providing for a general revision and codification of the statutes of the State. Commissioners were appointed under this latter act, and the work was begun in the latter part of the year.

There was no general election in California this year, and hence no important movement of the political parties. The Republican State Central Committee, who held a meeting in August, adopted resolutions expressing sympathy with the German people in the war in Europe; favoring the total abolition of the income tax; the reduction of all taxation to the lowest requirement of the Government; affirming the resolutions of the State Convention of 1867; strongly opposing the importation of coolies; and requesting the State department to investigate the conduct of consuls in the Chinese ports, allowing the law against the importation of coolies to be violated.

The term of the State officers is four years, and the next election occurs on the 1st Wednesday of September, 1871. The three Representatives to which the State is entitled in Congress will also be elected in 1871. The present Governor, H. H. Haight, is a Democrat, and the Legislature is divided as follows: Senate, 26 Democrats, 11 Republicans, 8 Independent; House of Assembly, 66 Democrats, 11 Republicans, and 8 Independent.

CENTRAL AMERICA.* There are at present in Central America five independent republics: Costa Rica, Guatemala, San Salvador, Nicaragua, and Honduras. Their area and population were, in 1869, 178,700 square miles, with 2,665,000 inhabitants.

COSTA RICA.—President of the Republic, Tomas Guardia; minister resident of the United States, J. B. Blain, in San José. The public revenue amounts to \$1,000,000 annually. Costa Rica has no public debt.

GUATEMALA.—President of the Republic, V. Cerna (1869-'72); minister resident of the United States, S. A. Hudson, in Guatemala; Minister of Guatemala and San Salvador, at Washington, M. J. Vela. Public revenue, in 1867, \$1,518,180; expenditure, \$1,509,058. Public debt in 1865, \$2,461,978, of which \$1,489,879 was a floating debt. The industrial interests of the country, which were already

* See AMERICAN CYCLOPEDIA for 1869, for details of area and population.

highly prosperous, will soon receive a fresh impulse for further development from a railroad which is now in course of construction. This road, which is the work of an English company, is to connect the capital, Guatemala, with the port of Santo Tomas on the Atlantic coast, traversing the departments of Santa Rosa, Jupitapa, and Chiquimula.

SAN SALVADOR.—President of the Republic, F. Duenas (1868-1873); minister resident of the United States at San Salvador, General Torbett. In the budget for 1869, the revenue amounts to \$1,024,531; the expenditure to \$801,802. The consolidated public debt amounts to \$780,357; the non-consolidated to \$141,243. The imports, in 1868, amounted to \$1,794,061; exports, \$9,184,429. Cochineal, which was formerly the principal article for exportation, and generally reached from 50 to 60 per cent. of the aggregate value of exports, has of late been rather neglected, as the culture of coffee is found to be more profitable. The annual exports of the latter are from 85,000 to 90,000 hundred-weight.

NICARAGUA.—President of the Republic (1867-1871), F. Guzman, who is also commander-in-chief of the army; minister resident of the United States, in 1870, C. N. Riotte; minister resident of Nicaragua at Washington, in 1870, J. R. Perez. Revenue, in 1865, \$632,471; expenditure, \$630,120; expenditure, in 1868, \$517,709. The public debt is estimated at \$4,000,000.

HONDURAS.—President of the Republic, Captain-General J. M. Medina, reelected in February, 1866, and again proclaimed President in 1869. The United States Government is represented by H. Baxter, minister resident at Comayagua. Revenue, about \$400,000 annually; expenditure, about \$185,000; total public debt, in 1868, \$1,050,000; consolidated debt, \$600,000, for the redemption of which the import duties at the port of Truxillo, and a part of those at Amapala, are pledged. A report of President J. M. Medina estimates the exports for 1869 at \$1,805,000, as follows: Gold and silver, \$600,000; indigo, \$200,000; cattle, \$150,000; wood, \$180,000, and leather, \$100,000. Open ports on the Atlantic coast, Truxillo and Omoa; on the Pacific coast, Amapala. The construction of the Inter-oceanic Railroad through Honduras is now pushed forward in good earnest; in July, 1870, more than 50 miles were levelled, and over 1,000 laborers were at work during the dry season. The line proposed by Mr. O. G. Squier, of New York, starts from the Port of Puerto Cavallos, which is now called Cortez, and will, ere long, be connected by a submarine telegraph-line with the islands of Cuba and Jamaica; thence the road traverses the whole country in a nearly southerly direction, and terminates at the magnificent Bay of Fonseca, on the Pacific Ocean, at the port of Amapala. The length of the road is 691 English miles.

The Government of *Guatemala* during the

first weeks of the year was considerably harassed in the remote departments of the State by a revolutionary faction, headed by Sempio Cruz. The revolutionists were completely defeated on the 23d of January, and their leader killed. In the latter part of the year, Miguel Granados and Barrios, both formerly members of the gang of Cruz, succeeded in collecting some fifteen hundred men in the Mexican State of Chiapas, and entered the northern departments of Guatemala, as they said, for revolutionary, but as others believed, merely for plundering purposes. In October a rupture between the chiefs of this party dispelled the fears which were entertained with regard to their invasion.

Severe earthquake shocks were experienced in *Guatemala* during the month of June, some with destructive effects. The shocks were of such frequent occurrence as to occupy public attention to a great extent; many towns and villages were severely damaged.

The bishop of *Nicaragua*, in accordance with instructions received from Rome, earnestly opposed the establishment of secularized education. On January 1, 1870, the official paper of the republic published the following letter from Cardinal Antonelli to the bishop:

We have lately been informed here that an attempt has been made to change the order of things hitherto existing in that republic by publishing a programme in which are enunciated "freedom of education" and of worship. Both these principles are not only contrary to the laws of God and of the Church, but are in contradiction to the concordat established between the Holy See and that republic. Although we doubt not but that your most illustrious and reverend lordship will do all in your power against maxims so destructive to the Church and to society, still we deem it by no means superfluous to stimulate your well-known zeal to see that the clergy, and above all, the curates, do their duty.

The Congress of *Nicaragua* approved all the acts of the Executive from and after the 21st of March, 1869, to the 19th of January, 1870. It, in particular, sanctioned the following contracts entered into by the executive: With a company for the exclusive privilege for ten years of preparing by machinery and exporting all classes of vegetable fibre, excepting that called *cabrilla*; with Captain Andrew T. Douglas, of the Central American and California Steam Packet Company, for the establishing of a line of steamers between the ports of the republic and the ports of Central America, Mexico, and California; with Messrs. J. E. Hallenbeck & Co., of Greytown, for twenty-five years, for the navigating by steam of the inner waters of the republic. This latter concession is not to interfere with that given to M. Chevalier for a canal.

On the 27th of April a revolution occurred in San José, the capital of *Costa Rica*, resulting in the overthrow of the government of President Jesus Jimenez, and the establishment of a new one, with Dr. Bruno Carranza at its head as Provisional Governor. The following details of the overthrow of the administration

are interesting as they illustrate the character of most of the Central American revolutions: The outbreak commenced at the artillery barracks on the morning of the 27th of April. At about nine o'clock the gate was opened to give entrance to the cart that usually brought fodder for the horses and mules of the corps; but on that day two carts came instead of one. The last one had nine men, armed with revolvers, under the grass, who, as soon as the carts entered, at a signal given by the cartman, jumped out, rushed upon the guard, killed the officer and every man that opposed them. Thence they repaired to the quarters of the commandant of the barracks, Biscubi, who shot the first man who entered, but the latter returned the fire and blew Biscubi's brains out. The nine assailants were immediately joined by a large body of men, and they made themselves masters, first of the artillery barracks, and later of those of the infantry, after the firing of a few shots only. They next secured the person of Señor Jesus Jimenez, the President of the republic. In the afternoon of the same day, Santiago Millet, with 400 men, came from Cartago to the relief of the Government, but he was notified that, if he attacked the city, President Jimenez would be immediately put to death. Jimenez then ordered Millet and his force to lay down their arms, which they did, and on the following day he and all the other prisoners were set at liberty. No one was persecuted or banished. The chief of the movement was Tomas Guardia; he had the assistance of several young men belonging to San José, among them Horacio Carranza and Victor Guardia. The Provisional President appointed Tomas Guardia commander-in-chief of the military forces, and Dr. Lorenzo Montufar Secretary of Foreign Relations. On July 30th, a decree was issued by President Carranza, suspending friendly relations with Guatemala:

AMERICA. The treaty of peace, friendship, and commerce, between the Republics of Costa Rica and Guatemala, signed on the 10th of March, 1848, cannot be considered to exist from the time that Guatemala suspended her relations with this republic.

A Constituent Assembly, to be composed of thirty-two members, and to meet on the 15th of August, was elected, the object of which was: 1. To give the republic a new constitution more suitable to the actual state of the country, and which will better guarantee republican institutions and be more in harmony with the desires of the people; 2. To fix a term for the ex-President (Jimenez) and his secretaries to give an account of their responsibilities. The Provisional President, Carranza, fearing his enemies would be too powerful in the Assembly, convened that body on the 8th, instead of the 15th, as announced, thinking in this way to have his friends in the majority. The opposition, however, hearing of the move, marshalled their numbers in full force, and the consequence was that, when Carranza rose to address the Assembly on the

8th, he was hissed down and had to resign. In his place, the Minister of War, Tomas Guardia, was elected Provisional President. Guardia was believed to be the tool of Julian Volio, formerly Minister of State under President Castro, and one of the ablest statesmen of Central America, who for years past has aspired to the presidency, and who would, in due time, supersede Guardia. The Constituent Assembly showed itself, however, hostile to Guardia, and systematically opposed each and all of his official acts, so much so as to oblige him to retire to Alajuela with the intention of resigning his position. But at the latter place the populace rose *en masse* and annulled the power of the convention on October 7th. On the following day the movement was seconded by Cartago and a portion of the district Herredia, with the exception of the capital, and Guardia assumed dictatorial power.

CHAMPLIN, STEPHEN, a Commodore in the United States Navy, and one of the largest contributors to Commodore Perry's victory on Lake Erie, in 1813; born at South Kingstown, R. I., November 17, 1789; died in Buffalo, N. Y., February 20, 1870. He was a cousin of Commodore Perry. When he was about five years old, his parents removed to Lebanon, Conn., and he was employed on his father's farm, with only the ordinary district-school advantages of the time for obtaining an education. At the age of sixteen he ran away from home to become a sailor, and, on his return to New London from a voyage to Demerara, his father requested him to return home, promising that he might follow a seafaring life if he wished. He went to Lebanon, but he was still bent on following the sea, and made such progress that at the age of twenty-two he was captain of a fine brig in the West-India trade. The war of 1812 having commenced, he was appointed a sailing-master in the U. S. Navy, and was placed in command of a gunboat under Commodore Perry at Newport, and soon after ordered to Sackett's Harbor, N. Y. He soon attracted the attention of his superior officers by his remarkable promptness and celerity in all his movements, transporting his men and obtaining supplies in less than half the time which other officers required for the same movements. He was sent on the 17th July, 1813, by Commodore Chauncey from Sackett's Harbor to Utica with a draft for \$36,000, a part of which was to be paid out there and the remainder to be returned to the commodore. On his return, the next evening, he was ordered to take charge of seventy-four officers and men and report to Commodore Perry, at Erie, Pa., going by way of Lakes Ontario and Erie, and marching across the country from Niagara to Schlosser, and from Black Rock to Buffalo. He made the entire distance, using only setting-poles and oars for propulsion, in five days. The next day, July 25th, he was ordered to take command of the Scorpion and prepare her for battle. He engaged with that vessel in

the battle of Lake Erie, being at that time under twenty-four years of age. Next to the name of Perry, that of Champlin is most closely associated with the glory of our greatest naval triumph, the gallant young commander having the honor to fire the first shot and the last shot of the battle on the American side. When the British and American fleets came together, the Scorpion flanked the flagship Lawrence upon the left. She bore two long guns, carrying respectively a 32-pound and a 12-pound shot. The British commander, Barclay, opened by a shot which fell short on account of distance. Champlin answered by a shot from the Scorpion, and the fight soon after became general. The Scorpion was fought with great bravery, and kept its place near the Lawrence, which was riddled with shot and finally disabled, throughout the entire engagement. When all the other vessels of the British fleet had struck their colors, the Little Belt and the Chippewa, which were to the extreme leeward of the two fleets, attempted to escape. Champlin and the commander of the Trippe gave chase. Both the vessels were overtaken, and in capturing the Little Belt, at ten o'clock at night, the final shot was fired from the Scorpion. Champlin was afterward placed in command of two of the captured prize-ships, the Queen Charlotte and the Detroit. In the spring of 1814, he commanded the Tigress, and blockaded, with Captain Turner in the Scorpion, the port of Mackinac. They cruised for some months in the service, cutting off the supplies of the British garrison, but both vessels were surprised and captured early in September, by a party of Indians and British, sent from Mackinac in five boats to raise the blockade. The party fell upon the Tigress first, while at anchor near shore, at nine o'clock in the evening of September 3d. It was intensely dark, and the enemy were within fifty yards before discovered. They were received with a heavy fire, but the vessel was quickly boarded by overwhelming numbers and captured, her force being only about thirty men, while the attacking party numbered one hundred. Every American officer was severely wounded, and Captain Champlin was so painfully injured by a canister-shot, which passed through the fleshy part of the right thigh and embedded itself in the left thigh, shattering the bone fearfully, and remaining embedded in the limb for eighteen days, that he was partially crippled for life. He was obliged to submit to repeated severe operations for the removal of portions of the bone, and it continued to exfoliate at intervals up to the time of his death. He was taken prisoner at the time of receiving this wound, and carried to Mackinac, where he lay for thirty-eight days suffering from his wound, and was then paroled and sent down the lake to Erie, where he arrived in November. He remained there until January, when he was removed by easy stages, his condition being very

critical, to Connecticut, arriving there in March, 1815. Soon after his arrival he was ordered to join the squadron of Commodore Perry at Bristol, R. I., destined for the Mediterranean. He proceeded there, and was attached to the flagship, the Java; but his wound continued so annoying that, by advice of surgeons, he applied for orders to return to Erie on lighter service. These orders he received in the fall from the Navy Department, and in the spring of 1816 was ordered to the command of the United States schooner Porcupine, which vessel he commanded during the season, being employed with the commissioners in surveying the boundary-line between this country and Canada on the chain of Lakes Erie, St. Clair, Huron, and Superior, as well as through 1817 and 1818, being employed in various duties, among them that of taking President Monroe and suite to Detroit and back again to Sandusky. In the winter he was detached from this station and ordered to report to Commodore Perry at Newport, R. I. but in consequence of his wound was allowed to locate in Connecticut. From that time till 1828 he continued to suffer from his wound, and underwent several operations without material relief. In 1828 he was ordered to the United States receiving-ship Fulton, stationed at New York, but was detached from her a few days before she blew up, and returned to Connecticut, where he resided until the year 1834. In that year he removed to Buffalo, where he continuously resided up to the day of his death. In 1842 a naval rendezvous was opened in Buffalo and placed under his command, which was very successful, over four hundred men being shipped in about four months. In the fall of 1845 he was ordered to the command of the United States steamer Michigan, which position he retained until the close of his term of service in 1848. In 1855, under the act of February of that year, he was placed by the board of naval officers on the reserve list with leave-of-absence pay, which is equivalent to being on the retired list of the army. He had passed through the various grades of promotion to captain previously, and was promoted to be commodore in 1862. The naval triumph of which Commodore Champlin was the last prominent survivor was, in some respects, the most remarkable in the history either of this country or Great Britain. It was the first encounter between an American and an English fleet in regular battle, and the British Navy had never before known the humiliation of losing an entire squadron. The importance of the engagement, also, in saving the Northwest Territory to the United States, and perhaps in deciding the result of the war, can hardly be overestimated.

CHASE, Right Rev. CARLTON, D. D., Bishop of the Protestant Episcopal Church for the Diocese of New Hampshire, born in Hopkinton, N. H., February 20, 1794; died in Claremont, N. H., January 18, 1870. He was grad-

nated at Dartmouth College in 1817, and immediately commenced the study of theology, being ordained a deacon in the following year, and a priest in 1820, by Bishop Griswold. Soon after his ordination he became rector of Immanuel Church at Bellows Falls, Vt., where he continued his ministry until 1844. During his connection with the Bellows Falls society the important question regarding lands granted in colonial times by Government to the Episcopal Church came up for settlement in the Supreme Court of that State, and during the litigation Mr. Chase performed very important service for the denomination. From Bellows Falls he removed to Claremont, N. H., accepting the rectorship of Trinity Church. He was consecrated Bishop of the Diocese of New Hampshire during the same year, 1844. The State had been included in the Eastern Diocese before his consecration. Until 1863 he performed all the parochial duties of his rectorship in Claremont as well as those of a bishop, but was then relieved on account of feeble health. Bishop Chase had many difficulties to meet during the more than quarter of a century in which he was the head of the Episcopal Church in New Hampshire. The prosperity which has attended the denomination in that State is evidence of his untiring labor and energy. Every minister in the diocese, whatever his discouragements, found in him a hearty collaborer and a firm friend. He was always on terms of friendliness, and, indeed, affection, with all other clergymen within his jurisdiction. He was universally beloved as a citizen, combining a most amiable disposition with the grace of a refined and cultivated gentleman. After the deposition of Bishop Onderdonk in New York, Bishop Chase was called to this State, and filled the vacancy for a short time. In 1852 he preached the sermon at the consecration of Bishop Wainwright of New York. He was a member of the Masonic fraternity, being a Royal Arch Mason at the time of his death. In 1839 he received the degree of Doctor of Divinity from the University of Vermont.

CHAUVENET, WILLIAM, LL. D., an eminent mathematician, professor, and author, born in 1821; died at St. Paul, Minn., December 13, 1870. He was educated at Yale College, graduating in 1840, and soon after his graduation entered the naval service as Professor of Mathematics, and was appointed to the Naval School, then located at the Naval Asylum, in Philadelphia. When the school was removed to Annapolis, Prof. Chauvenet remained in connection with it, and was one of the most energetic and efficient members of the board by which its organization was changed into the present Naval Academy, on the basis of the Military School at West Point. He resigned his position in the Academy to accept a professorship in the Washington University of Missouri. During his residence at Annapolis he devoted the greater part of his time, aside from that re-

quired by the demands of the institution, to the production of his "Manual of Special and Practical Astronomy," which was published by Lippincott & Co. in 1863. This is a work of purely scientific character, and so remarkable for the ability and attainments in mathematical science of which it gave evidence, that Prof. Chauvenet's reputation as a mathematician was at once established. After the death of Prof. Olmstead of Yale College, he was twice offered the vacant professorship. He declined it, but, though he was at this time Chancellor of Washington University, Missouri, he accepted in 1868 the Mathematical Professorship in the University of St. Louis, and prosecuted his labors on another mathematical work of kindred character with his Manual of Astronomy. He died before this was quite completed.

CHEMICAL EXAMINATION OF AMERICAN GRAPES AND WINES.—The comparative value of American wines, as indicated by extended analyses of the same, is shown by Prof. C. M. Wetherill. He says:

"The American vintner has to solve the problem: 'To furnish from our native grapes a wine at as low a cost, and with at least as fine a flavor, as the well-known brands of Europe.' The solution is difficult. Our climate will not permit the European vine to flourish, unless in California, and the juice of our native grapes contains too much acid and too little sugar to afford a good wine.

"The localities of the grapes analyzed are stated in the table of results, on page 86. The first column of numbers denotes the percentage of juice in the grape. The results were obtained by weighing a quantity of the fruits, pressing it in muslin under a hydraulic press of the power of 6 tons, and weighing the residue. The juice was then filtered and its specific gravity was taken (col. 2). Column 3 gives the percentage of ash of five specimens of juice.

"The fourth column embodies the important results of the analysis, viz., the percentage of dry grape-sugar in the juice. The laws of chemistry teach us that 92 parts of alcohol may be obtained from 180 parts of grape-sugar; or, as we may say, for every per cent. of sugar in the juice $\frac{1}{2}$ per cent. of alcohol is possible. A must containing 12 per cent. of grape-sugar cannot possibly give a wine containing more than 6 per cent. of alcohol, unless sugar has been added, or the must concentrated by evaporation.

"The last column is no less important, although the results are only for nine specimens. It concerns the percentage of acid in the grape-juice.

"An examination of the table will show the value of the grapes in percentage of juice, richness in sugar, and freedom from acid. With respect to the amount of juice, there is not a very great difference between the respective specimens: the lowest is No. 5, the highest is

No. 14; the average of 16 specimens is 79.11 per cent. of juice in the grape. Dr. Jackson, in 1859, gives an average percentage of juice, in 38 specimens of native grapes, of 67.23.

"Comparing these with the results which we have for foreign grapes, we find that Berthier determined the percentage of juice in Chasselas and Pineau, grown in the neighborhood of Paris, at 73.81 and 72.43, respectively, or, mean, 73.12. The mean of Dr. Jackson's and of my results is 73.17, which is almost exactly the mean of Berthier's analyses. The amount of juice, therefore, of American grapes is not different from that of the European fruit.

Chemical Analyses of Grapes.

NAME OF GRAPE.	Approximate percentage of juice in the grape.	Specific gravity of the juice.	Percentage of ash in the juice.	Percentage of dry grape-sugar in the juice, by Fehling's test.	Percentage of acid above normality in the juice, calculated as dry tartaric acid.

"It is very different with respect to the sugar which gives the alcoholic value to the grape. The average percentage of sugar found by me is 12.5; the mean of Dr. Jackson's analysis is 11.6 per cent., or, for our examinations combined, a mean of 12 per cent., which could not give a wine of greater than 6 per cent. of alcoholic strength. The sugar in the several grapes of the present research varies 7.73 to 20.36 per cent. I found a larger amount of sugar in the upper than in the lower half of the same bunch of No. 14. The European wine-grapes give a much larger amount of sugar than those which I have analyzed, as may be seen by the table from Mulder, in next column.

"This is equivalent to a general mean of 19.5 per cent. of sugar for all of the grapes analyzed. We have, therefore, to improve our grapes to the extent of 7 per cent. in sugar before we can make a wine of the same average strength as the European wines. The result is deduced from the consideration of all the

grapes analyzed. If we take certain varieties we will need to improve their sugar to a less degree; thus the Delaware No. 17 is already a good wine-grape, and No. 2, Baldwin Le Noir, contains an amount of sugar equal to that of European grapes, at least in the specimens analyzed by me, and grown by the Agricultural Department. The grape No. 9 is a foreign specimen, having been imported from Sans-Souci, near Berlin, by Mr. C. J. Uhlmann, in 1860.

Mean of all.....		15 to 24

"The amount of acid in the grape-juice determines the acidity of the wine, so far as it is not masked by sugar remaining unfermented. Fresenius and others have given analyses of grape-juice in which the tartaric acid varies from 0.56 to 1.11 per cent.; the acid being present as bitartrate of potash. The celebrated Johannisberg grape, of the vintage of 1860, contained 0.74 of tartaric acid, and not more than 19.2 per cent. of sugar, although the same chemist found in the grapes of the Rhinegau from 24 to 28 per cent. of saccharine matter.

"The results of my examination of American grapes give from 0.80 to 1.75 per cent. of free acid. This is considerably greater than in the analyses above quoted, in which only half the tartaric acid given is free to exert its acid reaction, the remainder being masked by its combination with the potash. Taking both sugar and acid in question, as well as the amount of juice yielded, the specimen, No. 2, is found to be the best wine-grape of those analyzed by me. It remains for a full examination to show in what respect this opinion may have to be modified."

CHEMISTRY. *The Atomic Theory.*—The most important contribution to literature upon the puzzling question of atoms, or molecules, during the year, is a paper by Sir William Thomson, F. R. S., which appeared in *Nature* of March 81st, on the size of atoms. That distinguished investigator opens the discussion by remarking that the idea of an atom has been so constantly associated with assumptions of infinite indivisibility that many naturalists have dismissed it to the realms of metaphysics, and made the atom "smaller than any thing we can conceive." But, if atoms are inconceivably small, why are not all chemical actions infinitely swift? as they are not. He then proceeds to defend Cauchy's proposition, made more than thirty years ago, setting forth that the familiar prismatic colors proved the "sphere of sensible molecular action" in transparent liquids and solids to be conforma-

* Not determined.

ble with the wave-length of light. Professor Thomson, supporting Cauchy's view, says that optical dynamics leaves no alternative but to admit that the diameter of a molecule, or the distance from the centre of a molecule to the centre of a contiguous one, in palpably homogeneous bodies such as glass or water, or any other transparent liquid or solid, exceeds the ten-thousandth of the wave-length, or the two-hundred millionth of a centimetre. The author next refers to his own experiments showing that the attraction between parallel plates of one metal held at a distance apart small in comparison to their diameters, and kept connected with a galvanic element, would experience an attraction amounting to two ten-thousand-millionths of a gram weight per area of the opposed surfaces equal to the square of the distance between them. Let a plate of zinc and a plate of copper, each a centimetre square and a hundred-thousandth of a centimetre thick, be placed with a corner of each touching a metal globe of a hundred-thousandth of a centimetre diameter. Let the plates kept thus in communication with one another be at first wide apart except at the corners touching the little globe, and let them then be gradually turned round till they are parallel and at a distance of a hundred-thousandth of a centimetre asunder. In this position they will attract one another with a force equal in all to two grammes weight. By abstract dynamics and the theory of energy, it is readily proved that the work done by the changing force of attraction, during the motion by which we have supposed this position to be reached, is equal to that of a constant force of two grammes weight acting through a space of a hundred-thousandth of a centimetre; that is to say, to two hundred-thousandths of a centimetre-gramme. Now let a second plate of zinc be brought by a similar process to the other side of the plate of copper; a second plate of copper to the remote side of this second plate of zinc, and so on till a pile is formed consisting of 50,001 plates of zinc and 50,000 plates of copper, separated by 100,000 spaces, each plate and each space one hundred-thousandth of a centimetre thick. The whole work done by electric attraction in the formation of this pile is two centimetre-grammes.

The whole mass of metal is eight grammes. Hence the amount of work is a quarter of a centimetre-gramme per gramme of metal. Now, 4,030 centimetre-grammes of work, according to Joule's dynamical equivalent of heat, is the amount required to warm a gramme of zinc or copper by one degree centigrade. Hence the work done by the electric attraction could warm the substance by only $\frac{1}{10000}$ of a degree. But now let the thickness of each piece of metal and of each intervening space be a hundred-millionth of a centimetre instead of a hundred-thousandth. The work would be increased a million-fold unless a hundred-millionth of a centimetre approaches the smallness of a mole-

cule. The heat equivalent would therefore be enough to raise the temperature of material by 62°. This is barely, if at all, admissible, according to our present knowledge, or, rather, want of knowledge, regarding the heat of combination of zinc and copper. But suppose the metal plates and intervening spaces to be made yet four times thinner, that is to say, the thickness of each to be the four hundred-millionth of a centimetre. The work and its heat equivalent will be increased sixteen-fold. It would therefore be 990 times as much as that required to warm the mass by ten per cent., which is very much more than can possibly be produced by zinc and copper in entering into molecular combination. Were there in reality any thing like so much heat of combination as this, a mixture of zinc and copper powders would, if melted in any one spot, run together, generating more than heat enough to melt each throughout; just as a large quantity of gunpowder if ignited in any one spot burns throughout without fresh application of heat. Hence plates of zinc and copper of a three hundred-millionth of a centimetre thick, placed close together alternately, form a near approximation to a chemical combination, if, indeed, such thin plates could be made without splitting atoms.

Professor Thomson remarks that, in the blowing of a soap-bubble, much is done by the stretching of a film, which resists extension as if it were an elastic membrane. This resistance is to be reckoned as a certain number of units of force per unit of breadth, in the soap-bubble. Observation of the ascent of water in capillary tubes shows that the contractile force of a thin film of water is about sixteen milligrammes weight per millimetre of breadth. Hence the work done in stretching a water-film to any degree of thinness, reckoned in millimetre-milligrammes, is equal to sixteen times the number of square millimetres by which the area is augmented. The author's own experiments had proved that, during this process, about half as much more energy in the shape of heat must be given to the film to prevent it from sinking in temperature. Hence the intrinsic energy of a mass of water in the form of a film kept at constant temperature increases by twenty-seven milligramme-millimetres per every square millimetre added to its area.

Suppose then a film to be given with a thickness of a millimetre, and its area to be augmented ten-thousand-and-one fold: the work done per square millimetre of the original film, that is to say, per milligramme of the mass, would be 240,000 millimetre-milligrammes. The heat equivalent of this is more than half a degree centigrade of elevation of temperature of the substance. The thickness to which the film is reduced on this supposition is very approximately a ten-thousandth of a millimetre. The commonest observation on the soap-bubble (which in contractile force differs, no doubt, very little from pure water) shows that there is no sensible diminution of contractile

force by reduction of the thickness to the ten-thousandth of a millimetre; inasmuch as the thickness, which gives the first maximum brightness round the black spot seen where the bubble is thinnest, is only about an eight-thousandth of a millimetre.

The very moderate amount of work shown in the preceding estimates is quite consistent with this deduction. But suppose now the film to be further stretched, until its thickness is reduced to a twenty-millionth of a millimetre. The work spent in doing this is two thousand times more than that which we have just calculated. The heat equivalent is eleven hundred and thirty times the quantity required to raise the temperature of the liquid by one degree centigrade. This is far more than we can admit as a possible amount of work done in the extension of a liquid film. A smaller amount of work spent on the liquid would convert it into vapor at ordinary atmospheric pressure. The conclusion is unavoidable, that a water-film falls off greatly in its contractile force before it is reduced to a thickness of a twenty-millionth of a millimetre. It is scarcely possible, upon any conceivable molecular theory, that there can be any considerable falling off in the contractile force as long as there are several molecules in the thickness. It is therefore probable that there are not several molecules in a thickness of a twenty-millionth of a millimetre of water.

The author then cites what is called the Kinetic theory of gases, worked out by Herapath, Joule, Clausius, and Maxwell. By a simple application of the calculus of probabilities, Clausius proved that the average length of the free path of a molecule of gas, from collision to collision, bears to the diameter of each molecule the ratio of the whole space in which the atoms move, to eight times the sum of the volume of the atoms. It is also known that the average velocity of the molecules, say of oxygen, nitrogen, or common air, at ordinary atmospheric temperature and pressure, is about fifty thousand centimetres per second, and the average time from collision to collision a five-thousand-millionth of a second. Hence the average length of path of each molecule, between collisions, is about $\frac{1}{100000}$ of a centimetre.

Reference is then made to the experiments of Cagniard de la Tour, Faraday, Regnault, and Andrews, as to condensation of gases, which experiments do not allow us to believe that any of the ordinary gases could be made forty thousand times denser than at ordinary atmospheric pressure and temperature, without reducing the whole volume to something less than the sum of the volume of the gaseous molecules as now defined. Hence, according to the grand theorem of Clausius quoted above, the average length of path from collision to collision cannot be more than five thousand times the diameter of the gaseous molecule; and the number of molecules in unit of vol-

ume cannot exceed 25,000,000, divided by the volume of a globe whose radius is that average length of path. Taking now the preceding estimate, $\frac{1}{100000}$ of a centimetre, for the average length of path from collision to collision, we conclude that the diameter of the gaseous molecule cannot be less than $\frac{1}{100000000}$ of a centimetre; nor the number of molecules in a cubic centimetre of the gas (at ordinary density) greater than 6×10^{21} (or six thousand million million million).

The densities of known liquids and solids are from five hundred to sixteen thousand times that of atmospheric air at ordinary pressure and temperature; and, therefore, the number of molecules in a cubic centimetre may be from 3×10^{24} to 10^{26} (that is, from three million million million million to a hundred million million million million). From this (if we assume for a moment a cubic arrangement of molecules), the distance from centre to nearest centre in solids and liquids may be estimated at from $\frac{1}{100000000}$ to $\frac{1}{1000000000}$ of a centimetre.

Prof. Thomson presents the grand conclusions of his argument thus: "The four lines of argument which I have now indicated, lead all to substantially the same estimate of the dimensions of molecular structure. Jointly they establish, with what we cannot but regard as a very high degree of probability, the conclusion that, in any ordinary liquid, transparent solid, or seemingly opaque solid, the mean distance between the centres of contiguous molecules is less than the hundred millionth, and greater than the two thousand-millionth of a centimetre.

"To form some conception of the degree of coarse-grainedness indicated by this conclusion, imagine a rain-drop, or a globe of glass as large as a pea, to be magnified up to the size of the earth, each constituent molecule being magnified in the same proportion. The magnified structure would be coarser grained than a heap of small shot, but probably less coarse grained than a heap of cricket-balls."

In his opening address before Section B of the British association, in September, Prof. H. E. Roscoe says, that although every year has to boast of numerous important and brilliant discoveries in chemistry, we are really but very imperfectly acquainted with the fundamental laws which regulate chemical action, and that our knowledge of the ultimate constitution of matter, upon which those laws are based, is of the most elementary nature. In proof of this he refers as follows to the different opinions expressed by leading chemists in recent discussions on the subject of the atomic theory.

The President (Dr. Williamson) delivered a very interesting lecture, in which the existence of atoms was treated as "the very life of chemistry." Dr. Frankland, on the other hand, states that he cannot understand action at a distance between matter separated by a vacuum space, and, although generally granting that the atomic theory explains chemical facts, yet he is not to be considered as a blind be-

liever in the theory, or as unwilling to renounce it if any thing better presented itself. Sir B. C. Brodie and Dr. Odling both agree that the science of chemistry neither requires nor proves the atomic theory; while the former points out that the true basis of this science is to be sought in the investigation of the laws of gaseous combination, or the study of the capacity of bodies for heat, rather than in committing ourselves to assertions incapable of proof by chemical means.

Agreeing in the main myself with the opinions of the last chemists, and believing that we must well distinguish between fact and theory, I would remind you that Dalton's discovery of the laws of multiple and reciprocal proportions (I use Dr. Odling's phraseology), as well as the differences in the power of hydrogen replacement in hydrochloric-acid water, ammonia, and marsh-gas, *are facts*, while the explanation upon the assumption of atoms is, as far as chemistry is as yet advanced, *a theory*.

If, however, the existence of atoms cannot be proved by chemical phenomena, we must remember that the assumption of the atomic theory explains chemical facts, as the undulatory theory gives a clear view of the phenomena of light; thus, for instance, one of the most important facts and relations of modern chemistry, which it appears difficult, if not impossible, to explain without the assumption of atoms, is that of Isomerism. How otherwise than by a different arrangement of the single constituent particles are we to account for several distinct substances in which the proportions of carbon, hydrogen, and oxygen, are the same? Why, for instance, should 48 parts, by weight, of carbon, 10 of hydrogen, and 16 of oxygen, united together, be capable of existing as three different chemical substances, unless we presuppose a different statical arrangement of the parts by which these differences in the department of the whole are rendered possible? If, then, it be true that chemistry cannot give us positive information as to whether matter is infinitely divisible and therefore continuous, or consists of atoms and is discontinuous, we are in some degree assisted in this inquiry by deductions from physical phenomena which have been recently pointed out by the genius of Sir William Thomson. [Prof. Roscoe here made reference to the article in *Nature*, the substance of which is given *ante*.] There is, however, another class of physical considerations, which renders the existence of indivisible particles more than likely. I refer to the mechanical theory of gases, by means of which, thanks to the labors of eminent English and German philosophers, all the physical properties of gases—their equal expansion by heat, the laws of diffusion, the laws of alteration of volume under pressure—can be shown to follow from the simple laws of mechanical motion. This theory, however, presupposes the existence of molecules, and in this direction, again, we find confirmation of the real existence of Dalton's atoms.

Hydrogenium-Amalgam.—Prof. O. Loew, of New York, communicated to the New-York Lyceum of Natural History, in April, the fruits of his experiments upon the production and properties of this (supposed) compound. He obtains the hydrogenium-amalgam on a large scale by shaking up zinc-amalgam, containing only a few per cent. of zinc, with an equal volume of the solution of bichloride of platinum, containing about 10 per cent. of the chloride, care being taken to keep the mixture cool. The zinc-amalgam then absorbs hydrogen, and, on being removed from the mixture, evolves it, till the decomposition of the amalgam is complete. The volume of the hydrogen thus developed is from 100 to 150

times that of the mercury employed. It has a faint but peculiar odor. When the hydrogenium-amalgam is passed, directly after its preparation, between sheets of filtering-paper, and spread out, in a layer not too thin, to the air, its temperature soon rises considerably, and vapor of water is formed, which may be condensed in a glass receiver. The finely-divided platinum present is obviously the cause of this rapid oxidation. If, after this, it is washed with water, it undergoes a very slow decomposition; the volume increases, and bubbles of hydrogen escape through the water above. An addition of zinc-amalgam or sodium-amalgam greatly accelerates the decomposition of the hydrogenium-amalgam.

Platinum after perfect amalgamation does not act as energetically as in its nascent state; i. e., when precipitated on the amalgam. When platinum-amalgam is mixed with zinc-amalgam, the decomposition of the water by zinc is extremely slow, and the hydrogenium-amalgam does not appear for some time. Under certain conditions, moreover, the hydrogenium-amalgam is formed without the aid of platonic chloride. Prof. Chandler had at one time about twenty pounds of mercury containing zinc, which was left standing in a bottle with water for three weeks; the hydrogenium-amalgam formed on the surface of the mercury gradually decomposing above and being renewed from below.

Constitution of Ammonium-Amalgam.—Prof. Charles N. Seely read a paper on this subject before the New-York Lyceum of Natural History. He regarded the so-called ammonium-amalgam to be a mechanical or physical mixture of liquid mercury with the gases, ammonia, and hydrogen, and that its semi-solid consistency is due to the mixture having the nature of a froth.

The principal considerations by which this view of the constitution of ammonium-amalgam has been reached are as follows:

1. The volume of ammonium-amalgam is inexplicable in any other way; it is utterly inconsistent with the well-established laws of combinations by volume. There is no case of a liquid or solid chemical compound or amalgam which has any analogy to it.

2. Mercury has a mirror-like surface, while ammonium-amalgam has comparatively a whiter and more dead surface; it approaches in appearance to matt silver. Such changes are characteristic of froths.

3. If ammonium-amalgam be subjected to varying pressure, its volume changes apparently in accordance with Mariotte's law of gaseous volume. To illustrate this important fact, a glass tube one-third of an inch in diameter, twenty inches long, and fitted with a plunger, was employed. Mercury containing a little sodium was poured into the tube to one-third of an inch in depth, and upon this was poured a strong solution of chloride of ammonium, occupying about two inches in length of the tube. The ammonium-amalgam was completely formed in a few minutes, and occupied several inches of the tube. On adjusting and depressing the plunger, the volume of the amalgam progressively diminished till it closely approached the original volume of the amalgam. Also

it was notable that the amalgam progressively gained fluidity and the mirror surface, till at the greatest pressure it appeared like mercury. On withdrawing the pressure the original volume and appearance of the compound were resumed, and, on reducing the pressure below that of the air, the amalgam still expanded, until it rose above the surface of the liquid in the tube. If the great pressure be maintained, more ammonium-amalgam will be formed, the mass expanding progressively, apparently in accordance with the fact that the absorption or adhesion of gases to liquids is favored by pressure. By means of the simple apparatus used, a pressure of ten atmospheres, or a good vacuum, is easily and at once attainable, and the experiments with it are very striking.

The so-called ammonium-amalgam is therefore not an amalgam at all; ammonium is not proved to be a metal, and, if it be admitted that the monatomic radical really exists in ammonium-amalgam, it is neither a solid nor a liquid, but a gas.

The author then applies the same reasoning to the supposed new metal hydrogenium, as follows:

The considerations regarding ammonium-amalgam are evidently equally applicable to Loew's hydrogenium-amalgam; both are only metallic froths. The expansion of palladium observed by Graham, on its absorption of hydrogen, is probably analogous to the case in question. In both cases the gases concerned are condensed by reason of their attraction to the metal; and if the molecules of palladium were made free to move, as those of mercury, it is probable that Graham's hydrogenium alloy would become a palladio froth, more remarkable than the corresponding mercurio froth. Many have erroneously supposed that hydrogen was conspicuous in its capability of being absorbed by metals, and thus have more readily been infused with the hydrogenium theory. Oxygen has an eminence over hydrogen in that property, and yet no one has a theory of oxygenium. Iron absorbs carbonic oxide, but no one is bold enough to suggest that carbonic oxide is a metal.

Researches on Vanadium.—Henry E. Roscoe, F. R. S., read before the Royal Society a series of papers on vanadium, and its compounds. Experiments had borne out the conclusion previously announced, that vanadium would absorb hydrogen; and it appears that the amount of the gas taken up by it varies according to the state of division, first of the chloride from which the metal is prepared, and secondly and especially of the metal itself:

The metal containing absorbed hydrogen slowly takes up oxygen on exposure to the air, water being formed and the metal undergoing oxidation to the lowest oxide, V_2O . At this point the oxidation stops.

The difficulty of obtaining metallic vanadium free from admixture of oxide has been again rendered evident. Perfectly pure tetrachloride was prepared in quantity, and from this pure dichloride was made. On heating this to whiteness for forty-eight hours, a substance was obtained which gained, on oxidation, 70.7 per cent. (vanadium requiring 77.79 percentage increase), and, therefore, still contained a slight admixture of oxide.

The reducing action of sodium on the solid chlorides was next examined; in this case, the reduction takes place quietly in an atmosphere of hydrogen at a red heat, and is best conducted in strong iron tubes. Explosions occur when sodium acts on the liquid tetrachloride. The substance thus obtained was found, after lixiviation, to be free from chlorine, and on washing it separated into two portions—(1) a light and finely-divided black powder (trioxide), which remains in suspension, and is soluble in hydrochloric acid; and (2) a heavier gray powder, insoluble in hydrochloric acid, which soon deposits, and can, by repeated washing, be completely freed from the lighter trioxide. This bright-gray powder consists of metallic vanadium, mixed with more or less oxide. If this metallic powder, after drying *in vacuo*, be reduced at a low red heat in a current of pure hydrogen, the powder, even when cold, on exposure to air or oxygen, takes fire spontaneously, water being formed, while the vanadium undergoes oxidation, forming the blue oxide, V_2O_4 . A portion of metal exposed for some weeks to the air also slowly absorbed oxygen, passing into the oxide, V_2O .

The lecturer has proved that the substance supposed by Berzelius to be vanadium is not the metal, but an oxide, and that the true atomic weight of the metal is 51.8. The vanadic acid, VO_3 , of Berzelius, hence, becomes V_2O_5 , corresponding to P_2O_5 and As_2O_5 ; and the above-mentioned isomorphism is fully explained. The suboxide of Berzelius is a trioxide, V_2O_3 ; while the tetrachloride (VCl_4) of Berzelius is an oxychloride, $VOCl_2$, corresponding to oxychloride of phosphorus, $POCl_3$.

Prof. Roscoe has succeeded in obtaining bromine and iodine compounds of vanadium, and also various metallic vanadates. He went on with his lecture by pointing out that the characters of the vanadates bear out the analogy of the vanadic acid with the highest oxides of phosphorus and arsenic; and stated, in conclusion, that vanadium, hitherto standing in no definite relation to other elements, must now be regarded as a member of the well-known triad class of elementary substances, comprising nitrogen, phosphorus, boron, arsenic, antimony, and bismuth.

No such Element as Jargonium.—H. C. Sorby, F. R. S., supposed that by spectroscopic analysis he had discovered a new element, which he called Jargonium, in that variety of the zircon known as the Ceylon jargon. (See ANNUAL CYCLOPEDIA for 1869.) About the same time, the alleged independent discovery of such an addition to the known elements was announced in this country by Prof. Loew at a meeting of the New-York Lyceum of Natural History. Later experiments have convinced Mr. Sorby of an error, and in a paper submitted to the Royal Society he explains how he was led into it, and to what causes the peculiar spectra of jargon are to be attributed. The facts which he presents show that the various spectra which seemed to indicate the presence of a new element, existing in three different physical conditions in jargon, are in reality characteristic of the two oxides combined with zirconia, or not in combination. He says:

"In order to see the spectra of the zirconium-uranium compounds, it is requisite that their oxides should be combined in a crystalline condition. When both constituents are melted in borax and are held in solution, or if, when crystals are deposited, any other substance replaces either the zirconia or the oxides of uranium, the characteristic spectra cannot be seen. The most simple application of this test for uranium is in the case of various zircons. As much of the powdered mineral as will dissolve should be melted with borax in a circular loop of platinum wire about $\frac{1}{4}$ inch in diameter, so as to give a bead of moderate thickness. A little boric acid should then be added, which not only tends to keep the uranium in the

state of protoxide, but also facilitates the crystallization of the borate of zirconia, which is far less soluble when there is excess of boric acid. The bead should then be kept at a bright-red heat, just within the deoxidizing flame, until so much borax has been volatilized that small needle-shaped crystals begin to be deposited, when it must be allowed to cool rapidly. It should then be transparent, with scattered crystals, and the uranium all in the state of protoxide. On gently reheating it, the bead ought to suddenly turn white and almost opaque; and care must be taken not to heat it any more than is just requisite to cause the borate to crystallize out, or else the uranium will rapidly pass into the state of peroxide. Such beads must be examined by strong direct light from the sun, or from a lamp of very great brilliancy, condensed on them by means of an almost hemispherical lens of about $\frac{1}{4}$ inch focal length; and, in addition to the means described in my former paper, I have since found it very convenient to place them over a hole in a black card, so as entirely to prevent the passage of any light which has not penetrated through them, even when so arranged in the focus of the microscope that the spectrum of their thin edges may be examined, if the centre be too thick and opaque. If thus properly prepared, the presence of more or less uranium will be shown by the greater or less intensity of the absorption-bands of the spectrum described in my former paper. This test is so delicate that there is no difficulty in seeing the darker band in the green in the case of zircons which contain no more than one-tenth per cent. of uranic oxide; and I find that very few localities yield this mineral so free from it that it cannot be easily detected. Those from Mikask, Siberia, are the only specimens in which I have not been able to recognize it. The jargons from Ceylon contain an amount varying up to about one per cent., although in no published analysis that I have seen is there any allusion to the presence of even a trace."

Ozone.—O. Loew, in a contribution to the *Zeitschrift für Chemie*, after referring to the well-known instances of the formation of ozone during slow combustion and oxidation, gives the opinion that every act of oxidation, whether slow or rapid, is accompanied by the formation of ozone just previous to the combination between the substance to be oxidized and the oxygen, a state of great activity taking place. The following experiment is described to prove this dictum: A current of air is blown through a rather wide glass tube toward the flame of a Bunsen gas-burner; and opposite the end of the tube, which is directed toward the flame, a suitably-sized beaker-glass is held; and, after a few seconds, the blowing is discontinued, and the beaker-glass simultaneously covered with a glass plate. When the air contained in the beaker-glass is tested, it will be found to emit the peculiar odor of ozone, to blue guaiacum-paper, and to separate iodine from iodide

of potassium. The formation of ozone is greatest when the current of air is so strong as nearly to cause the extinguishing of the flame. The experiment succeeds with every other kind of flame, provided care be taken so to regulate the current of air as to exclude the presence of intermediate products of combustion, as, for instance, vapors of partly-consumed alcohol, if a spirit-flame be used. The author draws from his researches the following conclusions: 1. Oxygen is first converted into ozone in every case where active combustion takes place. 2. Far more ozone is formed than is required for the keeping up of the process of complete combustion and oxidation of the oxidizable material. This surplus of ozone is, in all ordinary cases of combustion, destroyed, partly by the high temperature, and partly by the rush of cold air, and draught thereby caused, attending the combustion.

M. August Honzeau gives a new method for the preparation of ozone, by treating binoxide of barium with sulphuric acid. The oxygen given is strongly ozonized.

M. J. Jonglet has ascertained that nitro-glycerine, dynamite, iodide of nitrogen, chloride of nitrogen, and some other similar compounds, explode the very moment they are brought into contact with ozone: so that, for instance, a drop of nitro-glycerine, introduced into a vessel containing ozone, causes an instantaneous explosion. Picrate of potash gunpowder and ordinary gunpowder are slowly decomposed by ozone, a decomposition which, as regards the last-named substance, takes several weeks before it is perceptible.

Chemical Action of Sunlight.—M. Bontemps, managing director of the crystal-glass works at Choisy le Roi, France, has found that within three months of exposure to sunlight the best and whitest glass made at St. Gobain is turned distinctly yellow; extra white glass (of a peculiar manufacture) becomes even more yellow, gradually assuming a color known as *pelure d'oignon*; glass containing 5 per cent. of litharge is also affected, but far less perceptibly; crystal glass made with carbonate of potash (the other varieties referred to contain carbonate of soda), litharge, and silica, not at all affected. English plate-glass, made by the British Plate-Glass Company, and exhibiting a distinctly azure-blue tinge, remains also unaffected. The author attributes this coloration, which begins with yellow and gradually turns to violet, to the oxidizing effect of the sun's rays upon the protoxides of manganese and iron contained in the glass.

A contributor to the *American Gas Light Journal* writes: "We know that the plants, under the influence of the sunlight, reduce within their substance carbonic acid and water to organic compounds and organized tissues. We know further that the albuminous parts as well as some essential oils of plants contain sulphur, which doubtless comes from the sulphates contained in the soil. As regards this

reduction of sulphuric acid in the plants, it seemed to me of some interest to try whether the sunlight possesses any reducing power upon the oxygen compounds of sulphur outside of vegetable tissues. For this purpose I exposed diluted sulphuric acid, solutions of sulphates, sulphites, and aqueous sulphurous acid, under various conditions, in sealed tubes, to the sunlight of last summer. With sulphurous acid only did I notice any change; and even the tubes containing this remained clear during two months, but after that time a change set in which slowly increased, and sulphur was deposited in a finely-divided state. Sulphurous acid was thus gradually reduced to sulphur, but oxygen was not liberated; another part of the acid having been oxidized by it to sulphuric acid. It seems very singular that such a period (two months) was required to initiate this change; and it would appear that a previous absorption of a great amount of light was necessary to the separation of the first atom of sulphur, which was followed then, however, by more atoms at shorter intervals."

Artificial Gems.—M. Gaudin, who has devoted many years to the production of artificial crystallized gems—especially rubies, sapphires, and emeralds—has communicated to the French Academy of Sciences some curious observations on the effect of a powerful oxyhydrogen blow-pipe blast. He says that alumina, by itself, cannot serve for obtaining precious stones, owing to the tendency of this earth to devitrify again. It does not become pasty before fusing, but liquefies at once, and is as fluid as water; and next volatilizes as if it were camphor. In order to render alumina viscous, quartz has to be added; but that impairs the crystallization, and also the hardness. The coloration of the stones is another difficulty, since the enormously high temperature of the oxyhydrogen blast acts upon several substances, such as compounds of gold, silver, palladium, and other metals, in a manner quite different from that of a furnace-fire. Copper is a protean substance in this aspect, and, by dexterous manipulations, may be used to produce many tints of color. Curiously enough, manganese and nickel yield, at this high temperature, an orange-yellow coloration; and chromium, exposed to the reducing flame, gives a sky-blue, and, in the oxidizing flame, a deep green, which is smoked (*enfumé*), as it were, and has not even a remote resemblance to emerald green. This color can only be obtained by a special and very well-directed oxidizing manipulation from oxide of copper.

M. Gaudin, in another paper read before the Academy, remarks that it is far more difficult to obtain artificial crystallized gems in crucibles than by the use of the oxyhydrogen blow-pipe, and that only by the latter can really hard stones, capable of resisting the file, be made.

M. Zchweskofski, of Paris, claims to have

discovered some peculiar silicic and aluminous ethers; but it is not true, as is reported, that these yield on evaporation precious stones, and certainly not diamonds.

Mineral Crystallization by Cold.—M. Collas has a theory of the crystallization of the diamond and other minerals by cold, which he explains in a note to *Les Mondes*. His theory is as yet confirmed only by the crystallization of tribasic phosphates of lime, which, he says, is an accomplished fact. The following is a summing up of his paper: The hydrate of the basic phosphate of lime becomes horny by desiccation, pulverulent on being boiled, and crystallizes by congelation. The precious stones, which contain cavities filled with a liquid, are crystallized hydrates, and the liquid alluded to is a remnant of the water of the hydrate. A hydrate crystallizes in a manner different from that of the crystallization of a saturated saline solution. The crystallization of a hydrate by cold (freezing) is a dissociation; the hydrated substance precipitates entirely in crystalline state. Lastly, the author states that it is a contradiction, so to say, to try to obtain crystallized carbon (diamond) by means of heat. The author's opinion concerning this crystalline carbon is that, at a very remote period of the existence of our globe, hail-storms of diamonds have taken place. And to the paper a map is added indicating, by means of a curved line, the *cercle diamantaire*—i. e., the area within which diamonds are now to be found. Graphite is, according to the author, destroyed diamond—that is to say, diamond which has lost its crystalline state.

Chlorine as a Refining Agent.—Mr. F. B. Miller, F. G. S., one of the assayers of the Sydney Royal Mint, has detailed to the Chemical Society the working results of his method of separating gold and silver directly by the agency of chemical gas. He says that at the Sydney Mint 6,820,198 ounces of gold have been received for coinage from the date of its establishment, May, 1855, to December 31, 1868. The average composition of this gold would be about 94½ per cent. of gold, 5 per cent. of silver, and ½ per cent. of base metals; the gross amount of silver contained in the gold would be about 384,190 ounces, so that about 24,750 ounces of silver per annum have been lost to the colony for the want of a simple process of refining. The gold now obtained in Queensland, as also that now brought from New Zealand, contains a much larger proportion of silver, so that the present loss to the colony is more nearly 42,000 ounces per year. The experience of the Sydney Mint proves that on the average there is a marked deterioration in the gold proceeding from Victoria, where the fineness is 96 per cent., northward through New South Wales, where the average is 98½ per cent., to Queensland, average 87½ per cent. The silver can now be readily separated by passing a stream of chlorine gas into the melt-

ed gold for about an hour and a half, as it lies in a crucible heated in an ordinary melting-furnace. The chlorine is at first rapidly absorbed, and the process is completed when a brownish-yellow vapor appears. The chlorine is conveniently evolved from a self-acting generator, and 2,000 ounces of gold are readily refined in five hours, by three melting-furnaces, 98 per cent. of the gold being delivered ready for coinage on the same day. The gold thus refined is perfectly tough, and contains only about one-half per cent. of alloy. The ultimate loss of gold is found to be only 19 parts in 100,000; the loss of silver is 240 in 100,000. The cost of refining, including the above loss, but excluding rent of premises and expenditure, is five farthings per ounce. The silver is obtained in the form of fused chloride, and is reduced to the metallic state by plates of zinc combined with slabs of the chloride into a galvanic arrangement, devised by Dr. Leibniz. In twenty-four hours the chloride is completely reduced to the state of spongy silver, and 1,400 or 1,500 ounces could thus be readily treated in a day. No acid is required, and the zinc consumed is only 25 per cent. of the chloride reduced. The whole process, having been thoroughly tested at the time, is to be brought into active operation at once. It is already employed by some of the banks in Australia and New Zealand.

Anhydrous Fluoride of Silver.—George Gore, F. R. S., read before the Royal Society a paper on the preparation and chemical behavior of this salt of silver. He says that it is not decomposed by sunlight. It melts below a visible red heat, and forms a highly-lustrous, mobile, and jet-black fluid. In a state of semi-fusion or complete fusion it is rapidly decomposed by the moisture of the air, with separation of metallic silver, but not by dry air. In such a state, with platinum electrodes, it conducts electricity freely, apparently with the facility of a metal, and without visible evolution of gas, or corrosion of the anode.

Hydrogen does not decompose the dry salt, even with the aid of sunlight; nor does a stream of that gas decompose an aqueous solution of the salt; but the dry salt is rapidly and perfectly decomposed by that gas at an incipient red heat, its metal being liberated.

Nitrogen has no chemical effect upon the salt, even at a red heat, nor upon its aqueous solution. Dry ammonia gas is copiously absorbed by the dry salt. In one experiment, the salt absorbed about 844 times its volume of the gas. The salt, in a fused state, is rapidly and perfectly decomposed by dry ammonia-gas, and its silver set free. A saturated solution of the salt is also instantly and violently decomposed by strong aqueous ammonia.

Oxygen has effect neither upon the dry salt at 15° C., or at a red heat, nor upon its aqueous solution. Steam perfectly and rapidly decomposes the salt at an incipient red heat, setting free all its silver. No chemical change took place on passing either of the oxides of nitrogen over the salt in a state of fusion.

By passing anhydrous hydrofluoric-acid vapor over perfectly anhydrous and previously-used fluoride of silver, at about 60° Fahr., distinct evidence of the existence of an acid salt was obtained. This acid

salt is decomposed by a slight elevation of temperature.

Numerous experiments were made to ascertain the behavior of argentic fluoride in a state of fusion, with chlorine; and great difficulties were encountered, in consequence of the extremely corrosive action of the substances when brought together in a heated state. Vessels of glass, platinum, gold, charcoal, gas carbon, and purified graphite, were employed. By heating the salt in chlorine, contained in closed vessels, formed partly of glass and partly of platinum, more or less corrosion of the glass took place, the chlorine united with the platinum and fluorine of silver to form a double salt, and a vacuum was produced. By similarly heating it in vessels composed wholly of platinum, the same disappearance of chlorine, the same double salt, and a similar vacuum resulted. Also, by heating it in vessels composed partly of gold, an analogous double salt, the same absorption of chlorine, and production of rarefaction, was produced. And, by employing vessels partly composed of purified graphite, a new compound of fluorine and carbon was obtained.

Artificial Alizarine.—Mr. J. Wallace Young has laid before the Glasgow Philosophical Society the results of experiments upon two kinds of artificial alizarine (the genuine article being the well-known extract from madder), one of Continental and the other of English manufacture. The former contained a large amount of colored matter, but further purification was necessary before it could be used as a madder-substitute. When mordanted cloth dyed with it was boiled with solution of soap, the colors were found to be rather fugitive. Cloth prepared for Turkey-red absorbed the dye-stuff readily, but the same want of fastness was observed. When mixed with iron and albuminous mordants, and printed on in the way in which madder extract is used, the colors were found to be dull and not sufficiently fast. A sublimate obtained from the dried paste closely resembled natural alizarine, but was rather lighter in color. It dyed mordanted cloth well, and withstood treatment with soap. The English-made madder-substitute yielded a red rather yellower than that yielded by natural alizarine, a black of equal if not superior quality to madder-black, but the chief difference was in the purple, which was rather slate-colored than any thing else, contrasting most unfavorably with the fine shade of color given by madder. The yellowness of the red seemed to depend pretty much on the proportion of tin salt used in the clearing. As with madder and its preparations, the development of the coloring matter of the artificial alizarine is increased by tanning materials, as sumac, and deteriorated by chalk. The dried residue of the brown artificial alizarine liquid yielded by sublimation a crystalline body of a yellower shade than that of the crystals of the natural alizarine. In order to compare the artificial alizarine with the natural substance, and with purpurine, which is another madder extract, the author dissolved each of them in weak ammonia, and added barium-chloride; they all yielded purplish precipitates. The natural alizarine precipitate was of a fine bluish-purple color, and the supernatant liquor

was almost quite clear; that from the artificial product was much redder, and the supernatant liquid was highly-colored; the purpurine precipitate was of a purplish-red color. The natural alizarine and purpurine precipitates did not seem to be much affected by being washed several times with cold water, but the artificial alizarine precipitates gradually dissolved in the washing water, and finally disappeared. Mr. Young thoroughly tested the dyeing powers of the new alizarine by comparing the results produced upon mordanted cloth with equal weights of sublimed alizarine obtained from the two artificial preparations and from madder, and of purpurine; he showed the specimens of cloth so treated. Instead of the dark, full red given by the natural substance, the artificial alizarine yielded only a yellowish-red, much like that of the purpurine. Its purple was of a slaty tint, but the chocolate and black differed very slightly from those of the natural alizarine. The purpurine scarcely gave any purple, and the same is true of the Continental and English madder-substitutes. Alcoholic solution of natural alizarine gives a fine purple color with copper acetate, and with the same reagent the artificial preparation gives a very red purple. No characteristic bands appear in the spectrum when artificial alizarine is used, and, therefore, purpurine is shown to be totally absent. The author was not aware if any thing had been done toward establishing a formula for the new alizarine, but his opinion, arrived at after performing many practical experiments, was that there was some essential difference between the artificial and the natural substance. He had found no superiority in the new substance. In a supplement to the paper of which the foregoing is an abstract, Mr. Young said that the manufacture of artificial alizarine is carried out in two or three ways by Continental chemists, and, from the examination which has been made of the products, it would appear that some of them consist of a mixture of alizarine and purpurine, in different proportions, and some of alizarine, or of a substance intermediate between the two.

New Explosive Powders (see AMERICAN ANNUAL CYCLOPEDIA for 1869).—The new explosive agent, popularly called picrate powder, invented in France, and made under the patronage of Napoleon's government, has not yet, so far as known, been employed in war, or to any great extent in blasting. Its value and comparative safety are still matters of doubt. The *Scientific Journal* says of the new compound:

It is most readily prepared by the double decomposition of a soluble picrate of soda, magnesia, or lime, and a salt of potash, or by the direct action of picric acid upon the carbonate of potassa. The explosion of the picrate gives rise to an immense volume of gaseous matter, as nitrogen, carbonic, and hydrogen, and oxygen, and the only solid residuum is a little carbon and carbonate of potassa. The smoke produced is very light and easily dissipated,

and the gaseous products are totally destitute of the corrosive and poisonous action of those of gunpowder, with their thick, heavy, stifling smoke. Nearly insoluble in cold water, there is no absorption of moisture from the atmosphere to deteriorate its quality or destroy its utility, as with gunpowder, so that it may be used in the dampest mines, where also the almost total absence of smoke and of noxious products after explosion is a great recommendation.

Two varieties of the picrate powder are now manufactured, one for blasting, the other for fire-arms; each made of various grades of strength, and adapted for special applications. For the first purpose, nitrate of potash is used with the picrate; for the second, an additional ingredient, charcoal, is employed, the latter being added to diminish the rapidity of the combustion and increase the projectile force. This can be regulated so as to be greater or less than that of gunpowder, while the blasting power is much greater than that of the latter substance.

Our space will not permit us to go into more detail respecting this new powder, which is so easily made and kept unchanged, and can be made of any desired degree of strength, and in its explosion yields no deleterious or corrosive gases, blinding smoke, or acrid and troublesome residuum. It is nearly as cheap as, and less easily ignited by carelessness or accident than, gunpowder. Of much greater blasting power, and quite equal to nitro-glycerine in this respect, it seems destined to play a very important part in mining operations, while the comparative absence of solid deposit renders its use in gunnery highly advantageous. The color is a brilliant yellow, and thus it is easily distinguished among other substances. It is also of varied application in pyrotechnics.

Mr. Percy A. Blake, of England, has patented a powder which he calls the "Safety Explosive Compound." Its constituents are simply sulphur and chlorate of potash, in the proportions of one of the former to two of the latter. These substances can be kept separately, in a dry powdered state, and mixed by sifting when required. This mixture has been known for years to detonate when struck with a hammer, but was useless as an explosive agent, because it merely burned slowly when fired by the ordinary fuses. The invention, therefore, consists in causing this compound practically to explode by the use of a peculiar kind of detonating tube, or percussion-cap, which renders it exceedingly serviceable for torpedoes, blasting, shells, blowing down palisades, and other similar appliances. The detonating tube to be employed is made of metal, about an inch in length, and about $\frac{1}{4}$ of an inch in diameter, the bore being about $\frac{1}{16}$; but the inventor does not confine himself exactly to these dimensions, as a larger or smaller tube can be used for the purpose. First is introduced into it some of the compound, and well pressed down; next, some fulminating mercury, and then a small quantity of detonating silver, and the rest of the tube may be filled up with meal powder. The end of the tube, which is filled with the compound, is to be placed in contact with the compound contained in the vessel to be fired, and the other end may be fired by any kind of ignition apparatus.

M. Nobel, a Prussian engineer, has patented two new varieties of powder, composed as fol-

lows: 1. 63 parts of pulverized nitrate of baryta, 12 of charcoal, of light texture; 20 of nitro-glycerine. 2. 70 parts of baryta, as above; 10 of powdered resin, 20 of nitro-glycerine. The charcoal should be carbonized at a low temperature, and, consequently, still contain hydrogen. An addition of 5 to 8 per cent. of sulphur to either of the above mixtures gives a powder which fires more briskly, but, at the same time, it increases the danger in the manufacture, carriage, and application of the powder, which should not be lost sight of. The method of using these powders is to place them in cartridges, like firework-cases, covering the powder with a little fulminant, mercury for example, before closing and priming. The cartridge has merely to be placed in the hole, and covered in the usual manner, and it may be fired either by a fuse, or the electric spark; in either case the fulminating powder, acting on the nitro-glycerine, inflames the whole of the contents instantaneously. To render carriage of the cartridges less dangerous, a little ordinary gunpowder may be substituted for the mercurial fulminant.

The owners of the Nora-Gyttorp Mills, Sweden, have invented a new kind of powder, containing, it appears, a mixture of nitrate of ammonia and nitrate of potash, with other ingredients not known to the public. This material is, according to some accounts, a more powerful explosive than nitro-glycerine, and cannot be ignited, or made to explode, but by the impact of a blow, or a falling weight, or by the detonation of a small cartridge containing common gunpowder. Experiments made at a military establishment at Berlin with this powder have proved that, while ordinary gunpowder, gun-cotton, nitro-glycerine, and dynamite, took fire the moment flame is approached, this powder does not do so. As regards the effect of the impact of a blow of a falling weight (the same, of course, in each case), ordinary gunpowder requires for explosion that the weight fall from a height of between 4 and 5 feet; nitro-glycerine, $1\frac{1}{2}$ foot; dynamite, $2\frac{1}{2}$ feet; and ammonia gunpowder, between 12 and 15 feet. A sample having been sent to France from Berlin, did not, the author says, confirm the high opinion this substance is thought worthy of in Prussia.

Chemical Changes of Hides into Leather.—The *Annales de Chimie et de Physique*, for July, contains an essay by M. A. Müntz on the composition of skin, in which he mentions experiments, undertaken by him, to determine, from a theoretical point of view, the changes taking place in the conversion of hides during the process of tanning. Annexed is a summary of the paper:

A piece of ox-hide which was being converted into leather for the soles of boots was selected as the most appropriate for the investigation, and the operations were commenced after cleansing and depilation. In these processes no chemical change would take place, except, perhaps, in cases in which lime is employed

in the depilation, a small quantity of which is deposited in the skin, but afterward removed by a solution of glucose. The following process of *swelling* consists in steeping the hides in an acid liquid for a time varying from three weeks to two or three months. This acid liquid contains acetic and lactic acids, and a small quantity of tannin: its effect is to distend the pores of the epidermis, and thus facilitate the subsequent process of tanning. During the swelling so much water and other substances are absorbed that the hide increases in weight to such an extent that it is now as heavy as it was before the cleansing and depilation, the addition of dry matter amounting to nearly 19 per cent.; a small quantity of mineral matter is lost, the augmentation being due to the addition of carbon, hydrogen, and oxygen. After eleven months in the tan-pit an increase of nearly 83 per cent. was observed; a small diminution in the quantity of nitrogen took place, while the mineral constituents, and carbon, hydrogen, and oxygen, were augmented. The organic materials added had exactly the same composition as those absorbed by the hide during swelling, but they differ much from the composition of tannin. The author believes that the loss of nitrogen during the tanning process is due to a decomposition of part of the leather, for ammonium salts were found in the liquor from the tan-pits. The structure of leather is also very different from that of skin; while the latter is fibrous, the former is spongy; skin will absorb three or four times its weight of water, swelling considerably, but leather scarcely absorbs one and a half time its weight, and without increase of volume; 100 parts of skin by treatment with boiling water leave 8.35 of insoluble matter, the rest being converted into gelatine; the residue from leather under the same circumstances is about 48 per cent. The compound obtained by the action of tannic acid on gelatine differs very much in composition and properties from leather. A description is given of a process for the estimation of tannic acid; and M. Müntz announces the observation that the residue, after boiling skins with water, contains a substance dissolved by Schweitzer's cupro-ammoniacal reagent, and thus resembling cellulose, but containing about 15 per cent. of nitrogen. The author next gives an account of the composition of the mineral substances present in skin and in leathers, and points out the changes produced during the tanning. He concludes that the tannic acid is partially converted into more oxidized compounds, as gallic acid, glucose, lactic, acetic, formic, carbonic acids, and most probably propionic acid, the remaining less oxidized residue converting the skins into leather.

Preparation of Anthracen.—Dr. J. Gessert gives what he considers to be the best method of preparing anthracen, as follows: Anthracen is found in that portion of the distillation of coal-tar, commonly called "green grease," which is composed of about 80 per cent. of the heavy oil naphthalene, and 20 per cent. of anthracen. The semifluid grease is first placed in a centrifugal machine, in order to expel, mechanically, as much as possible of the oil; the residue is heated to 40° , and pressed, preferably between hot plates. The cake thus obtained (crude anthracen, containing 60 per cent. of that substance) is purified by boiling with light tar-oil (coal-tar naphtha), or with petroleum naphtha. The pasty mass is again placed in the centrifugal machine, to remove the last traces of heavy oil, and the material next submitted to sublimation. In order to test the green grease for the quantity of anthracen, from 5 to 10 grms. of that sub-

stance are taken, placed between folds of filtering-paper, and pressed between hot plates; the remainder of the substance is repeatedly boiled with alcohol, washed with cold alcohol upon a filter, and next dried and weighed. The fusion-point of the mass should be, as near as possible, 210° . The author says that sulphide of carbon is not well suited for the purification of anthracen, because that substance is too readily soluble in that fluid. 100 parts of alcohol dissolve, when cold, 0.6 parts of anthracen; 100 parts of cold benzol dissolve 0.9 parts of anthracen; and 100 parts of sulphide of carbon dissolve 1.7 parts of anthracen.

Improved Method of making Lead Paints.—

A patent has been received by Messrs. Dale & Milner, of England, for the invention of an improved method of manufacturing white-lead (carbonate) by the action of the soluble acid carbonates of the alkalies on litharge, hydrated oxides of lead, or insoluble basic salts of lead. The patentees propose to carry out their invention in two ways, and, when soda is the substance chosen, they proceed—1. By mixing litharge, hydrated oxides of lead, or insoluble basic salts of lead, with an equivalent of bicarbonate of soda, together with sufficient water to form a stiffish paste. This mixture is ground in a suitable mill, small quantities of water being from time to time added as may be found requisite until the change of the lead bodies into carbonates is complete. The paste is now well washed with water, and the supernatant liquid which contains monocarbonate of soda is separated from the white-lead by filtration, and boiled down to dryness, and disposed of as soda-ash; or it may be crystallized; or it may be again converted into bicarbonate of soda, by treatment with carbonic acid, and used to convert further quantities of lead oxides, or insoluble basic salts of lead, into carbonates. Instead of grinding, the lead oxides, or insoluble basic salts of lead in a fine state of division, may simply be mixed with bicarbonate of soda and water and left to themselves, when the conversion into carbonates goes on in the same manner; only much more slowly. 2. They mix litharge, hydrated oxides of lead, or basic salts of lead, with caustic soda, monocarbonate of soda, or acid carbonates of soda, and sufficient water to form a stiffish paste. The mixture is now introduced into a suitable closed mill, and during the grinding a stream of carbonic-acid gas is passed into it. After conversion of the lead bodies into carbonates, they are washed with water, and the supernatant liquid treated as before described. In carrying out their process by this secondly described method, the patentees do not bind themselves to any particular proportion of lead oxides and soda, but equivalents of each answer very well. The quantity of the soda salts may, however, be reduced with advantage if found desirable. Grinding may also

be dispensed with, by mixing the lead oxides or insoluble basic salts of lead in a fine state of division with the caustic soda, monocarbonate or acid carbonates of soda, as described, and exposing the mixture in a suitable room to the action of carbonic acid. Artificial heat accelerates the conversion, both in the first and secondly described operations, but is not essential to their success. The patentees claim the manufacture of carbonate of lead by the action of acid carbonates of the alkalies on litharge, hydrated oxides of lead, and insoluble basic salts of lead, either by direct addition, as described in their first part, or indirectly by the mixture of the lead oxides with the caustic alkalies, or their monocarbonate or acid salts, and their conversion into bicarbonates during the time they are in contact with the litharge, hydrated oxides, or insoluble basic salts of lead.

Manufacture of Sulphide of Carbon.—In 1840 rectified sulphide of carbon cost per kilogramme fifty francs, in 1848 eight francs, and now by the improved method of manipulation only fifty centimes. The apparatus employed consists of vertical retorts made of the same kind of clay as is in use for glass pots, lined internally with a glaze composed of one hundred and thirty parts of flint glass, twenty parts of carbonate of soda, and twelve parts of boracic acid fused together, and next pulverized and painted on the inside of the retorts with gum-water (at the first heating of the retorts this mixture yields a glaze which entirely closes the pores of the material, thus preventing escape of vapors and gases); four of these retorts are set in one oven made of brickwork, and are heated by a properly-constructed furnace; the retorts are provided with the necessary tubes for the abduction of the vapors of the sulphide of carbon, and the introduction of the charges of sulphur and charcoal; the operation once commenced is continuous, since the retorts last for at least six months; the consumption of sulphur per retort amounts to 125 kilogrammes in twenty-four hours, introduced in charges of 155 grammes each, every three minutes time; the vapors of the sulphide of carbon are collected and condensed in vessels made of zinc or sheet-iron, and shaped like flattened-down casks, and entirely covered over with cold water constantly refreshed, while the contrivance is so arranged as to keep the sulphide under water also (its specific gravity is 1.265). The most suitable temperature for this manufacture is bright-red heat; the raw liquid obtained has to be redistilled, and this operation is conducted in large iron vessels, which contain some 5,000 kilogrammes at the same time and communicate with six worn condensers; steam is used for heating by means of a serpentine-coiled set of pipes, and the liquid is heated to 48° ; near the end of the distillation the temperature is raised to 100° , in order to drive off a raw product containing very much sulphur dissolved; in the

distillatory apparatus some sulphur remains, which is removed and again applied. It appears that this industry has become very extended and is carried on with great success in France.

Gas-Furnace for Chemical Operations.—Mr. Charles Griffin, in the *Journal of the Chemical Society*, describes a new gas-furnace for chemical operations at a white heat which does not require a blowing-machine. The gas is supplied to this furnace through a bundle of sixteen Bunsen's burners, the upper ends of which are surrounded by a metal jacket fitting into a perforated clay plate supported on a tripod. When large crucibles are to be employed, a plumbago cylinder, open at both ends and pierced with holes, is placed on the clay plate, the conical crucible being supported by the upper end of the cylinder. The crucible and plumbago cylinder are surrounded by a fire-clay cylinder resting on three bronze pence placed on the lower plate. The cylinder is closed at the top by a clay plate, through which a flue is so made that the current of spent gases is bent twice at right angles before escaping into the sheet-iron chimney; the object of this flue is to check the stream of gas, which would otherwise be so great as to cool the furnace very considerably. When small crucibles have to be heated, they must be supported on a grate consisting of a clay plate with a cusped aperture. By means of this furnace, ingots of cast-iron 4 lbs. in weight have been fused in 2½ hours, starting with a cold furnace; when the furnace is hot, 5 lbs. could be fused in the same time; the quantity of gas used is 33 cubic feet per hour. The cylindrical body of the furnace may be replaced by one of an oval shape, and containing a muffle in which many operations may be performed, the temperature inside the muffle being sufficiently elevated to fuse silver, gold, and copper.

Composition of Iron-Rust.—Dr. Orace Calvert, in a communication to the Chemical Society on this subject, says that he had lately analyzed samples of rust from two different places, and found both specimens to be composed as follows:

Besquioxide of iron.....	92.907
Protoxide of iron.....	6.177
Carbonate of iron.....	0.617
Carbonate of lime.....	0.295
Silica.....	0.011
Ammonia.....	traces
	100.000

This result induced the author to inquire to which of the constituents of the atmosphere the formation of rust is chiefly due. To this end, clean blades of steel and iron were put into tubes filled respectively with oxygen, oxygen and a little carbonic acid, oxygen and moisture, etc. The blades were introduced into the tubes, which then were filled, over mercury, with oxygen. But this proved an unsatisfactory method, inasmuch as always some globules of mercury remained adhering to the iron, whereby a galvanic action was pro-

duced, which, of course, induced a rapid oxidation. To avoid this, the tubes were filled simply by displacement of the atmospheric air. The blades were then left exposed to the action of the different agents for a period of four months. The results were as follows:

Blades in dry oxygen.—No oxidation.

Blades in moist oxygen.—Out of three experiments, only in one a slight oxidation.

Blades in dry carbonic acid.—No oxidation.

Blades in moist carbonic acid.—Slight incrustation of a white color. Out of six experiments, two did not give this result.

Blades in dry carbonic acid and oxygen.—No oxidation.

Blades in moist carbonic acid and oxygen.—Most rapid oxidation.

Blades in dry oxygen and ammonia.—No oxidation.

Blades in moist oxygen and ammonia.—No oxidation.

These facts led the author to assume that it is the presence of carbonic acid in the atmosphere, and not oxygen or water vapor, which determines the oxidation of iron.

The author next investigated the behavior of iron in water into which, successively, oxygen, carbonic acid, a mixture of the two gases, etc., were conducted. The results were analogous to those above mentioned, inasmuch as the most effective oxidation took place when a mixture of oxygen and carbonic acid was introduced into the water. The action commenced immediately, and, in a short time, a dark precipitate covered the bottom of the vessel. The oxidation, in these cases, was not due to the fixation of the oxygen dissolved in the water, but to oxygen liberated from the water by galvanic action; the occurrence of hydrogen collected above the liquid in the bottles proved this sufficiently.

Analysis of Ooze or Chalk-Mud.—Mr. James Mahony, of Glasgow, has analyzed a sample of ooze, or fine white mud, procured from the comparatively level plateau between Ireland and America, at a depth of 2,435 fathoms. Part of the sample was air-dried and a small portion put, when fresh, into methylated spirit. The analysis is as follows:

Silica.....	26.60
Peroxide of iron and phosphates.....	8.50
Protoxide of iron.....	0.08
Carbonate of lime.....	58.80
Carbonate of magnesia.....	1.76
Sulphate of lime.....	trace
Soluble salts.....	4.80
Organic matter.....	2.30
Water.....	2.50
	100.04

The silica was found under the microscope to consist chiefly of minute structureless fragments, some of them being crystalline. A small number of diatoms were also found. The calcic carbonate consisted of larger organisms (class *Foraminifera*), some still containing the small particle of jelly-like matter, constituting the animal substance of these organisms, and called *sarcodæ* by Dujardin. These doubtless yielded the organic matter noted in the analysis. The soluble salts were accounted for by the evapora-

tion of the sea-water with which the mud was charged when taken up. Over the North-Atlantic sea-bed the chalk formation is in continued progress, the identity of the ooze with chalk, both chemically and organically, being very apparent. The silicious grains have their counterpart in the layers of flint seen in the chalk-cliffs—probably formed by the aggregation of minute particles round a central nucleus—while the species of minute shells found in the ooze are in many cases identical with those entombed long ages ago.

New Volatile and Saccharine Substance.—M. Gerard has found in the caoutchouc imported into France from Gaboon (West Coast of Africa) a substance which he calls Dambonite. It is a white-colored solid body. Taste sweet; very soluble in water; difficultly so in absolute alcohol; fuses at 190° ; and may be sublimed at 200° to 210° without decomposition. In its crystalline state, its formula is $C_6H_6O_6$. When submitted to the action of fuming hydriodic acid, it is split up into *Dambose* and iodide of methyl; $C_6H_6O_6 + HI = C_6H_5O_6 + C_2H_5I$. Dambrose is an anhydrous glucose, capable of crystallization, insoluble in absolute alcohol.

Soluble Glass.—The uses of this remarkable substance are extending. In Germany and England it is very largely employed in the manufacture of artificial building-stone, ground chalk and marble being mixed with it into a paste, which readily hardens. Large barracks have been constructed in Vienna solely of such materials, and the cathedral tower in that city was thoroughly repaired by it, in the only way possible, considering the great height of the edifice and the extent to which it had fallen into decay. Prof. Joy, in the *Journal of Applied Chemistry*, mentions various uses for soluble glass as follows:

"Marble and dolomite immersed in a solution of soluble glass, and the operation repeated a number of times, take up an appreciable quantity of silica and become so hard that they are capable of taking a fine polish. Attempts to employ such stones for lithography have been made, but not altogether with success. Artificial stone can be prepared as follows:

"Well-washed and gently-heated sand is stirred into a warm solution of soluble glass until a proper consistence has been reached for pouring it into a mould. After it has set it is removed from the frame, which ought to have been previously oiled, and is left to dry in an airy place. To avoid too great a consumption of water-glass, a stone or brick can be put in the centre of the mould. It is also possible to stir in pebbles and to use earthy colors in imitation of marble and conglomerate. Such artificial material becomes very hard, and is adapted to pavements, hearths, and building-purposes.

"Soluble glass can be used in the manufacture of paper-hangings, for printing on paper and woven fabrics, or for attaching gold and silver powder to any kind of object.

"Hydraulic lime can be prepared by mixing in fine powder 10 to 12 parts by weight of dry soluble glass and 100 parts of lime—this affords a ready way of preparing a hydraulic cement from ordinary lime, which is always available.

"Wood and timber and other porous substances, after being boiled for several hours in soluble glass, then exposed in tanks containing lime-water or chloride of calcium and magnesia, and left to dry, become highly vitrified and incombustible. Railroad-ties, ship's timber, house and bridge beams, have been treated in this manner with entire success.

"The silicate is also used for penetrating fire-brick and clay, and for cementing the walls of furnaces.

"When stirred up with chloride of calcium and used for luting down the covers of crucibles, it answers an excellent purpose.

"As a species of lubricator, and to preserve the elasticity of leather, soluble glass has a ready application."

Analysis of Soot.—Mr. W. R. Hutton, manufacturing chemist of Glasgow, has made analyses of London and Glasgow soots with the following results:

	London.	Glasgow.
Carbon.....	53.18	35.7
Tar and Oil.....	18.00	15.0
Ammonia.....	1.75	2.8
Potash.....	0.20	0.3
Soda.....	0.84	0.3
Lime.....	1.00	0.8
Magnesia.....	0.80	trace.
Phosphate of Lime and Alumina.....	2.08	3.3
Iron.....	0.40	0.7
Sulphuric Acid.....	4.60	7.9
Chlorine.....	trace.	0.4
Sulphocyanogen.....	0.25	none.
Carbonic Acid.....	0.70	trace.
Sand.....	14.40	25.7
Water.....	2.80	7.2
Total.....	100.00	100.00

The genuineness of the London soot Mr. Hutton was able to guarantee, but he feared that the Glasgow soot which he had examined had been adulterated, judging from the large percentage of sand and water in it. The large proportion of sulphuric acid in the latter soot might be accounted for by the sulphurous quality of the Scotch coal, and the great number of chemical works in Glasgow. A considerable quantity of soot is shipped from Great Britain to the West Indies, to be used for the growth of the sugar-cane, its price there being 80s. to 40s. a ton. Not more than 500 tons are gathered in Glasgow per annum, and the value of it never exceeds £1,000.

Taking the waste of fuel, the loss of the nitrogen of the coal, the destruction of property, and the personal discomfort resulting from smoke and soot, he found that there was no profit, but rather a great loss instead. As a practical solution of the "smoke nuisance," Mr. Hutton briefly sketched a plan by which practically smokeless fires might be obtained, while all the volatile compounds could be separately collected, and be got in a form fit for utilization. He would distil the coal before burning, stopping short the process of distillation at such a stage as would

permit *soft coals* to be formed—that is, fixed carbon with a sufficient amount of volatile matter in it to render it slightly inflammable. The other useful products would be chiefly crude oil, coal-gas, and ammonia. Assuming, as a basis of calculation, 2,000 tons of coal to be used daily, that amount would yield in round numbers:

Soft Coke.....	1,400 tons.
Crude Oil.....	40,000 gallons.
Ammoniacal Water.....	30,000 "
Coal-Gas.....	6,000,000 cubic feet.

Deducting the ash, the fixed carbon would be reduced to 1,329 tons. Mr. Hutton calculated that the coke and the other products would realize £742, while the coal (at 5s. per ton) and the labor, etc., would cost £600, leaving an apparent balance of £142, in addition to all the other advantages which would result from the complete combustion of the fuel. The coke would be such a material as would be available alike for domestic fire-places and the furnaces of steam-boilers, etc.

Uses of Glycerine.—The essential principle of fat enters into the useful arts to a degree far more important than its employment in the combination of nitro-glycerine as an explosive agent. Prof. C. N. Joy, in the *Journal of Applied Chemistry*, thus refers to some of the commercial and domestic purposes for which it is used:

Housekeepers will be glad to know that, if tubs and pails are saturated with glycerine, they will not shrink and dry up, the hoops will not fall off, and there will be no necessity for keeping these articles soaked. Butter-tubs keep fresh and sweet, and can be used a second time. Leather treated with it also remains moist, and is not liable to crack and break.

For the extraction of perfume from rose-leaves, from scented woods, from bark, from gums, there appears to be nothing better than glycerine, and this use of it is constantly on the increase, as the most delicate odors are perfectly preserved in it.

A soft soap, into which glycerine enters as a constituent, is highly prized in cold weather, when the hands become chapped, and can be used for washing in hard water.

For wounds and sores, and bites of venomous insects, glycerine is found to be a most valuable substance, as it either prevents the mortification of the parts, or it can be used to carry the remedies to counteract the effects of poison.

To preserve animal substances from decay, glycerine is now substituted for alcohol in collections of natural history, and it is employed to keep many articles of food from undergoing decomposition.

As it requires an intense cold to freeze it, even when mixed with its own bulk of water, it is largely employed to fill the wet gas-metres.

Some kinds of candy, chocolate, confectionery, and fruit, which are preserved in tin foil, are kept moist by a small quantity of glycerine.

Delicate chronometers, clocks, and watches, are lubricated with it. Copying-paper and wall-paper, for taking fancy colors, are also kept moist by a small amount of glycerine used in their manufacture.

In pharmacy, for the preservation of pills, to mix with many substances, in compounding prescriptions, and in more ways than can easily be remembered, glycerine now plays an important part.

In the arts it finds its way as the best wash for the interior of moulds in the casting of plaster figures, to prevent the gypsum from adhering to the sides of the mould.

In dyeing with some of our beautiful organic colors, glycerine is extensively employed with the best effect.

In chemistry it is used to prevent the precipitation of the heavy metals by the alkalis, and is thus a reagent in analysis.

Utilization of Sewage.—In a paper submitted to the British Association, Mr. David Forbes, F.R.S., maintained that the mechanical treatment of sewage, which at best only effected a mere filtration, had everywhere failed to purify sewage-water, so that it might be properly allowed to flow directly into living streams, without detriment to the public health. The more purely chemical processes, such as the treatment of lime alone, or in combination with chloride of iron, alum, sulphate of alumina, and the so-called A B C process, were regarded as failures, since it could be shown not only that the affluent water had not been sufficiently purified, but that the sewage-manure obtained was of so low an agricultural value as to preclude its employment elsewhere than in the immediate neighborhood of the sewage-works. Mr. Forbes recommended an entirely new method of treatment, called the phosphate process, based on the property which hydrated phosphates have of combining with organic matter, while the ammonia also can be precipitated in the condition of the double phosphate of ammonia and magnesia.

The process was shown experimentally with Liverpool sewage, and consisted merely of adding a solution of certain phosphates, chiefly of alumina, in sulphuric or hydrochloric acid, to the sewage, and afterward a little milk of lime barely sufficient to neutralize the acid and give a faint alkaline reaction to the sewage; even if tinctorial matters of great intensity (ink was added in the experiments) were present, the liquor became immediately discolored, the supernatant liquor resting quite clear above a precipitate of the phosphates, along with all the insoluble matter and a large portion of the soluble organic matter and ammonia originally contained in the sewage. The authors of this process, Messrs. A. Price and D. Forbes, although they did not pretend to have extracted the entire amount of the ammonia and other matter valuable for agriculture from the sewage, or effected an absolute purification of the affluent water, believed that, as the water so purified was free from any nauseous taste, so that it could be drunk without repugnance, was devoid of smell, and did not putrefy or emit any disagreeable odor even when left standing in an open vessel during the whole of the preceding hot summer, it had been sufficiently purified by the phosphate process to permit of its being directly run off into rivers without detriment to the fish in them or the health of the inhabitants on their banks.

Relative Purity of Air.—Dr. Angus Smith, Inspector under the British Chemical Act, has published analyses of air taken in various parts of England and Scotland, in dwelling-houses, factories, theatres—in streets, in parks and other open places, and in mines. His researches show that out-door air does differ in different places in the amount of oxygen, but the differences are only slight when stated in per-

centages, the streets of London having an atmosphere apparently almost as pure as the hills of Scotland. We subjoin his tables for oxygen and carbonic acid:

OXYGEN.	Per cent.
N. E. sea-shore and open heath (Scotland).....	20.9980
Tops of hills (Scotland).....	20.9800
In the suburb of Manchester in wet weather.....	20.9800
In the suburb of Manchester in wet weather.....	20.9800
St. John's, Antigua.....	20.9800
In the outer circle of Manchester, not raining.....	20.9470
Low parts of Perth.....	20.9350
Swampy places, favorable weather, France and Switzerland.....	20.9230 to 20.9500
In fog and frost in Manchester.....	20.9100
London, open places, summer.....	20.9500
In a sitting-room which felt close, but not excessively so.....	20.8900
In a small room with petroleum-lamp.....	20.8400
Ditto, after six hours.....	20.8300
Pit of theatre, 11.30 P. M.....	20.7400
Gallery, 10.30 P. M.....	20.8600
About backs of houses and closets.....	20.7000
In large cavities in metalliferous mines (average of many).....	20.7700

Hills above 3,000 ft.....	.0836

Poisonous Cosmetics.—Toward the close of 1869 Dr. Sayre, of New York, sent to Dr. Harris, Sanitary Superintendent of the Metropolitan District, a pamphlet describing three cases of lead-palsy, produced by a variety of cosmetic called "Bloom of Youth." This led eventually to an official investigation of a great number of hair-tonics, washes, and restoratives, lotions, enamels, and skin-powders, with high-sounding and captivating names, manufactured or sold in the city. It was conducted by Prof. C. F. Chandler, chemist to the Board of Health. His examination was for mineral poisons only; not for injurious vegetable or animal substances, as for example cantharides, which he has reason to believe are sometimes employed. Analyses were made of seventeen varieties of preparations for the hair, six of complexion-washes, six of enamels for the skin, seven of skin-powders. The latter consist of carbonate of lime, carbonate of magnesia, clay, or "French chalk," either singly or mixed. The following is Prof. Chandler's summing up:

"1. The hair-tonics, washes, and restoratives, contain lead in considerable quantities; they owe their action to this metal, and they

are consequently highly dangerous to the health of persons using them.

"2. With a single exception, which contains corrosive sublimate, the lotions for the skin are free from lead and other injurious metals.

"3. The enamels are composed of either carbonate of lime, oxide of zinc, or carbonate of lead, suspended in water. The first two classes of enamels are comparatively harmless, as harmless as any other white dirt when plastered over the skin to close the pores and prevent its healthy action. On the other hand, the enamels composed of carbonate of lead are highly dangerous, and their use is very certain to produce disastrous results to those who patronize them.

"4. The white powders for the skin are harmless, except in so far as their application may interfere with the healthy action of the skin."

Adulterated Aniline Dyes.—Dr. S. Dana Hayes, State Assayer of Massachusetts, reported to the *Chemical News* (American edition) an instance of adulteration in aniline dyes, which had come under his notice:

"It consists of fine granulated sugar, and each particle or crystal is so well covered with a thin film of the true aniline dye as to produce a very good imitation, in color and form.

"The first instance was a case of sixty pounds of Hoffman's Violet, which was sold for about six dollars per pound, without discovery. It contained more than half its weight of this colored sugar, the remainder being ordinary crystals of aniline violet.

"These dyes have not been heretofore so extensively adulterated, and although this fraud may be easily detected, still it is a dangerous one, and one against which dyers and colorers should be cautioned."

Test as to the Adulteration of Milk.—Prof. Chandler, chemist to the Metropolitan Board of Health, made a valuable report on milk sold in New York, in which he said that water was, practically, the only substance employed for adulteration. This he would detect by the simple process of taking the specific gravity of milk, and estimating the water it contains by evaporating a weighed sample to dryness. Pure milk, according to Prof. Chandler, varies in specific gravity from 1.023 to 1.032, water being represented by 1.000. In testing milk, the lower number is selected as a fair gravity, and, whenever the gravity falls below that, the milk may be considered as containing an excess of water, and consequently is poor in quality and adulterated. Dr. Davies, F. C. S., of England, dissents from Prof. Chandler, and maintains that specific gravity cannot be relied on as a test. A sample of milk of known genuineness analyzed by him gave the following results: "Casein, 4.26; fat, 6.26; sugar, 5.13; salts, 0.60; water, 88.75; cream (by the lactometer), 17 per cent.; specific gravity, 1.0246. It was, therefore, a very excellent sample, and rich in all the solid constituents of milk, especially butter, but, had it been judged by its specific gravity,

it would have been put down as of very inferior quality. Besides, even supposing the specific gravity to be a reliable test of quality, it gives us no indication as to whether the milk is naturally poor, or has been rendered so by the addition of water, and the test, in my opinion, is therefore worthless." Prof. Chandler also laid down the proposition that, if a milk loses more than 88 per cent. of water, leaving less than 12 per cent. of solids when evaporated, and the residue carefully dried at 212° Fahr., it is adulterated. But Dr. Davies says: "The presence of 88 per cent. of water is an indication of inferior quality, but is certainly no indication whatever that water has been purposely added. In milk of known purity, examined by Dr. Voelcker, as much as 90.70 per cent. of water was found; and this alone shows the untrustworthiness of Prof. Chandler's test—at least, as far as it refers to added water." The English chemist suggests that a better test is afforded in the specific gravity of the serum or liquid portion of the milk, from which the caseine and fat have been removed by coagulating and straining. The gravity of this liquid he had found to be remarkably constant, ranging, in that obtained from genuine milk, from 1.026 to 1.028; and, by carefully ascertaining the specific gravity of the serum of genuine milk diluted with various quantities of water, we may obtain a standard of comparison which will enable us to say, within a few per cents., what quantity of water has been added to any sample of milk under investigation.

CHICHESTER, Right Rev. **ASHHURST TURNER GILBERT**, D.D., Bishop of, an English prelate and promoter of education, born in Manchester, Eng., in 1786; died in Chichester Episcopal Palace, February 21, 1870. He was educated at the Manchester Free Grammar-School and at Brasenose College, Oxford, where he took a first class in classics in 1809. He was soon after elected a Fellow of his college, and, after some years of service as tutor, became Principal of Brasenose in 1822, and held that position till 1842. In 1836 the Duke of Wellington being Chancellor of the University of Oxford, Dr. Gilbert was for four years Vice-Chancellor or Acting-President of the University. In 1842, on the death of Dr. Shuttleworth, he was consecrated to the See of Chichester. His duties were arduous here and they were faithfully performed, and throughout his diocese the bishop exerted himself to promote education and sound morals. He was nearly 84 years of age at his death.

CHILL* a republic of South America. President, for the term from 1866 to 1871, José Joaquín Pérez. The revenue amounted in 1869 to \$10,494,974; expenditures, \$13,966,249. The revenue for 1870 is estimated at \$12,112,174; expenditures at \$11,586,849.

* See the names of the ministers, movements of shipping, imports, and exports, in the **ANNUAL AMERICAN Cyclopedia** for 1869.

The revenue of the republic during the first four months of 1870 amounted to \$4,111,860; expenditures of the first quarter, till March 31, 1870, \$2,481,564. The Anglo-Chilian 5 per cent. loan of £1,012,700 was taken up by F. S. Morgan & Co., of London, for £800,038. The home debt, on July 12, 1869, amounted to \$9,816,945, and the foreign debt to \$23,862,500, making a total public debt of \$33,179,445. The army was composed, in 1870, of 5,018 men, troops of the line, and of 54,992 men of the national guards. The fleet, in 1870, consisted of 12 screw-steamers, manned by a battalion of marines, of 400 men. By the formation of the province of Curico, out of the southern part of the province of Colchagua, the number of the Chilian provinces has reached fifteen. Ten of these are comprised altogether in the area of land surveyed in 1866, so that the figures given below may be considered nearly reliable:

Provinces.	Square Miles.	Provinces.	Square Miles.
Atacama.....	87,924	Colchagua.....	3,858
Coquimbo.....	13,390	Curico.....	2,945
Aconcagua.....	5,939	Talca.....	3,595
Valparaiso.....	1,669	Maule.....	6,885
Santiago.....	7,771	Nuble.....	3,667

The area of the province of Arauco is estimated at 13,873 square miles, that of the province of Concepcion at 3,589 square miles. Some changes have taken place in the area and boundary-lines of the southern provinces; the department of Osorno, of 1,595 miles, was transferred in 1861 from Valdivia to Llanquihue, and the department of Carelmyru, 1,892 square miles, from Chiloe to Llanquihue. The present area of Valdivia, according to planimetric calculations made in the Geographical Institute of Justus Perthes, in Gotha, comprises 10,715 square miles; that of Llanquihue, 8,334 square miles.

Population of the Republic at the end of 1866-'67.

PROVINCES.	1866.	1867.
	Inhabitants.	Inhabitants.
Atacama.....	80,081	80,878
Coquimbo.....	149,303	151,541
Aconcagua.....	128,395	128,941
Valparaiso.....	139,365	140,698
Santiago.....	253,290	267,915
Colchagua.....	143,438	144,979
Curico.....	95,016	95,980
Talca.....	101,848	108,535
Maule.....	190,568	201,418
Nuble.....	117,139	119,132
Concepcion.....	142,598	144,466
Arauco.....	73,153	80,066
Valdivia.....	24,543	25,273
Llanquihue.....	39,237	40,025
Chiloe.....	56,903	59,534
Total.....	1,848,895	1,874,346
The colony of Magallanes (Punta Arenas) has a population of.....		656
To this estimate of the population, according to a remark in the census report, about 10 per cent. must be added, as not counted in the census, say.....		187,500
Besides, there are about 80,000 Araucanians, and 3,800 Patagonians not included in the census.....		83,800
Total population of Chili.....		2,146,302

In an official report of April 19, 1865, the area of the republic is estimated at 132,622 square miles. The total area of the fourteen provinces, as given above, is 123,594 square miles, leaving for the province of Chiloe, not comprised in that statement, an area of 9,028 square miles. In the census of 1865, the area of Chiloe is set down at 2,400 square miles; since then, however, the entire western-coast district of Patagonia, up to the ridge of the Cordilleras, as well as some small adjacent islands, has been added to it.

During the year 1869 the construction of railroads was carried on with considerable energy. The following lines were completed and in working order at the close of the year:

	Miles.
From Santiago to Valparaiso.....	116
" Curico.....	116
" Caldera to San Antonio.....	94
" Pabellon to Chanarcillo.....	27
" Coquimbo to Las Cardas.....	89
Total	392

The first two roads are almost entirely owned by the state, while the four others have been built by private companies. During the year 1870 the mountain-range of the Cordilleras between Chili and Argentina has, for the first time, been traversed by a train of loaded wagons led by Don Indalecio Castro, who arrived at San Juan on April 3d, with forty-one wagons, to the great surprise of the inhabitants, who had hitherto considered it impossible to pass the Cordilleras in any other way than with mules or llamas. Castro had started on his daring travels from Copiapo on the Chilean coast, after having carefully searched for every available pass in the mountain-range, and after making all necessary preparations during six entire years. He was forty-five days on the road from Copiapo to San Juan. Chili intends to cooperate with the Government of the Argentine Republic in building a railroad across the Cordilleras at an early date; the road from Cordova to Tucuman, now in course of construction, will reach the base of the mountains. By order of the Government, Professor Emilio Rosetti has made a minute survey of the Andes Mountains with the assistance of the land-surveyor Peña, to ascertain the practicability of making a railroad over the Planchon Pass. The celebrated Chilean Professor Domeyko, a Lithuanian by birth, and Mr. Pissis took part in the expedition, which was intrusted to the care of the experienced guide Navarrete. We condense the following from Professor Rosetti's report about the general direction agreed upon for the road across the Andes: The railroad, completed so far, reaches from Buenos Ayres to Chivilcoy. From the latter point it must be built across the Pampas in a westerly direction to a point a little above the junction of the Rio de las Barrancas with the Rio Grande, which there assumes the name of Rio Colorado. The road is to go along the right (or southern) shore of the Rio Grande up to where it is called Tordillo, formed by the junction of

Valenzuela and the Las Cuevas Rivers near the Planchon Pass. Thence it is to lead up the valley of the Valenzuela until it reaches the Azuela Valley at the southern limit of the Valle de los Ciegos. This is the highest point on the entire line of the road, which now winds around the western base of the volcano of Peteroa, or Planchon, for a distance of forty-three English miles. Here it reaches the Chilean slope, and starts in a northerly direction through the ravine of Vergara to where the Vergara River flows into the Rio Teno at a point called Las Toscas, a mining district where copper and argentiferous lead are found. Thence the road leads along the shore of the Teno to the station of Curico, where it connects with the road of Santiago.

We would here remark that, besides a pass recently discovered by Germans travelling from Chili to Patagonia, there are no less than ten mountain-passes across the Andes: 1. The pass from Antofagasta in Catamarca through the Portezuela de Come Cavallo to Guasco and Copiapo, about 14,500 feet above the level of the sea; 2. A pass leading from San Juan over the Portezuela de la Laguna to Coquimbo, 15,575 feet; 3. The pass of Los Patos, on the northern side of the Aconcagua; 4. The Paso de la Cumbre, which leads from Mendoza by way of Uspallata to Santiago (445 miles), 12,580 feet, passable from November till May; 5. The Dehesa Pass, seldom used; 6. The Tortillo Pass, much used from the beginning of February till the end of April, leads from Mendoza to Chili, to the valley of the Maypu River; 7. The pass of La Cruz de la Piedra, which leads into the Portillo road on the western slope of the Andes; 8. The pass of Las Damas, through which a road might be led without great difficulty; highest point 11,600 feet; 9. The Planchon Pass, leading along the Claro and Teno Rivers to Curico, 11,600 feet. Gillis (who surveyed this pass in 1827) says that vegetation reaches it, but that its slope is very rough and steep; 10. The pass of Antuco from Concepcion to Chili. The report of Rosetti was to be published in full at an early date, with a map on which all the passes are designated; it contains descriptions of the various roads, and shows conclusively that the Planchon is the most favorable for the construction of a railroad. The length of the road by the line indicated will be 1,023 miles, and its cost is calculated at \$26,000,000 for the Argentine division, and \$6,000,000 for the Chilean, and the time requisite to complete the road is estimated at four years.

Elections for a new Congress took place on the 3d of April. The Government and its supporters were in the main triumphant, but at the same time the opposition party largely increased the number of its representatives in both Houses, and elected a class of men vastly superior to that which formerly represented its views. Indeed, the very best and foremost men appeared as candidates on either side.

The number of delegates elected by the opposition party reached thirty.

Considerable trouble was caused by the Araucanians, who were commanded by their self-styled Emperor, Orelie. The latter was reported to have obtained a battery of light field-guns, and instructed the Indians in artillery practice. Congress adopted a bill granting \$500,000 for the war department, and authorizing the organization of a force of 2,000 men, for the especial purpose of putting an end to the war. In October, Chilian papers reported that Orelie had disappeared, and that the Araucanians were desirous of treating for peace.

The President on 23d of August received the Argentine and British ministers, to give his decision as umpire between the two Governments in a claim preferred against the Argentine Government by British residents of Montevideo for injuries received when that port was blockaded by an Argentine fleet during the revolution of 1845. The decision of the President, based upon the opinions of several of the most eminent lawyers of the republic, was adverse to the claimants.

The Government annulled the Arman contract for exporting guano to Europe from the Mejillones deposits, and, instead, adopted the plan of selling the guano as it lies on the island to the highest bidder. The guano was purchased by Mr. Henry Meigs, who had previously secured the absolute right from the Bolivian Government to export guano from that part of the island belonging to that nation, giving as an inducement the sum of four million dollars' advance on the price of the article. Subsequently the Government of Chili entered into a contract with Mr. Meigs for the extraction and shipment of 430,000 tons of Mejillones guano, the joint property of Chili and Bolivia, at the rate of 5,000 tons per month, commencing from the 1st of September. The price to be paid by the Chilian Government for the extraction and shipment to be \$2.50 per ton on 230,000 tons, and \$2.25 per ton on the remaining 200,000 tons. It was further stipulated that the before-mentioned price for extraction and shipment should not be paid for any guano containing less than sixty per cent. of phosphates.

Great attention is paid to industrial progress. The Chilian Agricultural Society appointed a committee, composed of competent and experienced persons, to study the system followed in the agricultural schools established in the United States, and to make a thorough report on them, in order that some plan might be adopted for the use of institutions of the same class that are to be established throughout Chili. M. Julio Prieto Urriola, a gentleman who has distinguished himself in this branch of science, was appointed by the society to communicate with the different associations in the United States, and to offer, in return for the information and data requested, to remit all the publications that have appeared in Chili on the subject.

CHINA, an empire in Eastern Asia. The Council of State is the highest official body, and consists of four high dignitaries and of two assistants, selected from the Grand College. It is the duty of the latter to guard and protest against any decree which may be in contradiction to the fundamental laws of the empire, as contained in the holy books of Confucius. The members of the Council of State are called State-Ministers. There are six departments, to wit: 1. For the appointment and control of civil officials throughout the empire; 2. Department of Finances; 3. Department of Public Worship; 4. Department of War; 5. Department of Justice (highest criminal court); 6. Department of Public Works. Besides, there is a college which attends to the external affairs.

The Emperor of China is usually styled *Hwang Shang*, or August Supreme, by the people; the term *Tien Tsz'*, meaning Son of Heaven, refers to his position as vicegerent of Heaven, and is not a common appellation. His personal name is Tsai-shun, which is his given name, and is never used by the people. Aisngioro is the family name of the present dynasty of Mantchoos. His reign is called Tungchi, meaning United Rule; it was called *Kitsiang* for only a few weeks at the beginning of his reign in 1861, and is used no longer. Though he succeeded after the death of his father, August 22, 1861, his reign dates from January 30, 1862, the first day of the succeeding Chinese year. He was born May 16, 1856, and was the only child of Yihehu, whose reign was called Hien-Fung. The regency is now conducted by two Empresses, one of whom, the Empress *Tsz* (Mercy) is the Empress-dowager, or the first Empress of the late sovereign; the other, the Empress Ngan (Peace), is his own mother, and was one of the inferior wives. The late Emperor's four brothers are styled *Tsin-wang* or blood-related kings; their titles are *Kung*, *Chun*, *Fen*, and *Tun*; the first, known as Prince Kung, is actively associated in the Government as President of the General Council of State—the others hold no important posts.

The population of China has been much reduced during the last fifteen years by reason of rebellion and its consequent distress, so that the best-qualified observers, judging from the census of 1812 compared with that of 1822, and noting the enormous destruction of population in those parts of Kiansi, Chehkiang, Kiangnan, Shensi, Yunnan, and Honan, where rebel armies resisted the Imperial troops, and both destroyed every thing they could, place the population at present at about three hundred millions. The population of Mantchooria is increasing by the immigration of Chinese from Shantung, and is near five millions now; the population of Corea and Loochoo should not be reckoned in that of China, which exercises no sort of control in either country; Loochoo is in fact a dependency of the Prince

of Latsuma in Kiutsu (Japan). The Tienshan Pehlu and Tienshan Nanlu are more usually known as the province of Ili, and have maintained a quasi-independence for ten years past, though it is not improbable that the Imperial sway may be again acknowledged, as the oppressions and devastations of the Mohammedan rulers are worse than even those of Chinese mandarins; the population of the vast region between Barkoul and Yarkand, including Khoten and all the valley of the river Tarim, has been diminished latterly, and is now probably under two millions. The present population of Mongolia is not far from three millions, but probably less. The total number over which the Emperor bears rule is probably under three hundred and twenty-five millions; the population is supposed to have diminished fully forty millions during the years 1852-'64, by the combined effects of the rebellions of the Taiping and Mohammedans in the central and western provinces, aided by famine, sickness, and robbers; the latter rising is far from being suppressed, and the Mohammedans in Kansuh and Yunnan manage to keep possession of the best part of those two western provinces.

The suppression of the Taipings in the central provinces has been followed by rapid recuperation of the regions on both sides of the Yang-tse-Kiang, and the people are resuming their agricultural and manufacturing pursuits. The rapid extension of the cultivation and use of opium is one of the most disheartening features of the future of China, as it now pervades all classes; the native drug comes more and more into competition with the Indian product, and everywhere weakens and destroys those who become victimized by long

use of the pipe; the foreign importation is about 85,000 chests (11,000,000 lbs.) a year, worth nearly \$60,000,000, a little less than the combined value of the tea and silk exported annually. The native growth is at present greatest in the western and northern provinces, but no reliable statistics of the amount have been obtained; its price averages one-third of the foreign article.

The Peking official journal of July 13, 1869, admits the loss of that part of Toorkistan which was formerly under Chinese rule and administration. It is impossible to obtain reliable data concerning the present condition of the finances of the empire. The last official report of the revenue (published in 1844) gives an aggregate of revenues from all sources of 191,804,139 taels, or £63,934,713. The customs returns show the following amount of duties paid:

Duties paid in Haiknan Taels (1 Tael equal to \$1.52) at 8 Francs.

DUTIES.	1866.	1867.	1868.
Import duties.....	3,263,852	3,157,445	3,287,679
Export duties.....	4,645,710	4,879,045	5,341,600
Tonnage duties.....	217,733	203,653	203,767
Duty paid by coasting trade.....	529,066	478,301	474,302
Duty on home productions.....	27,349	66,892	118,308
Total taels.....	8,685,629	8,785,336	9,425,656
Equivalent to gold.....	\$13,202,156	\$13,253,710	\$14,336,956

The following is the official report of the foreign commerce of China in the year 1868. The commercial tael at \$1.43. It embraces a list of the countries with which a trade was carried on, with the imports from and exports to the same; also the trade at each of the open ports.

TRADING COUNTRIES.	1868.		PORTS OPEN TO FOREIGN COMMERCE.	1867.	
	Import.	Export.		Import.	Export.
Great Britain.....	24,480,000	42,040,000	Shanghai.....	46,570,000	29,330,000
Hong-Kong.....	15,670,000	8,970,000	Less reexport.....	2,240,000
East Indies.....	26,100,000	250,000			
Japan.....	2,610,000	940,000			
Australia.....	730,000	2,350,000	Canton.....	44,830,000	29,230,000
Singapore.....	740,000	230,000	Swatow.....	7,880,000	10,550,000
Siam.....	690,000	80,000	Amoy.....	4,750,000	220,000
Philippine Isles.....	330,000	180,000	Fu-tchen (Foochow).....	5,800,000	1,760,000
Java.....	280,000	290,000	Takao (Formosa).....	3,870,000	14,820,000
Cochin China.....	330,000	50,000	Tamsui (Formosa).....	160,000	20,000
Amoor Provinces.....	30,000	10,000	Ningpo.....	400,000	60,000
Siberia.....	80,000	10,000	Tschin-kiang.....	750,000	10,000
United States.....	830,000	6,330,000	Kin-kiang.....
South America.....	70,000	230,000	Hankan.....	10,000	570,000
European Continent.....	330,000	4,590,000	Tschu-fu (Cheefoo).....	770,000	180,000
British Channel.....	330,000	Tien-tsin.....	790,000	950,000
Other Countries.....	330,000	New-tchnang.....	370,000	10,000
Total, 1868.....	73,330,000	69,110,000	Total.....	71,640,000	57,900,000
Transfers from 1867.....	2,200,000	Reexport.....	2,310,000
Net 1868.....	71,130,000	69,110,000	Net 1867.....	69,330,000	57,900,000

In 1868 the port of Tschao-tschu-fu was opened to foreign commerce, but there were no arrivals or clearances during the year.

* The importations by way of Hong-Kong come from Great Britain, America, India, and other countries.

Converting the above values into United States money, the imports sum up \$101,346,000 gold; the exports, \$98,481,750 gold. The following table shows the articles of import and export in 1868, and their respective value:

	Import.		Export.
Opium.....	26,130,000	Tea.....	37,170,000
Cotton Goods.....	12,371,000	Silk, raw.....	24,420,000
Woolen Goods.....	6,510,000	Silk Goods.....	3,160,000
Cotton, raw material.....	4,300,000	Various.....	4,300,000
Metals.....	3,150,000		
Coal.....	1,630,000		
Various articles.....	7,140,000		
Total taels.....	71,190,000	Total.....	69,110,000

The total value of specie imported in 1867

amounted to 54,930,000 taels; exports, 56,950,000 taels. According to a correspondence from Shanghai, the importations of opium in Hong-Kong amounted to 88,148 piculs, while the report from the custom-house gives only 62,566 piculs. It is taken for granted that the balance of 25,582 piculs, at 18½ English pounds, was smuggled into the country.

The movement of shipping in all the Chinese ports (arrivals and clearances) was as follows:

FLAGS OF	1866.		1867.		1868.	
	Ships.	Tons.	Ships.	Tons.	Ships.	Tons.
Great Britain.....	8,276	2,921,851	7,964	3,711,080	7,165	3,323,092
America.....	3,602	1,957,697	3,926	1,673,754	3,623	2,327,227
Germany.....	2,248	620,222	2,323	611,841	1,772	467,087
France.....	224	108,918	217	112,587	249	139,165

Total.....	15,673	6,877,562	14,705	6,396,815	14,075	6,418,508

The animosity of the Chinese against foreigners, during the year 1870, brought on outbreaks of more than common violence. In January a fierce attack was made on the French and English missionaries at Hangkow, on the Yang-tee-Kiang River, and a number of the former were outrageously treated, their houses burned, and one clergyman killed. The French minister at once ordered the admiral to his aid, and with several gunboats steamed up the river, where he demanded of the governor reparation and punishment of all persons engaged in the violence. The governor tried to procrastinate, and attempted Chinese "diplomacy," but the Frenchman was peremptory. His demands were complied with, churches and missions were rebuilt, actual indemnification made, and several of the known participants in the affair were beheaded. For a time every thing remained quiet; but educated Chinamen said openly that in a little time they would kill every foreigner in China. In order to accomplish this end, from Nanking to Tien-tsin, a concerted plan of action was agreed upon, under the plea that foreigners were in China for the purpose of "kidnapping young boys and girls," killing them, digging out their eyes, mutilating their persons, stewing portions of their bodies in a huge caldron, and packing them in tin cans; after which they shipped them to Europe and America for medicinal purposes, the preparation being a sure panacea for baffling diseases. On June 6th the several governors of all the northern provinces caused to be posted official notices taking cognizance of the rumors, and giving official color and sanction thereto. In every village, hamlet, fishing-station, and city, these notices appeared on walls and temples, and the following, from the *North China News*, at Shanghai, was circulated all over the province:

Proclamation issued by Wang, Chin sien of Tantu in the Prefecture of Chinkeang.

Dated 6th June, 1870.

Whereas, It has been discovered by me that a number of vicious characters are going about in all directions, kidnapping children and young women, by stupefying them, either through the medium of taste in something they give them to eat, or of vapor conveyed in tobacco they give them to smoke, thereby rendering them more easy subjects for abduction, the result of which is that they are cruelly murdered for the sake of procuring, in the case of males, their eyeballs, livers, and testes, and, in that of females, their breasts and privy parts, which are out to be made up, it is presumed, into some strange drug.

And as this is a matter of deep commiseration, the Chih Hsien has taken secret and vigilant measures for their apprehension, and it is his duty to issue this pressing notice, calling upon all classes not to allow their wives and children to run the risk of being kidnapped by going out at will; and any one who can procure the conviction of one of these kidnappers shall, without fail, receive a reward of \$100. Let all obey with trembling. A necessary notice.

The consequence of this official notice was to cause great alarm among the lower classes, and to intensify their bitter hatred of Europeans.

The first result of these inflammatory proclamations was the bloody massacre of Tien-tsin. Tien-tsin is situated on the Peiho River, and is at the head of navigation, the depot for Peking—which is one hundred miles northeast and one hundred and seventy miles from the sea. The mouth of the river is protected by two large forts, rendered almost impregnable by their natural position. They are furnished with a large number of improved guns, among which are twenty Dahlgrens of the largest calibre. It was at this point the English and French were so severely beaten in 1858 by Chinese forces. The Sisters of Mercy have had a mission at Tien-tsin for eight years. On June 19th, the mutterings of trouble, heard for weeks previously, assumed

hostile shape by the assembling of a large crowd of natives under the walls of the native city, about two miles north of the foreign settlement; and in the immediate vicinity of the French settlement, i. e., the consulate, cathedral, mission, and hospital. (In all China it is observable that the French almost invariably form settlements apart from other nationalities, and as near the native cities as possible.) All that day the crowd indulged in fierce screams and howls, beating of tom-toms and gongs, and assaults of servants of Europeans, and such native Christians as appeared on the streets, the unfortunates being thrashed with long bamboo rods, applied by the leading "braves," who were applauded and encouraged by several hundreds of Ohung-how's soldiers, evidently in earnest coöperation with the gathering assailants. Dr. Fraser, an English surgeon, only escaped personal violence through the fleetness of his horse. The French consul, M. Fontanier, used his best endeavors to prevent trouble, and made a direct appeal to Chung-how to prevent any violence, by detailing a portion of his army (which numbered several thousands) for the protection of his countrymen. Chung-how said that he would certainly protect him, and sent two "glass-buttoned mandarins" (a rank of about the same as a policeman), who were jeered at by the people and driven away.

On the succeeding day, Monday, June 20th, the tumult continued; the crowd being largely augmented, and numbering several thousand; a French priest was caught, and received two hundred blows of the bastinado. The hooting and howling surpassed that of the previous day. The "braves" demanded of the Sisters that the children be turned into the street at once, and that they forthwith leave the settlement. They threw missiles at the mission; used the most disgraceful language, and heaped all possible insult on the devoted ladies. They also insulted every foreigner who was abroad on the river or in the city, and in the afternoon grew so violent that M. Fontanier again sought his Excellency Chung-how, and demanded of him protection. "Glass-buttoned mandarins" were again sent, but the soldiers, armed with breech-loading rifles, were stationed to protect the shops of native merchants from violence when the mob should become excited too greatly. The Sisters, with barred doors, withstood the demands of the crowd, releasing all the children who desired to leave; but, of the one hundred and eighty-four, only eighteen consented to leave.

On Tuesday, the 21st, about noon the crowd reassembled and advanced to the consulate in two sections. It was at two o'clock that the assault commenced. The French consul, M. Fontanier, seeing himself menaced and his windows broken by stones, left the consulate in uniform, and insisted on being accompanied by a petty mandarin, who was looking on at the mob without impeding them, to the Yamen of Chung-

how, and there he demanded protection for the consulate, the persons who were resident, and for himself. He also asked Chung-how to protect the Sisters of Mercy and their hospital, as he had by that time heard they were in danger. Chung-how told him that he could not protect any of the persons whom he had named. Some altercation took place, when one of the soldiers of the Yamen stabbed the French consul in the thigh with a spear, and in that wounded state, with the blood having reddened the whole side of his white linen trousers, the consul went to the door of the Yamen, and, holding up the French flag, asked leave to pass. The soldiers and mob seemed awed for a moment, but it was for a moment only. They fell upon the unfortunate consul, pierced him with spears and swords, and after mutilating him, threw his corpse into the river. Meanwhile the mob, after allowing the French consul to go toward the Yamen, immediately broke open the consulate and murdered Monsieur and Madame Thomassin, and the Abbé Chevrier, and another Catholic priest. M. Thomassin was an attaché of the French legation at Peking, and had only arrived the day previous from France with his newly-married and beautiful young bride. The mob, led on by soldiers, then set fire to the consulate, and the church of the Catholic mission, and burnt all the other inmates who could not escape. Simultaneously with the assault on the French consulate, the mob and soldiery surrounded the hospital of the French Sisters of Charity. Having set fire to a portion of the building, they entered the gates, and dragged all the Sisters of Charity out into the street. There they stripped them naked, exposed them to the public gaze, plucked out their eyes, cut off their breasts, ripped them open, dragged out their hearts, and deliberately cut them to pieces, and divided portions of their flesh among the infuriated mob. The lady superioress of the hospital, it is related, was cut in twain while yet alive. No sooner had the mob and the soldiers glutted their thirst for human blood on the unfortunate Sisters, than they burnt the entire hospital. Nearly a hundred orphan children, who had been received into the orphanage attached to the hospital, perished in the flames. The mutilated members of the dead Sisters were thrown into the burning ruins, and thus, together with the little children they were charitably nurturing, was the holocaust completed. Mr. N. Protopoff, a Russian merchant, with his wife, to whom he had only been married two days, were met in the town of Tien-tsin by the same infuriated mob and soldiery, and murdered. A French merchant, M. Chalmaison, hearing that the Sisters of Charity were being attacked, tried to get near the hospital to defend them, but he was caught in the street and hacked to pieces. His wife, on hearing of her husband's death, fled to the house of a native Christian and remained there till night, when, disguised

in a Chinese dress, she ventured to her house, thinking to see the body of her dead husband. After a fruitless search she endeavored to get back to the Chinese house, but, being discovered by some of Chung-how's trained troops (the Chung-how Rifles), she was killed by them in the street. During the afternoon, Dr. Fraser, the resident surgeon at Tien-tsin, was attacked by the mob while returning from a visit to a sick patient in the town, and only escaped serious ill-treatment by being mounted on a fleet horse that bore him through the crowd. About fifty Cantonese men, who were suspected of being on intimate terms with Europeans, were murdered during the excitement, and even toward the end of the day some miscreants were prowling about the foreign settlement. One of them was taken with a loaded pistol, and he confessed that he had been sent to kill some of the Europeans in the customs service.

As soon as the slaughter commenced, news of it was carried by the friendly Chinese to the main settlement, and instantly means of defence were taken. There was lying at the levee the American steamship *Manchu*, Captain Steele, and the English steamship *Appin*, besides two barks and three schooners. Inasmuch as the deck of the *Manchu* commanded the entire levee and the main street leading to the city, it was deemed best to centralize means of defence, and so eleven mounted guns were procured; guns, rifles, and pistols secured; the ladies and children hurried on board; the citizens resolved into a patrol guard, and as night closed in they awaited an attack. The Chinese, informed of these preparations by spies, had, however, not the courage to make an attack, and thus 106 foreigners in Tien-tsin were saved. On the 26th the English gunboat *Opossum* arrived, putting an end to all danger. On the day before, June 25th, the following Imperial decree had been published:

In consequence of some bad people having kidnapped children, and charged the missionaries' establishments with being implicated in this crime, it came to pass that the people of Tien-tsin began to entertain doubts in their minds, and created disturbances. And further, in consequence of the French Consul Fontanier having discharged a revolver in the Yamen of Chung-how, and fired a shot at the city magistrate of Tien-tsin, the excitement of the people rose to such a degree that a general fight ensued, in the course of which Fontanier was killed, and missionary establishments set on fire and demolished.

It appears from this, first, that Chung-how, being intrusted with the management of international affairs, has been unable to pacify the place; second, that the Postal of Tien-tsin, Chow-chiahsun, whose duty it was to set a good example to all the people, has not been able to prevent the outbreak before it was too late; third, that the Chifu (prefect) of Tien-tsin, Chang-kuang-tsee, and the Chin-sien (city magistrate) of Tien-tsin, Lui-chih, have shown an utter want of skill in the fulfilment of their several duties.

It is evident that so great a disaster could never have taken place but for the alleged reason, and that therefore all the above-named officials must be considered guilty and responsible for these events.

The Ministry of Administration (Li-pu) has therefore been instructed to define the several punishments to be inflicted upon the said officials.

Further, Tseng-kwo-fan has been ordered to repair to Tien-tsin to institute strict inquiry into the occurrences and to report upon them to the Emperor.

Again, as regards the miserable individuals who have been guilty of kidnapping, and the principal instigators of the late disturbances, they must be arrested and punished. It will be the duty of Tseng-kwo-fan, in concert with Chung-how, to execute the measures necessary with regard to the latter point. In the discharge of this duty they will have to investigate the bottom, and to search for the root; they must proceed with justice and without partiality, or any private considerations.

This is our imperial will.

The news of the massacre produced a terrible state of excitement among the native population of China, which exulted over it, and in many places made threatening demonstrations against the foreigners. At Cheefoo, Mr. Hartwell, an American missionary, was seized by a high mandarin, bound hand and foot, beaten nearly to death, and ordered to leave the province under pain of death. The Protestant missionaries of Shanghai and Hong-Kong signed the following address to the French consul-general at Shanghai, the Comte de Mejan:

SHANGHAI, July 5, 1870.

We, the undersigned Protestant clergymen and missionaries residing at Shanghai, lose no time in writing to assure you of our profound and sincere sympathy on the present occasion. At a time like this one unanimous feeling of common sorrow fills our hearts. The loss of the devoted men and women, who have been so barbarously sacrificed at Tien-tsin, is a loss to all Christendom. Deep and terrible, however, as is the calamity, we cling to the promise of our Lord Jesus Christ, that He will be with His people to the end of the world, and we are comforted by the teaching of ecclesiastical history, which assures us that "the blood of martyrs is the seed of the Church." We pray that full reparation for the past and better protection for the future may be secured for those engaged in the spread of religion throughout the Chinese Empire.

The members of the Chinese embassy, at that time in Europe, addressed the following letter to the French Minister of Foreign Affairs:

TWENTY-EIGHTH DAY OF THE SIXTH MOON }
(July 27, 1870.) }

It is with a profound sentiment of grief that we learned that the scenes of murder and devastation, which occurred at Tien-tsin through a popular rising, have been confirmed by a telegram lately received from Count de Rochechouart. We have, on the other hand, been semi-officially informed that the Chinese Government has confided to a functionary of elevated rank and eminent capacity the care of opening an inquiry relative to these deplorable events. We do not hesitate to affirm that this high personage, whoever he may be, will use the greatest diligence in acquitting himself of his mission, regulating his action on treaties and laws. This is for us a reason to hope that the negotiations previously commenced between the Duke de Gramont and ourselves, with a view to arrange, as we have done with the principal courts of Europe, the bases of a durable understanding on the principles of international law, and which have been so unfortunately interrupted at the moment they were about to be completed, will be resumed hereafter. Under existing circumstances we propose to leave Paris for Spain to-morrow. We shall shortly

return, and, in the mean time, ask permission to take leave of your Excellency in renewing the assurance of our high esteem.

The foreign ministers at Peking were much disturbed by the atrocity, and the Emperor forbade any of them to leave Peking until the excitement should be over. The Chinese Government promised to comply with all reasonable demands for satisfaction; but as to the extent of this satisfaction it was found difficult to arrive at an agreement with the representative of France in Peking. In October, the French demands were so far granted, that sixteen Chinese were sentenced to be beheaded, and two mandarins to be exiled. The execution of the former took place on the 27th of October, while Mr. Seward and his party were entertained at the Russian embassy. The leading officials who were implicated in this massacre were left unpunished; and the sincerity of the Chinese Government was greatly doubted by the diplomatic corps in Peking.

The additional articles* to the treaty between the United States and China, of June 18, 1866, which were concluded and signed by the plenipotentiaries of the two Governments, at Washington, July 18, 1868, were ratified in 1869 by the Chinese Government. The Chinese Government was so well pleased with the results of Mr. Burlingame's mission in the United States and England that it extended his term to two years, and appropriated the sum of \$140,000 in gold for expenses. In January, 1870, he succeeded in concluding a treaty with the North-German Confederation, similar in all important provisions to the treaties concluded with the United States and England. From Berlin he went to St. Petersburg, where he was received with the greatest distinction; but, before his negotiations for an additional treaty were concluded, he died.

The rebellions in the southwestern and northwestern provinces of the empire maintained their strength during the year. The disturbances first broke out among the Mohammedan Panthay of the southwest province of Yunnan, about twelve years ago. They were occasioned by the heavy taxation and the misconduct of the Mantchoo officers. At first the movement was considered as of no importance, and only a small detachment of troops was sent against the rebels. This force was soon repulsed. When more energetic measures were adopted, the insurrection had acquired such strength that nothing was accomplished. The Chinese forces were not able to cross the borders of the disturbed region. The rebels divided their territory into four districts, and chose their leader, Ta-wia-tsin King. He assumed the name of Solimon. The royal palace was established at Tali-fu. Since then Yunnan has been an independent kingdom. In 1866 the Chinese Government sent an embassy to King Solimon, which sought, by

conceding to him the territory he already held and his independence, to obtain from him a promise that he would make no more conquests. He refused to give any such promise. Another Mohammedan rebellion which has been going on for years is that of the Soongarians, in the northern provinces of Kan-su and Shen-si, who rose under similar provocations to those which had occasioned the revolt in Yunnan. This insurrection commenced in 1862, at Singan-fu, the capital of Shen-si, and spread very rapidly in the northwest. Messengers were sent from Ssalar, the largest community of Soongarians in China, to every place where Soongarians dwelt, to call them to the holy war against the Mantchoos. All the Soongarian men, without exception, were required to join the military force, and to bring their goods to the mosques to be appropriated to the common fund. The insurrection was headed by Sso-chun-schan, and was organized on a radical democratic basis, yet under very strict discipline. Officers and common soldiers were paid equal rates out of the common treasury; the use of tobacco, opium, and wine, was strictly forbidden. Wherever the Soongarians have made their way, they have removed the officials of the Mantchoos, and reorganized the country. The Mohammedans have laid aside the Chinese costume, and adopted that of Bokhara. The Chinese and Calmuck temples have been pulled down, and all the children, without distinction, have been taken to the mosques, to be brought up in the religion of Islam. Chinese, who accept Islamism, enjoy the same rights as the Soongarians; but whoever remains a Buddhist is made a laborer or herdsman; only the women are permitted to adhere to their faith. The insurrection spread steadily from city to city, along the northern part of the Thian-Shan to the extreme border trading-towns of Kuld-shee on the Ili (August, 1864), and Tuguchuk (1865). Another division of the insurrectionists advanced along the roads which follow the mountain-ranges of Toorkistan, and the cross-roads between Oksu and Yarkand. Of the nomadic tribes around Tuguchuk the Kirgheez took the side of the Soongarians, and, of course, the Calmucks, the hereditary enemies of the Kirgheez, allied themselves with the Chinese party. The Calmucks at length obtained the ascendancy, and the Soongarians were put back on the defensive in Tuguchuk. But, in the beginning of 1866, the Mantchoos had possession of only three points in the province of Ili, and in 1868 the Mohammedans ruled not only all of old Soongaria, but also the whole of East Toorkistan and Khoten, Kashgar and Yarkand. At the end of 1869 and the beginning of 1870 the insurrection also extended to the hitherto quiet Mongolia. When the insurgents had pressed forward to the vicinity of Urga, the Russian authorities, at the solicitation of the chief in the province of Urga, sent a detachment of Cossacks over the border. Urga is about 170 miles south of

* See the text of these articles in the AMERICAN ANNUAL CYCLOPEDIA for 1868.

the Siberian line near Kiakhta, and is an important market and principal intermediate station for the trade which goes to Siberia, and is also the seat of the Guison-Tamba, or most important Lama-King of the Mongols.

In 1870 the war against the Mohammedans in Yunnan, according to the Chinese reports, took a turn very favorable to their Government. The following information on the last movements on this seat of war, both in the southwestern and northwestern provinces, is from the *North China News*, of July 8th:

The two imperialist armies, commanded respectively by Tang-ta-men and Chen-foo-tay, have been victorious, both at Chao-chong and near the capital. Some strong and important forts, together with several rich and powerful Mohammedan chiefs, have fallen into the hands of the imperialists. The victors are pitiless toward the vanquished, and put all to the sword. There hardly seems any hope left to the Mohammedans, save in their capital city of Tali, where their ruler is ensconced. And this will soon fall before the cannon of Mr. Moursen. The capture of the celebrated fort near the capital, which had previously kept in awe all the Chinese army, is entirely attributed to the Khai-noa-phao (grape-shot, *lit.*, blowing-flowers cannon) which this officer directs. The Mr. Moursen named is an Englishman, formerly in charge of a Chinese gunboat at Canton, who lately left Hankow with one foreign (Greek) companion for Yunnan, with some European firearms, destined to help the Viceroy against the Mohammedan rebels. There, as in the case of the Taipings, foreign cannon seem to be deciding the day.

It is, however, by no means to be concluded from this that the rebellion is being quelled, as the successes of the imperial forces in the southwestern provinces are more than compensated by their failures in the northwest, from which direction intelligence has been received from a reliable source to the effect that the Mohammedan rebels have come back in large numbers to the provinces of Kan-suh and Shensi; and it is feared that they may also enter Honan. From this it appears that the Mohammedans have not only entered the province of Shensi, but have crossed it from west to east. The imperial troops are making great efforts to stay the march of the rebellion, and the Viceroy of Hupah has been ordered to proceed with a large body of troops to meet the Mohammedans, whose numbers have been largely increased by the Mohammedans in the Shensi province, who rose up at their approach.

CLARENDON, Right Hon. GEORGE WILLIAM FREDERICK VILLIERS, fourth Earl of, K. G., G. C. B., P. C., Chancellor of the Queen's University, in Ireland, a British statesman, diplomatist, and cabinet minister, born in London, January 12, 1800; died in London, June 26, 1870. He was educated at Oxford, and early commenced a diplomatic career, being an attaché of the embassy to St. Petersburg from 1820 to 1823. Soon after his return he was appointed commissioner of customs in Ireland. In 1831 he was sent to negotiate a commercial treaty with France. In 1833 he was appointed British minister plenipotentiary at the court of Madrid, where for six years he attracted public attention by his firm and statesmanlike course in the midst of the bloody strifes excited by the succession of Ferdinand VII. As a Whig, and a representative in Spain of the Whig party, then in power, he manifested his

sympathies with the Constitutional party, of which Queen Christina was then at the head: but, at the same time, he contributed much to modify the horrors of the civil war, and to ameliorate the condition of the prisoners, whom the Spanish authorities would have put to death. He also advocated the cause of the slaves, and urged upon Spain the repression of the slave-trade. His fine address and reputation for gallantry aided his popularity among the Spanish people. In December, 1838, he succeeded to the peerage on the death of his father; and in 1839 returned from Spain, and took his seat in the House of Lords. He defended his own course in Spain, and the policy of the ministry by which he had been employed, with great ability and success against the attacks of the Marquis of Londonderry, who had espoused the cause of the Carlists. From 1839 to 1841 Earl Clarendon was Lord Privy Seal and Chancellor of the Duchy of Lancaster in the Melbourne ministry, and was sworn a Privy Councillor in January, 1840. When Sir Robert Peel succeeded to power in 1841, Lord Clarendon retired from the ministry, but supported all the liberal measures of Sir Robert's administration. He was appointed President of the Board of Trade in Lord John Russell's first Cabinet, late in 1846, but on the death of the Earl of Bessborough, in May, 1847, he succeeded him as Lord-Lieutenant of Ireland, which post he held until 1852. Though popular at first, his reputation soon suffered under the successive calamities which befell that unhappy country. The potato-crop failed, and thousands perished from want of adequate measures on the part of the Government to arrest the ravages of the famine which followed. During the first years of his viceroyalty, Ireland was also agitated by the revolutionary movement for national independence. Naturally inclined to moderation, Lord Clarendon at first attempted mild measures with the insurgents, but, finding it necessary to maintain the authority of the Government, he resorted to stern measures of repression, which, of course, exasperated the disaffected, though they did not satisfy the Orange party. In 1853 the Earl was appointed Secretary of State for Foreign Affairs in the Aberdeen ministry. He accepted this office when England was committed to the war against Russia, which invested the position of Foreign Secretary with special importance, and he discharged its difficult duties with exceptional ability and tact. He retained this office until 1858, with the exception of the brief interval caused by the fall of Lord Aberdeen's ministry and the reorganization of the administration with Lord Palmerston as Premier. Lord Clarendon represented his Government at the signing of the treaty of peace at Paris in the spring of 1856, on which occasion he advocated with great zeal the establishment of liberal institutions in Belgium. In 1864 he joined Lord Palmerston's second government, and was again appointed Secretary

of State for Foreign Affairs, retiring with his colleagues in June, 1866. On the accession of Mr. Gladstone to power in 1868, he was again appointed Foreign Secretary, and held that position up to his death. His intercourse with the representatives of the United States, as Secretary of State for Foreign Affairs, was not, at any period of his official career, very satisfactory. Under a studied courtesy of manner, which, in his long diplomatic and public life, he had carefully cultivated, there was evident a want of that cordial sympathy and regard for the American nation and its institutions which made diplomatic intercourse with him a game of skill.

CLARK, Sir JAMES, Bart., M. D., K. C. B., F. R. S., a British physician and author, born at Cullen, Banffshire, December 14, 1788; died in London, June 30, 1870. He was educated at the Universities of Aberdeen and Edinburgh, obtaining his medical degree at the latter in 1817. Soon after graduating M. D., he took an appointment as surgeon in the British Navy, and visited the hospitals and asylums and studied the methods of treatment in the great cities of the Continent. In 1820 he was practising his profession in Rome; but not long afterward returned to Edinburgh, where he soon obtained a very high reputation, especially in pulmonary diseases. In 1826 he removed to London, where he became physician-in-chief to St. George's Hospital, consulting physician to the King, the Queen of the Belgians, the Duchess of Kent, and the Princess Victoria. On the accession of Victoria to the throne she appointed Dr. Clark her first physician, and made him a baronet. He was also physician-in-ordinary to the late Prince Albert. Sir James was a diligent student of his profession throughout his long life, and published several professional works of great value. The most important of these were: "Medical Notes," the result of his observations on the Continent (1820); "The Sanative Influence of Climate," first published in 1829, but which has passed through numerous editions, and is still highly prized; and most valuable of all, his "Treatise on Pulmonary Consumption," published in 1835, and often reprinted.

COLBURN, ZERAH, was born in Saratoga, New York, in 1832, and was named after his uncle, the celebrated arithmetician. His father died soon after, and his mother, very poor and infirm, removed to New Hampshire, where, during his boyhood, young Colburn earned his living on a farm. He soon after, as he found means of support, removed to Boston. Mr. Colburn commenced his professional career at the age of fifteen, at the Lowell Machine-Shop, next on the Concord Railroad, under the late Charles Minot, who was attracted by the brightness and practical ideas of this singular youth. He in a few months had mastered the anatomy and physiology of the locomotive engine, tabulated the dimensions and proportions of those under his observation, and published

a small but excellent and still useful treatise on the subject. He then got a subordinate position, and soon rose to the superintendence of the locomotive works of Mr. Souther, in Boston; and at the Tredegar Works, at Richmond, in connection with Mr. Souther, he started the manufacture of locomotives. As superintendent, for a year or more, of the New-Jersey Locomotive Works at Paterson, he made some improvements, still standard, in the machinery of freight-engines. Although eminently fitted for the management of practical construction, Mr. Colburn early found that the literature of engineering was his true calling. He, therefore, joined the *Railroad Journal*. In 1854 he started, in New York, the *Railroad Advocate*. In the summer of 1855 he sold the *Advocate*, bought land warrants with the money, journeyed to Iowa and located his lands, then returned to New York, and got together an engine and machinery to set up a steam saw-mill in the far West. But, before his plans were completed, literature resumed the mastery. The story of a three-months' stay among the machine and iron works of England and France is recorded in the *Advocate*, and is of permanent value. In the autumn of 1857 Messrs. Colburn and Holley were commissioned by several leading railroad presidents to visit Europe, to report on the railway system and machinery abroad, and in 1858 their report on these subjects, largely illustrated by engravings, was published. The success of this book was such that its authors determined to continue their researches, and in the fall of 1858 Mr. Colburn again visited London. Here he commenced writing for the *Engineer*, then the leading professional journal, and soon became its editor. Mr. Colburn at this time wrote a supplement on the American practice for a new edition of Mr. D. K. Clark's work on the "Locomotive Engine." After several years' hard work in London, Mr. Colburn resolved to start another engineering paper in America; he selected Philadelphia as the birthplace of his own *Engineer*. It was an excellent paper, and the few numbers published will have permanent value. In a moment of despondency he dropped his new enterprise, sailed for England, and again became the editor of the *London Engineer*. In 1866 Mr. Colburn started in London the publication of *Engineering*, with which he dissolved his connection only a few weeks before his death. During his residence in London, Mr. Colburn was employed as consulting engineer on many important constructions, and prepared many valuable papers in addition to his editorial labors. The more noted of these were his papers before the Institution of Civil Engineers (of which he was a member) on "Iron Bridges" and on "American Locomotives and Rolling Stock," both of which received medals. Mr. Colburn wrote vigorously, originally, and with understanding, on all the leading subjects embraced under the head of engineering. On the locomotive, the

steam-engine and boiler at large, steam navigation, bridges, railway works, and mechanical engineering in general, he was a first-rate authority. The saddest part of Mr. Colburn's story remains to be told. Overwork, together with his natural impulsiveness and his habitual irregularity in relaxation, as well as in work, drove him within a few months into partial insanity. He came back to this country in April, avoided all his old friends, strayed away to a country town in Massachusetts, and there died by his own hand on May 4th.

COLES, Captain COWPER PHIPPS, R. N., O. B., a British naval officer and constructor of armed ships, born at Ditcham Park, Hants, England, in 1819; lost by the foundering of the Captain, in the Bay of Biscay, September 7, 1870. Captain Coles entered the navy in 1881, served with ability on various stations, distinguished himself on board the *Agamemnon* at the siege of Sevastopol, and subsequently at Kertch and in the Sea of Azof. In 1855 a board was appointed by the commander-in-chief to report upon a plan submitted by Captain Coles for the construction of shot-proof rafts, guns, and mortars; and so favorable was their report, that he was ordered to England, and put in communication with the surveyor of the navy and the dock-yard authorities at Portsmouth. His first idea was to protect guns by means of fixed shields, and at Sir J. Brunel's suggestion, in 1859, the shield and gun were placed together upon a turn-table, in place of moving the raft to point the gun, as it had been necessary to do previously. The plan was, however, yet crude and not satisfactory, and, after the great success of Captain Ericsson's Monitors as armed vessels for harbor siege and defence, Captain Coles, a little disingenuously, claimed the turret system as his own invention, and proceeded to apply it to the new armored ships of the British Navy. His general plan of the ship's form and armament differed materially from that of Ericsson; and, though his ships were much more elegant in model and graceful in appearance than those of the Swedish engineer, they had the fatal defect of being top-heavy and almost unmanageable in a storm. This defect cost him his life, and more than five hundred of his gallant comrades perished with him. The Captain and the *Monarch*, twin iron-clads built after his models, were regarded by the English Admiralty as perfect specimens of what armored ships should be; the *Monarch* had crossed the Atlantic, and was greatly admired; and so great was Captain Coles's confidence in the Captain, that he went to sea in her, though only a passenger, the ship having her regular commander and a full complement of officers. They found her sailing qualities unexceptionable, until they encountered a storm, not of extraordinary severity, in the Bay of Biscay, and the beautiful ship foundered in the night, only seventeen out of five hundred and forty escaping with their lives. Captain Coles was an accomplished en-

gineer, resolute and persevering in whatever he undertook, and of very amiable and gentlemanly address.

COLOMBIA, UNITED STATES OF, a republic in South America. President for two years from April 1, 1870, General E. Salgar; Secretary of State and of Foreign Affairs, Dr. F. Zapata; Secretary of Finances, Dr. S. C. Rodan; Secretary of the Treasury and of National Credit, General J. Trujillo; Secretary of War, Dr. R. Nunez. The republic consists of the nine States of Antioquia, Bolivar, Boyaca, Cauca, Cundinamarca, Magdalena, Panama, Santander, and Tolima. Area, variously estimated at from 857,000 to 513,000 square miles; population, census of 1864, 2,794,478, not including the uncivilized Indians, whose number is estimated at 126,000. Revenue, 1866-1867, \$2,417,870, gold; expenditure, 1865-1866, \$2,020,000, gold. According to a report of the British ambassador at Bogotá (published in London, 1869), the revenue of 1866-1867 was derived from the following sources:

Duties.....	\$1,037,534
Salt-Monopoly.....	1,086,618
Post Department.....	45,663
Various.....	267,540
Total.....	\$2,417,370 gold.

The report does not contain any information concerning the public debt, beyond the remark that one-half of the customs duties and 15 per cent. of the revenue derived from the salt-monopoly are mortgaged as security for the claims of British creditors. The sum required for the payment of interest on the home-debt for 1866-1867 amounted to \$218,104; for the floating debt, to \$68,100, gold. The Federal army comprises 1,420 men in time of peace; at the outbreak of war one per cent. of the population of each State is drafted. The movement of commerce and navigation, according to the above report, was as follows: Imports in 1866, \$7,897,206; exports, \$6,772,017; imports, in 1867, \$5,524,498; exports, \$5,494,259, gold. The exportation of gold and silver, which is estimated at \$3,000,000 annually, is not included in the above figures, nor is any mention made of the transit-commerce over the Isthmus of Panama. The aggregate value of merchandise entered at Colon for transit, in 1864, was estimated at \$3,750,000, while the clearances summed up \$66,020,000. The movement of navigation, in 1867, consisted of 708 vessels entered; of which 147 vessels, of 26,992 tons register, were under home flag; and 556 vessels, of 247,721 tons, under foreign flag. Clearances under home flag, 183 vessels, of 27,118 tons; under foreign flag, 587 vessels, of 225,152 tons.

The only railroad in operation is the road across the Isthmus of Panama, 48 miles long.

The presidential election resulted in favor of General E. Salgar, the liberal candidate, against General Herran. President Salgar was inaugurated on the 1st of April. In May he sent an important message to Congress

concerning popular education. The President compliments the House of Representatives for having unanimously approved the item in the budget appropriating \$100,000 to found normal schools in the republic. This unanimity, he thinks, shows the good disposition of all political parties to labor harmoniously for the advancement of the republic, which fact, while honorable to the nation, will be accepted with favor by all the friends of constitutional liberty. In taking for a model the United States, and adapting their institutions to these republics, the common-school system was left out. This the President deeply regrets, and says that it is impossible to found a republic without forming first the citizen, and that the electoral arm and the school must be the base on which rests every republic. A country is neither republican nor free because the constitution says so, but because the amount of intelligence and the social condition permit it to be so. The continued revolutions of Spanish America, and the low state of industry, are due entirely to the ignorance of the lower classes. The minority govern, and the majority suffer. The President asserts that the condition of the laboring classes is not any better than under the colonial government. The question of the intervention of the Government with public instruction he considers definitely settled in the affirmative, and thinks the system of education should conform in all the schools, as tending to unite the States themselves. The best mode of doing this would be, in his opinion, for the Government to take upon itself the forming of the teachers, leaving to the States the primary schools. He then recommends the passing of a law making public instruction a branch of the administration, and independent of the university. How little has as yet been done for public education may be seen from the fact that the State of Panama, probably the most enlightened of the republic, during the last fiscal year, in which the total income amounted to \$203,173, expended \$114,000 for keeping up a military force, and only \$3,122 for educational purposes.

Among the acts passed by Congress and sanctioned by the President, was one relative to telegraphic communication across the republic. The following are the principal clauses of the act: The Executive is authorized to concede permission, to any company or person who may solicit it, to establish on the coasts of the republic the extremities of telegraphic submarine cables, which shall place the nation in connection with other parts of the world, as well as to unite the said cables with land-lines of telegraphs. The telegraphs which may be established in the national territory, and to which the previous article refers, shall be considered of public benefit, consequently they will be exempt from the payment of all national and State taxes or contributions. The lines which accept this concession will, from

this fact itself, be obliged to transmit gratuitously all official communications of the Government of the Union or of the States. In the case of foreign war or interior commotions, the lines will only operate under the surveillance of the political authorities.

On the 12th of May a bill was introduced into the House, proposing the formation of a solemn compact between all the Spanish-American republics, for the purpose of obtaining the independence of the Spanish Antilles from the dominion of Spain, and the erection of republics in those islands. The bill was enthusiastically received and referred to a special committee, which presented a lengthy report on the relations of Spanish America to Spain, concluding with the following *résumé* of the Cuban question:

1. The cause for which Cuban patriots fight is the same for which Colombia fought incessantly from 1810 to 1824.
2. The interests of self-preservation, and our duty as a civilized and Christian nation, justify in the most complete manner Colombian intervention.
3. The aggressions of monarchical Europe against the liberty and independence of America always have had and will have for a base Spanish dominion in Cuba.
4. The policy of the United States cannot serve as a guide to Colombia on this occasion.
5. The resources we may need for this war are not beyond our means.
6. The time has arrived when Colombia should assume in the politics of South America the position to which she is called by her topographical situation, her historical traditions, her population, and her political conquests.

The House of Representatives, on the 17th of June, passed the bill by a large majority; the Senate, however, refused to concur in it.

A new treaty for an interoceanic canal across the Isthmus of Darien was concluded between General Hurlburt, the United States minister, and the Colombian commissioners, Señor Justo Avozomena and Dr. Jacob Sanchez. The Colombian Congress approved the treaty, with some important modifications. The new form of section 11 is in effect a refusal of Colombia to grant exclusive right to the United States or any other nation to send armed vessels through the canal in time of war; but merchant-vessels, of any nation that has guaranteed to Colombia the sovereignty of the canal, will always have the free use of it. That is, that in time of war neither the United States nor any other power shall be allowed to pass their armed vessels through the canal. It was commonly expected in Colombia that these modifications would not prove acceptable to the Government of the United States.

No official report on the expedition which started from the United States in the Nipsic and Guard for the survey of the Isthmus of Darien in 1869, under Commander Selfridge, was made public up to the close of the year 1870; but it is evident that no satisfactory solution of the problem has been found, and that part of the isthmus still remains to be surveyed. The

Guard arrived at Oathagena on December 19, 1869, took in supplies and carried off a considerable number of laborers, with whom she left for her destination on the 27th of the same month. The time from February to July had been spent by the first exploring expedition in a patient, thorough, scientific examination of the isthmus; every probable, rumored, or suspected pass, from Aspinwall to San Blas Bay, was diligently and carefully explored without success, as the Cordilleras proved a formidable barrier at every point.

The southern part of the isthmus is still unexplored, and it is the impression, among scientific engineers most familiar with the country, that the Atrato route, from the Gulf of Darien up the Atrato to the "divide," thence down the Tuyra to the Gulf of San Miguel, on the Pacific side, offers the most encouragement for the construction of an eligible ship-canal route. The main advantages of this route consist in the fact that the channels of both the Atrato and Tuyra Rivers are very wide, and have a sufficient depth of water at all seasons of the year for vessels of the largest class for a considerable distance upward. The harbors on the Pacific, as well as on the Atlantic coast, are said to be excellent, and to need but little improvement to make them at all times accessible.

The President of the United States ordered Commander Selfridge to start at once for the survey of this route, and to leave no stone unturned before giving up the researches in that part of the isthmus. While capitalists and projectors have hitherto taken it for granted that the canal must be horizontal with the two oceans, as no reservoir to provide the locks can be found on the crest of the mountain, it appears that President Grant has also taken into consideration a project of a different nature, suggested to him by eminent and experienced engineers and surveyors. The plan, which was at the bottom of all previous exploring expeditions, consisted in either cutting or tunnelling the Cordilleras at the place best suited for such a purpose. But, as it is supposed that no place can be found where the crest of the mountain is less than several hundred feet above the level of the ocean, the cutting of a ridge deep enough to answer the purpose in view would necessitate such an enormous outlay of capital that the execution of the work would be altogether beyond the means of any private company, and would even tax the wealthiest nation too severely. On the other hand, the tunnelling through such a broad ridge of solid rock would, to all appearances, be even more expensive.

The new plan, which is said to have been duly weighed and considered, is to search for the most feasible surface-route, and construct a canal *over* instead of *under* the Cordilleras. Mr. J. Medill, an engineer of high repute, in a recent communication to a contemporary, says:

"To construct a ship-canal on the natural

surface over the isthmus, and to equip it with double locks, would require no deep cutting and no tunnelling, and will be conceded by engineers to be entirely practicable; nor would the cost exceed the means of a company of capitalists which can easily be organized to execute it. All that remains would be to supply it with sufficient water, and the cost of so doing is readily computable, and will amaze many persons by reason of its comparative smallness. I take it for granted that a route may be found where the elevation would not exceed 500 or 600 feet. The Aspinwall route is only 300 feet, but the harbors are bad. Perhaps, on the Atrato route, where excellent harbors are found, the pass can be surmounted at an elevation not exceeding 500 feet. But, whatever the altitude may be on the line selected for the canal, only a part of the water for the locks and levels would need to be supplied by artificial power. The rainy season on the isthmus lasts two-thirds of the year. Feeders from the numerous mountain-streams would furnish a large part of the lockage-water. Reservoirs could be established to increase the supply, and only on the upper levels would the canal have to depend entirely upon the pumps. The rainfall into the canal would make good for eight or nine months in the year all loss by evaporation or percolation, leaving, for steam-power, streams and reservoirs to furnish lockage-water. All objections, that can be urged against the feasibility of filling locks by steam-power to float ships over elevations, will also lie against attempting to move trains or cars over mountains by the same power. In both cases it is only a question of overcoming the gravity of a given weight to be elevated a given height. The locomotive is obliged to move itself up a grade as well as to drag its load. A stationary engine can expend its whole power to lift its load, and has not to lift itself, nor a stock of fuel and water. On a grade of 70 to 90 feet to the mile a locomotive expends, perhaps, a quarter of its power to move itself and tender, and in wet weather, when the track is slippery, even more than that proportion. The cost of coal used for a locomotive or a stationary engine is comparatively small; a few hundred-weight of coal burned under the boiler of a locomotive will produce steam-power in such force and quantity as to, elevate 400 tons of engine, trucks, and freight, up a grade 400 feet high in an hour. A stationary engine of the same horse-power would lift twice the weight the same height in the same time."

COLVER, Rev. NATHANIEL, D. D., a Baptist clergyman, orator, reformer, and promoter of education, born in Orwell, Vt., in May, 1794; died in Chicago, Ill., September 25, 1870. His early advantages of education were limited, but were diligently improved. He was a volunteer in the War of 1812, and subsequently engaged in business as a tanner. It was not till he was married and settled in life that he

began to think of becoming a preacher, though his father was a clergyman. He commenced preaching about 1820, and for a few years had charge of small congregations in Vermont and North Eaton, N. Y., studying diligently meanwhile to qualify himself for greater usefulness. In 1836 he was called to the pastorate of the large and influential church at Union Village, N. Y., where he remained for seven years. He had already attained a high reputation as a pulpit orator and an efficient advocate of the temperance and antislavery causes. In 1843 he was called to Boston, where he founded the Tremont Temple, the "Plymouth Church" of Boston. He was very useful, and exerted a powerful influence throughout New England, during his thirteen years' ministry in Boston. But he felt a strong inclination to labor in the Western field, for which his earnest nature, his broad views, and his impassioned oratory, eminently qualified him. He spent a year at Detroit, two or three years at Cincinnati, and about 1860 settled down in Chicago, where the remainder of his life was spent, excepting his year or two of earnest labor, after the war, in founding and bringing into successful operation the "Colver Institute," at Richmond, for educating young men of color, of decided piety, and promising gifts, for the ministry. For two or three years past he had been a great sufferer from heart-disease; but his patience under severe pain, and his calm endurance of the ills to which he was subjected, were worthy of admiration. He had written considerably for the periodical press, and published some small treatises and occasional discussions and addresses, but his greatest merit as a public speaker lay in his power of forcible and eloquent extemporization. As a pastor he had been remarkably successful, more than sixteen hundred converts having been baptized by him in connection with the churches of which he had had charge.

COMMERCE OF THE UNITED STATES FOR 1870. The Government returns of imports and exports at all the customs ports of the United States are now completed for the nine months of the year ending September 30, 1870. They show a gain in the imports for that period of over \$9,000,000 as contrasted with those of the first nine months in 1869; and an increase in the exports of nearly \$19,000,000 in the same period, when compared with the previous year. The excess of imports over exports thus far returned for 1870 is, in round numbers, \$45,800,000.

Trade with Canada during the year was not so prosperous as in 1869, on account of the Dominion tariff which went into effect April 7, 1870, in retaliation for the heavy duties imposed on Canadian goods. In 1869 the balance of trade against the United States was \$11,714,610, but in 1870 it amounted to \$21,742,130.

The following are summaries of the statistics for the periods mentioned.

Imports at all United States Ports.

The total official returns which have been made for the year 1869, since the publication of the last ANNUAL CYCLOPEDIA, show the imports to have been \$463,461,427, against \$381,701,510 for 1868, and the exports \$394,644,335 (specie value), against \$362,481,052 for the year previous—thus indicating a far larger excess of imports in 1869 than that of 1868.

Full comparative tables of commerce at the port of New York, for the year 1870, are given by the *Journal of Commerce*. The following is a statement of the totals of foreign imports at New York for the past ten years.

Under dutiable are included goods entered directly for consumption and for warehousing. The free list is small, owing to the transfer of tea, coffee, and other items, to the list of dutiable imports eight years ago. The specie and bullion came mostly in transit to foreign ports, and nearly all appears again in the exports.

Foreign Imports at New York from 1860 to 1870.

Year.	Dutiable.	Free Goods.	Specie.	Total.
1860...	\$301,401,633	\$28,006,447	\$3,852,330	\$333,260,410
1861...	95,826,459	30,853,918	37,068,413	163,748,790
1862...	149,970,415	23,391,635	1,390,277	174,652,327
1863...	174,521,766	11,567,000	1,525,311	187,614,077
1864...	304,128,236	11,731,902	2,365,623	318,225,761
1865...	212,306,301	10,410,837	2,133,361	224,850,499
1866...	284,033,567	13,001,588	9,578,029	306,613,184
1867...	288,297,955	11,044,181	3,306,339	302,648,475
1868...	232,544,418	11,764,027	7,065,860	251,374,305
1869...	275,779,976	14,789,235	15,788,463	306,357,674
1870...	289,618,878	13,716,500	11,864,644	315,200,022

The following tables show monthly summaries of imports at New York for four years: 1. The total dutiable entered each month for consumption. 2. The monthly entries for warehousing. 3. Free goods thrown directly on the market. 4. The specie. 5. The total monthly entries of all kinds.

* First nine months.

It will be perceived that the total imports at this port during the year amounted, in round numbers, to \$315,000,000, being \$8,500,000 in excess of any previous calendar year. The customs duties on these imports footed up over \$185,000,000.

Entered for Consumption.

Foreign Goods entered for Warehousing.

Foreign Goods entered free.

Total Imports.

The total imports for 1870, at the port of New York, are the largest on record; and it is estimated that the year's profits upon imported goods have been larger than in 1869, in consequence of greater steadiness in the market, and less violent fluctuations in the price of gold.

The withdrawals from bond, for consumption, of goods previously entered for warehousing, were as follows:

Withdrawals from Warehouse.

The receipts of customs at the port of New York, for 1868, 1869, and 1870, are thus stated—the figures representing coin, and the imports being reported at their foreign gold cost, not including freight and duty:

Receipts of Customs at New York.

It will be noticed that the shipments of specie have been \$58,000,000, against \$32,000,000 for 1869.

About two-thirds of all the imports of the United States arrive in New York, and about forty per cent. of all the exports of the country are shipped from the same point.

The subjoined tables are prepared from the report of the Registrar of the Treasury. They give the tonnage and ship-building of the United States for nine months of the year ending September 30, 1870, and compare them with the statistics of the corresponding period in 1869:

Tonnage of the United States.

CONGREGATIONALISTS. On the 2d of March a convention was held in the chapel of the Broadway Tabernacle, New York, to deliberate on an appropriate celebration, by the Congregational churches, of the two hundred and fiftieth anniversary of the landing of the Pilgrims. In April, a Pilgrim Memorial Convention, largely attended from all parts of the country, was held in Chicago. A resolution was adopted providing for a committee to set forth a condensed statement of the characteristic ideas to which the pilgrims gave power by their self-denying devotion, and to whose continued advocacy and application the Congregationalists stand pledged before God and man. Prof. Bartlett and Drs. Chapin, Bacon, Post, and Dexter, were appointed as such committee. Resolutions were also adopted, declaring that, as the Pilgrims recognized an educated and pious ministry as the right arm of the power of the church, there can be no more fitting memorial in their honor than the raising, during this anniversary year, of not less than three million dollars to aid the recognized theological seminaries of the Congregational churches in establishing these institutions upon the broadest and most permanent basis; recognizing in the erection of the contemplated Congregational House at Boston, for the valuable library of the denomination, and

as a permanent house of all the denominational benevolent societies, an enterprise worthy of liberal aid by Congregationalists in all parts of our land; and thanking God for the triumph of the principles of the Pilgrims in the late war for the emancipation of the blacks and for the adoption of the fifteenth amendment. Another resolution recommended the establishment of a National Congregational Convention. Nearly all the State Associations and Conferences declared at the annual meetings in favor of this plan. In December a convention was held in Boston, at which a committee was charged with drafting a definite plan.

The long-continued coöperation of the Congregationalists with a large section of the Presbyterian body in the prosecution of the foreign missionary work was terminated in the case of many missionaries and some mission churches by the reunion of the Old and New School Presbyterians. The American Board of Commissioners of Foreign Missions, heretofore the common missionary society of Congregationalists and New-School Presbyterians, transferred, in 1870, the missions to the Seneca and Ojibway Indians, to Syria and the Gaboon, to the care of the Presbyterian Board of Missions; and most of the missionaries to Persia, it was supposed, would also be transferred in the course of the coming year. The American Board will henceforth be an essentially Congregational Society. Including the missions which were transferred to the Presbyterian Board, the whole number of native laborers in connection with the different missions the past year was 1,095, an increase of over a hundred upon the previous year. Of these, 119 are pastors and 827 preachers; the remainder teachers, colporteurs, and Bible-readers, but all educated in the various schools and seminaries, and, in point of education and character, holding about the same relative position to the people among whom they labor that similar classes do at home. Forty-five pupils of the missionary schools completed, in 1870, their theological studies—seven at Walluku in the Hawaiian Islands, nine in the Madura mission, seven in Ceylon, and twenty-two at Harfoot. The number in mission training-schools and seminaries studying theology was about equal to the number of deaths in the Congregational seminaries in the United States. The mission churches, 238 in number, received during the year 1,580 new members, and, at the close of the year for which the missionaries reported, numbered 24,142 members. The number of native pastors increased from 106 to 119. The fifty-eight Hawaiian churches support their own ministry, build their own houses of worship, sustain mission labor among the Chinese immigrants, and contribute liberally for the missionary work in Micronesia and the Marquesas Islands. The entire amount contributed by the native Christian communities for the missionary funds was about sixty thousand dollars in gold, or one-sixth of the

sum contributed for foreign missions by all the churches acting through the American Board. Exclusive of the missions transferred to the Presbyterian Board, the statistics of the missions of the Board were as follows: missions, 14; stations, 86; out-stations, 506; ordained missionaries (3 being physicians), 129; physicians not ordained, 8; other male assistants, 4; other female assistants, 190—total of laborers sent from America, 331; native pastors, 118; native preachers and catechists, 815; school-teachers, 400; other native helpers, 208; whole number of native helpers, 1,041: whole number of laborers connected with the missions, 1,872. Pages printed, 19,728,995; number of churches (including all at the Hawaiian Islands), 226; church-members so far as reported, 23,718; added during the year (so far as reported), 1,533; number of training and theological schools, 15; boarding-schools for girls, 17; common schools (omitting those at the Hawaiian Islands), 464; pupils in common schools, 12,437; in training and theological schools, 323; in boarding-schools for girls, 535; other adults for instruction, 1,115; whole number of pupils, 14,416.

The forty-fourth anniversary of the American Home Missionary Society was held in New York, May 11, 1870. The receipts of the year amounted to \$283,102; expenditures, \$270,927; number of missionaries employed 944, congregations and missionary districts 1,886.

The English *Congregational Year-Book* for 1871 reports the following statistics of Congregationalists in Great Britain and the British dependencies:

County Associations and Unions.—England, 43; Wales, 16; Scotland, 8; Ireland, 1; Colonies, 8. Total 76.

Churches at Home and Abroad.—England, 2,045; Wales, 878; Scotland, 103; Ireland, 28; islands of the British seas, 16; Canada and British North America, 108; Australia and New Zealand, 176; South Africa and Demerara, etc., 12; mission churches, about 300. Total, 3,665. Total of vacant churches, 303.

Ministers and Missionaries.—England, 1,948; Wales, 893; Scotland, 107; Ireland, 25; Continent, 6; colonies, 286; foreign countries, 164; natives, ordained in heathen lands, 106, inclusive of 51 in Madagascar and South Seas; ministers with pastoral charges, 2,439; without pastoral charges, 541.

Colleges.—England, 8; Wales, 3; Scotland, 1; Colonies, 8. *Institutes.*—England, 4; foreign, 15. Students in colleges, 317. Students in institutes, 269.

Among the principal Congregational Societies of Great Britain belong the English *Congregational Chapel-Building Society*, which extends its operations throughout England, the English districts of Wales, the Channel islands, and Ireland; income for the year 1869-'70, including payments of loans, £11,021 13s.; expenditures, £8,757 16s.; the *Home Missionary Society*, income, £9,775; expenditures, £7,107

19s.; the *Colonial Missionary Society*, income, £5,212; expenditures, £3,430. The *London Missionary Society*, which is not an exclusively Congregational society, but is supported by the Congregationalists as a body, had an income of £104,670, and its expenditures were £98,735.

In France the Union of Evangelical Churches comprises forty-five churches, divided into seven groups, which hold frequent meetings for fellowship and local business. The churches reported, at the last biennial synod held at Bergerac, in September, 1868, a membership of about 3,000, averaging upward of sixty to each church. The largest church is that of the Taitbout, in Paris, with 210 members. Besides the Union of Evangelical Churches, there are a number of Independent Churches. Altogether the Free Churches of France number 104 pastors, 132 temples, and a total population of about 30,000.

The Free Churches of the Canton of Vaud, in Switzerland, are united on a basis which, though Presbyterian in form, secures the independence of each. There are also free churches in the Cantons of Geneva, Neuchâtel, and Bern.

The *Congregational Quarterly* for January, 1871, reports the statistics of Congregationalism in the United States and the British Colonies, for the year 1870, as follows:

CONGRESS, UNITED STATES. The second session of the Forty-first Congress* commenced at Washington on December 6, 1869. (For President's Message, see PUBLIC DOCUMENTS, ANNUAL CYCLOPEDIA, 1869.)

The Vice-President, Schuyler Colfax, presided in the Senate, and James G. Blaine, of Maine, presided as Speaker of the House.

In the Senate, on December 6th, Mr. Drake,

of Missouri, asked leave to introduce the following bill:

A bill further to define and regulate the jurisdiction and powers of the courts of the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That no court created by an act of Congress, or judge thereof, shall have power, in any case, to adjudge or hold any act or joint resolution of Congress invalid, in whole or in part, for any sup-

* The following is a list of the members of Congress: **SENATE.**

Alabama—Willard Warner, George E. Spencer.
Arkansas—Alexander McDonald, Benjamin F. Rice.
California—Cornelius Cole, Eugene Casserly.
Connecticut—William A. Buckingham, Orrin S. Ferry.
Delaware—Thomas F. Bayard, Willard Saulsbury.
Florida—Abijah Gilbert, Thomas W. Osborn.
Georgia—Not admitted.
Illinois—Lyman Trumbull, Richard Yates.
Indiana—Oliver P. Morton, Daniel D. Pratt.
Iowa—James B. Howell,* James Harlan.
Kansas—Samuel C. Pomeroy, Edmund G. Rose.
Kentucky—Garret Davis, Thomas C. McCreery.
Louisiana—John S. Harris, William P. Kellogg.
Maine—Hannibal Hamlin, Lot M. Morrill.†
Maryland—William T. Hamilton, George Vickers.
Massachusetts—Charles Sumner, Henry Wilson.
Michigan—Zachariah Chandler, Jacob M. Howard.
Minnesota—Alexander Ramsey, Daniel S. Norton.
Missouri—Charles D. Drake, Carl Schurz.
Nebraska—John M. Thayer, Thomas W. Tipton.
Nevada—William M. Stewart, James W. Nye.
New Hampshire—James W. Patterson, Aaron H. Cragin.
New Jersey—Alexander G. Cattell, John P. Stockton.
New York—Roscoe Conkling, Reuben E. Fenton.
North Carolina—Joseph C. Abbott, John Pool.
Ohio—John Sherman, Allen G. Thurman.
Oregon—Henry W. Corbett, George H. Williams.
Pennsylvania—Simon Cameron, John Scott.
Rhode Island—William Sprague, Henry B. Anthony.
South Carolina—Thomas J. Robertson, Frederick A. Sawyer.
Tennessee—William G. Brownlow, J. S. Fowler.
Vermont—Justin S. Morrill, George F. Edmunds.
West Virginia—Arthur J. Boreman, Waitman T. Willey.
Wisconsin—Timothy O. Howe, Matthew H. Carpenter.
Mississippi—Hiram H. Revels, Adelbert Ames.‡
Virginia—John W. Johnston, John F. Lewis.§
Texas—Morgan C. Hamilton, James W. Flanagan.¶

HOUSE.

Alabama—Alfred E. Buck, Charles W. Buckley, Robert S. Heflin, Charles Hays, Peter M. Dox, William C. Sherrod.
Arkansas—Logan H. Roots, Anthony A. C. Rogers, Thomas Boles.
California—Samuel B. Artell, Aaron A. Sargent, James A. Johnson.
Connecticut—Julius Strong, Stephen W. Kellogg, H. H. Starkweather, William H. Barnum.
Delaware—Benjamin T. Biggs.
Florida—Charles M. Hamilton.
Georgia—Entitled to seven members, but no election yet been held.
Illinois—John A. Logan, Norman B. Judd, John F. Farnsworth, Horatio C. Burchard, John B. Hawley, Ebon C. Ingersoll, Burton C. Cook, Jesse H. Moore, Shelby M. Calum, T. W. McNeely, Albert G. Burr, Samuel S. Marshall, John B. Hay, John M. Crebs.
Indiana—William E. Niblack, Michael C. Kerr, William S. Holman, George W. Julian, John Coburn, Daniel W. Voorhees, Godlove S. Orth, James M. Tyner, John P. C. Shanks, William Williams, Jasper Packard.
Iowa—George W. McCrary, William Smyth, William B. Allison, William Loughbridge, Francis W. Palmer, Charles Pomeroy.
Kansas—Sidney Clarke.
Kentucky—Lawrence S. Trimble, William N. Sweeney, Joseph H. Lewis, J. Prucktor Knott, Boyd Winchester,

Thomas L. Jones, James B. Beck, George M. Adams, John M. Rice.

Louisiana—1 (vacancy), Lionel A. Sheldon, C. B. Dar-
 rail, Joseph P. Newsham, (vacancy).

Maine—John Lynch, Samuel P. Morrill, James G. Blaine, John A. Peters, Eugene Hale.

Maryland—Samuel Hambleton, Stevenson Archer, Thomas Swann, Patrick Hamill, Frederick Stone.

Massachusetts—James Buffinton, Oakes Ames, Ginery Twichell, Samuel Hooper, Benjamin F. Butler, Nathaniel P. Banks, George M. Brooks, George F. Hoar, William B. Washburn, Henry L. Dawes.

Michigan—Fernando C. Beaman, William L. Stoughton, Austin Blair, Thomas W. Ferry, Omar D. Conger, Randolph Strickland.

Minnesota—Morton S. Wilkinson, Eugene M. Wilson.

Mississippi—George E. Harris, J. L. Morphis, Henry W. Barry, George C. McKee, Legrand W. Perce.

Missouri—Erastus Wells, Gustavus A. Finkelburg, James R. McCormick, S. H. Boyd, Samuel S. Burdett, Robert T. Van Horn, Joel F. Asper, John F. Benjamin, David P. Dyer.

Nebraska—John Taffe.

Nevada—Thomas Fitch.

New Hampshire—Jacob H. Kila, Aaron F. Stevens, Jacob Benton.

New Jersey—William Moore, Charles Haight, John T. Bird, John Hill, Orestes Cleveland.

New York—Henry A. Reeves, John G. Schumaker, Henry W. Slocum, John Fox, John Morrissey, Samuel S. Cox, Hervey C. Calkin, James Brooks, Fernando Wood, Clarkson N. Potter, Chas. H. Van Wyck, John H. Ketcham, John A. Griswold, Stephen L. Mayham, Adolphus H. Tanner, Orange Ferris, William A. Wheeler, Stephen Sanford, Charles Knapp, Addison H. Laflin, Alexander H. Bailey, John C. Churchill, Dennis McCarthy, George W. Cowles, William H. Kelsey, Giles W. Hotchkiss, Hamilton Ward, Noah Davis, John Fisher, David S. Bennett, Porter Sheldon.

North Carolina—Clinton L. Cobb, (vacancy.) Oliver H. Dockery, (vacancy.) Israel G. Lash, Francis M. Shober, Alexander H. Jones.

Ohio—Peter W. Strader, Job E. Stevenson, Robert C. Schenck, William Lawrence, William Mungen, John A. Smith, James J. Winans, John Beatty, Edward F. Dickinson, Erasmus D. Peck, John T. Wilson, Philadelphia Van Trump, George W. Morgan, Martin Welker, Eliakim H. Moore, John A. Bingham, Jacob A. Ambler, William H. Upson, James A. Garfield.

Oregon—Joseph S. Smith.

Pennsylvania—Samuel J. Randall, Charles O'Neill, Leonard Myers, William D. Kelley, John B. Reading, John D. Stiles, Washington Townsend, J. Lawrence Getz, Oliver J. Dickey, Henry L. Calk, Daniel M. Van Anken, George W. Woodward, Ulysses Mercus, John B. Packer, Richard J. Haldeman, John Cessna, Daniel J. Morrell, William H. Armstrong, Glenn W. Scofield, Calvin W. Gilliland, John Covode, James S. Negley, Darwin Phelps, Joseph B. Donley.

Rhode Island—Thomas A. Jencks, Nathan F. Dixon.
South Carolina—Benjamin F. Whittamore,* C. C. Bowen, S. D. Hoge, Alexander S. Wallace.

Tennessee—Roderick R. Butler, Horace Maynard, William B. Stokes, Lewis Tillman, William F. Prosser, Samuel M. Arnell, Isaac R. Hawkins, W. J. Smith.

Vermont—Charles W. Willard, Luke P. Poland, Worthington C. Smith.

West Virginia—Isaac H. Duvall, James C. McGrew, John S. Wither.

Wisconsin—Halbert E. Paine, David Atwood, Amasa Cobb, Charles A. Eldridge, Philletus Sawyer, Cadwalader C. Washburn.

Texas—G. W. Whitmore, John C. Conner, W. T. Clark, Edward Degener.

Virginia—Richard S. Ayer, James H. Platt, Jr., Charles H. Porter, George W. Booker, Robert Ridgway, William Milnes, jr., Lewis McKenzie, James K. Gibson.

* Resigned.

* Qualified Jan. 24, 1870, in place of James W. Grimes, resigned.

† Qualified Dec. 4, 1869.

‡ Mr. Revels qualified Feb. 25, 1870, and Mr. Ames April 1, 1870.

§ Mr. Lewis qualified Jan. 27, 1870, and Mr. Johnston on Jan. 28th.

¶ Qualified March 21, 1870.

posed repugnancy between such act or joint resolution and the Constitution of the United States, or for any supposed want of authority in said Constitution for the same; nor shall the appellate jurisdiction of the Supreme Court of the United States be construed to authorize that court, in any case now pending, or hereafter brought, before it, to affirm any order, judgment, or decree of any inferior United States court, or of any State court, which shall appear to have been based upon any such adjudging or holding; but every such order, judgment, or decree shall, for that cause, be reversed, vacated, and annulled; nor shall any justice of said Supreme Court, in furtherance of the exercise of such appellate jurisdiction, make any order, or authorize or issue any writ or process, or take any proceeding, based upon any such adjudging or holding by him, or by the said Supreme Court.

The bill was read twice, and laid on the table, and ordered to be printed.

Mr. Sumner, of Massachusetts, asked leave to introduce the following bill:

Be it enacted, etc., That all appellate jurisdiction of the Supreme Court of the United States, in causes or proceedings commenced by the writ of *habeas corpus*, is hereby repealed and abolished.

Sec. 2. And be it further enacted, That this act shall take effect from and after its passage.

Mr. Sumner said: "I give notice that, as soon as the committees are constituted, I shall move the reference of that bill to the Committee on the Judiciary, in the hope that it may be reported promptly to the Senate for immediate action. There are interests in question which are well known to the Senate and the country, that may be seriously affected by that bill. Meanwhile, I ask that it be printed."

Mr. Warner, of Alabama, offered the following bill, which was read, and ordered to be printed:

Be it enacted, etc., That all political disabilities imposed by the third section of the fourteenth article of amendment to the Constitution of the United States, or by law of Congress, for reason of participation in rebellion against the Government of the United States, are hereby removed from all persons who were citizens of the State of Alabama on the 1st day of December, 1869.

Mr. Stewart, of Nevada, offered the following resolution, which was read, and ordered to be printed:

Resolved, etc., That upon the ratification, by the Legislatures of three-fourths of the States, of article fifteen of the Constitution of the United States, proposed by the Fortieth Congress, all disabilities imposed by the United States, in consequence of participation in the late rebellion, shall cease, and no person shall, after such ratification, be deprived of any civil or political right on account of participation in such rebellion.

Mr. Stewart also offered the following resolution, which was laid on the table:

Resolved, That the Committee on the Judiciary be requested to inquire if any States are denying to any class of persons within their jurisdiction the equal protection of the law, in violation of treaty obligations with foreign nations, and of section one of the fourteenth amendment to the Constitution; and, if so, what legislation is necessary to enforce such treaty obligations and such amendment, and to report by bill or otherwise.

In the House, on December 13th, Mr. Cox,

of New York, offered the following resolution, which was laid on the table:

Resolved, That among the evils growing out of the late civil war is that of an irredeemable paper currency; that it is one of the highest duties of the Government to secure to the citizens a medium of exchange of fixed, unvarying value, and that this implies a return to a specie basis, and no substitute for it can be devised; that it should be commenced now, and reached at the earliest possible moment.

On December 16th Mr. Garfield, of Ohio, offered the following resolution:

Resolved, That the proposition, direct or indirect, to repudiate any portion of the debt of the United States is unworthy of the honor and good name of the nation, and that this House, without distinction of party, hereby sets its seal of condemnation upon any and all such propositions.

It was adopted by the following vote:

YEAS—Messrs. Adams, Allison, Ambler, Ames, Archer, Armstrong, Arnell, Asper, Barnum, Beatty, Blair, Boles, Boyd, George M. Brooks, James Brooks, Buffinton, Burchard, Cessna, Churchill, Clarke, Amasa Cobb, Coburn, Conger, Cox, Crebs, Davis, Dawes, Dickey, Dixon, Donley, Dox, Duvall, Dyer, Ela, Eldridge, Farnsworth, Ferriss, Finkelnburg, Fisher, Fitch, Garfield, Getz, Gilfillan, Halde-man, Hambleton, Hamill, Hawkins, Hawley, Hay, Heaton, Hill, Hoar, Holman, Hooper, Hotchkiss, Ingersoll, Jenckes, Alexander H. Jones, Julian, Kelley, Kellogg, Kelsey, Kerr, Ketcham, Knapp, Ladin, Lawrence, Lynch, Mayham, Maynard, McCarthy, McCormick, McGrew, Mercur, Jesse H. Moore, William Moore, Myers, Niblack, O'Neill, Orth, Packard, Packer, Paine, Palmer, Phelps, Poland, Pomeroy, Potter, Randall, Sanford, Sargent, Sawyer, Schenck, Scofield, Shanks, Slocum, John A. Smith, William J. Smith, Worthington C. Smith, William Smyth, Starkweather, Stevens, Stevenson, Stiles, Strong, Swann, Taffe, Tanner, Tillman, Twichell, Tyner, Upson, Van Horn, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Whittemore, Wilkinson, Willard, Williams, Eugene M. Wilson, John T. Wilson, Witcher, and Woodward—124.

NAYS—Mr. Thomas L. Jones—1.

NOT VOTING—Messrs. Axtell, Bailey, Banks, Beaman, Beck, Benjamin, Bennett, Benton, Biggs, Bingham, Bird, Bowen, Buck, Buckley, Burdett, Burr, Benjamin F. Butler, Roderick R. Butler, Cake, Calkin, Cleveland, Clinton L. Cobb, Cook, Cowles, Cullom, Deweese, Dickinson, Dockery, Ferry, Fox, Golladay, Greene, Griswold, Haight, Hale, Hamilton, Hays, Hefflin, Hoag, Hoge, Hopkins, Johnson, Judd, Knott, Lash, Logan, Loughbridge, Marshall, McCrary, McNeely, Eliakim H. Moore, Morgan, Daniel J. Morrell, Samuel P. Morrill, Morrissey, Mungen, Negley, Peters, Prosser, Redding, Reeves, Rice, Rogers, Root, Schumaker, Lionel A. Sheldon, Porter Sheldon, Sherrod, Joseph S. Smith, Stokes, Stone, Stoughton, Strader, Strickland, Sweeney, Townsend, Trimble, Van Auken, Van Trump, Voorhes, Wells, Wheeler, Winans, Winchester, and Wood—86.

In the House, on February 28th, Mr. Shanks, of Indiana, offered the following resolution:

Resolved, That the interests of the country require such tariff for revenue upon foreign imports as will afford incidental protection to domestic manufactures, and as will, without impairing the revenue, impose the lowest burden upon and best promote and encourage the great industrial interests of the country.

The resolution was adopted by the following vote:

YRAS—Messrs. Ambler, Ames, Atwood, Axtell, Beaman, Beatty, Bingham, Blair, George M. Brooks, Buck, Buffinton, Burdett, Benjamin F. Butler, Rod-
 erick E. Butler, Cake, Cessna, Churchill, Clinton L. Cobb, Coburn, Cook, Conger, Covode, Cullom, Davis, Donley, Dyer, Ferriss, Fisher, Garfield, Getz, Hamill, Harris, Hawley, Heaton, Hill, Hoar, Hoge, Hooper, Hotchkiss, Ingersoll, Jenckes, Alexander H. Jones, Kelley, Kellogg, Kelsey, Ketchum, Knapp, Lakin, Lash, Lawrence, Loughridge, Maynard, McCrary, McGrew, Mercur, Milnes, Eliakim H. Moore, Jesse H. Moore, William Moore, Morphis, Daniel J. Washburn, Welker, Wheeler, Wilkinson, Willard, Williams, John T. Wilson, Witcher, and Woodward—109.

YRAS—Messrs. Allison, Archer, Biggs, Bird, Booker, Boyd, James Brooks, Burchard, Burr, Calkin, Cox, Crebs, Dickinson, Dox, Finkelnburg, Gibson, Griswold, Haight, Hambleton, Hawkins, Hay, Hays, Healin, Holman, Johnson, Thomas L. Jones, Judd, Kerr, Marshall, Mayham, McCormick, McNeely, Mungen, Niblack, Orth, Potter, Ridgeway, Rogers, Schumaker, Sherrod, Joseph S. Smith, Stone, Trimble, Tyner, Voorhees, Winans, and Wood—47.

Nor Voting—Messrs. Adams, Armstrong, Arnell, Asper, Ayer, Bailey, Banks, Barnum, Beck, Benjamin, Bennett, Benton, Boles, Bowen, Buckley, Clarke, Cleveland, Amasa Cobb, Cowles, Dawes, Deweese, Dickey, Dixon, Dockery, Duval, Ela, Eldridge, Farnsworth, Ferry, Fitch, Fox, Gilfillan, Golladay, Haldeman, Hale, Hamilton, Julian, Knott, Logan, Lynch, McCarthy, McKee, McKenzie, Morgan, Morrissey, Packer, Poland, Porter, Reading, Reeves, Rice, Roots, Sanford, Sheldon, Slocum, William Smyth, Strader, Sweeney, Townsend, Van Auken, Van Trump, Van Wyck, Ward, Wells, Eugene M. Wilson, and Winchester—86.

In the Senate, on December 16th, the bill to perfect the reconstruction of the State of Georgia was considered. The following was reported as the bill:

That the Governor of the State of Georgia be, and he is hereby, authorized and directed forthwith by proclamation to summon all persons elected to the General Assembly of said State, as appears by the proclamation of George G. Meade, the general commanding the military district including the State of Georgia, dated June 25, 1868, to appear on some day certain, to be named in said proclamation, at Atlanta, in said State; and thereupon the said General Assembly of said State shall proceed to perfect its organization, in conformity with the Constitution and laws of the United States, according to the provisions of this act.

Sec. 2. And be it further enacted, That, when the members so elected to said Senate and House of Representatives shall be convened as aforesaid, each and every member and each and every person claiming to be elected as a member of said Senate or House of Representatives shall, in addition to taking the oath or oaths required by the constitution of Georgia, also take and subscribe and file, in the office of the Secretary of State of the State of Georgia, one of the following oaths or affirmations, namely: "I do solemnly swear" (or affirm, as the case may be), "that I have never held the office or exercised the duties of a Senator or Representative in Congress, nor been a member of the Legislature of any State of the United

States, nor held any civil office created by law for the administration of any general law of a State, or for the administration of justice in any State or under the laws of the United States, nor held any office in the military or naval service of the United States, and thereafter engaged in insurrection or rebellion against the United States, or gave aid or comfort to its enemies, or rendered voluntary or involuntary support or aid to any insurrection or rebellion against the United States, nor held any office under or given any support to any government of any kind organized or acting in hostility to the United States or levying war against the United States. So help me God" (or on the pains and penalties of perjury, as the case may be). Or the following oath or affirmation, namely: "I do solemnly swear" (or affirm, as the case may be), "that I have been relieved by an act of Congress of the United States from disability as provided for by section three of the fourteenth amendment to the Constitution of the United States. So help me God" (or on the pains and penalties of perjury, as the case may be). Which oath or affirmation, when so filed, shall be entered of record by the Secretary of State of the State of Georgia, and said oath or affirmation, or a copy of the record thereof, duly certified by said Secretary of State, shall be evidence in all courts and places. And every person claiming to be so elected, who shall refuse, or decline, or neglect, or be unable, to take one of said oaths or affirmations above provided, shall not be admitted to a seat in said Senate or House of Representatives, or to a participation in the proceedings thereof, but shall be deemed ineligible to such seat.

Sec. 3. And be it further enacted, That if any person claiming to be elected to said Senate or House of Representatives, as aforesaid, shall falsely take either of said oaths or affirmations above provided, he shall be deemed guilty of perjury, and shall suffer the pains and penalties thereof; and may be tried, convicted, and punished, therefor by the Circuit Court of the United States for the District of Georgia, in which district said crime was committed; and the jurisdiction of said court shall be sole and exclusive for the purpose aforesaid.

Sec. 4. And be it further enacted, That the persons elected, as aforesaid, and entitled to compose such Legislature, and who shall comply with the provisions of this act, by taking one of the oaths or affirmations above prescribed, shall thereupon proceed, in said Senate and House of Representatives to which they have been elected, respectively, to reorganize said Senate and House of Representatives, respectively, by the election of the proper officers of each House.

Sec. 5. And be it further enacted, That if any person shall by force, violence, or fraud, wilfully hinder or interrupt any person or persons elected as aforesaid from taking either of the oaths or affirmations prescribed by this act, or from participating in the proceedings of said Senate or House of Representatives after having taken one of said oaths or affirmations, and otherwise complied with this act, he shall be deemed guilty of a felony, and may be tried, convicted, and punished, therefor by the Circuit or District Court of the United States for the District of Georgia in which district said offence shall be committed; and shall be punished therefor by imprisonment at hard labor for not less than two nor more than ten years, in the discretion of the court; and the jurisdiction of said courts shall be sole and exclusive for the purpose aforesaid.

Sec. 6. And be it further enacted, That it is hereby declared that the exclusion of any person or persons elected as aforesaid, and being otherwise qualified, from participation in the proceedings of said Senate or House of Representatives, upon the ground of race, color, or previous condition of servitude, would be illegal and revolutionary, and is hereby prohibited.

Sec. 7. And be it further enacted, That, upon the

application of the Governor of Georgia, the President of the United States shall employ such military or naval forces of the United States as may be necessary to enforce and execute the provisions of this act.

Sec. 8. *And be it further enacted*, That the Legislature of Georgia shall be regarded as provisional only until the further action of Congress.

Mr. Morton, of Indiana, offered the following amendment, which was, to strike out the eighth section, and in lieu thereof to insert the following :

That the Legislature shall be provisional only, and until after it has ratified the fourteenth and fifteenth amendments to the Constitution of the United States, and Senators and Representatives in Congress from the State of Georgia have been admitted to their seats.

Mr. Carpenter, of Wisconsin, said: "Mr. President, that provision requiring the Legislature to adopt the fifteenth amendment to the Constitution was omitted from the bill by the committee, or a majority of the committee, purposely, and not by accident. My objection personally to the Senator's amendment is twofold: first, I think it wholly unnecessary. If the people of Georgia do not understand already that they will not be admitted into the Union until the fifteenth amendment to the Constitution is adopted by them, they certainly will understand it before they get in. But I think the amendment is pernicious in this respect: it will be claimed hereafter, and will be the subject of much discussion, that these Southern States have not voluntarily ratified that amendment to the Constitution. I do not say that that claim is well founded; I do not believe it is; but we shall hear it, and I am opposed to any amendment of this bill which shall lead manifestly to the discussion of these troublesome subjects hereafter. They will say that they were held by military power; they will say that Congress dictated to them the terms upon which they were to come into the Union; that they were practically and substantially in duress, and are not bound by the vote of adoption they have passed."

Mr. Drake, of Missouri, said: "I did not know but that the question of whether those constitutional amendments were ratified was in some future day to be brought for decision before the Supreme Court of the United States, where it might be denied that they had been constitutionally adopted, and the plea of duress put in by the State of Georgia to show that she had been coerced into the ratification, and therefore that her ratification was void. Unless this subject is in that way to go before some outside tribunal, which is regarded by the Committee on the Judiciary of the Senate as having a higher power than that of Congress, I do not see that we need have any particular apprehension about the matter being put in the shape proposed by the Senator from Indiana. If it is to come before Congress, then it will probably make no difference whether Georgia ratifies these amendments under the coercion of this section or not.

"Mr. President, I want that these rebel States should be made to feel the power of this nation through its Congress. I want that the rebels of the South, as much rebels probably in heart to-day as they ever were, may be made to feel that there is a power here that can hold them to their places under this Government. I wish especially that the infamy of that Georgia Legislature should be wiped out by this kind of retribution. I was the first to raise a voice in the Senate-chamber against the swearing in of the two Senators-elect from that State; and I am glad to see that, after the lapse of more than a year, the time has come when the rights of the loyal men of Georgia are to have a hearing upon the floor of this Senate, and the arm of the United States Government is to reach down there and vindicate them. I am glad to find that the time is approaching when the men who seized the dominion of the Legislature of Georgia are to be told that that dominion must end, and that the loyal men elected by the people of Georgia to the Legislature of that State shall have their seats there no matter what the color of their skin may be. And, sir, I want the thing to appear right on the face of this bill if it is to become a law; I want it to be understood throughout the United States that there is a Congress of the United States that wields the sovereignty of this nation, and that that sovereignty can neither be arrested by States nor by the Supreme Court of the United States.

"Sir, I hope that the amendment offered by the Senator from Indiana will prevail."

Mr. Morton, of Indiana, said: "Mr. President, the objection made by the Senator from Wisconsin, I take it, is a direct impeachment of the whole reconstruction policy from first to last. The original act provided as a condition-precedent, as one of the conditions of reconstruction, that the rebellious States should ratify the fourteenth amendment. We did not put them in duress; we cannot require them to do it; we do not by this amendment propose to require them to do it, but we put it to them as a condition upon which they may return, for the future security and peace of this nation.

"Sir, it is not our fault that Georgia has not been reconstructed. It is the result of her treachery, the treachery of her Legislature, the violation of good faith upon her part. She has by her acts put off her reconstruction until the fifteenth amendment has come before the country, and until reflection and experience have shown that the ratification of the fifteenth amendment is necessary to the preservation of the whole work of reconstruction from the beginning.

"Without the fifteenth amendment, there is no security for colored suffrage in any of the Southern States. When the late rebels shall get the power, and when colored suffrage is secured in no other way except by the constitu-

tion of the State, they will disfranchise, one after another, the colored men in every Southern State. There is no security for colored suffrage, there is no security for the whole work of reconstruction, except by putting universal suffrage in the Constitution and under the protection of the laws of the United States."

Mr. Thurman, of Ohio, said: "Mr. President, what I beg to call the attention of the Senate to is this: that this is not a question simply which concerns the State of Georgia; this is not, as the Senator from Missouri and the Senator from Indiana seem to suppose, a question of the merits or the demerits of the people of Georgia; this is not a question as to what conditions might properly be imposed upon Georgia, if Georgia stood affected alone by those conditions; but this is a question whether you shall impose an amendment to the Constitution upon the entire people of the United States by coercing Georgia into the adoption of that amendment. The question is whether you shall force that amendment on the people of Ohio, notwithstanding their fifty thousand majority against it, by coercing Georgia against her will to adopt it. There is not a member of the Senate who does not know that, if Mississippi and Texas and Virginia and Georgia were left to their free, unbiassed judgment on this amendment, not one of those States would adopt it, not one of them would think of adopting it; and every Senator well knows that, without the votes of all four of those States, the amendment cannot become a part of the Constitution.

"What, then, is the effect of coercing Georgia to adopt it? When you strangle her, when you deprive her citizens of the free election which the Constitution gives them to say what shall be a part of the Constitution of the Union, when you force her vote into the urn to be counted in favor of the amendment, you force that amendment on the people of Ohio, on the people of Indiana, on the people of Illinois, on the whole people, however much they may be opposed to its adoption. My State has voted upon the amendment; her Legislature has voted upon it and rejected it; and when you compel Georgia against the will of her people to adopt this amendment you nullify the vote of the State of Ohio on this great question of amending the Constitution. Therefore, Mr. President, not simply in the name of the people of Georgia, but in the name of all the people, I protest against this mode of coercing the people of the United States to adopt an amendment to their Constitution.

"The sole power that is given by the Constitution to Congress is to propose amendments. It is then for every State, of its own free will, without coercion, without compulsion, to say whether it will accept your proposition or not; and it is simply idle and frivolous to say that a State freely and voluntarily accepts your proposition of amendment to the Constitution when you say in the same breath to the State,

'If you do not accept it you shall have no rights in this Union; you shall be taxed without representation; you shall be governed by military instead of civil law; the civil courts shall be trampled down and drum-head court-martials shall take their place; every right that is sacred to an American, every right that is sacred to a freeman, shall be at the mercy of military tribunals and drum-head court-martials unless you of your own free will, forsooth, of your free choice, forsooth, agree to alter the fundamental law of the land.'

"Call that free choice! Call that a free election, accepting or rejecting an amendment to the Constitution! Why, sir, I should be insulting the understanding and intelligence of the Senate if I were to discuss such a proposition as that. No, sir; you give no free choice to Georgia; you give no free choice to any one of these States when you attach these conditions; when you say to them, with your hand on their throats, 'Accept this amendment or else continue to be deprived of the most sacred rights of the American people.'

"But, as I said before, it is not simply a question as to Georgia; it is a question as to Ohio as well as to Georgia; and your decision on this proposition affects my State just as much as it affects the State of Georgia; every bit as much. If this is to become a part of the Constitution, it will be a part of the Constitution in Ohio as well as in Georgia."

Mr. Sawyer, of South Carolina, said: "Mr. President, we do not say to the people of Georgia, by adopting the amendment which has been proposed by the Senator from Indiana to this bill, that they must ratify the fourteenth and fifteenth amendments; that is not the spirit of what we propose to say; but we say we want evidence that the people of the State of Georgia are in such a condition, have so far repented of their rebellion, and so far changed their minds, that they are fit to be received back into the family of States. We say that the State of Georgia is not a State which is in a condition to be received back after the history of the last eight years, and especially after the history of the last two years, unless her people have come to that spirit and mind which induce them to adopt the fourteenth and fifteenth amendments. It is because we want an index of their change of feeling and change of purpose that we propose to insert this condition."

Mr. Bayard, of Delaware, said: "Mr. President, on the first day that this body convened at the present session, a bill entitled 'An act to perfect the reconstruction of the State of Georgia' was introduced by the honorable Senator from Indiana. On the 8th it was referred to the Committee on the Judiciary, and reported back to this body with amendments on the 13th. Here we stand on the morning of the 16th to consider an act the effect of which simply is to remand that which this Congress has called a State back to the condition of a

conquered province. We have seen too many acts of this kind in the last few years directed toward States which, in my opinion, never were out of the Union, but which, nevertheless, for purposes of party and party domination, were to be treated as either in or out as the emergency of party might dictate; we have seen such acts too often to stand surprised.

"But there is within the present measure a doctrine and a principle which, as it is now sought to be applied to the lips of Georgia, may yet be returned, like another poisoned chalice, to those who have invented it for her destruction. When shall Georgia be a State? Has any gentleman of this body yet given a definition on that point? Has that question yet been answered? Can any man see with moral certainty when that may be, and what acts upon her part will suit the pleasure of the dominant majority of Congress? for that seems to me to be the only law that controls her fate.

"On the 25th of June, 1868, the Congress of the United States passed an act to admit the States of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida, to representation in Congress, in which it was recited that—

Whereas the people of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida, have, in pursuance of the provisions of an act entitled "An act for the more efficient government of the rebel States," passed March 2, 1867, and the acts supplementary thereto, framed constitutions of State government which are republican, and have adopted said constitutions by large majorities of the votes cast at the elections held for the ratification or rejection of the same.

"And then comes the enactment:

Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That each of the States of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida, shall be entitled and admitted to representation in Congress as a State of the Union when the Legislature of such State shall have duly ratified the amendment to the Constitution of the United States proposed by the Thirty-ninth Congress and known as article fourteen, upon the following fundamental conditions: that the constitutions of neither of said States shall ever be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote in said State who are entitled to vote by the constitution thereof herein recognized, except as a punishment for such crimes as are now felonies at common law, whereof they shall have been duly convicted under laws equally applicable to all the inhabitants of said State: *Provided,* That any alteration of said constitution may be made with regard to the time and place of residence of voters; and the State of Georgia shall only be entitled and admitted to representation upon this further fundamental condition: that the first and third subdivisions of section seventeen of the fifth article of the constitution of said State, except the proviso to the first subdivision, shall be null and void, and that the General Assembly of said State by solemn public act shall declare the assent of the State to the foregoing fundamental condition.

"Now, sir, it seems that, on the 22d day of July, 1868, the ratification of that amendment,

which is made the fundamental condition for the admission of Georgia, was formally made and certified by a Mr. Bullock, of Georgia, who now seeks the strong arm of Federal power to place him where the will of his people never would have permitted him to sit. Georgia did ratify the fourteenth amendment in the form required by Congress; Georgia did void those clauses of her constitution that the Congress of the United States required her to void. The clauses of her constitution which were objected to by Congress were those that enforced the qualification of 'white' upon the voter. That qualification was stricken out, and the vote that elected the Legislature of Georgia that met in pursuance of this proclamation and of this act and elected Senators to sit upon this floor, and the vote of the people of the State that sent her Representatives to the other House of Congress, were in precise accordance with the letter of this law here made the condition for her admission to Congress and into the Union as a State.

"But, sir, the fact was that the right to hold office was not included under the same qualification as the right to vote; and, when the people of Georgia found negro legislators sitting there as part of their State government, they took the constitution of Georgia according to the judgment of those bodies who, by the decisions of this body and by the doctrines of all parliamentary law, were the sole judges of the qualifications of their members, and they decided, whether rightly or wrongly, that under the constitution of the State of Georgia negroes were ineligible to office, although they had the legal right to vote. Exercising the inherent power of every parliamentary body—it not only is inherent here, but it is given expressly by the Constitution of our government—the Legislature of Georgia sat in judgment upon the qualifications of its members. It excluded the negro members from its midst. Since that time it is well known to every member of this body that that action of the Legislature has been before the judicial branch of the State government of Georgia and has been disapproved. It was declared to be illegal; to be an unconstitutional exercise of authority. This is the judgment of the proper branch of the government of Georgia as recorded against the act excluding negroes from her offices, or certainly from her Legislature.

"Now, sir, what is the result? The honorable Senator from Indiana laid down a proposition which I most entirely concur in, and that is, that, after you have passed an act for the admission of these States to their proper places in the Federal Government, it is dishonest and dishonorable to impose conditions of which you gave them no notice. Sir, if that be true now, it was true one year ago. It is just as dishonest, in my opinion, to mislead a community by saying, 'Do this thing required of you and you shall have your place,' and then upon the completion of the requirement to start

something new. I say that the time of such an act has nothing to do with its character; it is dishonorable under any circumstances.

"If this doctrine of examining into the actions of the Legislatures of the different States, virtually depriving them of their power to sit in judgment upon the qualification of their members, is to be carried out in the case of the State of Georgia, how long will it be before it is exercised against States of the more northern section of the Union? The honorable Senator from Wisconsin suggests that which I fancy has occurred to every man's mind before, that the consent of a State or of an individual to any bargain, wrung from him by duress of coercion, is worthless in morals as it is in law. Do Senators suppose, because they can by military rule compel these Southern provinces—for I will not call them States—to adopt amendments to the Constitution of the United States, that other States who are equally grievously affected by this absurd misnomer of adoption or consent will not question it? Why, sir, it the spirit of constitutional liberty exists in our people, that question will yet arise. The dominant party, who, having no other power under the Constitution than to propose an amendment to the Constitution for the acceptance or rejection of the States, have yet held them by force and thrust amendments down their throats, will hereafter find in this country, not perhaps from the States which have been the victims of that illegality directly, but from other States, the question raised as to whether an amendment so obtained has any legal, binding force upon a free and a brave people.

"Therefore it is, feeling that this bill and the doctrine involved in it are not only sought now to be applied to Georgia, but may with equal validity, with equal justice, be applied to the State which I in part represent and to any other State of this Union whose people may differ in opinion from the present dominant majority of Congress, that I do protest against the passage of any such act."

Mr. Williams, of Oregon, said: "A word as to the coercion imposed upon the State of Georgia by this proposed amendment. It may be called coercion or not, as you please. Georgia saw proper, for reasons best known to herself, to engage in a conspiracy for the dissolution of the Union; she withdrew her representation from Congress and undertook to destroy the Government of the United States; and Congress undertakes to say that before she shall resume her representation in these halls she shall comply with certain terms and conditions which, in the judgment of Congress, are necessary for the peace and welfare of the country. That Congress has the power to impose these terms and conditions upon the rebel States is a question that I regard settled forever in this country. It is now too late to discuss or controvert the right of Congress upon that subject. Sir, it has been determined, not only by repeated decisions of the legislative

department of the Government, but it has been submitted to, reviewed by, and affirmed by the American people time and again, and the doctrine has been recognized, too, by the Supreme Court of the United States in affirming that it belongs to the political department of the Government to say when a State government does or not exist within a State.

"Who is to determine when an amendment to the Constitution is ratified? Congress proposes the amendment, and the States are to take action in reference to it, and then some department of the Government must necessarily decide whether it has or has not been ratified by the requisite number of States. Congress beyond question has that power, for it is a political power to decide as to what is or is not the Constitution of the United States; but it is the province of the judicial department of the Government to construe that Constitution and determine its meaning. More than once the Supreme Court of the United States have determined that it was the province of Congress to decide as to whether a State government did or did not exist, and so it is the province of Congress to decide as to what is or is not the Constitution of the United States. I maintain that that is exclusively a political question and belongs to the political department of the Government; but when Congress affirm that an amendment has been adopted by the requisite number of States, then, of course, the judiciary can decide as to the meaning and effect of that constitutional amendment."

Mr. Casserly, of California, said: "The Senator from Oregon has been eminent as a judge, and certainly would not be less so as an expositor of the Constitution. I desire to ask him if I understand him now in his place to lay down the proposition that it is never a judicial question, but always a political question, what articles are or are not portions of the Constitution of the United States; in other words, whether a constitutional law has been validly passed or not?"

Mr. Williams: "I maintain the doctrine that when Congress proposes to the several States an amendment to the Constitution of the United States, it is exclusively within the province of Congress to determine as to whether or not that amendment has been adopted, and that the decision of Congress upon that question concludes the executive and judicial departments of the Government. This is the doctrine which I affirm, and I believe it to be a correct construction of the Constitution."

Mr. Casserly: "Suppose before the war, and before there could be any question as to whether a State was in the Union or not, an amendment to the Constitution had been proposed, and upon the record—there must be a record somewhere, I take it—it appeared as a matter of arithmetical calculation that less than the requisite number of three-fourths had ratified it; suppose upon that state of the record

and that state of facts Congress had put forth a bill declaring the amendment adopted, would that be a final decision conclusive on all departments? Does the Senator undertake to say that no judicial question can ever be raised as to what the Constitution of the United States is, whether it remains with or without amendment, which can be acted on by a court on the face of the record?"

Mr. Williams: "Mr. President, assuming that each member of Congress is sworn to support the Constitution of the United States as well as the judges of the Supreme Court, I affirm that if a majority of both Houses of Congress, upon their solemn oaths, affirm that a constitutional amendment had been ratified by three-fourths of the States, it would not be within the power of the judiciary to disaffirm that decision and declare it invalid, because the question is one belonging wholly to the political department of the Government. It is as easy to assume that Congress would abuse any other power belonging exclusively to the political department of the Government as to assume that it would abuse this power. Does the honorable Senator mean to say because it can be assumed that members of Congress will violate their oaths, that the Supreme Court of the United States may revise every action of Congress—actions confessedly within the political department of the Government? I say that the question as to what *is* the Constitution belongs to the political department of the Government, but the question as to what it means belongs to the judiciary. When the Constitution was framed it was altogether a matter of political action, and the amendments to it have been made by the political department of the Government; and the power of the judiciary extends only to questions arising 'under the Constitution' and not to questions as to whether or not there is a Constitution."

Mr. Howard, of Michigan, said: "Mr. President, I do not view that amendment as subjecting the people of Georgia or the State of Georgia to any coercion. If it shall be adopted and become a part of the law, it will simply submit to the people of Georgia the alternative of remaining in their present condition until it shall be changed by Congress, or of adopting the fifteenth amendment of the Constitution. It simply submits to them the question whether they prefer the one condition or the other; that is all—not a very uncommon state of things in our political history. If the people of Georgia see fit to remain in their present condition, subject to the reconstruction acts of Congress and to the military authority provided for in those acts, they have a right to do so; let them do so. But if they shall find it so uncomfortable and so objectionable as seems to be represented by some of their friends here, all they have to do is to adopt the fifteenth amendment and they can escape from their difficulty at once. There is no coercion about it; it all depends on the free will of

Georgia. 'Coercion' is not a term to apply to such a thing. It is left to their own free will. If that be coercion, then I have mistaken the meaning of language.

"An objection has been raised to the passage of this amendment, upon the allegation that it imposes a new and further condition upon the people of Georgia not embraced in the previous reconstruction laws. Well, sir, I am not sure but that that is true in point of fact, but the amendment is not worse on that account either for the people of Georgia or the rest of the people of the United States. I know very well that under the reconstruction acts even the State of Georgia acquired no positive right to be represented in the two Houses of Congress until the two Houses of Congress said so; until we should give our consent under all the circumstances of the case. That right and that duty were reserved in the reconstruction act in plain terms, and it was, in my judgment, a very prudent provision. We see its necessity at this present juncture plainly and distinctly.

"But, sir, if an excuse were wanting for the imposition of this further condition in the admission of Georgia, I feel for one that it is found in the conduct of the dominant party in Georgia. They have not kept their faith with the reconstruction acts. The reconstruction acts authorize every male person twenty-one years of age, without distinction of color, to vote at the polls and to vote for members of the Legislature, and to be voted for as members of the Legislature. The right to be elected to the Legislature was as plainly provided for in the reconstruction acts as was the right to vote. It was plainly written on the face of the statute, so plainly that he who runs might read, and that even he who stumbles might not mistake it. But notwithstanding the clearness of that provision in those acts, when the Legislature of Georgia assembled, there being a majority of what are called white Conservatives who believed not in the policy of the reconstruction laws, but in what is called the policy of 'the white man's government,' they took it into their heads to ostracize and to expel from the legislative bodies of that State, elected under the reconstruction acts, a large portion of the members elected; not because they were not twenty-one years old, not because they were not citizens of the United States, not because they had been guilty of any crime or offence justly disqualifying them for the elective franchise and for holding the office of representatives and senators, but because they were colored, because they had descended from Africa; and that was the sole reason.

"Sir, there was no excuse or apology for this high-handed, revolutionary, and oppressive measure. It was setting at direct defiance the commands of the reconstruction laws of Congress. It was not keeping faith with the United States. It was directly breaking faith with us. It was an unblushing and unhesitating violation of the plain language of the reconstruction acts."

Mr. Edmunds, of Vermont, said: "Mr. President, I entirely sympathize with the feeling of Senators who are desirous that this people of Georgia shall give some efficient proof of their good faith and of their real republicanism. I do not mean republicanism in the mere technical party sense, but in the Jeffersonian sense, if I may use such a phrase, in coming again into the sisterhood of States. But I confess I feel, as I believe the committee felt unanimously, that if we could attain that object, the adoption of the fifteenth amendment and the re-adoption, if you please, of the fourteenth, by the Legislature of that people, acting of their own free will without any thing that anybody could call coercion or duress, it would be eminently desirable; and desirable for the reason that the position of Georgia has come to be in the minds of a great many persons somewhat different from that of the other States upon whom we have imposed these conditions. When I say 'States,' I do not mean political, equal, complete communities, but should say rather the people within the territorial limits called States. Now, if we can attain by the free will of the people of Georgia this result and are sure of it, considering the somewhat different position of that people as is claimed by many, without inviting a controversy hereafter either in the halls of legislation or in the forum which is only a little way from us, would it not be very desirable to do so? It seems to me that it would."

Mr. Saulsbury, of Delaware, said: "If Georgia was a State in the Union, and if three-fourths of the States that are in the Union were to ratify a proposed amendment to the Constitution of the United States which destroyed the power of a State, a member of the Federal Union, to control the management of its own domestic and internal affairs; as, for instance, if a proposed amendment to the Constitution goes so far as to say who shall or who shall not vote for Governor of my State or members of the Legislature of my State, and if that proposed amendment is ratified by three-fourths of the States acknowledged to be in the Union, and does not receive the assent of my State, the ratification by three-fourths is absolutely null and void; and for this reason: because under our form of government there must, of necessity, be limitations upon the power of amendment, growing out of the nature and character of our political institutions. The States never meant, by giving to three-fourths of Congress the power to ratify a proposed constitutional amendment, to surrender all the power of internal government within their own limits to the Federal Government. They never, in other words, gave to three-fourths of the States the power to destroy the State governments; and, whenever three-fourths of the States go to such an extent as to say who shall vote for mere municipal officers of a State, for State officers, they go to the extent of saying who shall not vote,

and they go to the extent of saying that no one shall vote at all; and, when they can go to that extent, they can go the extent of saying there shall be neither executive, legislative, nor judicial officers within a State. The power of amendment contemplated by the Constitution is a power of amendment to perfect the system, to develop the system, if you please, in its operations, to make it more beneficial for the common weal and prosperity of the whole; but it never was intended to be a power of amendment to destroy the very nature of the Federal Government, or the nature, powers, and essential characteristics and rights of the State governments.

"Let us test it, sir. I ask you whether, if two-thirds of Congress were to propose an amendment, declaring that the powers of this Government, legislative, executive, and judicial, should not be vested in a Congress, in a President, and in a judiciary, but should be absolutely vested in the occupant of the White House at the present time, and, in the insanity and madness of the hour, three-fourths of the States were to ratify such a provision as that, would such a ratification be binding on any non-assenting State? No, sir; because the ratification would be in conflict with the nature and character of the Government to which the States had assented, and contrary to the purpose and objects for which the Government was formed."

Mr. Stockton, of New Jersey, said: "I hold, with the distinguished Senator who has addressed the Senate at length this morning, that these States have never been out of the Union, that they could not go out of the Union, that they have always been in the Union; but I say that, when you start on the theory of their governments being provisional and military governments, and then calling those military governments, those temporary governments, together, by the military commander of a division, to act upon a constitutional amendment, you are depriving my State, and the State of Ohio, and all the rest of the States who have never been in rebellion, or tainted with it, of their rights."

Mr. Morton: "Inasmuch as the fifteenth amendment is the vital point in my amendment, and the vital question of the hour, I am willing to strike out the fourteenth amendment, because I do not think it is to be seriously affected in any way."

Mr. Howard: "That is right."

The Vice-President: "The Senator from Indiana moves to amend his amendment, by striking out the words 'the fourteenth and' before 'fifteenth.'"

Mr. Morton: "Mr. President, I think it is a matter of vital importance to this nation that the fifteenth amendment should be ratified; and I think it very likely, in view of the contingencies in several of the States, that the final success of that amendment depends upon the vote of Georgia. If we in the Senate to-

night shall require Georgia to ratify it, it will be regarded throughout this whole country as settling the question; for, with all the other contingencies against us, still, if we require Georgia to ratify it, the amendment will be ratified, and then all opposition will cease. The very moment it is announced by the wires that this Congress has required Georgia to ratify it as a condition of representation, opposition to the amendment will cease. The Democratic party will not make strenuous exertions to secure the little handful of men that hold the balance of power in the Ohio Legislature. All doubt in regard to the Legislature of Rhode Island will disappear in the face of that vote; and in the face of that vote the New York Legislature will not rescind her ratification, because all will understand that the ratification of the amendment has been secured, and then all will want to be on the strong side, and my distinguished friends from Delaware and New Jersey, instead of further denouncing the amendment, instead of further denouncing the negro race, I imagine, will be found putting themselves in a position where they will be acceptable to the new voters, American citizens of African descent!

"Then, in every point of view it is important that we shall require Georgia to ratify this amendment just as we have done with other States. If we have done wrong, it is too late now to talk about it. To go back in the case of Georgia would be inconsistent; it would be regarded as weakness, as cowardice, and, instead of bringing us respect, would simply bring us contempt, that contempt which has already been manifested in strong language by the Senator from New Jersey this evening. But, sir, if we require Georgia to do it, the question is settled from that very hour. It will be regarded as a certain thing, and all opposition will pass away.

"Will the Legislature of Georgia on this subject go any further than you require them? No, sir; they will not. In my opinion there is not one chance out of fifty for the Legislature of Georgia to ratify the amendment unless this condition is placed in the bill. As I said before, we cannot tell the condition of that Legislature when it is called together. Several of its members have been killed, a number have been run out of the State, some are missing, some have resigned, and, when they come together, we cannot tell whether or not there will be a Republican majority."

Mr. Edmunds, of Vermont, said: "Why would it not be well, then, in order to make the thing sure, to insert an additional clause directing the military commander down there to put the amendment through, and compel people enough to vote for it to adopt it at once?"

Mr. Morton: "Ah, Mr. President, why did not the Senator ask that question when he voted to require the ratification of the fourteenth amendment as a condition precedent?"

Mr. Edmunds: "The Senator will permit me to inform him that I never did any thing of the kind. I voted against it."

Mr. Morton: "The Senator, then, is consistent. He has been against this business from the first. I am glad to understand that. I know the Senator voted against this provision in regard to Virginia, Mississippi, and Texas, but I was not aware before that he voted against the original reconstruction bill which contained it in regard to the fourteenth amendment."

Mr. Edmunds: "If my friend will permit me, I will explain to him exactly what I did. I voted against it in the case of Virginia, Mississippi, and Texas, and resisted it all in my power upon the grounds that I stated yesterday, not that I did not wish to attain the result, but I wished to attain it in a way that would leave no court and no future Congress any thing on the record to found a pretext upon for undoing what we have done. But, after the amendment was inserted against my objection, I voted for the bill finally, yielding my judgment to that of my friends, as I shall do in this instance if the amendment of the Senator from Indiana should be adopted. I shall vote for the bill, then, but I think this provision very unwise."

Mr. Morton: "Mr. President, we do not ask the military to force the Legislature of Georgia to ratify the amendment; we do not propose to force it. All that argument about coercion is without substance. But we have a right to say to them, 'If you are not willing to give us this security against future rebellion, against future revolution in the State, you can remain in your present condition; take your choice. If there is coercion in that, let it be coercion.

"Mr. President, in the absence of this requirement the Legislature of Georgia will not ratify the fifteenth amendment. The members of that body would be at once besieged by their enemies not to go further than Congress had required them to go. They would be told by the rebel Democracy, 'If you will refuse to go further than Congress requires you to go, we will forgive all the past; we will support you.' Every influence, every argument, every inducement, will be brought to bear upon those men, and they will not go further than Congress requires them. But for this requirement Virginia would not have ratified the fifteenth amendment. We know that just as well as we know any thing. The Legislature of Tennessee, elected at the same time with the Legislature of Virginia, led by a Republican candidate for Governor just as Virginia was, have spurned the amendment. I believe it got but ten votes in that body. Sir, this requirement in regard to the fourteenth amendment, and the requirement in regard to the fifteenth amendment in reference to Mississippi, Texas, and Virginia, were all that saved the fourteenth or that will save the fifteenth amendment. And now, sir, when the ratification hangs on the vote of one

single State, when we have come within just one State of securing this amendment, and to secure that we have got to do just what we have done before, now to halt, now to fall back would be regarded by the world as cowardice, would be regarded as a confession, would be an abandonment of this amendment."

The Vice-President: "The question is on the amendment of the Senator from Indiana."

Mr. Williams: "I propose this as a substitute for that amendment—it is simply a change in phraseology—to strike out all after the word 'that,' and insert:

The Legislature shall ratify the fifteenth amendment proposed to the Constitution of the United States before Senators and Representatives from Georgia are admitted to seats in Congress."

Mr. Morton: "As it contains precisely the substance of my amendment, and as it has a change of phraseology which will obviate some verbal arguments that have been offered here, I am willing to accept it as a substitute."

The Vice-President: "The question is on the amendment as modified."

Mr. Davis, of Kentucky, said: "Mr. President, the main matter that is before this body and before the country for consideration, according to my apprehension, is the ratification of the constitution of Georgia, or, in other words, the power that is legitimate to organize a government for the State of Georgia. Now, I would ask the honorable Senator who reported this bill, the able chairman of the Committee on the Judiciary, whose business is it to make a State government? What power in our country and under our system of mixed State and Federal Governments is the appropriate power to make a State government? Well, Mr. President, to my mind there can be but one answer, and that answer is that the people of the State itself are the only legitimate and constitutional power upon earth that can make a government for the State of Georgia or for any other State.

"Now, what is the question before this body, and what is the power which the Senate is trying to assume? It is that the Congress of the United States shall divest the people of Georgia of the power to make their own State government, and assume and usurp that power itself. Sir, I say that it is not competent for Congress to take upon itself the exercise of such a power at all. All the legislation of Congress upon this subject of the States whose people were in rebellion seems to concede the proposition that those States are still members of the Union; that is, they are States of the United States. If that proposition is conceded, with what show of logic or constitutional law can any man contend that Congress has the power to make a constitution for those States?

"Mr. President, here seems to be the pith of the question: If Georgia will come into the Union, and by her Legislature and State government range herself under the Radical banner, and elect Radical Senators of the proper

stamp to the Senate of the United States, then Georgia is a State in the Union; but, on the contrary, if Georgia will exercise her own independence, and her Legislature will elect members to the Senate, and her people Representatives to Congress, who are opposed to Radicalism or to Republicanism, then Georgia is no State in the Union! The question comes to that issue. If Georgia is Radical, and in her elections and legislation will act in conformity to the Radical policy, then Georgia is a State in the Union; but, if Georgia is Democratic or anti-Radical, and will elect members of the Senate opposed to Radicalism, then Georgia is no State in the Union! That, I think, is a fair statement of the proposition which now divides the Senate upon this evening. Georgia is a State of the Union if she will adopt the Radical policy; Georgia is a State in the Union if she will send Radical members to the House of Representatives and to the Senate; but, if Georgia acts in opposition to Radicalism and to the Radical party in those aspects, then Georgia is no State of the Union at all. Well, Mr. President, that is about equivalent to the proposition we have all so often heard stated between the gamblers, 'Heads, I win; tails, you lose.' There is no chance for the independence of Georgia, there is no chance for her action in relation to this subject of rehabilitating her State government, unless she declares herself Radical; and, unless she takes that position, she is not a State in the Union at all!

"Well, sir, the objections of the honorable Senator from Wisconsin to the amendment of the Senator from Indiana I think would avail nothing, because I think the question in that form was distinctly made up at the last session of Congress when the three States of Mississippi, Virginia, and Texas, were required absolutely by the action of Congress to adopt the fifteenth amendment before they could be received and treated as States in the Union; but it is only a difference of form and not in essence between the two modes; both of them are equally coercive of Georgia and destructive of her independence. She has as much right to vote upon the proposition of the fifteenth amendment to the Constitution independently and of her own free will as has any State of the United States. Says the Senator from Wisconsin: 'If the amendment of the Senator from Indiana is adopted, it will present upon the record a case of coercion of Georgia in this ratification of the fifteenth amendment, and, to avoid that case of coercion upon the record, I want to dodge that point, but make her adopt it just as imperatively as a matter of fact though it is evaded upon the record.' That is his position plainly expressed.

"Well, Mr. President, in either form it would avail nothing. Gentlemen delude themselves when they believe or affect to believe that by such shallow devices as that they can avoid the grave question whether there is coercion exer-

cised in passing upon a proposed amendment of the Constitution by certain States of the Union. There is no freedom allowed to Georgia in this matter of passing upon this fifteenth amendment. There was none allowed to Virginia, to Mississippi, and to Texas. The same liberty was allowed to them, and not an iota more, as is allowed by the highwayman when he arrests the traveller on the highway, and presents his pistol to his breast, and demands of him 'Your money or your life.' That is the freedom of choice and the freedom of action in this grave matter of amending the Constitution of the United States upon the proposition of the fifteenth amendment which the party in power in Congress have allowed to these Southern States. The time will come when the matter in that form will be presented to the American people."

Mr. Norton, of Minnesota, said: "Mr. President, yesterday the discussion seemed to take a sort of drift on the other side toward an attempt to justify under the Constitution, or in some other way, the enactment of this bill. The Senator from Oregon (Mr. Williams) found his justification for the passage of this bill in the fact that the people of Georgia had not been true to the pledges or the representations they had made to Congress, and from that we all inferred that they had not done what the Republican party had a right to expect they would do. The Senator from Vermont (Mr. Edmunds) found his justification for voting for this bill in the fact that it was consistent with the reconstruction laws heretofore passed, and he gave us a long history, a detailed statement of what those laws were. The Senator from Michigan (Mr. Howard) found a justification for his vote in favor of the bill in the fact that the people of Georgia were not loyal, and he said that we should teach this people that they should be true, as he understood it, to the Government. But the Senator from Indiana (Mr. Morton) has given the true reason why the majority here should pass this bill if it is to be passed, and of course I suppose it is to be, and that is that it is necessary to insure the adoption of the fifteenth amendment.

"The Senator from Wisconsin and the Senator from New York, who addressed us this afternoon, while they do not see the same necessity that the Senator from Indiana does for putting this amendment upon the bill, are yet willing to agree with the Senator from Indiana that their purpose and their intent are the same with him, and that this whole bill is intended to secure the adoption of the fifteenth amendment; 'for,' says the Senator from Wisconsin, 'never so long as I hold a seat in this body will I admit a Senator from the State of Georgia till she adopts the fifteenth amendment.' The Senator from New York said nearly the same. The Senator from Vermont, yesterday, when I asked him what would become of the ratification of Georgia if under his proposition Congress should still not admit Georgia to rep-

resentation, declined to answer. Who questions but that, if Georgia should ratify the amendment under the bill proposed by the committee, and still the Representatives and Senators of the State should not be admitted under the general discretion of Congress, yet the vote of Georgia would be counted as a ratification? So that, from what has been said thus far in the discussion of this bill, I take it that the whole object and purpose of the bill are nothing more and nothing less than to secure the adoption of the fifteenth amendment, and I think I am not wrong in assuming that as established by this discussion.

"Now, what I shall have to say is chiefly in regard to the pending amendment; but, before I come to that, I will say a word or two in regard to the provisions of the bill itself. And what I shall say on that is suggested by what was said this afternoon by the Senator from Connecticut (Mr. Ferry) and the Senator from New York (Mr. Conkling). The Senator from Connecticut was apprehensive that, if in the amendment proposed by the Senator from Indiana the requirement of a ratification of the fourteenth amendment of the Constitution was retained, there might be a question as to the validity of the ratification of that amendment, and whether it was now a part of the Constitution. I find, on looking at the record, that on the 25th day of June, 1868, the Congress of the United States passed an act reciting that, whereas among other States the State of Georgia had adopted the fourteenth amendment and had conformed to the reconstruction laws, she was entitled to representation in Congress, and upon the passage of that act Representatives were admitted in the other House. Senators were not admitted here, because of the objection, perhaps my friend from Missouri (Mr. Drake) would say, that he made to their admission. On the 28th of June, 1868, the Secretary of State, in pursuance of this act of Congress, issued his proclamation declaring the fourteenth amendment ratified.

"I call the attention of the Senate and the country to this point, that, if Georgia, on the 25th day of June last, was a State in this Union to ratify an amendment to the Constitution, it is to-day a State in this Union. If on the 25th day of June last the Congress of the United States declared by solemn enactment that Georgia was a State in this Union sufficient to ratify an amendment to the Constitution, Georgia is to-day a State in this Union; and by what power, what right, what authority, do you sit here to-night legislating for the purpose of perfecting the reconstruction of the State of Georgia? It does not lie in the mouth of Congress to say that Georgia is not now a State in this Union just as much as the State of Ohio or Indiana, or any other State. You might just as well say that, because the State of Ohio rejected the fifteenth amendment last winter by its Legislature, that State needs reconstructing, and you will call together the

Legislature that was elected a year or two years before, and require them to ratify this fifteenth amendment, else their Senators shall not hold their seats in this body.

"But, Mr. President, I am not citing this for the purpose of showing the inconsistency of these reconstruction measures, nor to show the inconsistency of Congress in its action in regard to the Southern States. I am only citing it to establish the fact that by all the political departments of the Government, executive and legislative, Georgia has been recognized as a State of the Union—recognized to the extent that she can participate in amending, changing, and modifying the fundamental law, the supreme law of the land. When she can do that, when she is enough of a State of this Union to do that, by what right, by what authority, by what power, and wherein do you find your justification for reconstructing and reorganizing Georgia?

"I care nothing, so far as this bill or the amendment of the Senator from Indiana is concerned, about Georgia. It is not Georgia alone that is interested. Georgia is but a very small portion of the territory of this country, and its people are but very insignificant in numbers, compared with the whole population. It is the principle that, after the State of Georgia has been recognized and readmitted, if you please, into this Union so far as to act upon a constitutional amendment, Congress can no more reconstruct and reorganize her than it can reconstruct or reorganize any other State. If you can thus reconstruct and reorganize Georgia, why may you not reconstruct and reorganize any other State in the Union? If this measure may be justified because of the condition of affairs in Georgia, because of the disturbed state of society there, because of the lawlessness and disorder there, why may you not take the State of Minnesota, and because of its lawlessness and its social disorder reconstruct it? The Senator from Oregon says he believes that, when the people of Georgia showed themselves so wanting in all the proprieties of political and civil life—I do not quote his words, of course, but the idea—when society was so disorganized that person and property were not safe, the General Government ought to stretch out its arm and restore order. Sir, I have seen the time in the State of Minnesota when lawlessness and disorder prevailed there to a greater extent than I believe they now exist in Georgia, and yet no one came to Congress and asked them to reach out their arms to repress it; and, if they had, they would have been laughed at.

"So much, sir, for the general provisions of the bill, and its general effect and tenor.

"I admit that in consistency, and to follow out and carry out to its legitimate results the reconstruction policy of Congress, as it is called, this bill is legitimate; but I agree with the Senator from Vermont that you do not in this bill go far enough to preserve to the fullest

extent your consistency. You go upon the idea that the Constitution of the United States and its guarantees for the protection of life and liberty, person and property, are not operative in certain States, and that you may, by force of enactments of Congress, establish there military or any other governments you please. Now, I say that in pursuance of the theory I would go with the Senator from Vermont, and I would depose your Governor Bullock; I would depose your Legislature and your judges and your courts, and I would make it a military despotism in truth and in fact. That is the legitimate and the consistent result or course of your reconstruction measures. The times, perhaps, may not justify or warrant it. That is not for me to consider. But, when gentlemen talk about consistency, and reproach each other about the theories of these reconstruction acts, and the desire to be consistent with them, I suggest to them that they should go the full length, because, if the theory and the idea upon which you started out was a true and a sound one, you may go with the utmost propriety to the extent of deposing all civil authority in Georgia, and establishing there your military courts and your military tribunals.

"What a spectacle to present to the nations of the world, that in this Government, claiming to be the freest on earth, deriving all its just powers from the consent of the governed, limited, restrained, and restricted in all its departments by a written law, the fundamental and supreme law shall be permitted to be changed without the consent of the people, and by the action of one of the departments of the Government! Nay, sir, not only that, but this fundamental supreme law that underlies and overrides all the others, and to which the people themselves must give obedience, because the Constitution is a restraint upon the people as well as upon their servants, may be changed by force, or, if not by force, by inducements held out to particular sections or particular localities and the people of particular States. Is not that a singular spectacle for us to present to the nations of the world?"

The Vice-President: "The question is on the amendment of the Senator from Indiana."

The Chief Clerk: "The amendment is, to strike out the eighth section of the bill after the enacting clause, and to insert:

That the Legislature shall ratify the fifteenth amendment proposed to the Constitution of the United States before Senators and Representatives from Georgia are admitted to seats in Congress."

The question being taken, resulted as follows:

YEAS—Messrs. Abbott, Brownlow, Buckingham, Cattell, Chandler, Cole, Cragin, Drake, Fenton, Gilbert, Hamlin, Harlan, Harris, Howard, Kellogg, McDonald, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Patterson, Pomeroy, Pratt, Ramsey, Robertson, Ross, Sawyer, Schurz, Scott, Sherman, Spencer, Stewart, Sumner, Thayer, Warner, Williams, and Wilson—38.

NAYS—Messrs. Bayard, Carpenter, Casserly, Conk-

ling, Corbett, Davis, Fowler, Hamilton, Norton, Rice, Saulsbury, Stockton, Thurman, Vickers, and Willey—15.

ABSENT—Messrs. Anthony, Boreman, Cameron, Edmunds, Ferry, Howe, McCreery, Pool, Sprague, Tipton, Trumbull, and Yates—12.

So the amendment was agreed to.

Mr. Thurman, of Ohio, said: "The State of Georgia elected a Legislature under your reconstruction acts. That Legislature performed every single requirement of those acts. So your President tells us in his message, and so the Senator from Illinois (Mr. Trumbull), in the views that he published at the last session of the Fortieth Congress, made perfectly manifest by reference to official documents. The State, then, according to your reconstruction laws, was entitled to the admission of its Senators and Representatives in Congress. The House of Representatives admitted its members in that branch of Congress. The Senate did not; it referred the credentials of the Senators-elect to the Committee on the Judiciary, and no action was taken finally upon their credentials.

"Here, then, was Georgia, having complied with every requirement of the reconstruction acts and having elected Senators and Representatives and her Representatives admitted in the other branch of the Fortieth Congress, and holding their seats until that Congress expired—I say Georgia did all that your acts required, ratifying the fourteenth amendment among the rest, and yet now it is proposed to take Georgia in hand again; and why to take her in hand? Two reasons have been given for it, and but two, that I know of. One reason is, that her Legislature, after she had complied with every requisition of the reconstruction acts, decided that colored men were not entitled to seats in that Legislature, not entitled to hold office in Georgia, and therefore the colored members were expelled from their seats; and in the next place, that certain persons held seats in that body who were not entitled under the fourteenth amendment of the Constitution to hold seats.

"First, in regard to the persons who held seats who were disqualified under the fourteenth amendment. I have looked at the testimony before the Committee of the House of Representatives on that subject, and nobody says that there were any more than from three to five of those men in a Legislature consisting, I believe, of two hundred and nineteen members. I suppose, then, even if those persons were disqualified, although a committee reported that they were not disqualified and the Legislature decided that they were not disqualified, if you could go behind their decision nobody would be willing to overturn the government of Georgia because out of the two hundred and nineteen members of the Legislature four or five persons disqualified under this amendment to the Constitution had held seats in that body.

"But then it is said that the negro members

were expelled from that body. First, what is the fact about that? The leading Republican of Georgia, the leading spirit in supporting the reconstruction acts, as everybody knows, was Governor Brown. He was the first man, I believe, of any eminence in the State who took ground in favor of the reconstruction acts. He spoke, I believe, all over that State in their favor; and when the constitution was formed he addressed the people at various times and in various places in support of that constitution. Everywhere that he spoke, as I am assured—and certainly once, for I have his speech in my possession—everywhere, in order to recommend that constitution to the people of Georgia, he told them—he, one of the most eminent lawyers of that State—he, a man who had been the Governor of that State—he, the leader in the reconstruction movement in that State—everywhere he told the people of that State that if that constitution were adopted negroes would be entitled to vote, but would not be entitled to hold office.

"The right to vote does not necessarily give the right to hold office. We all know that full well. It was never better expressed than by Mr. Justice Swayne, in the decision he delivered at Louisville, in which he sustained the fourteenth amendment, when he said that the political right to vote was one thing, the political right to hold office was another thing. We have known of States where every man could vote, but where a man could not be a member of the Legislature without having a certain qualification. I think in New York under the old constitution a man could not be a member of the Senate without a freehold of a certain prescribed value. It is so in Delaware now. The right to hold office, therefore, is one thing, the right to vote is another thing; and this eminent lawyer, this head and front of the Republican party in Georgia, this chief advocate of the reconstruction measures, told the people of Georgia everywhere, with the weight of his name, that if they adopted that constitution it would not confer upon the negro any thing but the right to vote; it would not confer upon him the power to hold office.

"Well, sir, the people did adopt the constitution; the Legislature assembled, and, as if they had determined to submit to the will of the dominant party in this country as far as possible, as if they had been determined to remove all doubt about their good faith, they ratified the fourteenth amendment before the colored members were expelled, and they elected their Senators before the colored members were expelled. Both these things were done. Then, you cannot complain. The Senator from Indiana (Mr. Morton) when he was asked by the Senator from Connecticut (Mr. Ferry) why he insisted on their ratifying the fourteenth amendment again, said that that was an unlawful Legislature. Unlawful why? Unlawful because it had expelled the negroes? No such thing, sir. Every negro had his seat there

when the fourteenth amendment was ratified; not one of them had been expelled. Unlawful because there were three or four men there disqualified to be there, as it is said but not proved? There is no proof before the Senate this day, and I defy a Senator to point me to a scintilla of legal proof that any member of that Legislature was disqualified under the fourteenth amendment. We have Governor Bullock's opinion, and that is all; we have Governor Bullock's surmise, and that not under oath, in the evidence which was taken before the House Reconstruction Committee; not a sworn statement, but his mere surmise, his mere belief, his mere suspicion, that three or four or five of those members were disqualified under the fourteenth amendment.

"Such was the state of the case. That Legislature met obedient to your will, even to servility. It adopted your fourteenth amendment, it elected its Senators, and after that and upon the maturest consideration of this legal, this constitutional question, it decided that under the State constitution of Georgia colored men were not eligible to hold office; and that is its great sin. And now if you turn her out you turn her out not because she has disobeyed any reconstruction act of Congress, not because she has disregarded any act of Congress, not because in any thing she has done she has set the power of the General Government at defiance, not because she has in any respect infringed the Constitution of the United States, not for any one of these reasons; but because her Legislature, in the exercise of an indubitable power, have made an error in the interpretation of her own State constitution. Hide it if you will, conceal it if you will, the pretext for turning her out is nothing more than this, nothing less than this, that her Legislature have misinterpreted her own State constitution; that they have followed the guidance and legal advice of the head and front of the Radical party in Georgia; that they have followed that legal opinion, which was promulgated from one end of Georgia to the other before the constitution was adopted, that under that constitution colored men would not be entitled to hold office.

"Why, sir, if you can now go into that State and turn out the present members of the Legislature and reinstate those negroes, I say you can do the same thing with regard to any State in this Union if you think its General Assembly misinterprets its own State constitution. It is only two years ago that we had a case in Ohio. A member was elected to the Senate of that State, received a certificate of election as a member of that Senate, and his election was contested on the ground that colored persons voted for him and gave him his majority. Upon the hearing of the contest the whole case turned upon this, whether a person having more white than black blood in his veins was an elector in the State of Ohio under the constitution of that State.

The Supreme Court of the State had decided that he was, and if that decision was to be followed by the Senate of Ohio, it was conclusive in favor of the sitting member; but the Senate of Ohio, precisely as both Houses of Congress have again and again decided, held that in regard to the qualifications and eligibility of its own members it was the sole judge; it was not bound by any decision of the Supreme Court. The decision of the Supreme Court was entitled to respect, but the decision of no tribunal is authority over any other tribunal unless it can reverse the decision of that other tribunal. It is nothing but a precedent; it is only authority when the tribunal that pronounces the decision has power to reverse the decision of the inferior tribunal. The Senate of Ohio therefore held that it was the judge of what was the constitution of Ohio, and, judging for itself, it decided that mulattoes were not entitled to vote in the State of Ohio, although they had more white blood than black blood in their veins, and ousted the sitting member and put in the contestant."

Several amendments were now offered to the bill, which modified the oath to be taken by striking out the words "involuntary aid," etc., and the bill was passed by the following vote:

YEAS—Messrs. Abbott, Anthony, Brownlow, Buckingham, Carpenter, Cattell, Chandler, Cole, Conkling, Corbett, Cragin, Drake, Edmunds, Fenton, Gilbert, Hamlin, Harlan, Harris, Howard, Kellogg, McDonald, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Patterson, Pomeroy, Pratt, Ramsey, Rice, Robertson, Ross, Sawyer, Schurz, Scott, Sherman, Spencer, Stewart, Sumner, Thayer, Warner, Wiley, Williams, and Wilson—45.

NAYS—Messrs. Bayard, Casserly, Davis, Fowler, Hamilton, Saulsbury, Stockton, Thurman, and Vickers—9.

ABSENT—Messrs. Boreman, Cameron, Ferry, Howe, McCreery, Norton, Pool, Sprague, Tipton, Trumbull, and Yates—11.

The title of the bill was then amended so as to read "A bill to promote the reconstruction of the State of Georgia."

In the House, on December 20th, the bill from the Senate was considered—and after a brief debate was passed by the following vote:

YEAS—Messrs. Allison, Ambler, Armstrong, Arnell, Asper, Bailey, Beaman, Beatty, Benjamin, Bennett, Benton, Boies, Bowen, Boyd, George M. Brooks, Buck, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Roderick B. Butler, Cassius, Amasa Cobb, Coburn, Cook, Conger, Cullom, Dawes, Deweese, Dickey, Dixon, Donley, Duval, Ela, Ferriss, Ferry, Finkelnburg, Fisher, Fitch, Garfield, Hale, Hamilton, Hawley, Hay, Heaton, Hill, Hoar, Hoge, Hooper, Hotchkiss, Ingersoll, Jenckes, Alexander H. Jones, Judd, Kelley, Kellogg, Kelsey, Knapp, Lash, Lawrence, Logan, Loughbridge, Maynard, McCarthy, McCrary, McGrew, Mercur, Eliakim, H. Moore, Jesse H. Moore, William Moore, Daniel J. Morrell, Samuel P. Morrill, Myers, Negley, O'Neill, Orth, Packard, Packer, Paine, Palmer, Peters, Phelps, Poland, Pomeroy, Prosser, Root, Sanford, Sargent, Sawyer, Schenck, Scofield, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, William J. Smith, Worthington C. Smith, William Smyth, Starkweather, Stevens, Stevenson, Stokes, Stoughton, Strickland, Strong, Taffe, Tanner, Town-

send, Twichell, Tyner, Upson, Van Horn, Cadwalader C. Washburn, Welker, Wheeler, Whittmore, Wilkin-son, Williams, John T. Wilson, and Winans—121.

YAYS—Messrs. Adams, Archer, Axtell, Beck, Bigge, Bingham, Bird, Calkin, Cox, Crebs, Dickin-son, Dox, Eldridge, Farnsworth, Getz, Greene, Gris-wold, Haldeman, Hambleton, Hamill, Hawkins, Holman, Johnson, Thomas L. Jones, Kerr, Knott, Marshall, Mayham, McCormick, McNeely, Morgan, Mungen, Niblack, Potter, Randall, Reeves, Rice, Rogers, Joseph S. Smith, Stone, Strader, Swann, Sweeney, Trimble, Van Trump, Voorhees, Wells, Eugene M. Wilson, Winchester, Witcher, and Wood-ward—51.

Nor Voting—Messrs. Ames, Banks, Barnum, Blair, James Brooks, Burr, Cake, Churchill, Clarke, Cleveland, Clinton L. Cobb, Cowles, Davis, Dockery, Dyer, Fox, Gillilan, Golladay, Haight, Hays, Heflin, Hoag, Hopkins, Julian, Ketcham, Ladin, Lynch, Morrissey, Reading, Schumaker, Sherrod, Slocum, Stiles, Tillman, Van Auken, Ward, William B. Washburn, Willard, and Wood—39.

In the House, on March 4th, a bill to admit the State of Georgia to representation in Con- gress was considered:

The bill recited in the preamble that the people of Georgia had framed and adopted a constitution of State government which was republican; that the Legislature of Georgia elected under said constitution had ratified the fourteenth and fifteenth amendments to the Constitution of the United States, and that the performance of these several acts in good faith was a condition precedent to the representation of the State in Congress.

The bill therefore declared that the State of Georgia was entitled to representation in the Congress of the United States, provided that, before any member of the Legislature of said State should take or resume his seat, or any officer of said State should enter upon the duties of his office, he should take and subscribe, and file in the office of the Secretary of State of Georgia, for permanent preservation, an oath or affirmation in the following form: "I, ———, do solemnly swear (or affirm) that I have never taken an oath as a member of Con- gress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, and afterward engaged in insurrection or rebel- lion against the same, or given aid or comfort to the enemies thereof; so help me God" (or under the pains and penalties of perjury, as the case may be); or such persons should in like manner take, subscribe, and file the follow- ing oath or affirmation: "I ———, do solemnly swear (or affirm) that I have, by act of Congress of the United States, been relieved from the disabilities imposed upon me by the fourteenth amendment of the Constitution of the United States; so help me God" (or under the pains and penalties of perjury, as the case may be); which oaths or affirmations should be taken before and certified by any officer law- fully authorized to administer oaths. And any person who should knowingly swear or affirm falsely in taking either of such oaths or affirma-

tions should be deemed guilty of perjury, and should be punished therefor by imprisonment not less than one year, and not more than ten years, and should be fined not less than \$1,000, and not more than \$10,000. And in all trials for any violation of this act the certificate of the taking of either of said oaths or affirma- tions, with proof of the signature of the party accused, should be taken and held as conclusive evidence that such oath or affirmation was regu- larly and lawfully administered by competent authority. Every such person who should neglect for the period of thirty days next after the passage of this act to take, subscribe, and file such oath or affirmation as aforesaid, was to be deemed and taken, to all intents and pur- poses, to have vacated his office.

It was further declared that the State of Georgia was admitted to representation in Con- gress as one of the States of the Union upon the following fundamental conditions: First, that the constitution of Georgia should never be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote who were entitled to vote by the constitution herein recognized, except as a punishment for such crimes as were now felonies at common law, whereof they should have been duly convicted under laws equally applicable to all the inhabitants of said State; provided, that any alteration of said constitu- tion, prospective in its effects, might be made in regard to the time and place of residence of voters. Second, that it should never be lawful for the said State to deprive any citizen of the United States, on account of his race, color, or previous condition of servitude, of the right to hold office under the constitution and laws of said State, or upon any such ground to require of him any other qualifications for office than such as were required of all other citizens. Third, that the constitution of Georgia should never be so amended or changed as to deprive any citizen or class of citizens of the United States of the school rights and privileges se- cured by the constitution of said State.

Mr. Farnsworth, of Illinois, said: "Mr. Speaker, in March, 1868, the constitution of Georgia was framed, submitted to a vote of the people, and ratified by a very large ma- jority. At the same time it was provided by the constitution that an election should be held for representatives to the Legislature and for State officers. The Legislature was elected, and State officers also. The present Governor, Governor Bullock, was elected at that time.

"I think the election was held in April. In the following June Congress passed an act to admit the States of North Carolina, South Carolina, Georgia, Alabama, and Florida, to representation in Congress. By the preamble of this act we declared just what is proposed to be declared again in the bill of the gentle- man from Massachusetts (Mr. Butler), that the State of Georgia had adopted a constitution republican in form by a large majority of its

citizens; and we provided that those several States should be admitted to representation in Congress when their Legislatures, which had been elected in pursuance of their constitutions, should have ratified the fourteenth article of the amendments to the Constitution, and when, in addition thereto, they should give their consent to certain fundamental conditions contained in the act. As to Georgia, it was provided that her Legislature should also give its consent to the condition imposed upon the State by the act nullifying certain provisions of its constitution in regard to the bringing of suits. We provided that certain provisions of the constitution of Georgia in regard to the bringing of suits should be void, and that her Legislature should assent to that before she should be entitled to representation. And that was the only exception we made which took the case of Georgia in any way out of the general rule as to the other States named in the title of the act. All those States were admitted to representation in both Houses of Congress, in pursuance of that law, except Georgia. Congress passed no new law declaring them entitled to representation, because this act to which I have referred of itself declared that they were entitled to representation when their Legislature should do certain things.

"The Representatives from Georgia were admitted to the House of Representatives. So far Georgia was treated precisely like the other States named in this act. And no new act of Congress was passed declaring any one of them entitled to representation, because, as I said before, that declaration was already contained in the act of June, 1868. Mr. Dawes, at that time chairman of the Committee of Elections, reported a resolution declaring that the members presenting themselves here from the State of Georgia were entitled to their seats. That resolution was adopted by the House, and the members were sworn in, and served during the Fortieth Congress. The Legislature of Georgia had been duly organized at that time.

"The proclamation which it was made the duty of the President to issue when Georgia should ratify the fourteenth amendment was duly issued by the President. We were told by the President and Secretary of State that that fourteenth amendment had become part of the Constitution of the United States; and among the States which had ratified it, thus making it a part of the Constitution, was the State of Georgia. I was about to say that the Legislature of Georgia was duly organized, and very little exception was taken to its organization at that time. But afterward the colored members of the Legislature were expelled wrongfully and unlawfully, so that, when the Senators-elect from the State of Georgia presented their credentials to the Senate, the Senate was unwilling to go further in admitting representatives from that State because of this expulsion of the colored members, and what was regarded by many as the revolutionary act of

that Legislature. I have had put in my hand the message of the President of the United States to Congress at the opening of the present session. He says, in speaking of the reconstructed States:

Seven States which passed ordinances of secession have been fully restored to their places in the Union. The eighth, Georgia, held an election at which she ratified her constitution, republican in form, elected a Governor, members of Congress, a State Legislature, and all other officers required. The Governor was duly installed, and the Legislature met and performed all the acts then required of them by the reconstruction acts of Congress.

"She performed all the acts required of her by the reconstruction acts of Congress! He goes on:

Subsequently, however, in violation of the constitution which they had just ratified, as since decided by the Supreme Court of the State, they unseated the colored members of the Legislature and admitted to seats some members who are disqualified by the third clause of the fourteenth amendment to the Constitution, an article which they themselves had contributed to ratify. Under these circumstances I would submit to you whether it would not be wise, without delay, to enact a law authorizing the Governor of Georgia—

"Not the 'provisional Governor,' but the Governor of Georgia—

to convene the members originally elected to the Legislature, etc.

"All the State officers elected in pursuance of the constitution of the State were duly inaugurated and installed, and the affairs of the State were turned over to the civil authorities of the State by General Meade.

"The Senate, as I was saying, hesitated about admitting the Senators from Georgia, and their credentials were referred to the Committee on the Judiciary. The majority of that committee made report. There was a minority report made by Senator Trumbull, of Illinois, and I believe it was concurred in by another member of the committee. The majority report, made by Senator Stewart, of Nevada, declared that in the opinion of that committee the State was not then entitled to be represented. They carefully put in the word 'now,' and reported a resolution that 'Mr. Hill is not now entitled to his seat in the Senate.' Why? Because they held that the Legislature which had been duly elected and duly organized had, after that organization, committed a revolutionary act, and therefore the State ought not then to be represented in Congress. That report, however, was never acted upon by the Senate. It was nothing but the report of a committee, and if the gentleman from Massachusetts is going to pin his faith to a report, and that not a unanimous report, of a committee of the Senate, I would respectfully refer him to the unanimous report made the day before yesterday by the Judiciary Committee of the Senate, through Mr. Edmunds, of Vermont, wherein they say that no more legislation is necessary in the case of Georgia.

"Now, Mr. Speaker, for my own part I do

not profess to rely wholly upon any report that may be made by a committee of the other branch of Congress. We are here acting independently of that body, I hope, upon our own responsibility to our constituents; but I submit that if we are to follow in the footsteps of the Committee on the Judiciary of the Senate, if we are to take as the law and gospel the mere majority report of that committee made in the case of Mr. Hill, of Georgia, we certainly should follow without question the unanimous report of the committee with reference to this subject.

"The Legislature, as I said, wrongfully and unlawfully expelled the colored members, thus committing a revolutionary act, and in consequence of that expulsion the State has not been represented in the Senate of the United States, and the anomalous spectacle was presented of a State being represented in one House and not in the other during the Fortieth Congress.

"Since that time there has been no election in the State of Georgia for members of the Forty-first Congress; and the Committee of Elections, of which the distinguished gentleman from Wisconsin (Mr. Paine) is chairman, reported but a short time since that the persons who had served in the Fortieth Congress as members from the State of Georgia, and who now claimed seats in this Congress upon the same certificates, ought not to be admitted to seats in this Congress. Now, I ask gentlemen what is the object of passing this bill when there are no members-elect to this Congress from the State of Georgia? I will tell them why. It is upon the theory of those who are urging this bill, that the admission of these gentlemen to the Fortieth Congress is to go for nothing, like the drink which Rip Van Winkle took. That is the view. Although they served in the Fortieth Congress, voted and drew their pay like any other members of that Congress, and very likely gave casting votes frequently for the passage or the defeat of bills, that is all to go for nothing, and they are to be allowed to come back here, be sworn in, and take their seats as members of the Forty-first Congress.

"The argument of the gentleman from Massachusetts (Mr. Butler) in favor of this bill is that it is not fair that these colored men who were expelled for a time from the Legislature should not have the enjoyment of their offices for the two years for which they were elected. Now, when those men were reseated in the Legislature, as they have been, of course they drew pay for their entire term. According to that argument a man who has been duly elected to Congress, but whose seat is contested, and who fails to receive a certificate of election, and therefore does not obtain his seat till the last session of the Congress, should be allowed to hold over into the next Congress in order to enjoy the full term of two years for which he was elected. Or, he might go into the next Congress, and begin *de novo*, blotting out en-

tirely his service in the previous Congress, on the ground that he did not enjoy a full term in the old Congress. That is the argument of the gentleman. It is very well understood what this bill is for. It is to prolong the tenure of office of certain gentlemen in the State of Georgia, and it might as well be so entitled as any thing else. That is the object of the bill.

"I feel, in regard to this matter, having known something of it, having been on the Reconstruction Committee from the first till now, and having watched the course of events and persons, as well as of governments in those States—I feel as certain as I could be, without having the sworn testimony before me, that the passage of this bill prolonging the term of office of those men who now control the State of Georgia, authorizing Governor Bullock to appoint all the judges again, to commence *de novo*, and putting the power of the State in his hands, would be an outrage upon the people of the State of Georgia. I believe it is only in the interest of a few people who desire to perpetuate their reign that they may put money in their purse."

Mr. Beck, of Kentucky, said: "Mr. Speaker, this much I desire to say, dangerous as was the avowal of the gentleman from Massachusetts (Mr. Butler), that he intended by this bill to give a new lease of power to the Governor, the Legislature, and the present State officers of Georgia, revolutionary as was that announcement, it is as nothing compared with the other avowal of a purpose which I knew the radical leaders of the Republican party were rapidly approaching.

"That avowal of the gentleman was in substance that he wanted to pass this bill as a precedent, to show to the people of this country that Congress has the right to exercise the same power over any State, no matter where, that in its opinion does not properly protect life, liberty, and property, within its borders; that Congress claimed the right to seize that State by the throat and compel it to do what Congress chooses to say it should do. He pointed to the State of Tennessee, and announced that if his friends would stand by him he would seize her as he was now proposing to seize Georgia.

"I knew that the more radical men of the Republican party were rapidly approaching that point. But this is the first time that I have ever heard the purpose deliberately avowed upon this floor. It required a bold man like the gentleman from Massachusetts (Mr. Butler) to avow it now, and it is well that it has been avowed; it is well for the country now to understand it. It is not particularly because the Republican party want to retain power in the State of Georgia that this bill is to be passed, but because they want a principle established which will authorize Congress to seize any State, no matter where, that does any thing that Congress may think is wrong in the treatment of the citizens of that State

within her own borders, in regard either to the persons, liberty, or property, of her citizens. It is now to be settled that Congress can determine by the vote of a majority when to put a military commander over any State, when to turn her out of the Union, when to send her Representatives out of this House, and her Senators out of the Senate, and to remand her to a military despotism. If that is the avowal of the Republican party, as it was of the gentleman from Massachusetts (Mr. Butler)—and that party always follows the lead of its boldest men, and since the removal from earth of the distinguished Pennsylvanian, Mr. Stevens, I have no doubt the gentleman from Massachusetts will be acknowledged as the leader of the more radical element of the Republican party in that direction—let this bill be passed, and the precedent will soon become a fundamental principle of the party."

The bill was subsequently passed by the following vote:

YEAS—Messrs. Allison, Ambler, Arnell, Asper, Atwood, Ayer, Banks, Beaman, Beatty, Benjamin, Bingham, Blair, Boles, Booker, Bowen, Boyd, George M. Brooks, Buck, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Roderick E. Butler, Cake, Cesena, Churchill, Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Cook, Conger, Cullom, Davis, Dawes, Dickey, Dockery, Donley, Duval, Ferriss, Ferry, Finkelnburg, Fisher, Garfield, Gilfillan, Hale, Hamilton, Harris, Hawley, Hay, Heaton, Heflin, Hill, Hoar, Hoge, Hooper, Hotchkiss, Ingersoll, Jenckes, Alexander H. Jones, Judd, Julian, Kelley, Kellogg, Ketcham, Knapp, Laffin, Lash, Lawrence, Logan, Loughridge, Lynch, McCarthy, McCrary, McKenzie, Mercur, Eliakim H. Moore, Jesse H. Moore, William Moore, Daniel J. Morrell, Samuel P. Morrill, Myers, Negley, O'Neill, Orth, Packard, Packer, Paine, Phelps, Platt, Pomeroy, Prosser, Rootes, Sanford, Sargent, Sawyer, Schenck, Seofield, Shanks, John A. Smith, William J. Smith, Worthington C. Smith, William Smyth, Starkweather, Stokes, Stoughton, Strickland, Strong, Tillman, Townsend, Twichell, Tyner, Upson, Van Horn, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Wilkinson, Willard, Williams, John T. Wilson, Winans, and Witcher—125.

NAYS—Messrs. Adams, Archer, Axtell, Beck, Biggs, Bird, Burr, Calkin, Cleveland, Cox, Crebs, Dickinson, Dox, Eldridge, Getz, Griswold, Haight, Haldeman, Hambleton, Hamill, Hawkins, Holman, Johnson, Thomas L. Jones, Kerr, Knott, Marshall, Mayham, McCormick, McNeely, Milnes, Niblack, Potter, Randall, Reading, Reeves, Rice, Rogers, Schumaker, Sherrod, Slocum, Stevenson, Stiles, Stone, Strader, Swann, Tanner, Trimble, Van Auker, Van Trump, Voorhees, Wells, Eugene M. Wilson, Wood, and Woodward—55.

NOT VOTING—Messrs. Ames, Armstrong, Bailey, Barnum, Bennett, Benton, James Brooks, Covode, Cowles, Dixon, Dyer, Ela, Farnsworth, Fitch, Fox, Gibson, Hays, Kelsey, Graynard, McGrew, McKee, Morgan, Morphis, Morrissey, Mungen, Palmer, Perce, Peters, Poland, Porter, Ridgway, Lionel A. Sheldon, Porter Sheldon, Joseph S. Smith, Stevens, Sweeney, Taffe, Van Wyck, Ward, and Winchester—40.

In the Senate, on March 18th, the bill was considered.

Mr. Morton, of Indiana, moved to add as an additional section to the bill the following:

And be it further enacted, That so much of the act

entitled "An act making appropriations for the support of the Army for the year ending June 30, 1868, and for other purposes," approved March 2, 1867, as prohibits the organization, arming, or calling into service of the militia force in the State of Georgia, be, and the same is hereby, repealed.

Mr. Morton said: "In the discussion of the Georgia bill I will first call attention to that part of it which is known as the Bingham amendment, which reads as follows:

That nothing in this act contained shall be construed to vacate any of the offices now filled in the State of Georgia, either by the election of the people or by the appointment of the Governor thereof, by and with the advice and consent of the Senate of said State.

"I object to this clause because it interposes a negative in a bill that contains no affirmative. The bills we passed in regard to Mississippi and Virginia, exactly in terms like this, leaving out this proviso, contained no inference or construction upon the subject. Therefore, this is an attempt to insert a negative where there is no affirmative in the bill to be met, and is wholly gratuitous.

Neither shall this act be construed to extend the official term of any officer of said State beyond the term limited by the constitution thereof, dating from the election or appointment of such officer; nor to deprive the people of Georgia of the right under their constitution to elect Senators and Representatives of the State of Georgia in the year 1870.

"I object to these clauses for the same reason, that they are wholly gratuitous, uncalled for, and do not meet any thing that is contained in the bill. But again:

But said election shall be held in the year 1870, either on the day named in the constitution of said State or such other day as the present Legislature may designate by law.

"I denounce this part of what is called the Bingham amendment as intended to take from the Legislature of Georgia the prerogative and the right to place their own construction upon the constitution of the State, and because it assumes, and assumes unjustly, that the constitution of the State must bear a certain construction; that the Legislature of Georgia is about to violate that construction, and that therefore it is the duty of Congress to come in in advance and place a prohibition upon the possible violation of the constitution of Georgia by its own Legislature. I denounce this proviso as being false in fact and false in theory. I denounce it as being in the interest of the rebels, as carrying exultation to every unrepentant rebel in the South. I say that its adoption by the House of Representatives has been regarded as a rebel victory, and I claim that in the interest of loyalty, in the interest of the protection of the loyal men of Georgia, of peace and security to persons and property, it is the duty of the Senate to strike out this amendment.

"This Bingham amendment has been defended by the Senator from Illinois, the chairman of the Committee on the Judiciary (Mr. Trumbull), and by the Senator from Vermont

(Mr. Edmunds). I now call upon the Senate to notice the theory upon which the chairman of the committee has placed his defence of this amendment. He has placed it upon the ground, first, that Georgia was fully reconstructed in 1868; that she then became entitled to representation in the Senate of the United States; that she has been entitled to it ever since, and that she has been improperly denied a seat to her Senators upon this floor, and that now no legislation is required for the purpose of placing her Senators upon this floor. In other words, according to the theory of the Senator from Illinois, Georgia is now and has been since 1868 as much a State in the Union and as much entitled to representation as any other State. This is shown, first, by the report of the Senator as a minority of the Judiciary Committee to this body in 1869, more than a year ago, in which he reported that Georgia was restored, and that Mr. Hill was entitled to be immediately sworn in as a member of the Senate. But the Senator the day before yesterday, in his speech, reiterated this position in the following language:

In my own opinion no legislation whatever is necessary in reference to Georgia. I think she is just as clearly entitled to-day to have her Senators admitted to their seats here as was the State of Arkansas or the State of North Carolina or South Carolina, or any other of the late rebel States at the time their Senators were admitted.

"According, then, to the Senator from Illinois, Georgia has been improperly and wickedly dealt with by Congress in the passage of the act of December 22, 1869; Georgia was most cruelly and wickedly outraged when Congress refused to count her electoral vote for President and Vice-President in February, 1869, and has been improperly denied representation on this floor continually. But when the Senator places himself broadly upon this position, how can he, consistently with the views that he has expressed in regard to the fundamental conditions put in the bills for the admission of Virginia and Mississippi, defend a provision that goes further to interfere with the rights of the States than any claim which was made by those bills, or which was made by myself or the Senator from Michigan (Mr. Howard) in the course of that discussion? For, while we assumed the power of Congress to supervise the States for the purpose of maintaining a republican form of government, we did not assume, what is contained in this bill, that Congress had a right in advance to give a construction to a State constitution, and to legislate against the possibility of that constitution being violated by the Legislature; so that it seems to me the Senator's support of this Bingham amendment, so called, is in direct conflict with the position he has so earnestly and so ably advocated all the time.

"Now, Mr. President, I come to the position taken by the Senator from Vermont, who has delivered an able argument on this subject. He

takes the position in his speech that the government of Georgia is not provisional, but that it is a State government in full force and operation, and that as such the term of office of its officers must be counted from the time the State was restored to its normal position in the Union. Now, I would say to my friend from Vermont that his position, as contained in the speech of yesterday, I regard as utterly at variance with his report as a member of the Judiciary Committee and with the position he took in this body on the 26th of January, 1870.

"I beg leave now most respectfully to call his attention to his own resolution offered in this Senate on the 28th of January, the resolution that gave rise to the report made by the Judiciary Committee, and upon which so much reliance is placed. That resolution reads thus:

Resolved, That the Committee on the Judiciary be, and they are hereby, instructed to inquire and report whether any further legislation is necessary upon the subject of the organization of the provisional Legislature in Georgia.

"If that Legislature was provisional on the 26th of January, 1870, it is provisional to-day. My friend from Vermont clearly recognized it as provisional then, and wanted to inquire what further legislation might be necessary to organize this provisional Legislature.

"Now, Mr. President, is the State of Georgia at present, and has it been regarded as still being, subject to the reconstruction acts of 1867? According to the theory of my friend, Georgia was entirely emancipated from the reconstruction acts in 1868; and it was according to the theory of the Senator from Illinois; but my proposition is that Georgia is to-day under the reconstruction acts of 1867, and has been continuously so, and that Congress, in the act of December, 1869, so regarded it; and that the act of 1869 is not in conflict with the reconstruction acts of 1867, but is simply in aid of them. Now, I will refer to the understanding the executive department has on the subject, and show upon what principle Georgia is now governed and upon what principle action has been taken. I have here an order, issued by the President of the United States on the 4th of January, 1870.

"From this order it appears that General Terry is now exercising the authority of military commander under the acts of 1867, and that the Executive regards Georgia as much an unreconstructed State as any over which military commanders have presided.

"Now, Mr. President, at what time does a State government in a new State go into operation? I will take the case of a Territory just formed into a new State, before its admission into the Union. It must adopt a constitution in pursuance of an act authorizing it to do it. It must elect officers of the State government. Now, when does that State government become effective? From what period does it date? Why, sir, it dates from the time

that the State is admitted. The previous election, the previous formation of the constitution, these are all mere acts of preparation, these are all things preliminary, which amount to nothing and go for nothing unless the State is subsequently admitted. And so with regard to this work of reconstruction; if these States are not subsequently actually admitted to representation, up to that time all that they have done goes for nothing. All that was done before was simply a matter of preparation, preparing them for subsequently coming in and being restored to their places in the Union.

"Therefore the State government, the tenure of the officers, does not date from the time the election was held, but dates from the time of the restoration of the State, when the military commander no longer has power to remove them, when they are no longer under his control. But when the State government goes into operation, and the State is completely restored, then the tenure begins. Any other conclusion is illogical, and is in conflict with the facts and the practice of the Government.

"I think the objection that has been taken to the reorganization of the Legislature of Georgia is entirely swept away. There is nothing left of it. It is a mere prejudice that has been sought to be arrayed against the organization of this loyal Legislature, without a single particle of foundation in law or in fact; and yet this is the burden of the cry all over the land to-day, in the mouth of every Democratic orator, upon the page of every Democratic newspaper, and in the mouth of every man who is in favor of the Bingham amendment, that this Legislature was illegally organized, because twenty-three or twenty-four persons were admitted in place of those who were held to be ineligible, because they had the next highest number of votes. I say it was legal, it was right, it was proper, and it was in pursuance of the law.

"Then, Mr. President, taking all these clauses of the constitution of Georgia together, I state the true doctrine to be this: in the first place, it was not in contemplation of law that these terms should begin until the State takes her place in the Union and the government goes into full operation; that Governor Bullock does not become the Governor of Georgia until the State is restored, and that he is now regarded and treated as the provisional Governor of that State, and that every officer of that State is regarded as provisional until, in the language of the act of 1867, the Senators and Representatives of Georgia have taken the oath of office in both branches of Congress.

"I now come to another point; and, talking about republican governments, I should like to ask any candid mind if it can be regarded as entirely republican that officers who have been elected, and a State government that has been formed, which has been virtually deposed for nearly two years, has been overcome by fraud and violence—I ask if it is republicanism, and

I ask if it is just to have the time while they have been virtually deposed, overcome by violence and fraud, taken out of their term?

"Shall men take advantage of their own wrong? That is the great question. These parties now propose to take advantage of their own wrong. Having held this government until within a few weeks past by force and fraud, they ask that the term shall be allowed to run all the time; that they shall have the benefit of it; and that an election shall be hurried on while they have all the advantages, and which would result in putting out of power the Union men of Georgia, down-trodden, oppressed, suffering every outrage that men can suffer in a land that claims to be civilized. Shall they be turned over bound into the hands of their enemies? No, sir; there is no justice, there is no republicanism, in the claim."

Mr. Schurz, of Missouri, said: "Mr. President, it appears that the issue at the present moment before the Senate is not whether the State of Georgia shall be admitted, for it seems we are all in favor of that; but it is whether the so-called Bingham amendment, prohibiting the State government to continue in office beyond this year, shall be preserved or stricken out from the bill.

"I hesitate a little to go again over that old story of the progress of reconstruction in Georgia; but a few words on that point will be sufficient for the purpose of completing my argument.

"The first steps of legal reconstruction were taken by the people of Georgia in pursuance of the act of March 2, 1867. A constitutional convention was elected from the 29th of October to the 2d of November of that year. The convention met on the 4th of December, 1867, and it adjourned the 11th of March, 1868. The constitution was ratified by the people of Georgia at an election held from the 20th to the 28d of April, 1868. By the act of June 25, 1868, Congress provided that certain States should be admitted upon their compliance with certain fundamental conditions precedent to their admission. As to Georgia, three conditions were imposed: first, the ratification of the fourteenth amendment; second, the expurgation of certain articles from her constitution, which I need not name in detail here; and third, the exclusion from office of those who were disqualified by the third section of the fourteenth amendment.

"The first two of these fundamental conditions were faithfully complied with; the fourteenth amendment was ratified, and the constitution of Georgia was expurgated by the Legislature in July, 1868. But the third of those conditions was evaded. Those who were disqualified by the third section of the fourteenth amendment were not ejected from the Legislature; but, on the contrary, loyal men were expelled and others were admitted who had received only a minority of the votes. How-

ever, before this took place their State government was inaugurated in pursuance of the act of June 25, 1868. Military rule was withdrawn on the 22d of July, 1868, and in consequence certain members elected in Georgia were admitted by the lower House of Congress to seats in that body. But the Legislature of Georgia, having not complied with the third condition imposed on them, the ejection of members disqualified by the fourteenth amendment, but having, on the contrary, ejected loyal men from their body, the Senate of the United States refused admission to their Senators. The reconstruction of the State of Georgia was therefore incomplete.

"In consequence of this, Congress passed the act of December 22, 1869. The Legislature of Georgia having committed a revolutionary act, had to be reorganized. The act of the 22d of December, 1869, was remarkable and important for two circumstances: first, for what it did provide, and secondly, for what it did not provide. It provided for compliance with the third condition precedent to admission; that is to say, that the Legislature of Georgia should expel the members who had no right to sit there in pursuance of the third section of the fourteenth constitutional amendment, and it provided for the admission of those who had been illegally expelled; but it did not provide for the reenactment of those acts by which the first two fundamental conditions had been complied with; that is to say, it did not provide for a reratification of the fourteenth amendment and for a reexpurgation of the objectionable provisions of the constitution of Georgia.

"The act of 22d December, 1869, therefore, neither directly nor by implication questioned the validity of the ratification of the fourteenth amendment or of the expurgation of the constitution of Georgia, both of which acts had been performed in July, 1868. It may be well assumed that therefore the act of December 22, 1869, confirmed the validity of these acts, in the opinion at least of the Congress of the United States. Will it be hazardous to assume that, in confirming the validity of the acts performed by the Legislature of 1868, the legality of the existence of that Legislature was recognized likewise? The act of the 22d December, 1869, imposed a new fundamental condition upon Georgia. That was the ratification of the fifteenth amendment. This fundamental condition, too, has been complied with. And now look at the attitude in which that State stands before us.

"All obligations precedent imposed upon Georgia by the Congress of the United States have been satisfactorily discharged. First, the fourteenth amendment was ratified; secondly, the constitution of Georgia was expurgated, and both these acts were performed in July, 1868; thirdly, the loyal members who had been expelled were readmitted, and members disqualified by the third section of the four-

teenth constitutional amendment were expelled; and fourthly, the fifteenth constitutional amendment has been ratified. Both these latter acts were performed in February, 1870. Now this State stands before us claiming admission on account of these conditions precedent complied with by their Legislature, partly in July, 1868, and partly in February, 1870; and so this bill, for which the Senator from Indiana says he is going to vote, affirms. It says:

Whereas the people of Georgia have framed and adopted a constitution of State government which is republican; and whereas the Legislature of Georgia elected under said constitution has ratified the fourteenth—

Which was done in July, 1868—

and the fifteenth amendments to the Constitution of the United States; and whereas the performance of these several acts in good faith is a condition precedent to the representation of the State in Congress; Therefore, etc.

"If we admit Georgia on that ground, as the preamble to this bill recites, then we emphatically admit also the validity of the acts in consequence of which we are to admit Georgia."

Mr. Morton: "I think my friend overlooks the fact that this Legislature, on the same day that it ratified the fifteenth amendment, ratified the fourteenth amendment also, as if it had never been acted on by the pretended Legislature of 1868. That is the fact."

Mr. Schurz: "I think I shall be able to show that the ratification of the fifteenth amendment falls under the same head with the ratification of the fourteenth amendment; and I would at the same time ask the Senator, inasmuch as we insisted upon the expurgation of the constitution of Georgia, which act was performed in 1868 and not reperformed now, are we going to admit the State without its having fulfilled that fundamental condition? Are we going to be satisfied with that? But if we are satisfied with that, we are satisfied with an act performed in 1868 and not repeated since. Therefore, if we accept that condition as satisfactorily complied with, I do not see how there is any ground to stand on but that we must necessarily recognize the Legislature which performed the act complying with that condition.

"It may be said, therefore, that the Legislature was elected, and all that was done by it was done by virtue and under the sanction of a State constitution, and not otherwise. That State constitution defined the term of life of the Legislature, making it two years for the House of Representatives and four years for the Senators, one-half to be elected biennially. I repeat, the State Legislature as such could find no condition of existence at all outside of the State constitution, for without the State constitution it certainly would not have been a State Legislature. The Legislature commenced in 1868, and, according to the constitution, providing for biennial elections, it must

necessarily end—at first sight, at least, we should conclude so—in 1870.

"Now, it is claimed that the State Legislature may continue its official existence and authority for another term of two years. On what ground is this claimed? The Senator from Indiana takes the very broadest ground. He asserts that its existence as a State Legislature will commence only with the admission of Georgia as a State of the Union; that is to say, the State Legislature will commence its legitimate and legal life on the very day when we here in Congress pass an act admitting the State of Georgia. Now, sir, if so, how can its previous acts, not only those which were performed in 1868, but also those which have been performed in February, 1870, be considered legal, if, as will not be denied, they could be performed only by a State Legislature?"

Mr. Morton: "Will the Senator allow me to answer him?"

Mr. Schurz: "Certainly."

Mr. Morton: "Upon the theory in all cases received where a new State is formed out of a Territory, never a State before, that when the State is finally admitted the act relates back in legal effect to sanction those things that were done with a view to admission and as conditions of admission."

Mr. Carpenter: "Office-holding as well as every thing else?"

Mr. Morton: "No, sir. I am not speaking of that."

Mr. Schurz: "Yes, sir, it is on the ground of the so-called doctrine of relation that we consider those acts which were performed by a Legislature, elected as a State Legislature in a Territory, before that Territory was admitted as a State, legal, inasmuch as the admission of the Territory as a State relates back and validates all those acts which were performed under the sanction of the State constitution before. That is what I understand the Senator from Indiana to say. Am I correct?"

Mr. Morton: "Certainly."

Mr. Schurz: "Yes, the act of admission does relate back, and validates that which was done before it; but if it validates the acts performed by a Legislature, I should like to know whether it does not validate that Legislature itself. If it validates the acts performed by the Legislature, does it not validate and legalize also the body which performed the acts at the time when the acts were performed? If the expurgation of the constitution of Georgia was a legal proceeding, and we certainly recognized it as a legal compliance with a fundamental condition imposed by Congress to be validated by the act of admission, I would ask the Senator from Indiana whether it can possibly be assumed that the Legislature, when it performed that act, had no legal existence?"

Mr. Morton: "I will take the State of Nebraska, where a condition was imposed, and the condition was to be agreed to by the Legis-

lature before the act of admission. Afterward Nebraska came in. She dates as a State from the date of her admission by act of Congress. She does not date as a State from the time that condition was performed by the Legislature. In other words, she was not a State before she was a State."

Mr. Schurz: "No, sir, that is true; she was not a State before she was a State; but I would ask the Senator whether the Legislature which complied with that fundamental condition was not afterward by the act of admission relating back to the act of the Legislature recognized as a Legislature, which only as a State Legislature could perform such an act?"

"Mr. Morton: "After it fully came in, of course it was."

Mr. Schurz: "That is the very point I am coming to."

Mr. Morton: "Then we agree."

Mr. Schurz: "I repeat, sir, if we admit that the act of admission relates back to the acts of the Legislature and validates them, then it must necessarily relate back to the body that performed the acts at the time when those acts were performed. I think it never was pretended that the term of a Legislature elected in a Territory, as an inchoate State Legislature, and legalized afterward by the act of admission of that Territory as a State, commenced only after the act of admission; but, if I remember correctly, it has been always held that the act of admission validating the acts of the Legislature, validated at the same time the existence of the Legislature at the time when those acts were performed. Has not this always been held? And was it ever pretended, I ask the Senator from Indiana, when Congress admitted the other reconstructed States, that the term of their Legislatures commenced on the very day when the act of readmission was passed? I have not heard of a single case where such a thing was done or pretended."

"But, sir, if we should accept the doctrine which it seems is held now by the Senator from Indiana, that the Legislature was not a legal State Legislature, and that the act of admission does not legalize its existence at the time it performed these acts complying with the conditions precedent, what would be the consequence? The whole system of reconstruction, which we have been so laboriously building up, will be tumbling down; all the constitutional amendments fall to the ground; and I see, to use an old figure of speech, the Senator from Indiana, like a blind Samson, shaking the only pillar on which the validity of these constitutional amendments can rest."

But, sir, we are estopped from accepting any such doctrine. We are estopped by the very act of December 22, 1869, which, by not providing for the reperformance of the conditions precedent, recognized the validity of the legislative acts by which they had been performed. We are estopped by the very preamble to this

bill, for, if we accept this doctrine, then the fifteenth just as well as the fourteenth amendment will have to be ratified again by the Legislature of Georgia after Georgia is admitted as a State; for such acts, being of that class which can only be legally performed by State Legislatures, must necessarily fall to the ground as soon as we assume that the bodies which did ratify them were not State Legislatures.

"It seems to me that no case in the world can be clearer. This Legislature exists as a State Legislature by virtue of the State constitution of Georgia. That State constitution of Georgia knows no other but biennial Legislatures. This Legislature commenced in 1868, and it must, therefore, according to the constitution, end in 1870. If this Legislature does not exist by virtue of the State constitution, then it had no constitutional authority whatever to ratify constitutional amendments. These acts are validated by the act of admission; and, if we recognize their validity, we must necessarily recognize the legality of the body which performed the acts at the time when it performed them.

"From whatever point of the compass I may look at this question, I can come to no other conclusion but that the continuation of the Legislature by its own act, the continuation of its authority beyond its term of two years, in violation of the fundamental law of the State of Georgia, would be an act of gross, palpable, and flagrant usurpation."

Mr. Thurman, of Ohio, said: "Senators, it is of no use to mince this matter. This is simply an attempt at usurpation in Georgia, as plain and flagrant an attempt at usurpation as ever marked the course of any men in this world who were seeking power by illegitimate means; and if you adjourn without passing this bill substantially in the form it is, so far as this Bingham amendment is concerned, if you leave them room and verge enough in any way whatsoever to accomplish their purpose, relying upon being supported in their bad acts, relying upon the influence they can bring to bear by these manufactured stories of violence, by these stereotyped falsehoods upon their own people, by this very incarnation of the spirit of lies, they will come here at the next session of Congress and ask you to sanction their usurpation, or, if not that, to ask you, 'Pray what can you do about it?'

"Take one course or the other, Senators. Stand by this constitution according to its true meaning; stand by it according to that interpretation which makes it consistent with the Constitution of the United States; and if you stand by it in that way let your will be made known, and let it be made known in such a manner that it can become effective. If you are not prepared to do that, if you are prepared to see constitution, and law, and republican government, and republican ideas, and republican principles, trampled under foot by a set of adventurers usurping power in one of the

States of this Union; if that is the sanction you wish to give, then, for God's sake, be bold about it and say so in plain and unequivocal words. Do not mince the matter; do not dodge the matter; do not deal in equivocations or dubious words. Speak truth or speak falsehood."

Mr. Sumner, of Massachusetts, said: "The Bingham amendment is in few words, but they are words of despair to the loyal men of Georgia, and words of cheer to the disloyal. I have listened to the arguments in its favor. Do I mistake, when I say that they all resolve themselves into technicality? At one moment we have allegations of 'irregularity,' and at another of 'estoppel,' and such technicalities play their part, while the good people of Georgia are sacrificed. We are estopped, so it is said, by the act of December 22, 1869, which, failing to provide for the reperformance of certain conditions precedent, recognized the validity of the legislative acts by which they had been performed. Very well. Suppose the legislative acts are recognized as valid, what then? Because the ratification of the constitutional amendments is recognized, does it follow that Congress is thereby 'estopped'—such is the word—in completing the work of reconstruction? I cannot comprehend this reasoning. It would be of value in a county court, but it is out of place in the Senate of the United States, on a question of reconstruction. To my mind, all this is a matter of supreme indifference. The powers of Congress are above any such incident, and nothing has occurred to impair them in any way. They exist now as at the beginning, awaiting the discretion of Congress.

"Do you ask where these powers are found? Of course in the two constitutional amendments already proclaimed, being ample sources if none others existed. Out of these Congress is authorized to do all that is needed to enforce emancipation and to protect the rights of the citizen. This is plain—very plain.

"But there are three other sources, each of which is overflowing. The first is from the necessity of the case, *ex necessitate rei*. This is the very ground on which Chief-Justice Marshall asserted the power of Congress over the Territories; but it is equally applicable in the work of reconstruction. From the necessity of the case this power must be in Congress, as without it reconstruction could not be completed. You must renounce reconstruction or recognize this power.

"Then comes the 'guarantee' clause, which is another bountiful, all-sufficient fountain. The United States are to guarantee a republican form of government to the States. But this guarantee can be executed only through Congress. This clause is at once old and new. It is old as the Constitution itself, but it is new in its practical exercise. And the reason is obvious. So long as slavery prevailed, this mighty power slept; but it was the sleep of a

giant. At last it has awakened, never again to sleep or slumber. From this time forward the duty of the nation to guarantee a republican government to all its parts will be constant and ever present, and this duty is reinforced by all needful powers. The guarantee is continuing and perpetual, and it must be executed at all hazards. In its execution, Congress must fix the definition of a republican government. How often have I said this; but I shall not fail to repeat it so long as the occasion requires. To Congress belongs the duty of determining what is a republican government, and then it must see that such a government prevails in every State.

"If in any State the existing government fails according to the just standard, or if it is in any way menaced, then must Congress interfere to execute the sleepless guarantee. And in this interference it may act according to its discretion, determining the occasion and the 'means' to be employed. It may act by repression or by precaution, and it may select any 'means' proper for the purpose. To say that it may not act by precaution as well as by repression is contrary to reason, and I may say to common-sense. Whatever may be done by repression may be done by precaution also. Such is the experience of life in other things, and this obligation of guarantee is subject to the universal law. In the selection of 'means' the whole field and the whole arsenal are at its command. Not an instrument, not a weapon proper for the purpose, which it may not grasp. Here the language of Chief-Justice Marshall, so often quoted, harmonizes with the claim of power which I now make:

The Government which has a right to do any act, and has imposed on it the duty of performing that act, must, according to the dictates of reason, be allowed to select the means, and those who contend that it may not select any appropriate means, that one particular mode of effecting the object is excepted, take upon themselves the burden of establishing that exception.

"In our recent debates, able Senators have denied every thing. They will not concede the 'means,' and they even ignore this great clause, which, as Cicero said of the ancient *senatus consultum*, has rested so long, like a sword in its scabbard. But there it is. Senators may ignore it; they may not see it; but there it is in the Constitution. In attempting to belittle this clause, Senators only show how little they appreciate the lofty unity of the republic. Other clauses are important in the machinery of government; but this guarantee makes the republic one and indivisible, being 'One out of Many,' and places the rights of all under the protecting power of the nation.

"Before the extinction of slavery, State rights were successful against this guarantee. To invoke this tyrannical pretension was enough. How often was it heard on this floor! How completely did it dominate the Constitution itself! But the habit still continues, and we are still compelled to hear this same

pretension, under which States *played the turtle*, drawing head, legs, and tail, all within an impenetrable shell. With the overthrow of the rebellion on the bloody field, this pretension should have been abandoned and forgotten. A State is not a turtle, which can shut itself within its shell, and enjoy its own separate animal existence, but it is a component part of this great republic, with which it is interlaced and interlocked so as to share with every other State a common life, subject to one and the same prevailing law. To insist that a State can play the turtle now as in the days when slavery ruled is to dishonor the Constitution and to abandon the crowning victory over the rebellion.

"Do you ask for the power in the Constitution to enter into a State and establish republican government? I give it to you in an immortal text. To question it is to show an ignorance of language, which in this case is clear beyond criticism, and an ignorance also of the true genius of American institutions, where unity of rights is the alpha and the omega. The national motto, '*E Pluribus Unum*,' is another expression of that great unity by which the States are lost in the nation. And this guarantee I now invoke for the protection of the good people of Georgia, and for the protection hereafter of human rights when imperilled anywhere within the limits of the republic.

"But there are other and exceptional reasons why Georgia is still within the control of Congress. The process of reconstruction in this State is not yet completed; so that the government there is simply provisional and nothing else. This is only according to the Reconstruction Act of March 2, 1867, where it is provided:

That, until the people of the said rebel States shall be *by law* admitted to representation in the Congress of the United States, *any civil governments which may exist therein shall be deemed provisional only*, and in all respects subject to the paramount authority of the United States at any time to abolish, modify, control, or supersede the same.

"Nothing can be more explicit. Until the people of the rebel States are 'by law' admitted to representation, they are under the power of Congress. Every thing done is inchoate only, and nothing more. But Georgia is not yet 'by law' admitted to representation, and we are now considering when and how such admission shall take place. Meanwhile, according to express language of the act, the government is 'provisional only;' nor is this all, for the act proceeds to declare further that this government is 'in all respects subject to the paramount authority of the United States at any time to abolish, modify, or supersede the same.' Words cannot be stronger. 'Abolish,' 'modify,' 'supersede.' To argue against their plain meaning is simply ridiculous. To insist that the existing government is beyond the reach of Congress, to be extended or abridged,

to be recognized or superseded, in its discretion, is preposterous. The power is reserved in terms almost excessive in fulness. Therefore do I say, there can be no question of power on the present occasion. As well question that the sun shines or that the river flows.

"There being no question of power, there arises, then, the obligation of duty. Congress has the power to protect republican institutions in Georgia, and to protect the good people there, and it has the further power to superintend the work of reconstruction to the end. All this it must do. It cannot abandon the appointed work. Of course, it will ascertain the exact condition of things, and will then apply the remedy. No excuse of State rights, no fine-spun technicality, no plea of irregularity, no argument of 'estoppel,' can be heard. All these are trivial and unworthy against the commanding duty. Georgia must be saved to herself and to the Union, and Congress must supply the means.

"Several courses are open to Congress, and all equally within its powers; for all are derived from the same fountains.

"1. Georgia may be remanded for an indefinite period to a condition like that of the Territories, subordinate in all respects to the jurisdiction of Congress, which may meanwhile mould it into loyalty and order.

"2. Or the State may be subjected to a military government until such time as it is fit in every respect for self-government.

"3. Or the existing provisional government may be invested with the powers of the State, in such form and way and for such term as Congress in its discretion shall think best.

"I doubt not that there are other modes within the jurisdiction of Congress; but these are all contained substantially in the three I have named.

"It is not now proposed to remand Georgia to a territorial condition or to subject the State to a military government. But it is proposed to place it in charge of the existing provisional government, which is to continue for a full constitutional term; and this is done as the best way of guarding against disturbing forces from the late rebellion. It is said that this will be sufficient. I hope that it may be. I am satisfied that it is the least Congress can do in the exigency. Any thing short of this will be the betrayal of those who have a right to our protection.

"Against this simple and moderate proposition is interposed the Bingham amendment, which, however plausible in form, is destructive in consequence. It is enough that it hands over the State to misrule and violence. Senators, how can you do this thing? How can you hesitate to take every heed and precaution against even the possibility of such an occurrence? You have the power. Then must you exercise it. In the recent history of Georgia nothing can be adduced to make you hesitate.

On the contrary, all things, when properly understood, conspire to constrain the exercise of this power.

"How feeble is the argument that *because* Governor Bullock was chosen Governor and the Legislature commenced its session at a given date now passed, therefore, in this process of reconstruction, the constitutional term of the Governor and of the Legislature must be limited to two years from that date. Besides ignoring all the controlling powers of Congress, this assumption ignores also the conduct of this very Legislature by which its organization was for a while defeated. Nothing is clearer than that the termination of the provisional government in Georgia was contingent on the performance of certain covenants, express and implied. These covenants have been outrageously violated. The very form of government underwent a change when persons clearly ineligible from disloyalty were allowed to take part in it while citizens entitled to equal rights, and especially protected by the reconstruction laws, were tyrannically ejected from the Legislature. There was for the time being a usurpation. Had this violation of underlying covenants been anticipated, reconstruction would have been postponed. No Senator will pretend the contrary. But Congress, in view of what has occurred, may justly do what it would have done, had it anticipated the result. It may postpone reconstruction—treating the Legislature meanwhile as provisional, and recognizing its acts only so far as in the judgment of Congress they are fit to be recognized.

"Am I not right when I insist that Congress is a High Court of Equity, with Georgia at its bar? It only remains that it should apply the principles of equity, especially supplying deficiencies in the existing law, enjoining against threatened wrong, and seeing that justice is done—all technicalities to the contrary notwithstanding. Against all strictness of law conscience must prevail, and, if there are niceties and subtleties in the law, they must all minister to the completion of reconstruction. To this end, the process of Congress must go forth in such form as will best establish peace and security in that State under the safeguard of equal laws. With the execution of this process Georgia will be a republican government in reality as in name."

Mr. Carpenter, of Wisconsin, said: "Why, sir, what is the meaning of all this wild talk about the Constitution being construed in the light of modern progress and new American ideas? What do Senators mean by it? There is nothing quite so easy as generality of expression. There is nothing quite so unprofitable in the management of practical affairs as mere oracular declarations. Much that the Senator has uttered everybody concedes. When he leaves the field of constitutional discussion entirely, and goes into a very learned discussion of the technical rules which regulate the ju-

isdiction of the court of chancery, quoting from the decisions of the chancellors, of course every Senator assents to his propositions: but the wonder is to see what they have to do with this question. Does the Senator from Massachusetts seriously maintain that Congress has the power to amplify its jurisdiction according to the generous theory of a court of chancery, to meet any case which, in its judgment, calls for a remedy? Here is the Constitution, it is still in print, it still lies on your tables, and we still go up to the President's desk and swear to support it. Turn now at random to any one of its provisions: "No State shall coin money." That is the provision, notwithstanding the civil war, and notwithstanding the fourteenth and fifteenth amendments. Does it still mean what it used to mean, or, in the light of modern progress and American ideas, may a State coin money? The provision in the Constitution is as follows:

No State shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make any thing but gold and silver coin a tender in payment of debts; pass any bill of attainder, *ex post facto* law or law impairing the obligation of contracts, or grant any title of nobility.

"Now, sir, since the war, and conceding every thing to modern progress and new American ideas, which can properly be conceded to them, does the Senator maintain that a State may enter into a treaty; may grant letters of marque and reprisal; may coin money; may emit bills of credit; may make any thing but gold and silver coin a tender in payment of debts; may pass any bill of attainder, *ex post facto* law or law impairing the obligation of contracts?

"Now, I ask the Senator to descend from his tripod, to emerge from his oracular and profane mysteries, and meet the precise questions. Can Congress do any one of the things which the provisions of the Constitution say it shall not do? For instance, can Congress, since the war, grant titles of nobility? Many a soldier has earned them; but can Congress grant them? If the Senator does not maintain the affirmative of any one of these questions, what does he mean by all this wantonness of speech? If no particular provision of the Constitution has been changed, or can be disregarded, how is it that every provision or the whole Constitution has ceased to be obligatory? This loose method of construction, this utter contempt of the Constitution, bodes evil to our country, and nothing but evil.

"Sir, we all understand that we are engaged in the transaction of grave and important business. The admission of a political community into the fellowship of the Union as a State is no trifling matter. It should not be done lightly, nor in heat, nor in haste, nor in passion. We are free men to-day, the fifteenth amendment being secured. We have a per-

fect right, and it is our bounden duty, to give the most elaborate investigation and mature deliberation to this subject. We are considering the bill which lies upon your table for the admission of the State government of Georgia into this Union as a State. From the first organization of the Government down to the civil war in 1860 the admission of new States was matter of frequent occurrence. Vermont and Kentucky were the first two States admitted into the Union. They were declared to be admitted as 'new and entire' States of the Union. This terse and masculine phrase, 'new and entire,' has deep significance. Take now the Statutes-at-Large, and it will be found that, in the instance of every State admitted into the Union prior to 1861, it is declared to be admitted 'on a footing with the original States in every respect whatever.'

"But, sir, the bill now before us for the admission of Georgia is a different thing altogether. It declares, indeed, that Georgia shall be admitted as a State, but it says not much about her coming in on a footing of equality with the other States. The first two lines of the bill declare that she shall be a State. Then follow three pages of solemn enactment designed to prevent her being admitted to the full rights of a State. It does not declare her equal to the other States, but it does provide that she shall not be.

"In the first place, here is what is called the Bingham amendment, which I will pass over for the present, and then comes:

And provided further, That the State of Georgia is admitted to representation in Congress as one of the States of the Union, upon the following fundamental conditions:

First, that the constitution of Georgia shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote, etc.

"And the next condition is:

Second, that it shall never be lawful for the said State to deprive any citizen of the United States, on account of his race, color, or previous condition of servitude, of the right to hold office under the constitution and laws of said State.

"That is of course not covered by any amendment to the Constitution of the United States. The fifteenth amendment to the Constitution of the United States is this:

The right of citizens of the United States to vote shall not be denied or abridged by the United States, or any State, on account of race, color, or previous condition of servitude.

"That is as far as you have gone in your fundamental law. You have said that no distinction of race or color shall exist in voting, and that is the law in New York and Massachusetts, in Wisconsin and in Indiana, and everywhere else in this Union; but in Georgia you advance a step further and say that she shall never so change her constitution as to deprive any citizen of the United States, on account of his race, color, or previous condition of servitude, of the right to hold office under

the constitution and laws of the State. And then—

Third, the constitution of Georgia shall never be so amended or changed as to deprive any citizen or class of citizens of the school rights and privileges secured by the constitution of said State.

“The school rights and privileges,” the precise rights and privileges. In other words, you strike down the power of Georgia to change, to amend the present provisions of the constitution on that subject as it now stands.

“I come, then, to the exact pending question, whether Congress may deny to a State, in the form of a condition contained in the act of admission, a power secured to the State by the Constitution of the United States.

“There are certain fundamental principles to be borne in mind in every constitutional discussion; one of which is, that the Government of the United States is one of delegated powers, and that all sovereign powers not delegated to the Union are reserved to the States respectively, or to the people. The powers of the Union are either conferred in express language or by reasonable intendment as an incident to or a means of executing some power expressly granted. All else belongs to the States. The tenth amendment to the Constitution is in full force, and declares:

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

“Now, if it be claimed that Congress has the power to enact this bill, the burden is upon those who make such claim to point out the provision in the Constitution which grants such power, or specify the power to which this power is an incident or a means of execution. Of course at this point in the discussion I take leave of the Senator from Massachusetts. I do not intend to skirmish with him in the twilight of the Declaration of Independence, nor contend with him as to his translation of *E Pluribus Unum*. I dismiss all that part of the debate for the purpose of calling your attention to a little instrument you have sworn to support, called the Constitution of the United States.

“Ordinarily, when the Constitution does grant a power to the Union, ingenious and learned men, like the Senator from Michigan (Mr. Howard), the Senator from Vermont (Mr. Edmunds), and the Senator from Indiana (Mr. Morton), will be able to concur in pointing out the provision which confers the power. But how is it in this case? Perhaps the most generally approved popular ground upon which to rest the power to impose these fundamental conditions is this: that inasmuch as the power to admit new States is with Congress, and Congress may, in its discretion, admit or refuse to admit a particular State, it may admit a State upon such terms and conditions as it pleases. But the Senator from Michigan (Mr. Howard) exploded this heresy at one dash.

“He said, and, being one of the best lawyers in this body, his opinion is entitled to consideration:

The first provision in this bill, not a condition, but a positive enactment—and in that light I also view the other clauses of the bill which purport to be conditions; they are not legally and technically speaking, in my judgment, conditions; they are positive, imperative enactments, and take effect as such as much as if they had declared that such and such should be the case in reference to the State of Mississippi—the first clause requires every member of the Legislature of Mississippi to take an oath, substantially, that he does not fall within the third article of the fourteenth amendment of the Constitution of the United States.

“The idea, then, that a State could be admitted upon conditions, in any lawyer-like sense of the term condition, finds no favor with the Senator from Michigan. He rests the right to pass this bill upon the power of Congress to guarantee a republican form of government to the States, and maintains that what are called conditions are positive legislative enactments.

“Then came the Senator from Vermont (Mr. Edmunds), and if there be a better lawyer in this Chamber than the Senator from Michigan, which I do not assert, it is the Senator from Vermont. He says:

Some gentlemen imagine that this authority is found in what is called the republican guarantee clause of the Constitution.

“Thus, referring to his friend from Michigan:

I do not think so, I confess, as it stands upon this particular bill, because I think that we might change—not entirely abrogate, it may be, but we might change—either one of these provisions in the constitution of Mississippi, and the constitution would be republican still; it might be as efficient still possibly by some change. So that, in order to secure a republican form of government in Mississippi, it does not occur to me that it is essential that the precise form of security for suffrage and for education, that that constitution now has, should be held to and observed.

“He goes on further to repudiate the ground upon which the Senator from Michigan rested the power, and placed it finally upon the power of the Government of the United States to make a treaty with a State, which I shall consider presently.

“Thus we see the popular idea, that Congress may impose conditions repudiated by the Senator from Michigan, who rests the power upon the guarantee clause in the Constitution, and that, in its turn, the theory of the Senator from Michigan is repudiated by the Senator from Vermont, who rests this power upon the ground of a treaty between the Union and the State; although he did not condescend to point out what provision of the Constitution authorizes Congress to enter into treaty relations with a State either to restrict or enlarge the powers of such State.

“I now cite a high authority upon all legal questions, the Senator from Indiana (Mr. Morton), and the Senate will see how completely

and conclusively he puts to rout all his associates in this discussion.

"Discussing this amendment, the Senator from Indiana said :

Mr. Morton : I would respectfully suggest to the Senator from Missouri that he can attain all that he desires by his amendment and yet leave off the last and the objectionable clause, which is that containing the statement that this shall never be changed. I do not believe we have the right to lay a perpetual obligation upon an incoming State or upon a State that is about to be restored. We can prescribe the conditions upon which we will admit a State. We can say "You shall put universal suffrage in the constitution," or "you shall put voting by ballot in the constitution, or we will not receive you." But after the State has been received it is at liberty then to amend its constitution in any manner so that it maintains a republican form of government. We cannot bind any State not to amend the constitution, so that the amendment be consistent with a republican form of government ; but we can say that these constitutions shall not be accepted, in the first place, unless they contain a provision that the voting shall be by ballot.—*Congressional Globe*, Fortieth Congress, first session, page 103.

"Again, on the 27th of May, 1868, the Arkansas bill being before the Senate, the Senator from Indiana delivered an unanswerable constitutional speech, from which I shall read several extracts :

Mr. President, I should like to inquire what is to be the practical advantage to result from the amendment of the Senator from Missouri? He seeks to impose a fundamental condition upon the people of Arkansas, that they shall never amend their constitution in regard to suffrage so as to take it away from any class of persons who have it by the constitution as now framed.

"I desire to say at this point that although the precise question before the Senate at that time, namely, the power of Congress to fetter a State in regard to suffrage, may be affected by the fifteenth amendment, yet the doctrine and philosophy of this speech are that Congress cannot destroy a power which the Constitution reserves to a State, and the question of suffrage was only an instance illustrating the general principle.

"Sir, the whole doctrine of fundamental conditions, the more you consider it, the more candidly and patiently you investigate the ground upon which it rests, looms up in monstrous proportions of absurdity more and more. It deals a destructive blow upon the very foundations of the Constitution, and destroys the harmony of our system of government. It is sowing the wind that our children may reap the whirlwind."

The following amendment was offered by Mr. Williams, of Oregon: Strike out all between the word "officer," in the twelfth line, second page, and the word "provided," in the eighteenth line, same page, and insert :

Provided further, That the next election for members of the General Assembly of said State shall be held on the Tuesday after the first Monday of November, A. D. 1872, and the last clause of the second subdivision of the first section of the third article of said constitution, in the following words: "The General Assembly may, by law, change the time of

election, and the members shall hold until their successors are elected and qualified," shall never be by any Legislature exercised so as to extend the term of any office beyond the regular period named in the said constitution ; and the said General Assembly shall, by joint resolution, consent to this proviso as a fundamental condition before this act shall take effect.

It was rejected by the following vote :

YEAS—Messrs. Abbott, Ames, Boreman, Chandler, Cole, Drake, Fenton, Flanagan, Gilbert, Hamilton of Texas, Howard, Howell, Lewis, Nye, Osborn, Ramsey, Rice, Spencer, Stewart, Sumner, Thayer, Warner, Williams, and Wilson—24.

NAYS—Messrs. Anthony, Buckingham, Carpenter, Casserly, Corbett, Davis, Ferry, Fowler, Hamilton of Maryland, Howe, Johnston, McCreery, Morrill of Maine, Morrill of Vermont, Patterson, Pratt, Schurz, Scott, Sherman, Sprague, Stockton, Tipton, Trumbull, Vickers, and Willey—25.

ABSENT—Messrs. Bayard, Brownlow, Cameron, Cattell, Conkling, Cragin, Edmunds, Hamlin, Harlan, Harris, Kellogg, McDonald, Morton, Norton, Pomeroy, Pool, Revels, Robertson, Ross, Saulsbury, Sawyer, Thurman, and Yates—23.

Mr. Wilson, of Massachusetts, offered the following amendment: to strike out the first proviso, which was this Bingham amendment, and insert as follows :

That in consequence of the failure of the General Assembly of Georgia to effect a legal organization for a period of over eighteen months, it be, and hereby is, declared that the term of service of the said General Assembly shall date from the 26th of January, 1870, and shall continue until the persons to be chosen on the Tuesday after the first Monday of November, 1872, as members of the General Assembly of such State are qualified: *Provided*, That the last clause of the second subdivision of the first section of the third article of the constitution of Georgia, in the following words, "The General Assembly may by law change the time of election, and the members shall hold until their successors are elected and qualified," shall never be by any Legislature exercised so as to extend the term of office beyond the regular period named in the said constitution ; and the said General Assembly shall by joint resolution consent to this fundamental condition before this act shall take effect.

Mr. Pomeroy, of Kansas, moved the following as a substitute for that of Mr. Wilson :

That the existing government in the State of Georgia is hereby declared to be provisional ; and the same shall continue subject to the provisions of the acts of Congress of March 2, 1867, and March 23, 1867, and of July 19, 1867, until the admission of said State by law to representation in Congress ; and for this purpose the State of Georgia shall constitute the Third Military District.

Sec. 2. *And be it further enacted*, That, in accordance with the provisions of and under the powers and limitations provided in said acts, an election shall be held in said State on Tuesday, the 15th day of November, 1870, for all the members of the General Assembly of said State provided for in the constitution of said State, adopted by its convention on the 11th day of March, 1868, at which election all persons who by said constitution are electors shall be entitled to vote. And said General Assembly so elected shall assemble at the capitol of said State on the 13th day of December, 1870, and organize, preparatory to the admission of the State to representation in Congress. And the powers and functions of the members of the existing General Assembly shall cease and determine on the said 13th day of December, 1870.

It was adopted by the following vote :

(Mr. Edmunds). I now call upon the Senate to notice the theory upon which the chairman of the committee has placed his defence of this amendment. He has placed it upon the ground, first, that Georgia was fully reconstructed in 1868; that she then became entitled to representation in the Senate of the United States; that she has been entitled to it ever since, and that she has been improperly denied a seat to her Senators upon this floor, and that now no legislation is required for the purpose of placing her Senators upon this floor. In other words, according to the theory of the Senator from Illinois, Georgia is now and has been since 1868 as much a State in the Union and as much entitled to representation as any other State. This is shown, first, by the report of the Senator as a minority of the Judiciary Committee to this body in 1869, more than a year ago, in which he reported that Georgia was restored, and that Mr. Hill was entitled to be immediately sworn in as a member of the Senate. But the Senator the day before yesterday, in his speech, reiterated this position in the following language:

In my own opinion no legislation whatever is necessary in reference to Georgia. I think she is just as clearly entitled to-day to have her Senators admitted to their seats here as was the State of Arkansas or the State of North Carolina or South Carolina, or any other of the late rebel States at the time their Senators were admitted.

"According, then, to the Senator from Illinois, Georgia has been improperly and wickedly dealt with by Congress in the passage of the act of December 22, 1869; Georgia was most cruelly and wickedly outraged when Congress refused to count her electoral vote for President and Vice-President in February, 1869, and has been improperly denied representation on this floor continually. But when the Senator places himself broadly upon this position, how can he, consistently with the views that he has expressed in regard to the fundamental conditions put in the bills for the admission of Virginia and Mississippi, defend a provision that goes further to interfere with the rights of the States than any claim which was made by those bills, or which was made by myself or the Senator from Michigan (Mr. Howard) in the course of that discussion? For, while we assumed the power of Congress to supervise the States for the purpose of maintaining a republican form of government, we did not assume, what is contained in this bill, that Congress had a right in advance to give a construction to a State constitution, and to legislate against the possibility of that constitution being violated by the Legislature; so that it seems to me the Senator's support of this Bingham amendment, so called, is in direct conflict with the position he has so earnestly and so ably advocated all the time.

"Now, Mr. President, I come to the position taken by the Senator from Vermont, who has delivered an able argument on this subject. He

takes the position in his speech that the government of Georgia is not provisional, but that it is a State government in full force and operation, and that as such the term of office of its officers must be counted from the time the State was restored to its normal position in the Union. Now, I would say to my friend from Vermont that his position, as contained in the speech of yesterday, I regard as utterly at variance with his report as a member of the Judiciary Committee and with the position he took in this body on the 26th of January, 1870.

"I beg leave now most respectfully to call his attention to his own resolution offered in this Senate on the 28th of January, the resolution that gave rise to the report made by the Judiciary Committee, and upon which so much reliance is placed. That resolution reads thus:

Resolved, That the Committee on the Judiciary be, and they are hereby, instructed to inquire and report whether any further legislation is necessary upon the subject of the organization of the provisional Legislature in Georgia.

"If that Legislature was provisional on the 26th of January, 1870, it is provisional to-day. My friend from Vermont clearly recognized it as provisional then, and wanted to inquire what further legislation might be necessary to organize this provisional Legislature.

"Now, Mr. President, is the State of Georgia at present, and has it been regarded as still being, subject to the reconstruction acts of 1867? According to the theory of my friend, Georgia was entirely emancipated from the reconstruction acts in 1868; and it was according to the theory of the Senator from Illinois; but my proposition is that Georgia is to-day under the reconstruction acts of 1867, and has been continuously so, and that Congress, in the act of December, 1869, so regarded it; and that the act of 1869 is not in conflict with the reconstruction acts of 1867, but is simply in aid of them. Now, I will refer to the understanding the executive department has on the subject, and show upon what principle Georgia is now governed and upon what principle action has been taken. I have here an order, issued by the President of the United States on the 4th of January, 1870.

"From this order it appears that General Terry is now exercising the authority of military commander under the acts of 1867, and that the Executive regards Georgia as much an unreconstructed State as any over which military commanders have presided.

"Now, Mr. President, at what time does a State government in a new State go into operation? I will take the case of a Territory just formed into a new State, before its admission into the Union. It must adopt a constitution in pursuance of an act authorizing it to do it. It must elect officers of the State government. Now, when does that State government become effective? From what period does it date? Why, sir, it dates from the time

that the State is admitted. The previous election, the previous formation of the constitution, these are all mere acts of preparation, these are all things preliminary, which amount to nothing and go for nothing unless the State is subsequently admitted. And so with regard to this work of reconstruction; if these States are not subsequently actually admitted to representation, up to that time all that they have done goes for nothing. All that was done before was simply a matter of preparation, preparing them for subsequently coming in and being restored to their places in the Union.

"Therefore the State government, the tenure of the officers, does not date from the time the election was held, but dates from the time of the restoration of the State, when the military commander no longer has power to remove them, when they are no longer under his control. But when the State government goes into operation, and the State is completely restored, then the tenure begins. Any other conclusion is illogical, and is in conflict with the facts and the practice of the Government.

"I think the objection that has been taken to the reorganization of the Legislature of Georgia is entirely swept away. There is nothing left of it. It is a mere prejudice that has been sought to be arrayed against the organization of this loyal Legislature, without a single particle of foundation in law or in fact; and yet this is the burden of the cry all over the land to-day, in the mouth of every Democratic orator, upon the page of every Democratic newspaper, and in the mouth of every man who is in favor of the Bingham amendment, that this Legislature was illegally organized, because twenty-three or twenty-four persons were admitted in place of those who were held to be ineligible, because they had the next highest number of votes. I say it was legal, it was right, it was proper, and it was in pursuance of the law.

"Then, Mr. President, taking all these clauses of the constitution of Georgia together, I state the true doctrine to be this: in the first place, it was not in contemplation of law that these terms should begin until the State takes her place in the Union and the government goes into full operation; that Governor Bullock does not become the Governor of Georgia until the State is restored, and that he is now regarded and treated as the provisional Governor of that State, and that every officer of that State is regarded as provisional until, in the language of the act of 1867, the Senators and Representatives of Georgia have taken the oath of office in both branches of Congress.

"I now come to another point; and, talking about republican governments, I should like to ask any candid mind if it can be regarded as entirely republican that officers who have been elected, and a State government that has been formed, which has been virtually deposed for nearly two years, has been overcome by fraud and violence—I ask if it is republicanism, and

I ask if it is just to have the time while they have been virtually deposed, overcome by violence and fraud, taken out of their term?

"Shall men take advantage of their own wrong? That is the great question. These parties now propose to take advantage of their own wrong. Having held this government until within a few weeks past by force and fraud, they ask that the term shall be allowed to run all the time; that they shall have the benefit of it; and that an election shall be hurried on while they have all the advantages, and which would result in putting out of power the Union men of Georgia, down-trodden, oppressed, suffering every outrage that men can suffer in a land that claims to be civilized. Shall they be turned over bound into the hands of their enemies? No, sir; there is no justice, there is no republicanism, in the claim."

Mr. Schurz, of Missouri, said: "Mr. President, it appears that the issue at the present moment before the Senate is not whether the State of Georgia shall be admitted, for it seems we are all in favor of that; but it is whether the so-called Bingham amendment, prohibiting the State government to continue in office beyond this year, shall be preserved or stricken out from the bill.

"I hesitate a little to go again over that old story of the progress of reconstruction in Georgia; but a few words on that point will be sufficient for the purpose of completing my argument.

"The first steps of legal reconstruction were taken by the people of Georgia in pursuance of the act of March 2, 1867. A constitutional convention was elected from the 29th of October to the 2d of November of that year. The convention met on the 4th of December, 1867, and it adjourned the 11th of March, 1868. The constitution was ratified by the people of Georgia at an election held from the 20th to the 28d of April, 1868. By the act of June 25, 1868, Congress provided that certain States should be admitted upon their compliance with certain fundamental conditions precedent to their admission. As to Georgia, three conditions were imposed: first, the ratification of the fourteenth amendment; second, the expurgation of certain articles from her constitution, which I need not name in detail here; and third, the exclusion from office of those who were disqualified by the third section of the fourteenth amendment.

"The first two of these fundamental conditions were faithfully complied with; the fourteenth amendment was ratified, and the constitution of Georgia was expurgated by the Legislature in July, 1868. But the third of those conditions was evaded. Those who were disqualified by the third section of the fourteenth amendment were not ejected from the Legislature; but, on the contrary, loyal men were expelled and others were admitted who had received only a minority of the votes. The Speaker: "The next amendment in order will be that of the gentleman from Ohio (Mr. Lawrence)."

The Clerk read Mr. Lawrence's amendment, as follows:

Add to Mr. Dawes's amendment the following:

And be it further enacted, That the State of Georgia is admitted to representation in Congress as one of the States of the Union, upon the following fundamental conditions: first, that it shall never be lawful for the said State to deprive any citizen of the United States, on account of his race, color, or previous condition of servitude, of the right to hold office under the constitution and laws of said State, or upon any such ground to require of him any other qualifications for office than such as are required of all other citizens; second, that the constitution of Georgia shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the school rights and privileges secured by the constitution of said State.

The question was put on Mr. Lawrence's amendment; and there were—yeas 48, nays 74.

The amendment of Mr. Lawrence was not agreed to.

The Speaker: "The question recurs on the amendment, as amended, of the gentleman from Massachusetts (Mr. Dawes), which is an amendment to the Senate substitute. Practically, as it now stands, it amounts to a substitute for the Senate amendment, because, if it is adopted by the House, all that the Senate have inserted is stricken out and what is proposed in the amendment is inserted. If there be no objection, it will be submitted as a substitute for the Senate amendment."

The question was put; and Mr. Dawes's amendment as amended, in the nature of a substitute, was agreed to.

The Senate refused to concur in the amendments of the House, and a committee of conference was appointed, and the bill as passed by the House was adopted. It was as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the State of Georgia having complied with the reconstruction acts, and the fourteenth and fifteenth articles of amendment to the Constitution of the United States having been ratified in good faith by a legal Legislature of said State, it is hereby declared that the State of Georgia is entitled to representation in the Congress of the United States. But nothing in this act contained shall be construed to deprive the people of Georgia of the right to an election for members of the General Assembly of said State, as provided for in the constitution thereof.

Sec. 2. *And be it further enacted*, That so much of the act entitled "An act making appropriations for the support of the army for the year ending June 30, 1868, and for other purposes," approved March 2, 1867, as prohibits the organization, arming, or calling into service, of the militia forces in the States of Georgia, Mississippi, Texas, and Virginia, be, and the same is hereby, repealed.

In the Senate, on January 16th, Mr. Stewart, of Nevada, moved to consider the following resolution:

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the State of Virginia is entitled to representation in the Congress of the United States.

Mr. Stewart said: "It will be recollected that we passed a series of measures known as the reconstruction measures, in which it was provided that, when the States which had been in rebellion performed certain acts therein named, they should be admitted to representation in Congress, thereby pledging the faith of the Government to admit them when they had complied with those terms. Several of the States did comply, and were admitted by a resolution without any considerable opposition. Virginia did not vote at the time fixed in those laws. She had formed her constitution, but failed to submit it to the people. No election was held under it. During the last session an act was passed allowing that constitution to be submitted to the people of Virginia and allowing them to vote on it in part. That was done. An election was held, and the President of the United States tells us—and he had the matter examined by his officers—that Virginia has complied in all respects with the reconstruction acts.

"The constitution of Virginia I have before me. It is certainly a republican constitution. This constitution was adopted by an almost unanimous vote of that people. It requires every person who takes an office to swear that he will recognize the equality of all men before the law. Virginia has decided to carry out this constitution by almost a unanimous vote. I see that the amendment of the Senator from Massachusetts has reference to the test-oath. When that question came up, the Legislature, before proceeding, had the matter submitted to the President; he referred it to the Attorney-

necessarily end—at first sight, at least, we should conclude so—in 1870.

"Now, it is claimed that the State Legislature may continue its official existence and authority for another term of two years. On what ground is this claimed? The Senator from Indiana takes the very broadest ground. He asserts that its existence as a State Legislature will commence only with the admission of Georgia as a State of the Union; that is to say, the State Legislature will commence its legitimate and legal life on the very day when we here in Congress pass an act admitting the State of Georgia. Now, sir, if so, how can its previous acts, not only those which were performed in 1868, but also those which have been performed in February, 1870, be considered legal, if, as will not be denied, they could be performed only by a State Legislature?"

Mr. Morton: "Will the Senator allow me to answer him?"

Mr. Schurz: "Certainly."

Mr. Morton: "Upon the theory in all cases received where a new State is formed out of a Territory, never a State before, that when the State is finally admitted the act relates back in legal effect to sanction those things that were done with a view to admission and as conditions of admission."

Mr. Carpenter: "Office-holding as well as every thing else?"

Mr. Morton: "No, sir. I am not speaking of that."

Mr. Schurz: "Yes, sir, it is on the ground of the so-called doctrine of relation that we consider those acts which were performed by a Legislature, elected as a State Legislature in a Territory, before that Territory was admitted as a State, legal, inasmuch as the admission of the Territory as a State relates back and validates all those acts which were performed under the sanction of the State constitution before. That is what I understand the Senator from Indiana to say. Am I correct?"

Mr. Morton: "Certainly."

Mr. Schurz: "Yes, the act of admission does relate back, and validates that which was done before it; but if it validates the acts performed by a Legislature, I should like to know whether it does not validate that Legislature itself. If it validates the acts performed by the Legislature, does it not validate and legalize also the body which performed the acts at the time when the acts were performed? If the expurgation of the constitution of Georgia was a legal proceeding, and we certainly recognized it as a legal compliance with a fundamental condition imposed by Congress to be validated by the act of admission, I would ask the Senator from Indiana whether it can possibly be assumed that the Legislature, when it performed that act, had no legal existence?"

Mr. Morton: "I will take the State of Nebraska, where a condition was imposed, and the condition was to be agreed to by the Legis-

lature before the act of admission. Afterward Nebraska came in. She dates as a State from the date of her admission by act of Congress. She does not date as a State from the time that condition was performed by the Legislature. In other words, she was not a State before she was a State."

Mr. Schurz: "No, sir, that is true; she was not a State before she was a State; but I would ask the Senator whether the Legislature which complied with that fundamental condition was not afterward by the act of admission relating back to the act of the Legislature recognized as a Legislature, which only as a State Legislature could perform such an act?"

Mr. Morton: "After it fully came in, of course it was."

Mr. Schurz: "That is the very point I am coming to."

Mr. Morton: "Then we agree."

Mr. Schurz: "I repeat, sir, if we admit that the act of admission relates back to the acts of the Legislature and validates them, then it must necessarily relate back to the body that performed the acts at the time when those acts were performed. I think it never was pretended that the term of a Legislature elected in a Territory, as an inchoate State Legislature, and legalized afterward by the act of admission of that Territory as a State, commenced only after the act of admission; but, if I remember correctly, it has been always held that the act of admission validating the acts of the Legislature, validated at the same time the existence of the Legislature at the time when those acts were performed. Has not this always been held? And was it ever pretended, I ask the Senator from Indiana, when Congress admitted the other reconstructed States, that the term of their Legislatures commenced on the very day when the act of readmission was passed? I have not heard of a single case where such a thing was done or pretended."

"But, sir, if we should accept the doctrine which it seems is held now by the Senator from Indiana, that the Legislature was not a legal State Legislature, and that the act of admission does not legalize its existence at the time it performed these acts complying with the conditions precedent, what would be the consequence? The whole system of reconstruction, which we have been so laboriously building up, will be tumbling down; all the constitutional amendments fall to the ground; and I see, to use an old figure of speech, the Senator from Indiana, like a blind Samson, shaking the only pillar on which the validity of these constitutional amendments can rest."

But, sir, we are estopped from accepting any such doctrine. We are estopped by the very act of December 22, 1869, which, by not providing for the reperformance of the conditions precedent, recognized the validity of the legislative acts by which they had been performed. We are estopped by the very preamble to this

a provision as this upon this bill that will have any force whatever in regard to Virginia, you can put such a provision upon a bill that will have force in regard to Missouri, or Illinois, or any other State. Therefore, with my imperfect knowledge, I took the liberty of saying that I thought such a provision would be utterly useless."

Mr. Morton: "Now, Mr. President, do we confess, by the adoption of this amendment, that a State has a right to rescind the ratification of an amendment to the Constitution at any time before its final ratification by three-fourths of the States? We make no confession of that kind. We have a right to guard against an act of that kind, without making such a confession. Sir, the ratification of the fifteenth amendment is one of the conditions of the reconstruction of Virginia. We have a right to require it in advance, and to protect ourselves against its rescission up to the time that the fifteenth amendment becomes a part of the law of the land. It is one of the conditions of reconstruction, and, for one, I do not intend to be cheated out of it. The State of New York has rescinded her ratification. I do not believe that she has a right to rescind. But, sir, I do not care about having the fifteenth amendment hang upon a question of that kind. I would rather that the ratification of the fifteenth amendment should be so clear and so perfect that no question of that sort will remain to be talked about by its enemies. Sir, we shall have enough States without counting New York."

Mr. Trumbull: "If this amendment is adopted which the Senator now advocates, and Virginia should next month recall her ratification of the fifteenth amendment, and Virginia should then be put back territorially, would he then insist that her ratification was good?"

Mr. Morton: "If Virginia should rescind, in violation of this amendment, and be put back to her present condition, we will hold her there until she does ratify the fifteenth amendment again, or until she consents to abide by her faith."

Mr. Trumbull: "That was not my question. My question was, where, then, would be the fifteenth amendment? Do you not thereby admit that her ratification of the amendment is gone if you put her back in that way? That is my point."

Mr. Morton: "I think not. I make no admission of that kind."

Mr. Trumbull: "Then why hold her until she ratifies again?"

Mr. Morton: "We simply hold the State as security; that is all."

Mr. Trumbull: "Do I understand the Senator to say that he would hold her for security for that which he has got? Will he keep the money and demand security too?"

Mr. Morton: "We expect, Mr. President, to

have the vote of Virginia for the fifteenth amendment, independent of any attempted breach of faith of that kind, and we give Virginia to understand by this amendment that, if she shall attempt to play a trick upon us in that way, she will lose her representation upon this floor. As to what may be the mere legal consequences following from that, it is unnecessary now to discuss; but we say to her that, if she attempts to play a trick of that kind upon us, she is liable to lose her representation in Congress and to be remanded back to her present position. If we shall adopt this amendment, then Virginia will never do anything of the kind; we have perfect security that she will not. She does not desire to lose her representation in Congress after having once secured it, and it would be security—and that is the way I use the word—against such an act of treachery as was performed by the State of Georgia.

"One word further, and I am done. The Senator from Illinois talks about Virginia, when once restored, as being upon the same footing as the other States. In one sense that will be true, but perhaps in another it will not be true. I believe that, if we have a right to reconstruct a State government that has been destroyed by rebellion, we have a right to protect it after it has been reconstructed; that the right to reconstruct implies the right to protect the reconstructed State. If, after a State government has been reconstructed, it has a right to knock it down, and we have no right to interfere to prevent it being knocked down, but simply the right to set it up again, then our power is imperfect; but if we have the power to reconstruct a State, to reestablish a State government after it has been once destroyed by a rebellion, then have we not the power to protect that new government, to continue it as a republican government, to prevent it being knocked down without requiring us to wait until it is knocked down, and after that to set it up again?"

Mr. Howard, of Michigan, said: "Mr. President, I wish to say one word on the subject of the power claimed by some of the States to retract their ratification of an amendment to the Constitution of the United States. It is in its very nature a serious question. I should very freely vote for the amendment of the honorable Senator from Missouri, if I did not think at the same time I was recognizing an extremely mischievous principle in reference to the power of the States. It seems to me that the remarks of the honorable Senator from Illinois, as to the concession which we are making impliedly by adopting this amendment, are very weighty and very important. It seems to me that, by passing this amendment, though it may be very necessary under the circumstances I agree, we are yielding the principle, for which we all on this side of the Chamber contend, that when an amendment of the Constitution has been once rati-

fied, it has passed completely from the power of the Legislature of the State, and that after that the State has nothing to do with it; it is bound by its ratification for all time. I so understand the Constitution; and I do not wish by my vote here to throw any doubt upon that principle. I cannot imagine how any enlightened court of justice, how any well-instructed judge, would ever come to any other conclusion upon the subject. The Constitution declares that amendments may be proposed by Congress or by the States in convention, 'which in either case shall be valid to all intents and purposes as part of this Constitution when ratified by the Legislatures of three-fourths of the several States.'"

Mr. Conkling, of New York, said: "I must vote against it, first, because, as was said by the Senator from Illinois, there is bound up in it, and ineradicable from it, a confession of the power of a State to retract its assent given to a constitutional amendment. I know of no construction by which we can escape from that conclusion involved in this amendment.

"But, Mr. President, I shall vote against it for a reason which, as I weigh the two together, is much more important with me than the reason from which I pass. I refer to the fact that this amendment contains an avowal that, when we recognize the State of Virginia and admit her to representation, she then is not a State of the Union at all. Is it not so, sir? Has Virginia been out of the Union? Has the Union been dissolved so that Virginia was not in it? That I have never believed. The honorable Senator before me (Mr. Pomeroy) says that he thinks it has been. I take that supposition to test his argument; suppose the Union has been dissolved and the State of Virginia has been out of the Union, what, then, is the nature and quality of that act which we are about to do? Is it not to bring back Virginia into the Union, so that she shall again be, as she once was, a State, and a State of the Union? The Senator assents to that. Manifestly it follows. And yet here comes a proposition which says that Virginia shall not, even after the consummation of that measure now pending, be a State in the Union; that when admitted she shall not have that statehood, she shall not represent that equality, she shall not illustrate and embody that fact which exists, if it exists at all, in the circumstance and the truth that she is a State equal to the other States in the Union. On the contrary, take the case as I understand it and as the Senator from Kansas denies it to be; take the case as I think it was most aptly stated by Mr. Lincoln, that Virginia was out of her proper practical relations with the Union, what, then, is the act which we are about to perform?"

Mr. Davis, of Kentucky, said: "Mr. President, I am free to state, and I state distinctly and with emphasis, that I believe this proposed amendment of the Constitution is utterly void, and that every amendment of the Constitution

that has been passed in the last six or seven years is utterly void and inoperative. In relation to this particular amendment, my first position is that Virginia was coerced to ratify the fifteenth amendment; that a condition unconstitutional, coercive in its character, which deprived that State of its free will upon the subject, was imposed upon Virginia by the law of Congress, upon the motion of the honorable Senator from Indiana (Mr. Morton), declaring that, before Virginia could be admitted to representation in either House of Congress, she should be required absolutely and unconditionally to accept the fifteenth amendment. I say, sir, that such a condition as that avoids the act of ratification by Virginia. The time will come when, before some forum, some tribunal in the United States, that great question will be made; and in my judgment that question will be ruled in favor of the State and of the freedom of the State, by coming to the conclusion that her ratification was coerced from her and is not binding on her.

"But, Mr. President, I have another objection to that and all these amendments, in my judgment still more fatal; and it is this: when Congress proposes an amendment to the Constitution, every State in the Union must be represented in the two Houses of Congress. Congress cannot get together with a representation in the Senate and in the House of Representatives from two-thirds of the States and exclude representation in both Houses from the other third, and legitimately and constitutionally propose an amendment to the Constitution. That is a universal principle of law, not only of constitutional law, but of municipal law, as the able lawyer from Oregon knows. When there is a corporation with a special government, a government consisting of a directory of various members, and a part of this government, a portion of this directory, excludes other members of the directory from the transaction of its business, every thing that the remaining directors do is null and void. They have no power to expel a part of the governing power from the board that governs, and then to perform the duties and exercise the powers of the corporation as though its government was full and complete. If they do so, there is no court that has ever ruled upon that question which has not decided that the exclusion of a part of the directory from its business avoids every thing that is done by the remaining members.

"Well, now, sir, if that is true in relation to the government of corporations for the transaction of private business, how much more true it is in relation to governments, to constitutions, to fundamental laws! When the Constitution provides expressly and plainly that two-thirds of both Houses of Congress shall be required to propose amendments to the Constitution, is that requisition, that principle of the Constitution, satisfied by the Senators and Representatives from two-thirds of the States getting together, excluding all the Senators and Rep-

representatives from the other third of the States, and then proposing amendments to the Constitution, and passing those amendments by a majority of two-thirds of a mutilated Congress? Is that complying with the requisition of the Constitution? Not at all, sir."

Mr. Sumner, of Massachusetts, said: "Mr. President, I have but one word to say, and it is one of gratitude to the Senator from Indiana for the complete adhesion which he now makes to a principle of constitutional law which I have no doubt is unassailable. The Congress of the United States will have forevermore the power to protect reconstruction. No one of these States by any thing that it may do hereafter can escape from that far-reaching power. I call it far-reaching—it will reach just as far as the endeavor to counteract it; it is coextensive with the Constitution itself. I have no doubt of it, and I am delighted that the distinguished Senator from Indiana has given to it the support of his authority."

The Vice-President: "The Senator from Missouri modifies his amendment, and the Secretary will report it as modified."

The Secretary: "The amendment, as modified, now reads:

Provided, That, should the Legislature of said State at any time hereafter pass any act or resolution purporting to rescind, annul, or retract, its ratification of the fifteenth article of amendment of the Constitution of the United States, the passage of such act or resolution shall operate to exclude said State from representation in Congress, and to remand said State to its condition immediately prior to the passage of this resolution."

The Vice-President: "Upon this amendment the yeas and nays have been ordered."

The question being taken, resulted as follows:

YEAS—Messrs. Brownlow, Cameron, Drake, Howe, Morton, Osborn, Pomeroy, Pratt, Spencer, Sumner, and Thayer—11.

NAYS—Messrs. Abbott, Anthony, Bayard, Boreman, Buckingham, Carpenter, Casserly, Cole, Conkling, Corbett, Davis, Edmunds, Ferry, Fowler, Hamilton, Harlan, Harris, Howard, Kellogg, McCreery, McDonald, Morrill of Maine, Morrill of Vermont, Norton, Nye, Patterson, Robertson, Ross, Saulsbury, Sawyer, Schurz, Scott, Sherman, Stewart, Stockton, Thurman, Tipton, Trumbull, Vickers, Warner, Willey, Williams, Wilson, and Yates—44.

ABSENT—Messrs. Cattell, Chandler, Cragin, Fenton, Gilbert, Hamlin, Pool, Ramsey, Rice, and Sprague—10.

So the amendment was rejected.

Mr. Edmunds: "I now move to amend the bill by adding the amendment that I gave notice of yesterday."

The Secretary read the amendment, as follows:

Provided, That, before this resolution shall take effect, each member of the Legislature of said State and each officer thereof shall take and subscribe, and file in the office of the Secretary of State of Virginia, for permanent preservation, an oath in the form following: "I, ———, do solemnly swear that I have never taken an oath as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial

officer of any State, to support the Constitution of the United States, and afterward engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof; so help me God;" or such person shall in like manner take, subscribe, and file the following oath: "I, ———, do solemnly swear that I have, by act of Congress of the United States, been relieved from the disabilities imposed upon me by the fourteenth amendment of the Constitution of the United States; so help me God;" which oaths shall be taken before and certified by any officer lawfully authorized to administer oaths. And any person who shall knowingly swear falsely in taking either of such oaths shall be deemed guilty of perjury, and shall be punished therefor by imprisonment not less than one year and not more than ten years, and shall be fined not less than \$1,000 and not more than \$10,000. And in all trials for any violation of this act the certificate of the taking of either of said oaths with proof of the signature of the party accused, shall be taken and held as conclusive evidence that such oath was regularly and lawfully administered by competent authority: *And provided further*, That every person, who shall neglect, for the period of thirty days next after the passage of this resolution, to take, subscribe, and file such oath as aforesaid, shall be deemed and taken, to all intents and purposes, to have vacated his office.

Mr. Willey: "Mr. President, I propose to offer an amendment to this amendment, if it is now in order."

The Vice-President: "It is."

Mr. Willey: "I propose to strike out after the word 'before,' in the first line, the words in the modified amendment, including the words 'hereinafter stated,' down to the word 'shall,' and to insert:

Any member of the Legislature of said State shall take his seat, or any officer thereof shall enter upon the duties of his office, he.

"So that, if amended, it will read:

Provided, That before any member of the Legislature of said State shall take his seat, or any officer thereof shall enter upon the duties of his office, he shall take and subscribe, and file in the office of the Secretary of State of Virginia, for permanent preservation, an oath in the form following, etc."

Mr. Edmunds, of Vermont, said: "The substantial effect of the amendment of my friend from West Virginia is to admit Senators and Representatives from the State of Virginia at once under this resolution, and to require the members of its Legislature and the officers of its government to take the test-oath, in conformity to the fourteenth amendment of the Constitution, afterward. Now, it seems to me upon principle, and a principle that ought to prevail in our action when we are dealing with one of these States, that whatever we think it fit should be done (as we all agree, I believe, that it is fit we should know whether that Legislature is composed of persons obnoxious to that amendment or not) should be done before the final act of restoration is completed. It is one thing to require that these people shall ascertain what their composition is under the Constitution of the United States after they are completely restored, and another thing to require them to ascertain what that composition is under the Constitution before you receive their Senators into this Chamber and their

Representatives into the other; and there is the difference."

The amendment proposed by Mr. Willey was modified in its phraseology, and agreed to. The amendment, as amended, was as follows:

Provided, That, before any member of the Legislature of said State shall take or resume his seat, or any officer of said State shall enter upon the duties of his office, he shall take, subscribe, and file in the office of the Secretary of State of Virginia, for permanent preservation, an oath in the form following: "I, _____, do solemnly swear that I have never taken an oath as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, and afterward engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof; so help me God;" or such person shall in like manner take, subscribe, and file the following oath: "I, _____, do solemnly swear that I have by act of Congress of the United States been relieved from the disabilities imposed upon me by the fourteenth amendment of the Constitution of the United States; so help me God;" which oaths shall be taken before and certified by any officer lawfully authorized to administer oaths. And any person who shall knowingly swear falsely in taking either of such oaths shall be deemed guilty of perjury, and shall be punished therefor by imprisonment not less than one year and not more than ten years, and shall be fined not less than \$1,000 and not more than \$10,000. And in all trials for any violation of this resolution the certificate of the taking of either of said oaths, with proof of the signature of the party accused, shall be taken and held as conclusive evidence that such oath was regularly and lawfully administered by competent authority; *And provided further*, That every such person, who shall neglect, for the period of thirty days next after the passage of this resolution, to take, subscribe, and file such oath as aforesaid, shall be deemed and taken, to all intents and purposes, to have vacated his office.

The question being taken, resulted as follows:

YEAS—Messrs. Abbott, Anthony, Boreman, Brownlow, Buckingham, Carpenter, Cole, Conkling, Corbett, Cragin, Drake, Edmunds, Fenton, Ferry, Hamlin, Harlan, Harris, Howard, Howe, Kellogg, McDonald, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Patterson, Pomeroy, Pratt, Ramsey, Rice, Robertson, Sawyer, Schurz, Scott, Sherman, Spencer, Sumner, Thayer, Tipton, Warner, Willey, Williams, Wilson, and Yates—45.

NAYS—Messrs. Bayard, Casserly, Davis, Fowler, Hamilton, McCreery, Norton, Saulsbury, Stewart, Stockton, Thurman, Trumbull, and Vickers—13.

ABSENT—Messrs. Cameron, Cattell, Chandler, Gilbert, Pool, Ross, and Sprague—7.

So the amendment was agreed to.

Mr. Wilson: "I move, as an additional amendment, the following:

And provided further, That the State of Virginia is hereby entitled to representation in Congress as a State of the Union upon the following fundamental condition: that the constitution of said State shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote or hold office in said State who are entitled to vote or hold office by said constitution, except as a punishment for such crimes as are now felonies at common law, whereof they shall have been duly convicted under laws equally applicable to all the inhabitants of said State: or to prevent any person, on account of race, color, or previous condition of servitude, from serving as a juror, or participating equally in the school fund or school privileges provided for in said constitution: *Provided*, That any alteration of

said constitution, equally applicable to all the voters of said State, may be made with regard to the time and place of residence of said voters."

The question being taken, resulted as follows:

YEAS—Messrs. Abbott, Boreman, Brownlow, Drake, Edmunds, Hamlin, Harlan, Harris, Howard, Howe, McDonald, Morrill of Vermont, Morton, Pomeroy, Pratt, Ramsey, Rice, Robertson, Spencer, Sumner, Thayer, Wilson, and Yates—23.

NAYS—Messrs. Anthony, Bayard, Buckingham, Carpenter, Casserly, Cole, Conkling, Corbett, Cragin, Davis, Fenton, Ferry, Fowler, Hamilton, Kellogg, McCreery, Morrill of Maine, Norton, Nye, Osborn, Patterson, Ross, Saulsbury, Sawyer, Scott, Sherman, Stewart, Stockton, Thurman, Tipton, Trumbull, Vickers, Warner, Willey, and Williams—35.

ABSENT—Messrs. Cameron, Cattell, Chandler, Gilbert, Pool, Schurz, and Sprague—7.

So the amendment was rejected.

The Vice-President: "The Senator from Missouri (Mr. Drake) moves an amendment to the joint resolution."

The Secretary read the amendment, which was, to insert at the end of the resolution the following additional proviso:

Provided, further, That the State of Virginia is admitted to representation in Congress as one of the States of the Union upon the following fundamental condition: that the constitution of Virginia shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote or hold office who are entitled to vote or hold office by the constitution herein recognized, except as a punishment for such crimes as are now felonies at common law, whereof they shall have been duly convicted under laws which are equally applicable to all the inhabitants of said State; *Provided*, That any alteration of said constitution prospective in its effects may be made in regard to the time and place of residence of voters.

The Presiding Officer: "The question is on the amendment of the Senator from Missouri, on which the yeas and nays have been ordered."

The question being taken, resulted as follows:

YEAS—Messrs. Abbott, Boreman, Brownlow, Drake, Edmunds, Hamlin, Harlan, Howard, Howe, Morrill of Vermont, Morton, Pomeroy, Pratt, Robertson, Thayer, Wilson, and Yates—17.

NAYS—Messrs. Bayard, Carpenter, Casserly, Cole, Conkling, Ferry, Fowler, Hamilton, Norton, Nye, Ross, Saulsbury, Sawyer, Scott, Stewart, Stockton, Tipton, Trumbull, Vickers, Warner, Willey, and Williams—22.

ABSENT—Messrs. Anthony, Buckingham, Cameron, Cattell, Chandler, Corbett, Cragin, Davis, Fenton, Gilbert, Harris, Kellogg, McCreery, McDonald, Morrill of Maine, Osborn, Patterson, Pool, Ramsey, Rice, Schurz, Sherman, Spencer, Sprague, Sumner, and Thurman—26.

So the amendment was rejected.

Mr. Drake: "I offer the amendment now without the words 'or hold office,' just in the original form in which I offered it before I consented to the modification proposed by the Senator from Massachusetts."

Mr. Stewart, of Nevada, said: "I hope that will not be adopted. If there ever was any reason for either of the provisions contained in this amendment, I think it is disposed of now in a conclusive manner. We have the constitutional amendment secure. It looks so, if Nebraska comes up pretty soon. It looks as though

we could close the breach and have the constitutional amendment secure. There is something tangible and within sight. This State has adopted it, and that act cannot be taken back."

Mr. Drake: "Mr. President, there is one thing connected with this whole discussion that takes me more by surprise than any thing that has happened in this body since I have been a member of it, and that is that Senators, who eighteen months ago insisted upon and voted for a condition of this kind to the admission of Arkansas, now turn round and not only speak of the doubtful efficacy of such conditions, but begin to stigmatize them as idle legislation. I wish that I could see the reason of this thing. I wish that gentlemen on this floor would avow why it is that they have changed front upon a question of this kind. I wish that they would inform the Senate and the country why it is that they will apply one rule to five or six of those rebel States, and then will refuse to apply it to others. Sir, I came into this work of reconstruction after it was begun, and I never have taken a step in it yet that I did not take from convictions of public necessity, and I never have given a vote here yet in reference to it which I would be willing now or hereafter to stigmatize as idle legislation. And, sir, the country will make the same inquiry on this subject that I am making here to-night. The country will wish to know why it is that Senators abandon their previous position and now take position with their political opponents on the floor of this Chamber.

"Sir, it matters not if the fifteenth amendment is to be adopted; we are acting now before it is adopted. We do not know that it will be adopted; we may believe it, and yet we may be disappointed. We ought to legislate in view of the circumstances in which we are placed at this moment, and not suffer our action to be swayed by possible events in the future, of the occurrence of which we have at this time no sufficient guarantee."

Mr. Carpenter, of Wisconsin, said: "Mr. President, I desire to ask of those Senators who are in favor of these amendments a few questions for information. In so important a legislation as this we ought to understand thoroughly the ground we are treading upon, and I doubt not those Senators who tenaciously adhere to these propositions of amendment to this resolution do understand the ground; but, as I do not, I would like a little information upon one or two points. It is proposed that Virginia shall be admitted into the Union upon a fundamental condition. If that condition is violated, what becomes of Virginia? What becomes of the act of admission? What is her status after that time? Is she in the Union or is she out? That is a matter, it seems to me, of very great importance, which ought to be well settled in the mind of the Senate before we adopt any such language."

"Mr. Drake: "If the honorable Senator will

allow me, I will give him another answer just there, as he is seeking for information. The answer is this: that I wish to lay the foundation for subsequent action of Congress in the event that that State does violate this condition. If we admit her without any such condition, she can say that none such was imposed upon her. If we admit her with that condition and she violates it, there is the foundation for action on the part of Congress to hold her to the condition."

Mr. Carpenter: "Now, as you are on the subject of imparting wisdom, let me know what, in that contingency, is to be the action of Congress?"

Mr. Drake: "The fourteenth article of the amendments to the Constitution provides that—

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

"That is a part of the Constitution now; and when we put this proviso into this bill it serves as a designation, by reference to the existing constitution of Virginia, of rights of citizens of the United States, that under this article of the Constitution Congress shall have the power to protect against all sorts of aggression."

Mr. Carpenter: "Let me ask the Senator from Missouri, because his explanation does me no good unless I can get one or two things more to put with it, does he understand that adopting this amendment is to enlarge that amendment to the Constitution or give it, even in the State of Virginia, any greater effect than it would have without our adopting this amendment to-night?"

Mr. Drake: "I understand that the adoption of this amendment to-night designates distinctly the constitution of Virginia as containing provisions which are for the protection of citizens of the United States, and that by adopting this provision we do not enlarge the scope of this constitutional amendment which I have just quoted, but we lay the foundation for the application of the powers therein given to that very class of persons designated in the constitution of Virginia."

Mr. Carpenter: "Assuming that that lays the foundation, what do you propose to build upon that foundation?"

Mr. Drake: "It is not at all necessary for me to undertake to express an opinion as to what we would propose to build upon that foundation, for it could be nothing but an opinion, having no particular value in this discussion. When they do violate that provision, if it is annexed to this bill, then is the time when the Senate of the United States, the honorable Senator from Wisconsin and myself among the number, if we should be here, would have to determine that question."

Mr. Carpenter: "I do not propose to discuss

this matter; I simply asked these questions for information. I desired to know what theory was entertained by these Senators; whether, if these conditions should subsequently be violated by Virginia, in their opinion Virginia would cease thereby to be a State of the Union, or if her right to be a State would thereby be extinguished; and, if so, what proceedings could be had to declare a forfeiture of her franchise as a State of the Union. Suppose her position in the Union is not lost by violating one of these conditions, then the question would come up on a given amendment of the constitution of Virginia before the courts as to its validity. Does any lawyer in this body suppose that any court, State or Federal, would hold a State constitution void because it conflicted, not with the Constitution of the United States, but with an act of Congress?"

Mr. Sumner: "If, allow me to ask my friend, that act of Congress be a compact?"

Mr. Carpenter: "If that act of Congress be a compact, then the Senator from Massachusetts goes into the arms of John C. Calhoun on the theory of this Union. We had the discussion of whether this Union was based in compact or cemented and crystallized in law, thirty years ago."

Mr. Sumner: "I think my friend does not understand me."

Mr. Carpenter: "Very likely."

Mr. Sumner: "If the fundamental condition is a compact between Congress and the State. That is my question."

Mr. Carpenter: "To that I have a short reply, that I do not think there can be any compact between Congress and a State. There may be a compact between the United States and a State; but I deny that the relation of any State to this Union can in any sense be regarded as a relation based upon a compact. This is a government. The powers of the Federal Union are based upon the solid foundation of the Constitution, not upon the terms of a contract, no matter how high may be the contracting parties. The latter theory of this amendment—and this question of the Senator brings us right up to it—if I understand it, just leads into that very danger out of which we have emerged only through the blood and terror of a four-years war. I want, so far as I am concerned, to have done with the talk about compacts which regulate the rights of a State in this Union, and I desire, so far as my vote goes, to admit States and let them be States and hold them responsible as States, and compel them to obey the Federal Constitution as States, or I propose to have nothing to do with them in that capacity, to remand them to the condition of Territories or hold them in military subjection. Let us have one thing or the other."

Without taking a vote on the amendment of Mr. Drake, a motion was made by Mr. Stewart, of Nevada, to lay aside the joint res-

olution, in order to take up a bill from the House for the admission of Virginia.

It was agreed to by the following vote:

YEAS—Messrs. Abbott, Bayard, Carpenter, Casserly, Cole, Conkling, Corbett, Davis, Ferry, Fowler, Hamilton, McCreery, Norton, Nye, Patterson, Saulsbury, Scott, Stewart, Stockton, Tipton, Trumbull, Vickers, Warner, Willey, and Williams—25.

NAYS—Messrs. Anthony, Boreman, Buckingham, Cameron, Drake, Edmunds, Fenton, Harris, Howard, Howe, McDonald, Morrill of Maine, Morrill of Vermont, Morton, Pomeroy, Ramsey, Rice, Robertson, Schurz, Spencer, Sumner, Thayer, and Wilson—23.

ABSENT—Messrs. Brownlow, Cattell, Chandler, Cragin, Gilbert, Hamlin, Harlan, Kellogg, Osborn, Pool, Pratt, Ross, Sawyer, Sherman, Sprague, Thurman, and Yates—17.

In the House, on January 11th, Mr. Farnsworth, of Illinois, from the Reconstruction Committee, reported a bill for the admission of Virginia to representation in Congress.

The bill was as follows:

Whereas the people of Virginia have adopted a constitution republican in form, and by its provisions assuring the equality of right in all citizens of the United States before the law; and whereas the Congress of the United States have received assurances and are assured that the people of Virginia, and especially those heretofore in insurrection against the United States, have renounced all claims of any right of secession in a State, and that they are now well disposed to the Government of the United States and will support and defend the Constitution thereof, and will carry out, in letter and spirit, the provisions and requirements of the Constitution submitted under the reconstruction acts of Congress and ratified by the people of Virginia: Therefore,

Be it enacted, etc., That the State of Virginia is entitled to representation in Congress as a State of the Union, under the constitution ratified on the 6th day of July, 1869, upon the following fundamental conditions:

First. That no person shall hold any office, civil or military, in said State who shall not have taken and subscribed one of the following oaths or affirmations, namely: "I do solemnly swear (or affirm) that I have never taken an oath as a member of Congress or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States and thereafter engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof;" or, "I do solemnly swear (or affirm) that I have been relieved from disability by an act of Congress, as provided for by the third section of the fourteenth article of the amendments of the Constitution of the United States."

Second. That the constitution of said State shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote or hold office in said State who are entitled to vote or hold office by said constitution, except as a punishment for such crimes as are now felonies at common law, whereof they shall have been duly convicted under laws equally applicable to all the inhabitants of said State, or to prevent any person, on account of race, color, or previous condition of servitude, from serving as a juror or participating equally in the school fund or school privileges provided for in said constitution: *Provided*, That any alteration of said constitution, equally applicable to all the voters of said State, may be made with regard to the time and place of residence of said voters.

Third. That all persons, who shall, at the time when

said constitution shall take effect, hold or exercise the functions of any executive, administrative, or judicial office in said State by the appointment or authority of the district commander, shall continue to discharge the duties of their respective offices until their successors, or those upon whom such duties shall under said constitution devolve, are duly chosen or appointed and qualified.

SECTION 2. *And be it further enacted,* That the election of United States Senators by the General Assembly of said State on the 19th day of October, 1869, shall have the same validity as if made by previous authority of law.

Mr. Farnsworth said: "The bill now under consideration, reported by the Committee on Reconstruction, and which I presume the members of this House have read, I will remark and ought to remark, in justice to myself, was in some sort a compromise measure. It is known to the members of this House that on the first day of this session I introduced a joint resolution for the immediate admission of the State of Virginia, which contained no condition. But I consented to report the bill now under consideration, reserving to myself, however, and I so gave notice to the committee, the right to oppose the oath which is provided in this bill, and perhaps to ask that the bill in some verbal particulars might be amended in other respects. There has been a question with regard to the test-oath in Virginia, and some members of this House, I have no doubt, are in favor of applying the test or iron-clad oath to members of the Virginia Legislature. With reference to that, allow me to say that after the election in Virginia that question was referred to the Attorney-General of the United States, and his opinion I have no doubt the members of this House have also read. That opinion was endorsed and approved by the President of the United States. The opinion was to this effect—without stopping to read it or to incorporate it in my remarks—that the test-oath could not be exacted, but that only the oath provided by the constitution under which the Legislature was elected should be imposed upon its members; and I am free to say that I concur most decidedly in that opinion.

"The Legislature of the State of Virginia is elected under a constitution which this Congress has approved and has authorized to be ratified by the voters of that State. That Legislature is in no sense a provisional Legislature, nor are the members of that Legislature in any sense provisional officers. They are members of a Legislature just as much as are the members of the Legislature of the State of Illinois. If Congress fails to approve the constitution and to ratify the election of these members by the admission of the State, then the whole constitution and the Legislature elected under it fall to the ground. They are not then members of a Legislature at all, and are not officers of the State at all. If we do approve, then that approval reverts back and covers the election which Congress itself authorized, and the members so elected to the Legislature are the Legislature of the State of

Virginia as much as is the Legislature of any other State. To hold otherwise, it seems to me, is to involve us in very absurd contradictions. Suppose that to-day you exact the test-oath of the members of the Legislature of Virginia; to-morrow we admit the State to representation in Congress; afterward a member of that Legislature dies and a new election is held for his successor, who appears in due time to qualify and take his seat—what oath is to be put to him? The State is now in the Union. Manifestly the only oath to be required is the oath provided by the constitution under which the Legislature has assembled. You then have the singular spectacle presented of members of the same Legislature taking different oaths. The members of the same Legislature have different qualifications, and are under different obligations. It seems to me that the bare statement of the matter is sufficient to satisfy any mind that the Attorney-General was right in the opinion which he gave. Besides, the test-oath has not been exacted of any Legislature of any one of the reconstructed States. We have never required of any Legislature of any one of those States that they should take any oath except that required by the constitution under which they were elected, except in the case of Georgia, which bill was passed a few days since. So much for the test-oath. The oath provided in the bill under consideration is not the test-oath. It is, I believe, substantially the oath conforming to the fourteenth amendment with reference to qualifications for office.

"Now to the main question. Is the State of Virginia entitled, under the circumstances, to be represented in Congress? I have detailed to the House, I think with sufficient particularity, the history of the formation and adoption of the constitution of the State of Virginia. The act of Congress contained this clause, 'that the proceedings in any of said States shall not be deemed final or operate as a complete restoration thereof until their action respectively shall be approved by Congress.' The act further provided that at the time of the election on the constitution the voters of the State should elect a Legislature, members of Congress, and State officers—this they have done—and that the Legislature, when assembled, should ratify the fifteenth article of amendments to the Constitution of the United States. This also has been done. Therefore—and I desire the members of the House to bear it in mind—the State of Virginia has complied to the letter with every requirement and condition of that act. And of all the reconstructed States no one of them has come up apparently with more alacrity and cheerfulness in adopting a constitution and conforming to the acts of Congress than has the State of Virginia.

"There are men who think that the State of Virginia should be still kept out of Congress, that we should be in no hurry to let that State in; who fear that the State of Virginia will not

keep faith with Congress. I hope we shall not set Virginia an example of bad faith. When we passed the act of last spring providing what these unrepresented States should do to be entitled to representation in Congress, did we not by the last clause of that act say in effect that, if they did what we there provided, and if Congress should approve of what they might do under that act, they should be admitted to representation in Congress? We did say that. Now, shall we keep the word of promise to the ear and break it to the hope?"

Mr. Whittemore, of South Carolina, moved to insert in the first section of this bill, at the end of the forms of oath therein recited, the following:

And any person who shall falsely take either of the aforesaid oaths or affirmations shall be deemed guilty of perjury, and shall suffer the pains and penalties thereof, and may be tried, convicted, and punished therefor by the Circuit Court of the United States for the district in which said crime was committed; and the jurisdiction of said court shall be sole and exclusive for the purpose aforesaid.

The question was taken, and it was decided as follows:

YEAS—Messrs. Ambler, Ames, Armstrong, Arnell, Asper, Beaman, Beatty, Benjamin, Bennett, Benton, Bowles, Bowen, Boyd, George M. Brooks, Buck, Buckley, Buffinton, Burchard, Burdett, Roderick B. Butler, Cake, Cessna, Churchill, Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Cook, Conger, Cowles, Cullom, Dawes, Dickey, Dixon, Donley, Duval, Dyer, Ela, Ferriss, Ferry, Finkelnburg, Fisher, Fitch, Garfield, Gilfillan, Hale, Hamilton, Hawley, Hay, Hedin, Hill, Hoar, Hoge, Hooper, Ingersoll, Jenckes, Judd, Kelley, Kellogg, Kelsey, Ketcham, Knapp, Ladin, Lash, Lawrence, Logan, Loughridge, Maynard, McCarthy, McCrary, McGraw, Merour, Eliakim H. Moore, Jesse H. Moore, William Moore, Daniel J. Morrill, Samuel P. Morrill, Myers, Negley, O'Neill, Orth, Packard, Packer, Paine, Palmer, Peters, Phelps, Pomeroy, Prosser, Roota, Sanford, Sargent, Schenck, Scofield, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, William J. Smith, Worthington C. Smith, William Smyth, Starkweather, Stevens, Stevenson, Stokes, Stoughton, Strong, Taffe, Townsend, Twichell, Tyner, Upson, Van Horn, Ward, Cadwalader C. Washburn, Wm. B. Washburn, Wheeler, Whittemore, Willard, Williams, John T. Wilson, Winans, and Witcher—123.

NAYS—Messrs. Adams, Archer, Axtell, Bailey, Banks, Barnum, Beck, Biggs, Bingham, Bird, Blair, James Brooks, Burr, Calkin, Cleveland, Cox, Deweese, Dickinson, Dockery, Dox, Eldridge, Farnsworth, Fox, Getz, Golladay, Greene, Griswold, Haight, Haldeman, Hambleton, Hamill, Hawkins, Heaton, Holman, Johnson, Kerr, Knott, Marshall, Mayham, McCormick, McNeely, Morgan, Mungen, Niblack, Potter, Randall, Reading, Reeves, Rice, Rogers, Schumaker, Slocum, Joseph S. Smith, Stiles, Stone, Strader, Swann, Sweeney, Tanner, Tillman, Trimble, Van Auken, Van Trump, Voorhees, Welker, Wells, Eugene M. Wilson, Winchester, Wood, and Woodward—10.

NOT VOTING—Messrs. Allison, Benjamin F. Butler, Crebs, Davis, Hays, Hoag, Hotchkiss, Alexander H. Jones, Thomas L. Jones, Julian, Lynch, Morrissey, Poland, Sawyer, Sherrod, Strickland, and Wilkinson—17.

So the amendment was agreed to.

Mr. Bingham, of Ohio, moved to strike out all after the enacting clause, and insert in lieu thereof the following:

Whereas the people of Virginia have adopted a constitution republican in form, and have in all respects conformed to the requirements of the act of Congress entitled "An act authorizing the submission of the constitutions of Virginia, Mississippi, and Texas, to a vote of the people, and authorizing the election of State officers provided by the said constitutions, and members of Congress," approved April 10, 1869: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the said State of Virginia is entitled to representation in the Congress of the United States.

The question was taken, and it was decided in the affirmative, as follows:

YEAS—Messrs. Adams, Archer, Axtell, Bailey, Banks, Barnum, Beck, Biggs, Bingham, Bird, Blair, George M. Brooks, James Brooks, Buckley, Burchard, Burr, Calkin, Cleveland, Cox, Crebs, Cullom, Dawes, Deweese, Dickinson, Dockery, Dox, Eldridge, Farnsworth, Ferry, Finkelnburg, Fitch, Fox, Garfield, Getz, Golladay, Greene, Griswold, Haight, Haldeman, Hale, Hambleton, Hamill, Hawkins, Hay, Heaton, Holman, Hooper, Ingersoll, Jenckes, Johnson, Kellogg, Kerr, Ketcham, Knott, Ladin, Logan, Marshall, Mayham, McCarthy, McCormick, McNeely, Jesse H. Moore, Morgan, Mungen, Niblack, Orth, Peters, Potter, Randall, Reading, Reeves, Rice, Rogers, Sanford, Schumaker, Slocum, Joseph S. Smith, Worthington C. Smith, Stiles, Stone, Strader, Strong, Swann, Sweeney, Tanner, Tillman, Trimble, Van Auken, Van Trump, Voorhees, Wells, Eugene M. Wilson, John T. Wilson, Winans, Winchester, Witchoer, Wood, and Woodward—98.

NAYS—Messrs. Ambler, Ames, Armstrong, Arnell, Asper, Beaman, Beatty, Benjamin, Bennett, Benton, Boles, Bowen, Boyd, Buck, Buffinton, Burdett, Roderick B. Butler, Cake, Cessna, Churchill, Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Cook, Conger, Cowles, Dickey, Dixon, Donley, Duval, Dyer, Ela, Ferriss, Fisher, Gilfillan, Hamilton, Hawley, Hedin, Hill, Hoar, Hoge, Judd, Kelley, Kelsey, Knapp, Lash, Lawrence, Loughridge, Maynard, McCrary, McGraw, Mercur, Eliakim H. Moore, William Moore, Daniel J. Morrill, Samuel P. Morrill, Myers, Negley, O'Neill, Packard, Packer, Paine, Palmer, Phelps, Pomeroy, Prosser, Roota, Sargent, Schenck, Scofield, Shanks, Porter Sheldon, John A. Smith, William J. Smith, William Smyth, Starkweather, Stevens, Stevenson, Stokes, Stoughton, Taffe, Townsend, Twichell, Tyner, Upson, Van Horn, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Whittemore, Willard, and Williams—95.

NOT VOTING—Messrs. Allison, Benjamin F. Butler, Davis, Hays, Hoag, Hotchkiss, Alexander H. Jones, Thomas L. Jones, Julian, Lynch, Morrissey, Poland, Sawyer, Lionel A. Sheldon, Sherrod, Strickland, and Wilkinson—17.

So the substitute of Mr. Bingham was adopted.

The bill, as amended, was then ordered to be engrossed and read a third time.

The question was upon the passage of the bill as amended, and it was decided in the affirmative, as follows:

YEAS—Messrs. Adams, Ames, Archer, Armstrong, Axtell, Bailey, Banks, Barnum, Beaman, Beck, Benjamin, Bennett, Biggs, Bingham, Bird, Blair, George M. Brooks, James Brooks, Buck, Buckley, Burchard, Burdett, Burr, Roderick B. Butler, Cake, Calkin, Churchill, Clinton L. Cobb, Cook, Conger, Cowles, Cox, Crebs, Cullom, Dawes, Deweese, Dickinson, Dockery, Dox, Duval, Dyer, Eldridge, Farnsworth, Ferry, Finkelnburg, Fitch, Fox, Garfield, Getz, Gilfillan, Golladay, Greene, Griswold, Haight, Haldeman, Hale, Hambleton, Hamill, Hawkins,

Hay, Heaton, Heflin, Hill, Holman, Hooper, Ingersoll, Jenckes, Johnson, Judd, Kellogg, Kerr, Ketchum, Knott, Ladin, Lash, Logan, Marshall, Mayham, McCarthy, McCormick, McGrew, McNeely, Mercur, Eliakim H. Moore, Jesse H. Moore, Morgan, Daniel J. Morrill, Samuel P. Morrill, Mungen, Myers, Niblack, Orth, Packard, Packer, Paine, Peters, Poland, Potter, Prosser, Randall, Reading, Reeves, Rice, Rogers, Sanford, Sargent, Schenck, Schumaker, Scofield, Porter Sheldon, Slocum, John A. Smith, Joseph S. Smith, Worthington C. Smith, Starkweather, Stiles, Stone, Stoughton, Strader, Strong, Swann, Sweeney, Tanner, Tillman, Trimble, Twichell, Tyner, Upson, Van Auken, Van Trump, Voorhees, William B. Washburn, Welker, Wells, Williams, Eugene M. Wilson, John T. Wilson, Winans, Winchester, Witcher, Wood, and Woodward—142.

YAYS—Messrs. Ambler, Arnell, Asper, Beatty, Benton, Boles, Bowen, Boyd, Buffinton, Cessna, Clarke, Amasa Cobb, Coburn, Dickey, Dixon, Donley, Ela, Ferriss, Fisher, Hamilton, Hawley, Hoar, Hoge, Kelley, Kelsey, Lawrence, Loughbridge, Maynard, McCrary, William Moore, Negley, O'Neill, Palmer, Phelps, Pomeroy, Root, Shanks, William J. Smith, William Smyth, Stevens, Stevenson, Stokes, Taffe, Townsend, Ward, Cadwalader C. Washburn, Wheeler, Whittemore, and Willard—49.

NOR VOIX—Messrs. Allison, Benjamin F. Butler, Cleveland, Davis, Hays, Hoag, Hotchkiss, Alexander H. Jones, Thomas L. Jones, Julian, Knapp, Lynch, Morrissey, Sawyer, Lionel A. Sheldon, Sherrod, Strickland, Van Horn, and Wilkinson—19.

In the Senate, on January 19th, the bill from the House for the admission of Virginia was considered, and Mr. Edmunds, of Vermont, offered the following proviso to be added to the bill:

Provided, That before any member of the Legislature of said State shall take or resume his seat, or any officer of said State shall enter upon the duties of his office, he shall take, subscribe, and file in the office of the Secretary of State of Virginia, for permanent preservation, an oath in the form following: "I, ———, do solemnly swear that I have never taken an oath as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, and afterward engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof; so help me God;" or such person shall in like manner take, subscribe, and file the following oath: "I, ———, do solemnly swear that I have, by act of Congress of the United States, been relieved from the disabilities imposed upon me by the fourteenth amendment of the Constitution of the United States; so help me God;" which oaths shall be taken before and certified by any officer lawfully authorized to administer oaths. And any person who shall knowingly swear falsely in taking either of such oaths shall be deemed guilty of perjury, and shall be punished therefor by imprisonment not less than one year and not more than ten years, and shall be fined not less than \$1,000 and not more than \$10,000. And in all trials for any violation of this resolution the certificate of the taking of either of said oaths, with proof of the signature of the party accused, shall be taken and held as conclusive evidence that such oath was regularly and lawfully administered by competent authority: *And provided further*, That every person, who shall neglect, for the period of thirty days next after the passage of this resolution, to take, subscribe, and file such oath as aforesaid, shall be deemed and taken, to all intents and purposes, to have vacated his office.

It was agreed to by the following vote:

YAYS—Messrs. Abbott, Anthony, Boreman, Brown-

low, Buckingham, Cameron, Carpenter, Chandler, Cole, Conkling, Corbett, Cragin, Drake, Edmunds, Fenton, Gilbert, Hamlin, Harlan, Harris, Howard, Howe, McDonald, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Patterson, Pomeroy, Pratt, Ramsey, Rice, Robertson, Sawyer, Schurz, Scott, Sherman, Spencer, Sumner, Thayer, Tipton, Warner, Willey, Williams, and Wilson—46.

NAYS—Messrs. Bayard, Casserly, Davis, Ferry, Fowler, Hamilton, Kellogg, McCreery, Norton, Ross, Saulsbury, Stewart, Stockton, Thurman, Trumbull, and Vickers—16.

ABSENT—Messrs. Cattell, Pool, Sprague, and Yates—4.

On January 20th, Mr. Drake, of Missouri, offered the following as an additional proviso to the bill:

And provided further, That the State of Virginia is admitted to representation in Congress as one of the States of the Union upon the following fundamental condition: that the constitution of Virginia shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote who are entitled to vote by the constitution herein recognized, except as a punishment for such crimes as are now felonies at common law, whereof they shall have been duly convicted under laws equally applicable to all the inhabitants of said State: *Provided*, That any alteration of said constitution prospective in its effects may be made in regard to the time and place of residence of voters.

This amendment was agreed to, on the 21st, by the following vote:

YAYS—Messrs. Abbott, Anthony, Boreman, Brownlow, Buckingham, Chandler, Cragin, Drake, Edmunds, Gilbert, Hamlin, Harlan, Harris, Howard, Howe, Kellogg, McDonald, Morrill of Vermont, Morton, Osborn, Patterson, Pomeroy, Pratt, Ramsey, Rice, Robertson, Spencer, Sumner, Thayer, Wilson, and Yates—31.

NAYS—Messrs. Bayard, Carpenter, Casserly, Cole, Conkling, Corbett, Davis, Fenton, Ferry, Fowler, Hamilton, Morrill of Maine, Norton, Nye, Ross, Saulsbury, Sawyer, Scott, Sherman, Stewart, Stockton, Thurman, Tipton, Trumbull, Vickers, Warner, Willey, and Williams—28.

ABSENT—Messrs. Cameron, Cattell, McCreery, Pool, Schurz, and Sprague—6.

Mr. Drake: "I offer the following further amendment to the bill as an additional proviso:

And provided further, That it shall never be lawful for the said State to deprive any citizen of the United States, on account of his race, color, or previous condition of servitude, of the right to hold office under the constitution and laws of said State, or upon any such ground to require of him any other qualifications for office than such as are required of all other citizens."

On the question of agreeing to this amendment, the yeas and nays were ordered; and being taken, resulted as follows:

YAYS—Messrs. Abbott, Boreman, Brownlow, Buckingham, Chandler, Drake, Edmunds, Gilbert, Hamlin, Harlan, Harris, Howard, Howe, Kellogg, McDonald, Morrill of Vermont, Morton, Osborn, Patterson, Pomeroy, Pratt, Ramsey, Rice, Robertson, Schurz, Spencer, Sumner, Thayer, Wilson, and Yates—30.

NAYS—Messrs. Bayard, Carpenter, Casserly, Cole, Conkling, Corbett, Cragin, Davis, Fenton, Ferry, Fowler, Hamilton, Morrill of Maine, Norton, Nye, Ross, Saulsbury, Sawyer, Scott, Sherman, Stewart, Stockton, Thurman, Tipton, Trumbull, Vickers, Warner, Willey, and Williams—29.

ABSENT—Messrs. Anthony, Cameron, Cattell, McCreery, Pool, and Sprague—8.

So the amendment was agreed to.

Mr. Wilson, of Massachusetts: "I now move to amend the bill by adding:

And provided further, That the constitution of Virginia shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the school rights and privileges secured by the constitution of said State."

The Vice-President: "The question is on the amendment of the Senator from Massachusetts."

The vote being taken, resulted as follows:

YEAS—Messrs. Abbott, Anthony, Boreman, Brownlow, Buckingham, Chandler, Cragin, Drake, Edmunds, Gilbert, Hamlin, Harlan, Harris, Howard, Howe, McDonald, Morrill of Vermont, Morton, Osborn, Patterson, Pomeroy, Pratt, Ramsey, Rice, Robertson, Schurz, Spencer, Sumner, Thayer, Wilson, and Yates—51.

NAYS—Messrs. Bayard, Carpenter, Casserly, Cole, Conkling, Corbett, Davis, Fenton, Ferry, Fowler, Hamilton, Kellogg, Morrill of Maine, Norton, Nye, Ross, Saulsbury, Sawyer, Scott, Sherman, Stewart, Stockton, Thurman, Tipton, Trumbull, Vickers, Warner, Willey, and Williams—23.

ABSENT—Messrs. Cameron, Cattell, McCreery, Pool, and Sprague—6.

So the amendment was agreed to.

Mr. Morton: "I send now to the Chair a substitute for the preamble of the House bill."

The Chief Clerk read the amendment, which was, to strike out the preamble of the bill, and in lieu thereof to insert:

Whereas the people of Virginia have framed and adopted a constitution of State government which is republican; and whereas the Legislature of Virginia elected under said constitution and in pursuance of the reconstruction acts of Congress has ratified the fourteenth and fifteenth amendments to the Constitution of the United States; and whereas the performance of these several acts in good faith was a condition precedent to the representation of the State in Congress: Therefore.

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Abbott, Anthony, Boreman, Brownlow, Buckingham, Chandler, Cole, Cragin, Drake, Edmunds, Fenton, Gilbert, Hamlin, Harlan, Harris, Howard, Howe, McDonald, Morrill of Maine, Morrill of Vermont, Morton, Osborn, Patterson, Pomeroy, Pratt, Ramsey, Rice, Robertson, Sawyer, Schurz, Scott, Spencer, Sumner, Thayer, Tipton, Willey, Williams, Wilson, and Yates—59.

NAYS—Messrs. Bayard, Carpenter, Casserly, Conkling, Corbett, Davis, Ferry, Fowler, Hamilton, Kellogg, Norton, Nye, Saulsbury, Sherman, Stewart, Stockton, Thurman, Trumbull, Vickers, and Warner—20.

ABSENT—Messrs. Cameron, Cattell, McCreery, Pool, Ross, and Sprague—6.

So the amendment to the preamble was agreed to.

Mr. Thurman, of Ohio, said: "As anxious as I have been for the restoration of Virginia to her rights, I cannot vote for an unconstitutional bill, at least one that I am clear in my own mind is unconstitutional, even to effect that purpose. The amendments that have been put on this bill to-day make it, in my

judgment, plainly unconstitutional; and I shall, therefore, be compelled to vote against it."

Mr. Stockton, of New Jersey, said: "I am constrained, also, to vote against this bill, and in one word my reason for it is this: I look upon it as a bill to exclude Virginia perpetually from being an equal State in this Union."

Mr. Saulsbury, of Delaware, said: "I have determined for the last hour not to vote for this bill. I would rather leave Virginia solitary and alone forever, as she is now, than consent to thus deprive her of her equal rights. She has been glorious in the past, and I will not degrade her now by my vote."

Mr. Bayard, of Delaware, said: "One word, sir; not to detain the Senate. I came here with the oath upon my lips to sustain the Constitution of the United States. The 'United States' means equal States united, and I never will consent that a member of this Union, especially so glorious and respected a member as the State of Virginia, shall come into these Halls by my vote any thing else than the full peer and equal of any of the rest. For that reason I shall not vote in favor of her inequality, which is what this bill now provides for."

Mr. Casserly, of California, said: "Mr. President, with sincere sorrow I find myself in a position, by the action of this body to-day, where I shall be obliged to vote against this bill. As the Senator from Ohio has stated, the amendments made to it I regard as unconstitutional, and I decline to vote to place upon the State of Virginia these badges of conquest, of inferiority, and of insult."

Mr. Hamilton, of Maryland, said: "Mr. President, it is with sincere regret that I am constrained to cast my vote against this bill. I cannot, in justification to myself and the views I entertain, cast my vote in favor of it as it is now presented to the consideration of the Senate."

Mr. Vickers, of Maryland, said: "I have never believed, sir, that Virginia was out of the Union. Therefore I decline to vote that she shall come into the Union. I would cheerfully vote for the original proposition, that she is entitled to representation. My opinion is, that she has always been entitled to representation in the Union; but, clogged as this bill is with these unconstitutional provisions, I shall be obliged to vote in the negative."

Mr. Norton, of Minnesota, said: "As the indulgence of the Senate seems to have been given, in violation of the understanding, to Senators to explain the reasons of the vote they shall give on the passage of this bill, I avail myself of the courtesy of the Senate in that regard. I shall not vote for this bill, for the reason that I am unwilling to put upon the record my assent to the proposition that the Congress of the United States can make constitutions for any State."

The vote was then announced as follows:

YEAS—Messrs. Abbott, Anthony, Boreman, Brown-

low, Buckingham, Carpenter, Chandler, Cole, Conkling, Corbett, Cragin, Drake, Edmunds, Fenton, Ferry, Gilbert, Hamlin, Harlan, Harris, Howard, Howe, Kellogg, McDonald, Morrill of Maine, Morton, Nye, Osborn, Patterson, Pomeroy, Pratt, Ramsey, Rice, Robertson, Ross, Sawyer, Schurz, Scott, Sherman, Spencer, Stewart, Tipton, Trumbull, Warner, Willey, Williams, Wilson, and Yates—47.

YEAS—Messrs. Bayard, Casserly, Davis, Fowler, Hamilton, Norton, Saulsbury, Stockton, Thurman, and Vickers—10.

ABSENT—Messrs. Cameron, Cattell, McCreery, Morrill of Vermont, Pool, Sprague, Sumner, and Thayer—8.

So the bill was passed.

In the House, on January 24th, Mr. Farnsworth, of Illinois, said: "I propose to move that the House concur in the amendments of the Senate to this bill, not because I think that the amendments, if presented as an original question, ought to be adopted, for I would not under such circumstances vote for some of them. I think some of them are very bunglingly drawn, and will do more harm than good. But I shall make the motion because I think that to throw the question open to a sea of discussion again, and keep Virginia out from the representation which she is entitled to in Congress, would be a greater evil than to adopt the amendments of the Senate and have an end of it. I make the motion to concur."

The amendments of the Senate were subsequently concurred in by the following vote:

YEAS—Messrs. Allison, Ambler, Ames, Armstrong, Arnell, Asper, Bailey, Banks, Beaman, Beatty, Benjamin, Bennett, Benton, Bingham, Blair, Boles, Bowen, Boyd, George M. Brooks, Buck, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Roderick R. Butler, Cake, Cessna, Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Conger, Cook, Cowles, Cullom, Davis, Dawes, Dixon, Donley, Duval, Dyer, Ela, Farnsworth, Ferriss, Ferry, Finkelnburg, Fisher, Fitch, Garfield, Gilfillan, Hale, Hamilton, Hawley, Hay, Heaton, Heflin, Hill, Hoar, Hoge, Hooper, Ingersoll, Jenckes, Judd, Julian, Kelley, Kellogg, Kelsey, Ketchum, Knapp, Lafin, Lash, Lawrence, Logan, Longbridge, Lynch, Maynard, McCarthy, McCrary, McGrew, Eliakim H. Moore, Jesse H. Moore, William Moore, Daniel J. Morrill, Samuel P. Morrill, Myers, Negley, O'Neill, Orth, Packard, Paine, Palmer, Peters, Phelps, Poland, Pomeroy, Prosser, Roots, Sanford, Sargent, Sawyer, Schenck, Scofield, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, William J. Smith, Worthington C. Smith, William Smyth, Starkweather, Stevens, Stevenson, Stokes, Stoughton, Strickland, Strong, Taffe, Tanner, Tillman, Townsend, Twichell, Tyner, Upson, Van Horn, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Whittemore, Wilkinson, Willard, Williams, John T. Wilson, and Winans—136.

YEAS—Messrs. Adams, Archer, Axtell, Beck, Bird, James Brooks, Burr, Calkin, Cleveland, Cox, Crebs, Deweese, Dickinson, Dox, Eldridge, Gatz, Golladay, Greene, Griawold, Haldeman, Hambleton, Hamill, Hawkins, Holman, Johnson, Thomas L. Jones, Kerr, Knott, Marshall, Mayham, McCormick, McNeely, Morgan, Mungen, Niblack, Potter, Randall, Reeves, Rice, Rogers, Schumaker, Sherrod, Slocum, Joseph S. Smith, Stiles, Stone, Strader, Swann, Sweeney, Trimble, Van Auken, Van Trump, Voorhees, Wells, Eugene M. Wilson, Winchester, Wood, and Woodward—58.

NOT VOTING—Messrs. Barnum, Biggs, Churchill, Dickey, Dockery, Fox, Haight, Hays, Hoag, Hotch-

kiss, Alexander H. Jones, Mercur, Morrissey, Packer, Reading, and Witcher—16.

In the House, on February 3d, Mr. Butler, of Massachusetts, from the Committee on Reconstruction, reported the following bill to admit the State of Mississippi to representation in Congress:

An act to admit the State of Mississippi to representation in the Congress of the United States.

Whereas the people of Mississippi have framed and adopted a constitution of State government which is republican; and whereas the Legislature of Mississippi elected under said constitution has ratified the fourteenth and fifteenth amendments to the Constitution of the United States; and whereas the performance of these several acts in good faith is a condition precedent to the representation of the State in Congress: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the said State of Mississippi is entitled to representation in the Congress of the United States: *Provided*, That before any member of the Legislature of said State shall take or resume his seat, or any officer of said State shall enter upon the duties of his office, he shall take, and subscribe, and file in the office of the Secretary of State of Mississippi, for permanent preservation, an oath or affirmation in the form following: "I, ———, do solemnly swear (or affirm) that I have never taken an oath or affirmation as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, and afterward engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof; so help me God;" or under the pains and penalties of perjury, as the case may be; or such person shall in like manner take, subscribe, and file the following oath or affirmation: "I, ———, do solemnly swear or affirm that I have, by act of Congress of the United States, been relieved from the disabilities imposed upon me by the fourteenth amendment of the Constitution of the United States; so help me God;" or under the pains and penalties of perjury, as the case may be; which oaths or affirmations shall be taken before and certified by any officer lawfully authorized to administer oaths. And any person who shall knowingly swear or affirm falsely in taking either of such oaths or affirmations shall be deemed guilty of perjury, and shall be punished therefor by imprisonment not less than one year and not more than ten years, and shall be fined not less than \$1,000 and not more than \$10,000. And in all trials for any violation of this act the certificate of the taking of either of said oaths or affirmations, with proof of the signature of the party accused, shall be taken and held as conclusive evidence that such oath or affirmation was regularly and lawfully administered by competent authority: *And provided further*, That every such person, who shall neglect, for the period of thirty days next after the passage of this act, to take, subscribe, and file such oath or affirmation as aforesaid, shall be deemed and taken to all intents and purposes to have vacated his office: *And provided further*, That the State of Mississippi is admitted to representation in Congress as one of the States of the Union upon the following fundamental conditions: first, that the constitution of Mississippi shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote who are entitled to vote by the constitution herein recognised, except as a punishment for such crimes as are now felonies at common law, whereof they shall have been duly convicted under laws equally applicable to all the inhabitants of said State: *Provided*; That any alter-

ation of said constitution, prospective in its effects, may be made in regard to the time and place of residence of voters: second, that it shall never be lawful for the said State to deprive any citizen of the United States, on account of his race, color, or previous condition of servitude, of the right to hold office under the constitution and laws of said State, or upon any such ground to require of him any other qualifications for office than such as are required of all other citizens; third, that the constitution of Mississippi shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the school rights and privileges secured by the constitution of said State.

Mr. Butler, of Massachusetts, said: "This bill, as members of the House will observe, if they have followed the reading, is exactly, word for word, the bill under which the State of Virginia was admitted to representation in Congress. Although some members of the Committee on Reconstruction, myself among the number, would have been glad to change the bill in some respects, yet the whole matter having been so fully and thoroughly discussed, and a precedent set in the case of Virginia, it was thought, after mature deliberation in the committee, that it was best to admit Mississippi, although she has an assured Republican majority and Republican representation, under the same conditions and with the same provisos as in the case of Virginia.

"The only change in the bill is the making provision for an affirmation as well as an oath, which in the case of Virginia was provided by a supplementary act, having been in the first instance omitted in consequence of an oversight."

Mr. Beck, of Kentucky: "I send to the Clerk's desk, to be read, the amendment which I offer."

The Clerk read the amendment, which was offered in the nature of a substitute, as follows:

Bill to admit the State of Mississippi to representation in the Congress of the United States.

Whereas the people of Mississippi have framed and adopted a constitutional State government, which is republican in form; Therefore,

Be it enacted, etc., That the said State of Mississippi is entitled to representation in the Congress of the United States.

The previous question was seconded and the main question ordered, which was on agreeing to the substitute.

The question was taken; and it was decided in the negative, as follows:

YEAS—Messrs. Adams, Axtell, Barnum, Beck, Biggs, Bird, Blair, James Brooks, Burchard, Burr, Calkin, Cleveland, Cox, Crebs, Dewesse, Dickinson, Dockery, Dox, Eldridge, Farnsworth, Ferry, Finkelnburg, Fitch, Garfield, Getz, Gibson, Golladay, Griswold, Haight, Hale, Hambleton, Hamill, Hawkins, Hay, Hill, Holman, Jenckes, Johnson, Thomas L. Jones, Kellogg, Kerr, Ketcham, Knott, Laffin, Logan, Marshall, Mayham, McCormick, McKenzie, McNeely, Milnes, Morgan, Niblack, Orth, Potter, Randall, Reading, Reeves, Rice, Ridgway, Rogers, Schumaker, Sherrod, Slocum, Joseph S. Smith, Stiles, Stone, Strong, Swann, Sweeney, Tanner, Tillman, Trimble, Van Auker, Van Trump, Voor-

hees, Wells, Eugene M. Wilson, Winans, Winchester, Witcher, Wood, and Woodward—88.

NAYS—Messrs. Allison, Ambler, Armstrong, Arnell, Asper, Ayer, Banks, Beaman, Beatty, Benjamin, Bennett, Benton, Boles, Booker, Boyd, George M. Brooks, Buck, Buckler, Buffinton, Burdett, Benjamin F. Butler, Roderick E. Butler, Cake, Cassa, Churchill, Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Conger, Cook, Cowles, Dickey, Dixon, Donley, Duval, Dyer, Ela, Ferriss, Hamilton, Hawley, Heffin, Hoar, Judd, Julian, Kelley, Kelsey, Knapp, Lash, Lawrence, Lynch, McCrary, McGrew, Mercur, Eliakim H. Moore, William Moore, Daniel J. Morrell, Samuel P. Morrill, Myers, Negley, O'Neill, Packard, Packer, Paine, Palmer, Peters, Phelps, Platt, Pomeroy, Prosser, Sargent, Sawyer, Schenck, Scofield, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, William J. Smith, William Smyth, Starkweather, Stevens, Stevenson, Stokes, Stoughton, Taffe, Townsend, Twichell, Tyner, Upson, Van Horn, Ward, Cadwalader C. Washburn, William B. Washburn, Wheeler, Whittemore, Wilkinson, Willard, Williams, and John T. Wilson—100.

NOR VOTING—Messrs. Ames, Archer, Bailey, Bingham, Bowen, Cullom, Davis, Dawes, Fisher, Fox, Gillilan, Greene, Haldeman, Hays, Heaton, Hoag, Hoge, Hooper, Hotchkiss, Ingersoll, Alexander H. Jones, Loughbridge, Maynard, McCarthy, Jesse H. Moore, Morrissey, Mungen, Poland, Porter, Roota, Sanford, Worthington C. Smith, Strader, Strickland, and Welker—85.

So the substitute was rejected.

The bill was then ordered to be engrossed and read a third time; and, being engrossed, it was accordingly read the third time.

The question on the passage of the bill was taken; and it was decided in the affirmative, as follows:

YEAS—Messrs. Allison, Ambler, Ames, Armstrong, Arnell, Asper, Ayer, Banks, Beaman, Beatty, Benjamin, Bennett, Benton, Bingham, Blair, Boles, Booker, Bowen, Boyd, George M. Brooks, Buck, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Roderick E. Butler, Cake, Cassa, Churchill, Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Conger, Cook, Cowles, Cullom, Davis, Dawes, Dewesse, Dickey, Dixon, Dockery, Donley, Duval, Dyer, Ela, Farnsworth, Ferriss, Ferry, Finkelnburg, Fitch, Garfield, Gillilan, Hale, Hamilton, Hawley, Hay, Heffin, Hill, Hoge, Hooper, Jenckes, Judd, Julian, Kelley, Kellogg, Kelsey, Ketcham, Knapp, Laffin, Lash, Lawrence, Logan, Loughbridge, Lynch, Maynard, McCrary, McGrew, McKenzie, Mercur, Milnes, Eliakim H. Moore, William Moore, Daniel J. Morrell, Samuel P. Morrill, Myers, Negley, O'Neill, Orth, Packard, Packer, Paine, Peters, Phelps, Platt, Pomeroy, Prosser, Ridgway, Roota, Sargent, Sawyer, Scofield, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, William Smyth, Starkweather, Stevens, Stevenson, Stokes, Stoughton, Strong, Taffe, Tanner, Tillman, Townsend, Twichell, Tyner, Upson, Van Horn, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Whittemore, Wilkinson, Willard, Williams, John T. Wilson, and Winans—184.

NAYS—Messrs. Adams, Archer, Beck, Biggs, Bird, James Brooks, Burr, Calkin, Cleveland, Cox, Crebs, Dickinson, Dox, Eldridge, Getz, Gibson, Golladay, Greene, Griswold, Haight, Hambleton, Hamill, Hoar, Holman, Johnson, Thomas L. Jones, Kerr, Knott, Marshall, Mayham, McCormick, McNeely, Morgan, Niblack, Palmer, Potter, Randall, Reading, Reeves, Rice, Rogers, Schumaker, Sherrod, Stiles, Stone, Strader, Swann, Sweeney, Trimble, Van Auker, Van Trump, Voorhees, Wells, Winchester, Wood, and Woodward—56.

NOR VOTING—Messrs. Axtell, Bailey, Barnum, Fisher, Fox, Haldeman, Hawkins, Hays, Heaton,

Hoag, Hotchkiss, Ingersoll, Alexander H. Jones, McCarthy, Jesse H. Moore, Morrissey, Mungen, Poland, Porter, Sanford, Schenck, Slocum, Joseph S. Smith, William J. Smith, Worthington C. Smith, Strickland, Eugene M. Wilson, and Witcher—28.

In the Senate, on February 10th, the House bill for the admission of Mississippi to representation in Congress was taken up for consideration.

Mr. Trumbull, of Illinois, said: "Mr. President, I deem it incumbent on me, as the organ of the committee reporting this bill, to state to the Senate the condition of Mississippi at this time. In pursuance of the act which was passed in April last, authorizing the President of the United States to submit the constitutions of Virginia, Mississippi, and Texas, to a vote of the people, and to submit them either in whole, or to submit separate clauses of the various constitutions, as he should think proper, to a vote of the people, the constitution formed by a convention of the people of the State of Mississippi was submitted to the voters of that State on the 30th of November, 1869, and four clauses of that constitution were submitted separately to the voters of the State. Of the four clauses submitted, three were rejected and one was retained.

"I will read to the Senate the separate clauses which were submitted to the voters of that State, and then will give the vote upon adopting or rejecting them, so that the Senate will see exactly what was submitted to the voters of the State, what was left out, and what was retained in the constitution. I have the constitution here, which, however, was passed upon by Congress at its session in April last. Congress was satisfied with the constitution at that time, and directed it to be submitted in the manner I have already stated. The first of the distinct clauses which were submitted by the President to a separate vote was a part of section three of article seven. It is a part of the oath that the constitution required to be taken by the voters. It reads as follows:

"That I am not disfranchised in any of the provisions of the acts known as the reconstruction acts of the Thirty-ninth and Fortieth Congresses, and that I admit the political and civil equality of all men; so help me God: *Provided*, That if Congress shall at any time remove the disabilities of any person disfranchised in the said reconstruction acts of the said Thirty-ninth and Fortieth Congresses, and the Legislature of this State shall concur therein, then so much of this oath, and so much only, as refers to the said reconstruction acts shall not be required of such person so pardoned to entitle him to be registered.

"The vote upon the adoption or rejection of that oath which I have just read to the Senate was, in favor of retaining it, 2,206; for its rejection, 87,874. It was rejected, the Senate will observe, by an almost unanimous vote of the voters of the State of Mississippi. Section five of the same article was also submitted to a separate vote. That section declares:

No person shall be eligible to any office of profit or trust, civil or military, in this State, who, as a

member of the Legislature, voted for the call of the convention that passed the ordinance of secession, or who, as a delegate to any convention, voted for or signed any ordinance of secession, or who gave voluntary aid, countenance, counsel, or encouragement, to persons engaged in armed hostility to the United States, or who accepted or attempted to exercise the functions of any office, civil or military, under any authority or pretended government, authority, power, or constitution, within the United States, hostile or inimical thereto, except all persons who aided reconstruction by voting for this convention, or who have continuously advocated the assembling of this convention, and shall continuously and in good faith advocate the acts of the same; but the Legislature may remove such disability: *Provided*, That nothing in this section, except voting for or signing the ordinance of secession, shall be so construed as to exclude from office the private soldier of the late so-called Confederate States army.

"The vote upon the adoption of that clause of the constitution was 2,390 in its favor, and against it 87,253; so it will be seen that this proscriptive provision, prohibiting the holding of office by persons who had been engaged in the rebellion, was voted down by the decisive vote of 87,000 to 2,000.

"Section five of article twelve of the constitution was also submitted to a separate vote. That section is in these words:

The credit of the State shall not be pledged or loaned in aid of any person, association, or corporation; nor shall the State hereafter become a stockholder in any corporation or association.

"The vote upon that was, in favor of retaining it, 70,427; against it, 20,834; so that the provision remains as a part of the constitution.

"A part of the oath prescribed in the twenty-sixth section of article twelve of the constitution for members of the Legislature and State officers was also submitted to a separate vote by direction of the President. The part thus submitted reads as follows:

That I have never, as a member of any convention, voted for or signed any ordinance of secession; that I have never, as a member of any State Legislature, voted for the call of any convention that passed any such ordinance.

"The vote upon that clause was, in favor of its retention, 2,170, and against it, 88,444; so that this proscriptive provision was also rejected by an almost unanimous vote. These were the four separate clauses which were submitted to the people of that State, three of which were rejected, and the one prohibiting the pledging of the credit of the State to corporations was retained. The vote upon the residue of the constitution was: in favor of its adoption, 108,785, and against it, 9,955; making a total vote of 114,690. Less than 10,000 out of the entire number voted against the constitution which is now presented as the constitution of Mississippi. So it will be seen that Mississippi comes here with a constitution ratified by an almost unanimous vote, and the proscriptive features which were put into the constitution by the convention which assembled have been voted out of it by, I am happy to say, a very decisive vote. I think that we owe much of the good feeling which now exists in

the State of Mississippi to the liberality of her citizens in rejecting those proscriptions which the convention had sought to put upon the voters and upon the right to hold office in that State.

"The House of Representatives has passed a bill which is a copy in so many words of the bill recognizing the State of Virginia as entitled to representation, except that it applies to the State of Mississippi, and except also that it provides that the oaths required by it may be affirmations where persons are conscientiously scrupulous about taking oaths. It will be remembered by the Senate that we passed a supplemental bill in the case of Virginia to correct the omission in the original bill, so that this is precisely the bill that was passed in reference to the State of Virginia, now sought to be applied to the State of Mississippi. The House of Representatives, it will be remembered, passed a bill for the recognition of the State of Virginia in the simplest form, simply declaring that the State of Virginia was entitled to representation in Congress, but the Senate thought proper to attach conditions. The Committee on the Judiciary reported a resolution for the admission of the State of Virginia, also in its simplest form, and the opinion of the Judiciary Committee now is that these conditions ought not to be attached to any State.

"It is believed by that committee that Congress has no authority to impose such conditions; that they have no binding efficacy; that their effect is evil, and evil only; and that it is keeping up a distinction in regard to the States which can do no good, and may do much harm. It is totally inconsistent with the action in the State of Mississippi, the voters of that State having acted liberally. They have struck out the proscriptive provisions in their constitution; they have organized their State peacefully. The condition of affairs in the State of Mississippi, so far as I know—and I have taken some pains to inquire—is as favorable to peace and good order as in any of the late rebel States, perhaps more so, and it is owing, in my judgment, to the liberal policy which has been pursued there.

"Why, then, it may be asked, should conditions be imposed upon the State of Mississippi when she is recognized as entitled to representation in this body? Does anybody suppose that the State of Mississippi is going back? Does anybody suppose that a State organized as the State of Mississippi is, and under the influences that she has been organized under, is going back and going to change her constitution and make it oppressive upon any portion of her people? Is there any thing in the character of the delegation which Mississippi has elected and sent to the two Houses of Congress, is there any thing in the character of her Legislature, is there any thing in the character of the officials of that State in any respect, to warrant the belief or the suggestion

that she may not be trusted with the powers of a full-grown State as well as the State of Illinois or any other State in the Union?

"I do not propose to argue this question. I believe that when a State is entitled to representation in this Union, and becomes one of the States of the Union, it is a full and complete State, with all the rights in all respects of every other State. I want the State of Mississippi here as a full-grown State. I want its representatives to stand up in the Congress of the United States as the representatives of a coequal State of the Union, and not of an inferior and subordinate State, or a State with conditions imposed upon it not imposed upon the other States of the Union.

"This is the opinion of the Committee on the Judiciary, and hence they have reported back the House bill with a recommendation to strike out the whole of these conditions, and every thing except the single provision declaring the State of Mississippi entitled to representation in the Congress of the United States."

Mr. Edmunds, of Vermont, said: "I do not want to open the question now as to what our powers are in imposing conditions. It has been fairly demonstrated, I think, on this floor, that we have the power to impose these conditions, as they are called, and I do not cavil about names; that the thing we have put into the statute with regard to Virginia, she having chosen to come in under it, binds her, I think that may be demonstrated. I think it has been demonstrated. I know some Senators do not think so. Very well. We have applied it to her, not in order to make her unequal, as she is not; not in order to make her subordinate, as she is not; but in order to make perpetual within her territory that clause of the Constitution which declares that she shall have a republican form of government all the time, and that she shall not turn her back upon us this year or next year or fifty years hence, and undertake to make progress in a retrogressive direction.

"This is only one of the means which the nation has, which the founders of the nation intended it should have, of securing liberty and equal rights and public progress in every one of the States; and I fail to see the force of the argument which goes to maintain that to do that by appropriate and legitimate means of legislation, in making a compact with a State when she comes in, or imposing a constitution on her when she comes in, is making her unequal. She is equally bound by the express letter of the law and by the Constitution to maintain republican institutions. She has no right at any time to disfranchise any portion of her people who are voters. We should have a right without such conditions, I agree and maintain, to interfere, and it would be our highest duty to execute and exercise that right.

"But these States are in a peculiar condition. They have cost the nation innumerable lives, a great waste of blood and treasure, and

we are endeavoring to restore order, to secure private rights to the rebels as well as to the Union men. We are not undertaking to set up one law for one class of people and another for another, but we are only endeavoring to maintain equal security and equal privileges in those States.

"Now, is it not wise, as a matter of precaution, to say to these very people, in the language of my friend from Illinois, who have shown so unanimous a disposition to restore themselves to a friendly condition of progressive republicanism: 'We accept you in the same spirit in which you come; and, feeling that your spirit is both generous and genuine, we apply to you the same guarantees and tests that we have to others?' Now, if the people of Mississippi are sincere, they will accept it without any complaint whatever; if the people of Mississippi are not sincere, these conditions and limitations imposed upon them are the very things that their condition absolutely requires of us. If the condition there is, as I do not doubt it is, as the Senator from Illinois thinks, they will not feel that they are imposed upon or insulted, or coerced in any unfriendly spirit by finding in the bill as to them the very same provisions that are in bills as to all their sister rebellious and restored States, every one of them.

"Now, I do not want to go into this argument any more than my friend does. I only wish to state the view that I entertain, as one member of the committee, of the high propriety of standing by the House bill."

Mr. Norton, of Minnesota, said: "Mr. President, like the Senator from Vermont, I do not care to open up the discussion of the questions incident to the admission of these States, and those questions that have been discussed in the Virginia and Georgia bills; but, at the risk of taking up the time of the Senate, I would wish again to call the attention of the Senate to the provisions of the Constitution. I know how much it is slighted, and how lightly it is treated here; but I would wish again to call the attention of the Senate to the provisions of the Constitution. I quote its words:

The Senate of the United States shall be composed of two Senators from each State.

"And, when that provision of the Constitution has its legitimate operation and force, a State of this Union is entitled, not by the law which you now propose to pass, not by the provisions of this bill as reported by the committee, but by the Constitution itself, to representation and to two Senators upon this floor. Congress may admit new States, but, when they are admitted, they are States like other States, and all upon an equal footing in every respect whatever.

"This bill, as reported by the committee, I do not object to, because it is an effort of the majority in the Senate to preserve their consistency, and by it they declare that the State of Mississippi is entitled to representation in

Congress. Sir, if Mississippi is a State in this Union, she is entitled to her representation in this body by virtue of the provisions of the Constitution, and not by this act. If Mississippi is a State in this Union, she is entitled to two Senators upon this floor, just as much as any other State, Minnesota, Illinois, Vermont, or Ohio; and she has the right to it by virtue of the provisions of the Constitution, and not because you pass this act.

"True, I am not objecting to the passage of the bill reported by the committee, declaring 'that the State of Mississippi is entitled to representation in the Congress of the United States;' but I do object to this continual thrusting in the face of the Senate and country the fact that the majority in this body deem it necessary to preserve their consistency—consistency with their reconstruction acts and the measures that have been passed with reference to the restoration of the Southern States. Precedents are referred to—the precedents of the laws admitting the other States. Conditions have been applied to them, and, it is said, because we did it with them, why not do it with Mississippi; because we made fundamental conditions for the other States, why not for Mississippi; and why not for Texas when she shall apply for admission? Sir, it is these precedents and the attempt to preserve political and party consistency that have brought to us all this trouble.

"I shall not go into a discussion of the policy of these reconstruction measures, but I do say, and I put it now to the Senate, that the whole difficulty you have had in your reconstruction was that you wanted to preserve your consistency, and have not adapted your legislation to the wants and necessities practically of the people of these States. You say that they are not reconstructed or restored to their practical relations to the General Government until you have admitted them to representation, making the existence of the State depend upon the fact whether it has representation in Congress. If they have Representatives in the other House and Senators upon this floor, then, you say, they are States. But, sir, the fact of their right to representation in the other House and here depends upon whether they are States independent of their representation.

"Now, if Mississippi is a State in this Union, she is entitled, not under your law, but under the Constitution, to representation; and the qualification, election, and returns of the members are the only questions for you. If Mississippi is a State in the Union, she is entitled, without your law, without your act, to representation upon this floor, and upon the other. I shall vote for this bill, because I choose to let all your reconstruction acts go. I care nothing for the preservation of your consistency in these matters; but I so vote for the purpose of bringing these States back to their proper practical relations to the General Gov-

ernment; and, so far as they inform us it is necessary to bring prosperity, peace, law, and order to those States, I prefer to do what I can to bring it about."

Mr. Willey, of West Virginia, moved to amend by striking out the third proviso, and inserting as follows:

That so much of the act of Congress entitled "An act to admit the State of Virginia to representation in the Congress of the United States," approved January 26, 1870, as declares that Virginia is admitted to representation upon certain fundamental conditions therein expressed, be, and the same is hereby, repealed.

Mr. Sumner, of Massachusetts, said: "The argument for State rights proceeds on a misapprehension. Nobody doubts the right of a State to local self-government, through which are supplied the opportunities of political education, and also of local administration adapted precisely to local wants. This is the peculiarity of our national system, wherein it differs especially from the centralized imperialism of France. But, while recognizing the State as the agency for all matters properly local, it must not be allowed to interfere with those other matters, being rights and duties, which are not local but universal.

"Now, sir, nothing can be clearer than that the equal rights of all must be placed under the safeguard of one uniform law, which shall be the same in all parts of the nation—the same in Charleston and New Orleans as in Boston and Chicago. It is absurd to suppose that the rights of the citizen can differ in different States. They must be the same in all the States; but this can be consummated only by the national authority. Therefore, on grounds of reason, I repel that pretension of State rights which would take this just prerogative from the nation. Understand me, sir, I do not seek to *centralise*, but to *nationalise*. The partisans of State rights, in their efforts to *decentralise*, would *denationalise*. In the name of local self-government they would overthrow the nation.

"If I am asked where I find these national powers, I answer that they are in those two great title-deeds of the Republic, the Declaration of Independence and the national Constitution. Whether viewed apart or together, these two are one and the same; but the two reinforce each other. The Declaration of Independence finds proper machinery for its great purposes in the national Constitution, while the national Constitution is explained, invigorated, and elevated, by the Declaration of Independence. By the national Constitution, the nation is bound to assure a republican government to all the States, thus giving to Congress the plenary power to fix the definition of such a government; but by the Declaration of Independence, the fundamental elements of this very definition are supplied in terms from which there can be no appeal. By this Declaration it is solemnly announced,

first, that all men are equal in rights; and, secondly, that just government stands only on the consent of the governed. Other things may fail, but these cannot. Whenever Congress is called to maintain a republican government, it must be according to these universal, irreversible principles. The power to maintain necessarily implies all ancillary powers of prevention and precaution, so that republican government may be assured. All these powers are essentially national, and not local. They belong to the nation, and not to the State.

"So long as slavery existed, this definition was impossible. State rights were set up against human rights; but with the death of slavery, followed by the extinction of the rebellion, this definition takes its just place in our national system. Therefore, whatever tends to maintain a republican government and to place it beyond assault; whatever tends to maintain the great principles declared at our birth as a nation—all this is constitutional. As well deny that the sun shines; as well with puny arm attempt to drag the sun from the sky. Still it shines. God be praised, the day has passed when State rights can be exalted above human rights!

"It is for Congress to determine, in its discretion, how republican government shall be maintained. Whatever it does in this regard, whether by general law, or by condition or limitation on States, is plainly constitutional beyond all question. All is in the discretion of Congress, which may select the 'means' by which this great guarantee shall be performed. It is a guarantee by the express text of the Constitution, and it must be performed. In selecting the means, Congress cannot hesitate at any requirement calculated to secure the beneficent result. By condition precedent, by condition subsequent, by prohibitory legislation, by legislation acting directly on the States or the people—by each and all of these, Congress may act, bearing in mind always the great definition supplied by our fathers, which must be maintained at all hazards.

"It is vain to say that our fathers did not intend this great power and foresee its exercise. There it is in the Constitution, clear and commanding, and there is the great definition in the Declaration of Independence, clear and commanding. If our fathers did not fully appreciate their mighty act, neither did the barons at Runnymede when they obtained Magna Charta, the perpetual landmark of English rights. The words of the poet are again fulfilled: 'They builded better than they knew.' But they did build. They built this vast temple of republican liberty, and enjoined upon Congress its perpetual safeguard, 'any thing in the constitution or the laws of any State to the contrary notwithstanding'; and, sir, by the oath which you have taken to support the Constitution, are you bound to watch and protect this vast temple. The recent war has had its

losses, terrible and afflicting. It has had its gains also. First among these gains is that interpretation of the Constitution which makes us a nation, and places the equal rights of all under the protection of the national power, being nothing less than the fulfilment of the early promises of the fathers. Too slowly has this been accomplished; but it is accomplished at last, and it is our duty to see that these promises are in no respect neglected, and that the republic, one and indivisible, dedicated to human rights, and an example to mankind, is upheld in every part of our wide-spread country."

Mr. Trumbull, of Illinois, said: "Mr. President, human rights and the liberties of this people are safer retained by the people themselves and at home than they are conferred upon any imperial central government.

"Human rights, thank God! in this land do not depend upon the Congress of the United States; and this is a modern and a false idea of our Government, that the Congress of the United States is the great centre of the liberties of this people. The Congress of the United States is composed of but the servants of the sovereign people; and the liberties of this people, if preserved at all, are to be preserved by the people themselves. This is a limited Government; and the further you take from the people the power that is in their own hands, the more danger there is of overturning their liberties. All government is an evil. It were better that all power were retained by the people themselves, if it were possible; but in a great country like this the people cannot all assemble together to establish the necessary rules for the protection of person and property; and hence they have adopted a representative form of government. That is what republican government means—a representative government; and the further the power is taken from the people the greater the danger is that their liberties will be encroached upon. It is the system of local organizations, school-district organizations, township organizations, county organizations, State organizations, and the division of powers among them, that is to familiarize our people with the mode of doing public business and with the character of their Government, and to preserve its free institutions; and it is better that there should be reserved as near the people as possible all powers, so that they surrender up enough to preserve the peace of society and protect the persons and the property of the citizens.

"This Federal Government is a Government of limited powers. The people have conferred upon it a few powers of a national character, and they supposed that their local State governments were the safest depositories for the protection of the great mass of the rights of the citizen. They have never surrendered them to the Federal Government, but they have surrendered to this Federal Government certain powers necessary for national purposes; and

we are not to be told, because we deny the omnipotence of Congress, that therefore we are opposed to human rights! Why, sir, it would be a surrender of human rights to imperial centralized government if the people of this country should ever consent to surrender up all their rights of liberty to the central Government here at Washington, the farthest removed from them of any Government established in this country."

The Vice-President: "The question is on the amendment offered by the Senator from West Virginia."

The question being taken, resulted as follows:

YEAS—Messrs. Bayard, Casserly, Conkling, Davis, Ferry, Fowler, Hamilton, Johnston, Kellogg, McCreery, Nye, Ross, Saulsbury, Sawyer, Sprague, Stewart, Stockton, Thurman, Trumbull, Vickers, Warner, Willey, and Williams—23.

NAYS—Messrs. Abbott, Anthony, Boreman, Brownlow, Buckingham, Cameron, Chandler, Cole, Cragin, Drake, Edmunds, Fenton, Gilbert, Hamlin, Harlan, Harris, Howard, Howell, McDonald, Morrill of Vermont, Morton, Osborn, Patterson, Pomeroy, Pool, Pratt, Ramsey, Rice, Robertson, Scott, Spencer, Sumner, Thayer, Tipton, Wilson, and Yates—26.

ABSENT—Messrs. Carpenter, Cattell, Corbett, Howe, Lewis, Morrill of Maine, Norton, Schurz, and Sherman—9.

So the amendment was rejected.

The Vice-President: "The question recurs on the amendment reported by the Committee on the Judiciary, to strike out all of the bill after the words 'United States,' in line four, upon which the yeas and nays have been ordered."

The question being taken, resulted as follows:

YEAS—Messrs. Bayard, Casserly, Cole, Conkling, Davis, Fenton, Ferry, Fowler, Hamilton, Johnston, Kellogg, McCreery, Morrill of Maine, Ross, Saulsbury, Sawyer, Scott, Sprague, Stewart, Stockton, Thurman, Tipton, Trumbull, Vickers, Warner, Willey, and Williams—27.

NAYS—Messrs. Abbott, Anthony, Boreman, Brownlow, Buckingham, Cameron, Chandler, Cragin, Drake, Edmunds, Gilbert, Hamlin, Harlan, Harris, Howard, Howell, McDonald, Morrill of Vermont, Morton, Nye, Osborn, Pomeroy, Pool, Pratt, Ramsey, Rice, Robertson, Spencer, Sumner, Thayer, Wilson, and Yates—32.

ABSENT—Messrs. Carpenter, Cattell, Corbett, Howe, Lewis, Norton, Patterson, Schurz, and Sherman—9.

So the amendment was rejected.

The bill was ordered to a third reading, and was read the third time.

The yeas and nays were ordered; and being taken, resulted as follows:

YEAS—Messrs. Abbott, Anthony, Boreman, Brownlow, Buckingham, Cameron, Chandler, Cole, Conkling, Corbett, Cragin, Drake, Edmunds, Fenton, Gilbert, Hamlin, Harlan, Harris, Howard, Howe, Howell, Kellogg, McDonald, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Patterson, Pomeroy, Pool, Pratt, Ramsey, Rice, Robertson, Ross, Sawyer, Scott, Spencer, Sprague, Stewart, Sumner, Thayer, Tipton, Trumbull, Warner, Willey, Williams, Wilson, and Yates—50.

NAYS—Messrs. Bayard, Casserly, Davis, Fowler, Hamilton, Johnston, McCreery, Saulsbury, Stockton, Thurman, and Vickers—11.

ANSWER—Messrs. Carpenter, Cattell, Ferry, Lewis, Norton, Schurz, and Sherman—7.

So the bill was passed.

Mr. Butler, of Massachusetts, from the Committee on Reconstruction, reported a bill (H. R. No. 1536) to admit the State of Texas to representation in the Congress of the United States; which was read a first and second time.

Mr. Butler: "Before the bill is read, I wish to say that it is precisely the Virginia and Mississippi bills, with the single addition of a provision that the passage of this bill shall not affect the original conditions under which Texas was annexed to the United States."

Mr. Beck, of Kentucky, said: "I offer the following as a substitute for the bill:

Whereas the State of Texas has a constitution of State government republican in form: Therefore, *Be it enacted, &c.*, That the said State of Texas is entitled to representation in the Congress of the United States.

"My only reason for offering this substitute is, that gentlemen on the Republican side, who agree with me substantially in the view which I take with reference to this measure, were absent this morning from the committee; and hence I have submitted this proposition that the House may pass upon it. It is precisely the same which has heretofore been submitted to the House in the cases of Virginia and Mississippi by the gentleman from Ohio (Mr. Bingham) and the gentleman from Illinois (Mr. Farnsworth). We were this morning called upon by the chairman of the committee to report in favor of the admission of Texas; and a statement, which I have no doubt was true, was made by him that Texas had adopted the thirteenth, fourteenth, and fifteenth constitutional amendments, and had complied with all the terms and conditions of every act passed by Congress relative to that State. This being so, and there being no complaint or intimation that she has ever shown any symptoms of bad faith in reference to congressional legislation, it occurred to me that if we intend to admit her as a State on equal terms with all the other States we ought to say so; our act of admission ought to contain simply that declaration.

"I believe that Texas has always been a State, and therefore these facts do not influence my action. She has now, as everybody admits, a republican form of government. Her constitution, from whatever stand-point it may be viewed, is all that can be required of her. In view of these facts, the State is entitled to representation in Congress. If Congress should hereafter undertake to exercise any power over the State in consequence of any default which she may hereafter commit, it will be upon such a case as would justify a similar exercise of power with regard to New York, Pennsylvania, Massachusetts, or any other State. When that question arises, if it ever should arise, it will

present itself as an original question. Such an exercise of jurisdiction by Congress would involve a power which of course I deny, unless the State should cease to have a republican form of government, which I do not anticipate. But, sir, everybody admits that the State of Texas has complied with every condition which has been imposed upon her, and that her constitution is as thoroughly republican as that of any State in the Union. It has always seemed to me that every condition which Congress may seek to impose on a State upon its admission into the Union is void; that any State admitted to the Union must come in upon an equality with all the other States. Therefore I have offered a substitute embracing a simple proposition which, I think, should commend itself to the judgment of gentlemen even on the Republican side of the House."

The yeas and nays were ordered.

The question was taken, and it was decided in the negative, as follows:

YEAS—Messrs. Adams, Archer, Beck, Biggs, Bird, Blair, James Brooks, Burr, Calkin, Dickinson, Dockery, Dox, Eldridge, Farnsworth, Getz, Griswold, Haight, Haldeman, Hamill, Hawkins, Hay, Holman, Johnson, Kerr, Knott, Mayham, McCormick, McKenzie, McNeely, Morgan, Mungen, Niblack, Potter, Randall, Reading, Reeves, Rice, Ridgway, Rogers, Schumaker, Sherrod, Slocum, Stiles, Stone, Swann, Trimble, Van Auken, Van Trump, Voorhees, Wells, Eugene M. Wilson, and Wood—52.

NAYS—Messrs. Allison, Ambler, Armstrong, Arnell, Asper, Atwood, Ayer, Banks, Beaman, Beatty, Benjamin, Boles, Booker, Boyd, George M. Brooks, Buck, Buckley, Buffinton, Burdett, Benjamin F. Butler, Roderick B. Butler, Cessna, Clarke, Amasa Cobb, Coburn, Conger, Cook, Covode, Donley, Duval, Ferriss, Ferry, Finkelnburg, Hamilton, Harris, Hawley, Heaton, Hedin, Hill, Hoar, Ingersoll, Jenckes, Alexander H. Jones, Judd, Julian, Kelley, Kelsey, Loughridge, Lynch, Maynard, McCarthy, McCrary, McGrew, McKee, William Moore, Morphis, Daniel J. Morrell, Samuel P. Morrill, Myers, Negley, O'Neill, Orth, Packard, Packer, Paine, Palmer, Pearce, Peters, Phelps, Poland, Pomeroy, Prosser, Roots, Sanford, Sargent, Sawyer, Schenck, Scofield, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, William J. Smith, William Smyth, Starkweather, Stevenson, Stokes, Stoughton, Strickland, Strong, Taffe, Tillman, Townsend, Twichell, Tyner, Upson, Van Horn, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Wilkinson, Willard, Williams, and Winans—105.

NOR VOTING—Messrs. Ames, Axtell, Bailey, Barnum, Bennett, Benton, Bingham, Bowen, Burchard, Calk, Churchill, Cleveland, Clinton L. Cobb, Cowles, Cox, Crebs, Cullom, Davis, Dawes, Dickey, Dixon, Dyer, Ela, Fisher, Fitch, Fox, Garfield, Gibson, Gilfillan, Hale, Hambleton, Hays, Hoge, Hooper, Hotchkiss, Thomas L. Jones, Kellogg, Ketcham, Knapp, Lakin, Lash, Lawrence, Logan, Marshall, Mercer, Milnes, Eliakim H. Moore, Jesse H. Moore, Morrissey, Platt, Porter, Joseph S. Smith, Worthington C. Smith, Stevens, Strader, Sweeney, Tanner, Van Wyck, John T. Wilson, Winchester, Witcoher, and Woodward—43.

So the substitute was rejected.

On the passage of the bill, the vote was as follows:

YEAS—Messrs. Allison, Ambler, Armstrong, Arnell, Asper, Atwood, Ayer, Bailey, Banks, Barnum, Beaman, Beatty, Benjamin, Blair, Boles, Booker, Bowen, Boyd, George M. Brooks, Buck, Buckley,

Buffinton, Burchard, Burdett, Benjamin F. Butler, Roderick R. Butler, Cake, Cessna, Churchill, Clarke, Amasa Cobb, Coburn, Conger, Cook, Covode, Cullom, Dawes, Dockery, Donley, Duval, Farnsworth, Ferriss, Ferry, Finkelnburg, Fitch, Garfield, Hale, Hamilton, Harris, Hawley, Hay, Heaton, Heflin, Hill, Hoar, Ingersoll, Jenckes, Alexander H. Jones, Judd, Julian, Kelley, Kellogg, Kelsey, Ketcham, Ladin, Logan, Loughridge, Lynch, Maynard, McCarthy, McGrew, McKee, McKenzie, William Moore, Morphis, Daniel J. Morrell, Samuel P. Morrill, Myers, Negley, O'Neill, Orth, Packard, Packer, Paine, Pearce, Peters, Phelps, Poland, Pomeroy, Prosser, Ridgway, Roots, Sanford, Sargent, Sawyer, Schenck, Scofield, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, William J. Smith, Worthington C. Smith, William Smyth, Starkweather, Stevens, Stevenson, Stokes, Staughton, Strickland, Strong, Sweeney, Taffe, Tillman, Townsend, Twichell, Tyner, Upson, Van Horn, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Wilkinson, Willard, Williams, John T. Wilson, and Winans—129.

YAYE—Messrs. Adams, Archer, Beck, Biggs, Bird, James Brooks, Burr, Calkin, Dickinson, Dox, Eldridge, Getz, Griswold, Haight, Haldeman, Hamill, Holman, Johnson, Kerr, Knott, Mayham, McCormick, McNeely, Morgan, Niblack, Potter, Randall, Reading, Reeves, Rice, Rogers, Schumaker, Sherrod, Slocum, Stiles, Stone, Strader, Swann, Trimble, Van Auker, Van Trump, Voorhees, Wells, Eugene M. Wilson, and Wood—45.

NOR VOTING—Messrs. Ames, Axtell, Bennett, Benton, Bingham, Cleveland, Clinton L. Cobb, Cowles, Cox, Crebs, Davis, Dickey, Dixon, Dyer, Ela, Fisher, Fox, Gibson, Gilfillan, Hambleton, Hawkins, Hays, Hoge, Hooper, Hotchkiss, Thomas L. Jones, Knapp, Lash, Lawrence, Marshall, McCrary, Mercur, Milnes, Eliakim H. Moore, Jesse H. Moore, Morrissey, Mungen, Palmer, Platt, Porter, Joseph S. Smith, Tanner, Van Wyck, Winchester, Witcher, and Woodward—46.

So the bill was passed.

In the Senate, on March 29th, the bill from the House was reported without amendment. Mr. Sherman, of Ohio, moved to strike out the following proviso:

Provided further, That this act shall not affect in any manner the conditions and guarantees upon which the State of Texas was annexed and admitted as a State.

The amendment was agreed to, and the bill passed by the following vote:

YAYE—Messrs. Abbott, Boreman, Brownlow, Buckingham, Cameron, Cattell, Chandler, Cole, Corbett, Cragin, Drake, Fenton, Ferry, Gilbert, Hamlin, Harlan, Harris, Howard, Howell, Lewis, McDonald, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Patterson, Pomeroy, Pratt, Ramsey, Revels, Rice, Robertson, Ross, Sawyer, Schurz, Scott, Sherman, Sprague, Stewart, Sumner, Thayer, Tipton, Warner, Willey, Williams, and Wilson—47.

NAYE—Messrs. Bayard, Casserly, Davis, Hamilton, Johnston, McCreery, Norton, Saulsbury, Stockton, Thurman, and Vickers—11.

ABSENT—Messrs. Anthony, Carpenter, Conkling, Edmunds, Fowler, Howe, Kellogg, Pool, Spencer, Trumbull, and Yates—11.

In the House, the amendment of the Senate was concurred in by the following vote:

YAYE—Messrs. Allison, Ambler, Ames, Arnell, Asper, Atwood, Ayer, Beaman, Beatty, Benjamin, Bennett, Benton, Blair, Boles, Boyd, George M. Brooks, Buck, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Cake, Cessna, Clarke, Clinton L. Cobb, Coburn, Conger, Cook, Covode, Cowles, Cullom, Davis, Dawes, Dickey, Dixon, Dockery, Donley, Duval, Dyer, Ela, Farnsworth, Ferriss,

Ferry, Finkelnburg, Fisher, Garfield, Gilfillan, Hale, Hamilton, Harris, Hawley, Hay, Heaton, Heflin, Hill, Hoar, Hoge, Hooper, Ingersoll, Jenckes, Alexander H. Jones, Judd, Julian, Kelley, Kelsey, Knapp, Lash, Lawrence, Logan, Loughbridge, Lynch, Maynard, McCarthy, McCrary, McGrew, McKenzie, Mercur, Milnes, Eliakim H. Moore, William Moore, Morphis, Daniel J. Morrell, Myers, Negley, O'Neill, Orth, Packard, Packer, Paine, Pearce, Peters, Platt, Poland, Pomeroy, Prosser, Roots, Sanford, Sargent, Sawyer, Schenck, Scofield, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, William J. Smith, Worthington C. Smith, William Smyth, Stevens, Stevenson, Stokes, Staughton, Strickland, Taffe, Tillman, Tyner, Upson, Van Horn, Van Wyck, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Wilkinson, Williams, John T. Wilson, Winans, and Witcher—130.

NAYS—Messrs. Adams, Archer, Axtell, Beck, Biggs, Bird, James Brooks, Burr, Calkin, Cleveland, Cox, Crebs, Dickinson, Dox, Eldridge, Getz, Gibson, Griswold, Haight, Haldeman, Hambleton, Hamill, Holman, Kerr, Knott, Marshall, Mayham, McCormick, McNeely, Morgan, Mungen, Niblack, Potter, Randall, Reading, Rice, Ridgway, Schumaker, Sherrod, Slocum, Joseph S. Smith, Stiles, Stone, Swann, Sweeney, Trimble, Van Trump, Wells, Eugene M. Wilson, and Wood—50.

NOR VOTING—Messrs. Armstrong, Bailey, Banks, Barnum, Bingham, Booker, Bowen, Roderick R. Butler, Churchill, Amasa Cobb, Fitch, Fox, Hawkins, Hays, Hotchkiss, Johnson, Thomas L. Jones, Kellogg, Ketcham, Ladin, McKee, Jesse H. Moore, Samuel P. Morrill, Morrissey, Palmer, Phelps, Porter, Reeves, Rogers, Starkweather, Strader, Strong, Tanner, Townsend, Twichell, Van Auker, Voorhees, Willard, Winchester, and Woodward—40.

On March 30th the President sent the following message to both Houses of Congress:

EXECUTIVE MANSION, March 30, 1870.

To the Senate and House of Representatives:

It is unusual to notify the two Houses of Congress by message of the promulgation, by proclamation of the Secretary of State, of the ratification of a constitutional amendment. In view, however, of the vast importance of the fifteenth amendment to the Constitution, this day declared a part of that sacred instrument, I deem a departure from the usual custom justifiable. A measure which makes at once four million people voters who were heretofore declared by the highest tribunal in the land not citizens of the United States, nor eligible to become so (with the assertion that "at the time of the Declaration of Independence the opinion was fixed and universal in the civilized portion of the white race, regarded as an axiom in morals as well as in politics, that black men had no rights which the white man was bound to respect"), is indeed a measure of grander importance than any other one act of the kind from the foundation of our free Government to the present day.

Institutions like ours, in which all power is derived directly from the people, must depend mainly upon their intelligence, patriotism, and industry. I call the attention, therefore, of the newly-enfranchised race to the importance of their striving in every honorable manner to make themselves worthy of their new privilege. To the race more favored heretofore by our laws I would say, withhold no legal privilege of advancement to the new citizen. The framers of our Constitution firmly believed that a republican Government could not endure without intelligence and education generally diffused among the people. The "Father of his Country" in his Farewell Address, uses this language: "Promote, then, as a matter of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of the Government gives

force to public opinion it is essential that public opinion should be enlightened." In his first annual message to Congress the same views are forcibly presented, and are again urged in his eighth message.

I repeat that the adoption of the fifteenth amendment to the Constitution completes the greatest civil change and constitutes the most important event that has occurred since the nation came into life. The change will be beneficial in proportion to the heed that is given to the urgent recommendations of Washington. If these recommendations were important then, with a population of but a few millions, how much more important now with a population of forty millions and increasing in a rapid ratio!

I would therefore call upon Congress to take all the means within their constitutional powers to promote and encourage popular education throughout the country; and upon the people everywhere to see to it that all who possess and exercise political rights shall have the opportunity to acquire the knowledge which will make their share in the Government a blessing and not a danger. By such means only can the benefits contemplated by this amendment to the Constitution be secured.

U. S. GRANT.

HAMILTON FISH, Sec'y of State of the United States.

To all to whom these presents may come, greeting:

Know ye that the Congress of the United States on or about the 27th day of February, in the year 1869, passed a resolution in the words and figures following, to wit:

"A resolution proposing an amendment to the Constitution of the United States.

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as part of the Constitution, namely:

"ARTICLE XV., Sec. 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States, or by any State, on account of race, color, or previous condition of servitude.

"Sec. 2. The Congress shall have power to enforce this article by appropriate legislation."

And further, that it appears from official documents on file in this Department that the amendment to the Constitution of the United States, proposed as aforesaid, has been ratified by the Legislatures of the States of North Carolina, West Virginia, Massachusetts, Wisconsin, Maine, Louisiana, Michigan, South Carolina, Pennsylvania, Arkansas, Connecticut, Florida, Illinois, Indiana, New York, New Hampshire, Nevada, Vermont, Virginia, Alabama, Missouri, Mississippi, Ohio, Iowa, Kansas, Minnesota, Rhode Island, Nebraska, and Texas—in all, twenty-nine States:

And further, that the States whose Legislatures have so ratified the said proposed amendment constitute three-fourths of the whole number of States in the United States;

And further, that it appears from an official document on file in this Department that the Legislature of the State of New York has since passed resolutions claiming to withdraw the said ratification of the said amendment, which had been made by the Legislature of that State, and of which official notice had been filed in this Department;

And further, that it appears from an official document on file in this Department that the Legislature of Georgia has by resolution ratified the said proposed amendment;

Now, therefore, be it known that I, Hamilton Fish, Secretary of State of the United States, by virtue and in pursuance of the second section of the act of Congress, approved the 20th day of April, in the year 1818, entitled "An act to provide for the publication of the laws of the United States, and for other

purposes," do hereby certify that the amendment aforesaid has become valid to all intents and purposes as part of the Constitution of the United States.

In testimony whereof I have hereunto set my hand and caused the seal of the Department of State to be affixed.

Done at the city of Washington this 30th day of March, in the year of our Lord 1870, and of [L. S.] the independence of the United States the ninety-fourth. HAMILTON FISH.

In the House, on May 16th, Mr. Bingham, of Ohio, from the Committee on the Judiciary, reported the following bill to enforce the fifteenth amendment to the Constitution, in the nature of a substitute to a bill referred to them:

Strike out all after the enacting clause and insert the following:

That any officer of the United States, or of any State, Territory, or district, and every officer of any city, county, town, township, borough, ward, parish, or hundred, in any State, Territory, or district, who shall by any official act whatever, or by the omission, neglect, or refusal to perform any official act or duty whatever; whether under color or pretext of any provision of any State constitution, or any law of any State, Territory, or district whatsoever, or of any local, municipal, or other law, rule, or ordinance, deny or abridge the right of any citizen of the United States to vote, on account of race, color, or previous condition of servitude, at any Federal, State, county, municipal, or other election, shall, upon conviction thereof, be adjudged guilty of a misdemeanor, and shall be punished by imprisonment of not less than one year and not exceeding three years, or by a fine not less than \$500 nor exceeding \$5,000, or both such fine and imprisonment, in the discretion of the court.

SECTION 2. *And be it further enacted,* That all colored citizens of the United States resident in the several States of the United States shall be entitled to vote at all elections in the State, county, parish, town, township, ward, or hundred of their residence, subject only to the same conditions which now are or may hereafter be required to qualify white citizens to vote therein. And any person who shall, by force, fraud, intimidation, or other unlawful means whatsoever, prevent any colored citizen from voting at any such election, who possesses the qualifications, except in respect of color, requisite to enable a white citizen to vote thereat, shall, upon conviction thereof, be adjudged guilty of a misdemeanor, and shall be imprisoned not less than six months and not exceeding one year, or be fined not less than \$100 nor more than \$1,000, or be punished by both such fine and imprisonment, in the discretion of the court.

Sec. 3. *And be it further enacted,* That, in case the constitution or law of any State shall require the assessment or payment of a tax as a qualification of an elector, if any assessor or other officer elected or appointed under the laws of such State, and authorized or required by the laws thereof to make any assessment of persons or property for the purpose of such taxation, shall refuse or wilfully neglect to assess the person or property of any colored citizen of the United States qualified as aforesaid, and residing in the town, hundred, borough, township, parish, county, ward, or district, for which said assessor or other officer shall have been elected or appointed as aforesaid, he shall, for every such offence, forfeit and pay the sum of \$500 to any person who will sue for the same, and shall for every such offence be guilty of a misdemeanor, and shall be fined not less than \$500, and be imprisoned not less than one month.

Sec. 4. *And be it further enacted,* That in case the constitution or law of any State shall require the assessment or payment of a tax as a qualification of an elector, if any officer or member of any levy court, or other body of officers authorized or required by the laws of such State to make or correct any assess-

ment of persons or property for the purpose of such taxation, or authorized or required by the laws of such State to assess or levy any such tax, shall refuse, or wilfully neglect or advise, or shall participate, concur, or acquiesce in the refusal or wilful neglect of such levy court or other body of officers to assess the person or property, or to assess or levy any such tax upon the person or property of any colored citizen of the United States, qualified as aforesaid, and residing in the county or district for which said officer, levy court, or other body of officers, shall have been elected or appointed, he shall for every such offence forfeit and pay the sum of \$500 to any person who will sue for the same, and shall for every such offence be deemed guilty of a misdemeanor, and shall be fined not less than \$500, and be imprisoned not less than one month.

SEC. 5. *And be it further enacted*, That if any clerk or other officer, required by the law of any State to register, record, or transcribe any list of persons upon whom taxes have been assessed, or to transcribe and certify any duplicate of such list to the collector of taxes, shall refuse or wilfully neglect to register, record, transcribe, or enter upon the proper assessment list, or upon the proper duplicates of such assessment list, the name of any colored citizen of the United States who has been lawfully assessed to pay any tax, the payment of which tax is by the constitution or laws of such State a qualification of an elector of such State, every such clerk or officer shall for every such offence forfeit and pay the sum of \$500 to any person who will sue for the same, and shall for every such offence be deemed guilty of a misdemeanor, and shall be fined not less than \$500, and be imprisoned not less than one month.

SEC. 6. *And be it further enacted*, That if any collector of taxes elected or appointed by authority of the laws of any State shall refuse or wilfully neglect to receive from any colored citizen of the United States residing in such State any tax which he is required by law to collect from citizens of such State, and the payment of which tax is by the constitution or laws of such State a qualification of an elector of such State, or if any such collector shall refuse or wilfully neglect to give to any such colored citizen a receipt for any such tax, when the amount thereof shall have been paid or tendered to him by such colored citizen, he shall for every such offence forfeit and pay the sum of \$500 to any person who will sue for the same, and shall for every such offence be deemed guilty of a misdemeanor, and shall be fined not less than \$200 and be imprisoned for not less than one month.

SEC. 7. *And be it further enacted*, That if at any State, county, township, hundred, or municipal election, held by the authority of any law of any State, or at any election for electors of President of the United States, or for members of the House of Representatives of the United States, any officer, inspector, or judge of the election, shall refuse to receive, or shall advise or concur in refusing to receive the vote of any person on account of his race, color, or previous condition of servitude, every such officer, inspector, or judge, shall, for every such offence, forfeit and pay the sum of \$500 to any person whose vote shall have been so refused who may sue for the same in any court of the United States; and such officer, inspector, or judge, shall for every such offence be deemed guilty of a misdemeanor, and on conviction thereof shall be fined not less than \$200 nor more than \$500, and be imprisoned not less than one month.

SEC. 8. *And be it further enacted*, That any registrar or officer who shall refuse to register, or enter upon the list of voters or list of persons who will be entitled to vote at any election, the name of any colored person having the qualifications of a white citizen entitled to vote or to be placed on such list in other respects except race or color, and any officer or member of any board for the admission of electors, who

shall refuse to admit to the electors' oath, or to the privileges of an elector, any colored person on account of his race, color, or previous condition of servitude, or having the qualifications of a white citizen entitled to the privileges of an elector in other respects than race, color, or previous condition of servitude, shall be guilty of a misdemeanor, and on conviction thereof shall forfeit and pay a penalty of not less than \$200 nor more than \$500, and shall be imprisoned not less than one month nor more than six months, or both, in the discretion of the court.

SEC. 9. *And be it further enacted*, That if any person shall, by threats, violence, or intimidation, prevent, or attempt to prevent, any citizen of the United States from the free exercise of his right to vote in any election at which members of Congress or electors for President or Vice-President of the United States may be voted for, such person so offending shall be liable to indictment, and, on conviction thereof, shall be subject to a fine not exceeding \$1,000, or to imprisonment not less than one year nor more than three years, or both, in the discretion of the court.

SEC. 10. *And be it further enacted*, That the circuit courts of the United States shall have jurisdiction of the suits for forfeitures imposed and causes of action created by this act, and the circuit and district courts of the United States shall have jurisdiction of the misdemeanors created by this act.

Mr. Bingham moved that the rules be suspended, and the bill passed.

The question was taken, as follows:

YEAS—Messrs. Allison, Ambler, Ames, Armstrong, Arnell, Asper, Atwood, Ayer, Banks, Barry, Beaman, Beatty, Benjamin, Bennett, Benton, Bingham, Blair, Booker, Boyd, George M. Brooks, Buck, Buckley, Buffinton, Burchard, Benjamin F. Butler, Cake, Cessna, Churchill, William T. Clark, Sidney Clarke, Amasa Cobb, Coburn, Conger, Cook, Cowles, Dawes, Diekey, Dixon, Donley, Duval, Dyer, Ela, Farnsworth, Ferriss, Ferry, Finkelnburg, Fitch, Garfield, Giffilan, Hale, Hamilton, Harris, Hawley, Hay, Heflin, Hill, Hoar, Hooper, Hotchkiss, Ingersoll, Julian, Kelley, Kellogg, Kelsey, Ketcham, Laffin, Lash, Logan, Loughbridge, Lynch, Maynard, McCarthy, McCrary, McGrew, McKee, McKenzie, Mercur, Milnes, Eliakim H. Moore, Jesse H. Moore, William Moore, Morphis, Daniel J. Morrell, Myers, Negley, O'Neill, Packard, Packer, Peck, Perce, Peters, Platt, Poland, Pomeroy, Prosser, Rootes, Sanford, Sargent, Sawyer, Schenck, Scofield, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, William J. Smith, Worthington C. Smith, William Smyth, Starkweather, Stevens, Stevenson, Stokes, Stoughton, Strickland, Strong, Taffe, Tanner, Taylor, Tillman, Townsend, Twichell, Tyner, Upson, Cadwalader C. Washburn, Welker, Wheeler, Whittemore, Willard, Williams, John T. Wilson, and Winans—181.

NAYS—Messrs. Adams, Archer, Artell, Barnum, Beck, Biggs, James Brooks, Burr, Conner, Crebs, Dickinson, Doh, Eldridge, Gibson, Griswold, Haight, Haldeman, Hamill, Hawkins, Holman, Knott, Lewis, Mayham, McNeely, Morgan, Mungen, Niblack, Potter, Randall, Rice, Rogers, Schumaker, Sherrod, Slocum, Joseph S. Smith, Stiles, Swann, Sweeney, Trimble, Van Trump, Voorhees, Eugene M. Wilson, Winchester, and Wood—44.

NOT VOTING—Messrs. Bailey, Bird, Boles, Bowen, Burdett, Roderick R. Butler, Calkin, Cleveland, Clinton L. Cobb, Covode, Cox, Cullom, Davis, Degener, Dockery, Fisher, Fox, Getz, Hambleton, Hayes, Heaton, Hoge, Jenckes, Johnson, Alexander H. Jones, Thomas L. Jones, Judd, Kerr, Knapp, Lawrence, Marshall, McCormick, Samuel P. Morrill, Morrissey, Orth, Paine, Palmer, Phelps, Porter, Reeves, Ridgway, Shober, Stone, Strader, Van

Auken, Van Horn, Van Wyck, Ward, William B. Washburn, Wells, Wilkinson, Witcher, and Woodward—53.

So (two-thirds voting in favor thereof) the rules were suspended, and the bill was passed.

In the Senate, on March 18th, the bill from the House was considered:

Mr. Stewart, of Nevada, said: "I wish to call the attention of the Senate to the provisions of this bill, to show that it will not answer the purpose; that we need something more if we intend to enforce the fifteenth amendment. I wish any bill on this subject to contain all the requisites.

"The first two sections relate simply to voting. If an officer fails or refuses to perform an official act necessary to give a voter the right to vote, he is guilty of a misdemeanor. It provides for the case of any person who shall by fraud, intimidation, or other unlawful means, prevent a citizen from voting. That has nothing to do with registration and the preliminary matters which are necessary prior to voting; so that something else must be provided to reach that.

"The third section provides 'that in case the constitution or law of any State shall require the assessment or payment of a tax as a qualification of an elector,' and the assessor or other officer shall refuse or wilfully neglect to assess the person or property of any colored citizen, he shall be punished for that offence.

"The fourth section also relates to the same system of the assessment of a tax, put in another form.

"The fifth section provides 'that if any clerk or other officer required by the law of any State to register, record, or transcribe any list of persons upon whom taxes have been assessed,' etc., shall refuse to register a colored voter, if he is properly assessed for taxes, then such officer shall forfeit \$500 and be deemed guilty of a misdemeanor.

"The sixth section provides a penalty for any collector of taxes who does not do his duty with regard to the taxes.

"The seventh section provides for the punishment of any officer who, at any election for President and Vice-President of the United States or members of the House of Representatives, shall fail to receive the vote of a voter on account of race or color.

"The eighth section goes on to prescribe the penalty for refusing to register the voter again.

"The ninth section provides the penalty in case 'any person shall, by threats, violence, or intimidation, prevent or attempt to prevent any citizen of the United States from the free exercise of his right to vote in any election at which members of Congress, or electors for President or Vice-President of the United States, may be voted for.' It provides that such person shall be liable to indictment and punishment. That is fixing it for a particular election.

"These are the provisions of the House bill. It provides for the two cases mentioned; and now let me state some cases that it does not provide for. There is nothing in the world in this bill to punish outsiders for preventing the registration of voters altogether. That is the great difficulty. A mob may prevent registration, as they have done over in Virginia, and there is no penalty provided. There is nothing to reach that case at all. And in case a mob should prevent registration altogether, and not allow a colored man to register, then under this bill there is nothing to entitle him to vote when he comes to the poll. There is nothing to interfere with the power of a mob to drive him away from the registrar's office; and that being conclusive evidence upon the right to vote, and there being no penalty provided for that, the whole bill is good for nothing; the whole bottom is out of the bill. I tell you, Senators, it will not answer the purpose at all. Now, in order that the bill reported by the Committee on the Judiciary may be understood, I desire to call the attention of the Senate to it.

"The first section is the simple declaration of the principle that all men shall be entitled to vote, without distinction of race or color.

"The second section provides:

That if by or under the authority of the constitution or laws of any State, or the laws of any Territory, any act is or shall be required to be done as a prerequisite or—

"I want to call attention to this thing, and Senators will see the difficulty in framing any thing. If any thing is required to be done as a prerequisite or—

qualification for voting, and by such constitution or laws persons or officers are or shall be charged with the performance of duties in furnishing to citizens an opportunity to perform such prerequisite, or to become qualified to vote, it shall be the duty of every such person and officer to give to all citizens of the United States the same and equal opportunity to perform such prerequisite, and to become qualified to vote, without distinction of race, color, or previous condition of servitude.

"We have undertaken to enumerate some prerequisites. There may be a thousand other things invented outside of them not referred to by the first section.

"I undertake to say that there is nothing whatever in the House bill to prevent intimidation and fraud by outsiders to prevent a party from performing the prerequisites necessary to qualify him to vote. Such a provision cannot be found in the bill. But in the third section of the bill that is reported by the Judiciary Committee we have this provision:

That whenever, by or under the authority of the constitution or laws of any State, or the laws of any Territory, any act is or shall be required to be done by any citizen as a prerequisite to qualify or entitle him to vote, the offer of any such citizen to perform the act required to be done, as aforesaid, shall, if it failed to be carried into execution by reason of the wrongful act or omission aforesaid of the person or officer charged with the duty of receiving or permitting such performance or offer to perform or acting thereon, be deemed and held as a performance in law

of such act, and the person so offering and failing as aforesaid, and being otherwise qualified, shall be entitled to vote in the same manner and to the same extent as if he had in fact performed such act.

"That is not provided for in the House bill. We say in this section that if the man offers to perform the prerequisites required by State law, and is prevented, that offer shall be equivalent to a performance, and when he presents his affidavit his vote shall be received. What is the objection to receiving his vote under those circumstances? If he is a legal voter, in every other way qualified, his vote ought to be received, whether he is actually registered or not.

"The fourth section of the bill presented by the Judiciary Committee provides—

That if any person by force, bribery, threats, or intimidation, or otherwise, shall hinder, delay, prevent, or obstruct, or attempt to hinder, delay, prevent, or obstruct, any citizen from doing any act authorized by this act to be done—

"I will say 'required to be done'—I propose to amend that phraseology at the proper time—

to qualify him to vote or from voting at any election as aforesaid, such person shall for every such offence forfeit and pay the sum of \$500 to the person aggrieved thereby.

"Here, if any person by any means—by fraud, force, or violence—prevents a man either from registering or paying taxes, or doing any act necessary to qualify him to vote, or if by fraud or violence he prevents him from voting, he is guilty of a misdemeanor; and I undertake to say that that fourth section alone is worth three times the whole House bill. It will meet three times as many cases as the House bill. The fourth section standing alone is worth more than the whole House bill put together. It makes it an offence to interfere with the registration by outsiders and for outsiders or anybody to interfere with voters.

"Then the fifth section contains this provision:

That any person who shall be deprived of any office, except that of member of Congress or member of a State Legislature, by reason of the violation of the provisions of this act, shall be entitled to recover possession of such office by writ of *mandamus* or other appropriate proceeding; and the circuit and district courts of the United States shall have concurrent jurisdiction of all cases arising under this section.

"The Senator from Ohio (Mr. Thurman) criticised this section because the word '*mandamus*' is used in it. I undertake to say that a *mandamus* is an appropriate proceeding in all cases where there is a refusal to count the votes. Cases may very frequently arise where the officers will refuse to count the votes at all because negroes have voted.

"Now, for the rest of our bill, it is simply providing the machinery to put the bill in motion; and I want to call the attention of the Senate to that. We have the machinery, substantially, of the civil rights act to put the bill in motion. The House bill merely makes it an

offence to do certain things, covering about one-half the ground; and it makes it an offence punishable in the United States district courts. Who is going to do it? What is that going to amount to? Who is going to be prosecutor? The Senate bill goes on and not only gives the United States courts jurisdiction, but requires the circuit judges to appoint commissioners wherever it may be necessary—if necessary, in every precinct—to arrest and punish parties. It empowers the marshal to aid those commissioners, and to summon the *posse comitatus* whenever it may be necessary. It further empowers the commissioners to appoint special officers to enforce their writs, and it empowers the President of the United States to aid the courts in the enforcement of the law. You have got the agents here in this bill—a system which was matured when the civil rights act was passed, giving agencies to enforce the bill. Merely declaring it an offence, and leaving anybody to prosecute it that pleases, and making no further provision, will be a dead letter. It also provides for paying these officers.

"I do not want to occupy the time of the Senate in the particular discussion of this bill. I can tell the effect of the Senate bill in a moment. In the first place, it makes it the duty of all officers charged with doing any act which is a prerequisite to voting to furnish to all men, without distinction of color, an equal opportunity of performing it. In the next place, if a person is otherwise qualified to vote, and attempts to qualify himself by registering, or paying taxes, performing the acts required, and he fails by reason of being unlawfully prevented, then he shall go to the polls with his vote. The next section provides that if any person—this goes outside of the officers—intimidate him while he is attempting to qualify himself by performing the prerequisites, or by any other unlawful means attempt to prevent him from performing that prerequisite, or if any person shall prevent him unlawfully from voting by threats or by any other mode of obstruction, then that person shall be guilty of an offence. The next section provides that the candidate who is entitled to his office by reason of the refusal of boards of canvassers, or otherwise, to count the colored vote, may have his action to obtain possession of his office. The rest of it is the machinery of the civil rights bill modified to suit the emergencies of the case, whereby you have agents to enforce the law, and the power of the Government to protect the voters in a fair opportunity to record their votes.

"Now, Mr. President, I move to strike out all after the enacting clause of the House bill, and to insert:

That all citizens of the United States who are or shall be otherwise qualified by law to vote at any election by the people in any State, Territory, district, county, city, parish, township, school district, municipality, or other territorial subdivision, shall be entitled and allowed to vote at all such elections,

without distinction of race, color, or previous condition of servitude; any law, custom, usage, or regulation of any State or Territory, or by or under its authority, to the contrary notwithstanding.

SECTION 2. *And be it further enacted*, That if by or under the authority of the constitution or laws of any State, or the laws of any Territory, any act is or shall be required to be done as a prerequisite or qualification for voting, and by such constitution or laws persons or officers are or shall be charged with the performance of duties in furnishing to citizens an opportunity to perform such prerequisite, or to become qualified to vote, it shall be the duty of every such person and officer to give all citizens of the United States the same and equal opportunity to perform such prerequisite, and to become qualified to vote, without distinction of race, color, or previous condition of servitude; and if any such person or officer shall refuse or knowingly omit to give full effect to this section, he shall, for every such offence, forfeit and pay the sum of \$500 to the person aggrieved thereby, to be recovered by an action on the case, with full costs and such allowance for counsel fees as the court shall deem just, and shall also, for every such offence, be deemed guilty of a misdemeanor, and shall, on conviction thereof, be fined not less than \$500, and be imprisoned not less than one month and not more than one year.

SEC. 3. *And be it further enacted*, That whenever, by or under the authority of the constitution or laws of any State or the laws of any Territory, any act is or shall be required to be done by any citizen as a prerequisite to qualify or entitle him to vote, the offer of any such citizen to perform the act required to be done as aforesaid shall, if it fail to be carried into execution by reason of the wrongful act or omission aforesaid of the person or officer charged with the duty of receiving or permitting such performance or offer to perform or acting thereon, be deemed and held as a performance in law of such act; and the person so offering and failing as aforesaid and being otherwise qualified, shall be entitled to vote in the same manner and to the same extent as if he had in fact performed such act; and any judge, inspector, or other officer of election whose duty it is or shall be to receive, count, certify, register, report, or give effect to the vote of any such citizen, who shall refuse or knowingly omit to receive, count, certify, register, report, or give effect to the vote of such citizen, upon the presentation by him of his affidavit stating such offer and the time and place thereof, and the name of the officer or person whose duty it was to act thereon, and that he was wrongfully prevented by such person or officer from performing such act, shall for every such offence forfeit and pay the sum of \$500 to the person aggrieved thereby, to be recovered by an action on the case, with full costs and such allowance for counsel fees as the court shall deem just, and shall also, for every such offence, be guilty of a misdemeanor, and shall, on conviction thereof, be fined not less than \$500, and be imprisoned not less than one month and not more than one year.

SEC. 4. *And be it further enacted*, That if any person, by force, bribery, threats, intimidation, or otherwise, shall hinder, delay, prevent, or obstruct, or attempt to hinder, delay, prevent, or obstruct, any citizen from doing any act required to be done to qualify him to vote or from voting at any election as aforesaid, such person shall for every such offence forfeit and pay the sum of \$500 to the person aggrieved thereby, to be recovered by an action on the case, with full costs and such allowance for counsel fees as the court shall deem just, and shall also for every such offence be guilty of a misdemeanor, and shall, on conviction thereof, be fined not less than \$500, and be imprisoned not less than one month and not more than one year.

SEC. 5. *And be it further enacted*, That any person who shall be deprived of any office, except that of member of Congress or member of a State Legislature, by reason of the violation of the provisions of

this act, shall be entitled to recover possession of such office by writ of *mandamus* or other appropriate proceeding; and the circuit and district courts of the United States shall have concurrent jurisdiction with the proper State courts of all cases arising under this section.

SEC. 6. *And be it further enacted*, That the district courts of the United States, within their respective districts, shall have, exclusively of the courts of the several States, cognizance of all crimes and offences committed against the provisions of this act, and also, concurrently with the circuit courts of the United States, of all causes, civil and criminal, arising under this act, except as herein otherwise provided; and the jurisdiction hereby conferred shall be exercised in conformity with the laws and practice governing United States courts; and all crimes and offences committed against the provisions of this act may be prosecuted by the indictment of a grand jury, or, in cases of crimes and offences not infamous, the prosecution may be either by indictment or information filed by the district attorney in a court having jurisdiction.

SEC. 7. *And be it further enacted*, That the district attorneys, marshals, and deputy marshals of the United States, the commissioners appointed by the circuit and territorial courts of the United States, with powers of arresting, imprisoning, or bailing offenders against the laws of the United States, and every other officer who may be specially empowered by the President of the United States, shall be, and they are hereby, specially authorized and required, at the expense of the United States, to institute proceedings against all and every person who shall violate the provisions of this act, and cause him or them to be arrested and imprisoned, or bailed, as the case may be, for trial, before such court of the United States or territorial court as has cognizance of the offence. And, with a view to afford reasonable protection to all persons in their constitutional right to vote without distinction of race, color, or previous condition of servitude, and to the prompt discharge of the duties of this act, it shall be the duty of the circuit courts of the United States, and the superior courts of the Territories of the United States, from time to time, to increase the number of commissioners, so as to afford a speedy and convenient means for the arrest and examination of persons charged with a violation of this act; and such commissioners are hereby authorized and required to exercise and discharge all the powers and duties conferred on them by this act, and the same duties with regard to offences created by this act, as they are authorized by law to exercise with regard to other offences against the laws of the United States.

SEC. 8. *And be it further enacted*, That it shall be the duty of all marshals and deputy marshals to obey and execute all warrants and precepts issued under the provisions of this act when to them directed; and should any marshal or deputy marshal refuse to receive such warrant or other process when tendered, or to use all proper means diligently to execute the same, he shall, on conviction thereof, be fined the sum of \$1,000, to the use of the person deprived of the rights conferred by this act. And the better to enable the said commissioners to execute their duties faithfully and efficiently in conformity with the Constitution of the United States and the requirements of this act, they are hereby authorized and empowered, within their districts, respectively to appoint, in writing, under their hands, any one or more suitable persons from time to time to execute all such warrants and other process as may be issued by them in the lawful performance of their respective duties; and the persons so appointed to execute any warrant or process as aforesaid shall have authority to summon and call to their aid the bystanders or *powers comitatus* of the proper county, or such portion of the land or naval forces of the United States or of the militia as may be necessary to the performance

of the duty with which they are charged, and to insure a faithful observance of the fifteenth amendment to the Constitution of the United States; and such warrants shall run and be executed by said officers anywhere in the State or Territory within which they are issued.

Sec. 9. *And be it further enacted*, That any person who shall knowingly and wilfully obstruct, hinder, or prevent any officer or other person charged with the execution of any warrant or process issued under the provisions of this act, or any person or persons lawfully assisting him or them, from arresting any person for whose apprehension such warrant or process may have been issued, or shall rescue or attempt to rescue such person from the custody of the officer or other person or persons, or those lawfully assisting as aforesaid when so arrested, pursuant to the authority herein given and declared, or shall aid, abet, or assist any person so arrested as aforesaid, directly or indirectly, to escape from the custody of the officer or other person legally authorized as aforesaid, or shall harbor or conceal any person for whose arrest a warrant or process shall have been issued as aforesaid so as to prevent his discovery and arrest after notice or knowledge of the fact that a warrant has been issued for the apprehension of such person, shall for either of said offences be subject to a fine not exceeding \$1,000 and imprisonment not exceeding six months, by indictment and conviction before the district or circuit court of the United States for the district or circuit in which said offence may have been committed, or before the proper court of criminal jurisdiction, if committed within any one of the organized Territories of the United States.

Sec. 10. *And be it further enacted*, That the commissioners, district attorneys, the marshals, their deputies, and the clerks of the said district, circuit, and territorial courts shall be paid for their services the like fees as may be allowed to them for similar services in other cases. The person or persons authorized to execute the process to be issued by such commissioners for the arrest of offenders against the provisions of this act shall be entitled to a fee of ten dollars for each person he or they may arrest and take before any such commissioner as aforesaid, with such other fees as may be deemed reasonable by such commissioner for such other additional services as may be necessarily performed by him or them, such as attending at the examination, keeping the prisoner in custody, and providing him with food and lodging during his detention, and until the final determination of such commissioner, and in general for performing such other duties as may be required in the premises; such fees to be made up in conformity with the fees usually charged by the officers of the courts of justice within the proper district or county, as near as may be practicable, and paid out of the Treasury of the United States on the certificate of the judge of the district within which the arrest is made, and to be recoverable from the defendant as part of the judgment in case of conviction.

Sec. 11. *And be it further enacted*, That whenever the President of the United States shall have reason to believe that offences have been or are likely to be committed against the provisions of this act within any judicial district, it shall be lawful for him, in his discretion, to direct the judge, marshal, and district attorney of such district, to attend at such place within the district, and for such time as he may designate, for the purpose of the more speedy arrest and trial of persons charged with a violation of this act; and it shall be the duty of every judge or other officer, when any such requisition shall be received by him, to attend at the place and for the time therein designated.

Sec. 12. *And be it further enacted*, That it shall be lawful for the President of the United States, or such person as he may empower for that purpose, to employ such part of the land or naval forces of the

United States, or of the militia, as shall be deemed necessary to prevent the violation and enforce the due execution of this act.

Sec. 13. *And be it further enacted*, That whenever any person shall hold office, except as a member of Congress or of some State Legislature, contrary to the provisions of the third section of the fourteenth article of amendment of the Constitution of the United States, it shall be the duty of the district attorney of the United States for the district in which such person shall hold office as aforesaid to proceed against such person by writ of *quo warranto*, returnable to the circuit or district court of the United States in such district, and to prosecute the same to the removal of such person from office; and any writ of *quo warranto* so brought as aforesaid shall take precedence of all other cases on the docket of the court to which it is made returnable, and shall not be continued unless for cause proved to the satisfaction of the court.

Sec. 14. *And be it further enacted*, That any person who shall hereafter knowingly accept or hold any office under the United States or any State, to which he is ineligible under the third section of the fourteenth article of amendment of the Constitution of the United States, or who shall attempt to hold or exercise the duties of any such office, shall be deemed guilty of a misdemeanor against the United States, and upon conviction thereof before the circuit or district court of the United States shall be imprisoned not more than one year and fined not exceeding \$1,000, and shall forever be disqualified to hold any office of honor, trust, or profit under the United States or any State.

Sec. 15. *And be it further enacted*, That all persons within the jurisdiction of the United States shall have the same right in every State and Territory in the United States to make and enforce contracts, to sue, be parties, give evidence, and to the full and equal benefit of all laws and proceedings for the security of person and property as is enjoyed by white citizens, and shall be subject to like punishments, pains, penalties, taxes, licenses, and exactions of every kind, and none other, any law, statute, ordinance, regulation, or custom to the contrary notwithstanding. No tax or charge shall be imposed or enforced by any State upon any person emigrating thereto from a foreign country which is not equally imposed and enforced upon every person emigrating to such State from any other foreign country, and any law of any State in conflict with this provision is hereby declared null and void.

Sec. 16. *And be it further enacted*, That any person who, under color of any law, statute, ordinance, regulation, or custom, shall subject, or cause to be subjected, any inhabitant of any State or Territory to the deprivation of any right secured or protected by this act, or to different punishment, pains, or penalties, on account of such person being an alien, or by reason of his color or race, than is prescribed for the punishment of citizens, shall be deemed guilty of a misdemeanor, and on conviction shall be punished by fine not exceeding \$1,000, or imprisonment not exceeding one year, or both, in the discretion of the court.

Sec. 17. *And be it further enacted*, That the act to protect all persons in the United States in their civil rights, and furnish the means of their vindication, passed April 9, 1866, is hereby reenacted; and said act, except the first and second sections thereof, is hereby referred to and made a part of this act; and section fifteen and section sixteen hereof shall be enforced according to the provisions of said act.

Mr. Carpenter, of Wisconsin, said: "This House bill is confined almost exclusively, and I think exclusively, to punishing officers and persons who shall intimidate or hinder or delay voting in the methods pointed out by the

bill, or permitting the performance of some duty which is enjoined on them as officers under the law. In that particular it is in no way remedial; it punishes the crime after it is complete and done, but it gives no remedy to the person who has been injured by the wrongful act.

"Now, the fifth section of the Senate bill is in my judgment worth the whole House bill together. It provides that

Any person who shall be deprived of any office, except that of member of Congress or member of a State Legislature—

"Of course that exception is because the Congress and the Legislature are the exclusive judges of the qualifications and elections of their members—

by reason of the violation of the provisions of this act, shall be entitled to recover possession of such office by writ of *mandamus* or other appropriate proceeding, and the circuit and district courts of the United States shall have concurrent jurisdiction of all cases arising under this section.

"Here is the great distinction in doctrine and philosophy between the two bills, and the question now is which course of action the Senate choose to take. If we are simply to follow on after the violation of law and punish the man who has violated it, in each particular case, by fine and imprisonment, then the House bill is the best conceived bill. If we design to do something more than that, if we design to go beyond merely punishing specific violations of the law, and to carry out and enforce the principle of this amendment to the Constitution, and give effect to the votes of colored persons offered at the polls, then we should have some such provision as is contained in the Senate bill.

"There are several things about this Senate bill, some things in its phraseology, perhaps some in its substantial and important provisions, that may be improved by amendment; but it seems to me to be a far better bill if we desire to do any thing. If we merely wish to pretend to do something and not accomplish any thing substantial and important, the House bill is an excellent recipe for doing that; but if we mean to carry out, execute, and secure the performance and observance of this amendment to the Constitution, it is certain to my mind that the Senate bill is far preferable to the bill that comes from the House; and for that reason I hope the Senate will not adopt it as a substitute. Let us take this Senate bill and go through with it, perfect it by additions or subtractions, but act upon it as the basis of the legislation called for at the present time."

Mr. Thurman, of Ohio, said: "Mr. President, I confess I was not prepared to hear my friend from Wisconsin (Mr. Carpenter) place his chief advocacy of the Senate bill upon the fifth section of the bill. Let us see what the fifth section is:

That any person who shall be deprived of any office, except that of member of Congress or member of a State Legislature, by reason of the violation of the provisions of this act, shall be entitled to recover

possession of such office by writ of *mandamus* or other appropriate proceeding, and the circuit and district courts of the United States shall have concurrent jurisdiction of all cases arising under this section.

"And by the next section it is provided—

That the district courts of the United States, within their respective districts, shall have, exclusively of the courts of the several States, cognizance of all crimes and offences committed against the provisions of this act.

"The idea, then, of the bill is that the enforcement of this act, and of the rights of persons under this act, is to be exclusively in the courts of the United States, and that all persons who shall be deprived of office by any violation of this act may recover their offices by some appropriate remedy in the courts of the United States. Now, the first point to which I wish to call the attention of my friend is quite a practical consideration. How many officers will this cover who may thus be deprived of their offices by a violation of this act; that is, by somebody not being registered who would have voted for them, or somebody being prevented from voting at the elections who would have voted for them, or any other of the grounds that may be stated under this bill? How many such officers are there? I will speak for my own State. This bill embraces every officer except members of the Legislature in the State of Ohio. It takes, therefore, all the State officers to begin with. It then takes all the judiciary of the State; then all the county officers; then all the city officers and town officers; and then all the township officers. Now, let me say to my friend from Wisconsin that that will make about two hundred persons in the county in which I live who are to be entitled to go into the circuit or district court of the United States to test the election of the persons who are declared elected."

Mr. Carpenter: "Let me ask my friend from Ohio whether he expects that whole number will be defrauded out of their election very often in his county?"

Mr. Thurman: "I do not expect any such thing, but I know there have been a great many contested election cases in Ohio, and I know if they had all been tried in the district court of the United States for the District of Ohio that court would have had very little time to attend to any thing else. But now, when you have increased the jurisdiction of that court, and increased the causes for which you may proceed, and allow two hundred persons in a single county, or more than twenty thousand persons in the single State of Ohio, or, taking the whole United States through, about half a million persons, to go into the district courts to contest elections and try the title to office there, I want to know what is to become of your district courts?"

"I wish to say a word upon the twelfth section, to which I briefly alluded the day before yesterday in the remarks that I then submitted. That section is in these words:

That it shall be lawful for the President of the United States, or such person as he may empower for that purpose, to employ such part of the land or naval forces of the United States, or of the militia, as shall be deemed necessary to prevent the violation and enforce the due execution of this act.

"I expected that the gentleman who has this bill in charge would explain that section and let us know how these troops were to act, how they were to enforce the provisions of this bill, how they were to prevent its violation. Let me ask the attention of that gentleman. There are in the State of Ohio about fifteen hundred election precincts. I suppose, taking the whole United States together, there are not less than twenty-five or thirty thousand election precincts in the whole United States and the Territories thereof, all of which are covered by this bill. Now, what are you going to do with your troops? It will be said that it will not be necessary to send them to every one of these election precincts. Manifestly not. You would have to increase the army twentyfold, fiftyfold, to do that. It is supposed, then, that there are some places only to which it will be necessary to send troops; and you put it entirely in the discretion of the Chief Magistrate of this country, whoever may be that Chief Magistrate, in a law which you intend to be permanent—it ought to be permanent or not be a law at all—to interfere with the military at any poll where he may see fit so to interfere.

"In any section of the country, in any State, in any district, in any closely-contested State or closely-contested district, you put it in the power of one man, the President of the United States, who may be directly interested in the result, who may be a candidate at that very election, to surround the polls with the troops of the United States, to do what? To see that this act be not violated; to see that this act be enforced. Nay, more, you put it in his power to delegate to some person, not an officer at all either of the State or of the United States, and in a district where there is no domestic violence, no insurrection, no rebellion, but perfect peace; you put it in the power of the President to give to some single individual the delegated power of employing the whole Army of the United States to see that this act be not violated; to see that there is no cheating at elections. Why, sir, what a power is that!

"I asked the gentleman who has this bill in charge, the day before yesterday, what the troops were to do when they surrounded the poll. I will take a case. Here is an election poll, and here are a hundred troops of the United States under the command of a captain or lieutenant of infantry. He is sent there to do what? In the language of this bill, 'to prevent the violation and enforce the due execution of this act.' What, then, is to be prevented? The violation of the act. What is to be the violation of the act? The improper rejection of the vote of some colored man, or

other citizen of the United States. That is the violation that is to be prevented. What is the enforcement of the act? To compel the reception of that man's vote. To prevent the violation of the act is to prevent the rejection of the vote. To enforce the act is to enforce the reception of his vote. When the judges of election, the sworn officers of election, decide that a man is not entitled to vote, then, and not until then, can this military officer be called into requisition. And what then? Is his judgment to override that of the judges of election?

"Is he to adjudge that they have wrongly decided? Is he to decide that they have violated the act? Is this military man to decide this question of law under the constitution of Ohio, or the constitution of New York, or the constitution and statutes of Kentucky, and to hold that the judges of election—men versed in the election law—have decided the question wrongly, and therefore it is necessary for him to interfere, and do what? Interfere and compel them at the point of the bayonet to receive the vote that they, under their oaths as sworn officers, have rejected. If it is not that, it is nothing. If it is not that, it is simply intimidation. If it is not that, it is simply holding the bayonet to the throat of the civil officer, and holding it there by command of the President of the United States. Show me something that these troops are to do; show me how they are to prevent the violation of this act; show me how they are to enforce this act, unless you give the military man the right to override the judgment of the civil officer; to override the solemn judgment of the sworn judge of election deciding as to the law of his own State and the constitution of his own State and the right of voters thereunder.

"I know it may be said that the soldiers are there for the purpose of preventing violence. That is not what this act says. It may be said that they are there for the purpose of preventing the intimidation of voters, and the like. That is not what the act says. The section is as broad as the whole act. It provides for troops being at the polls to prevent any violation whatsoever of this act, and to enforce every one of its provisions.

"Sir, I say once more, if this can be done in a free country, let us hear no more talk about the one-man power; let us hear no more talk about the power of the President of the United States; make a monarch of him at once. Louis Napoleon has been charged with controlling the elections in France. Louis Napoleon never surrounded every polling-place in France with the troops of the empire, or the troops of the republic before it was an empire. Never did he dare to do that. Not a soldier appeared at the voting-places in Paris even, where there was the strongest opposition that existed to the emperor at the late election there; but the votes of the soldiers were taken in their now barracks, their own camps. Throughout all

France the people were allowed to vote without any bayonets in sight, without any soldiers to make them afraid, without any thing to intimidate the voters in the shape of military coercion. And yet, here in a republic, you propose to confer upon one man, who may be a candidate for election himself, the power to surround any poll he pleases in the whole United States with his troops to see that the election law is not violated! I say again, if that can be done, it is idle to talk about free institutions any more."

Mr. Edmunds: "If my friend had made the speech that he has now favored us with (and it is a very ingenious one, and in many respects a sound one), twenty years ago, when his own party was pressing almost exactly such a section as the eighth section of this bill, in order to aid in the rendition of fugitive slaves back to slavery, he would have performed a greater service to his country than he performs now. I ask the Secretary, in order that the Senate may see the comparison between these two sections, to read the fifth section of the act of 1850, passed by the party of which my friend from Ohio is the exponent; and I ask Senators to take the eighth section of this bill and compare it as the Secretary reads, to see if we have not pretty good authority for that kind of legislation."

Mr. Thurman: "Mr. President, times have changed when the Senator from Vermont goes to the fugitive-slave law of 1850 to find a model for legislation, and times have changed wonderfully. Now, Mr. President, if I had the slightest doubt in the world that I was right, I could entertain that doubt no longer. When so astute and able a man as the Senator from Vermont can give no better reason for the defence of this section than that which he has given, I know my objections to it must be well taken. What possible connection, or parallel, or similitude, has the use of the troops of the United States to enforce the execution of the writ of a court against resistance, to the case provided for in this bill, of surrounding the ballot-boxes with the troops of the United States to compel the judges of election to receive the votes or to compel them to reject them?"

Mr. Edmunds: "My friend will pardon me. I was only alluding to what he said respecting the eighth section, which he condemned. I made no allusion at all to the twelfth section, which I will consider when we reach it."

Mr. Thurman: "I do not know that I have said one word about the eighth section to-day. I do not think I have said one word about the eighth section to-day; and therefore I am again strengthened by the fact that, instead of coming up to the defence of his eleventh and twelfth sections, my friend runs back to the eighth section, about which I think I have said not one word to-day. That is not quite as brave as my friend from Vermont usually is. Let him stand up to his work, if he undertakes

to father this bill and defend the proposition. What is the language of this amendment? 'The right of citizens of the United States to vote shall not be denied or abridged by,' whom? Not by an individual acting in breach of the law; that is not the language. Not by a combination of individuals constituting a mob; that is not the language. It is not against them that this provision of the Constitution is directed; but it is explicit, 'shall not be denied or abridged by the United States, or by any State, on account of race, color, or previous condition of servitude.'

"It is a prohibition upon the United States and upon the States, and no stretch of ingenuity can extend it one hair's-breadth further. Why the prohibition to the United States? Because the Congress of the United States fixes the qualifications of voters in the District of Columbia and also in the Territories of the United States; and therefore the prohibition upon the United States is proper. Why the prohibition upon the States? Because the States, each for itself, fix the qualification of voters in the States. Before the passage of this amendment to the Constitution the power of a State to fix the qualifications of its voters was without any limit or restriction whatsoever. It was so completely without limit or restriction that in several of the States persons not citizens of the United States were allowed to vote; as, for instance, foreigners who had declared their intention to become citizens, but had not completed their naturalization by a residence of five years and taking the final oath. That was the case, if I mistake not, formerly in the State of Illinois, and perhaps in some other States where foreign-born persons who had declared their intention to become citizens were allowed to vote before they had fully become citizens of the United States. I may be mistaken in respect to that particular State, but I know that that was the case in some of the States."

Mr. Davis: "On a residence of six months."

Mr. Thurman: "Then comes this provision, the sole provision in the Constitution of the United States which limits that heretofore complete and plenary and unconditional power of a State to fix the qualification of the voters in that State; and what is it? How can any man say that it is any thing more than a limitation upon the power of the State? Is it not just as much a limitation on the power of the State as is the provision in the Constitution that no State shall coin money; that no State shall keep or maintain an army or a navy without the consent of Congress? Just as these are limitations on the powers of the States, so is this fifteenth amendment a limitation on the power of the State, and nothing else, so far as the State is concerned."

"What is the effect? Simply this, that if there is in a State constitution a discrimination on account of race, color, or previous condition of servitude, that provision in the State con-

stitution becomes null and void, because it becomes repugnant to this provision of the Constitution of the United States. So if there are laws of the States that discriminate against any person otherwise qualified to vote, because of his race, color, or previous condition of servitude, those laws *ipso facto* become void, because they are repugnant to this provision of the Constitution of the United States.

"If a State should hereafter attempt to pass such laws, it would be attempting to do an unconstitutional thing, and its action would be absolutely null and void, and for a remedy against any such violation whatsoever the courts afford precisely the same redress that they do against the violation of any other portion of the Constitution of the Union. If there is a necessity for passing a stringent bill to enforce this amendment of the Constitution, the very same reason would require bills of pains and penalties and persecutions to enforce every other prohibition of the Constitution, for there is not one of them that may not be violated. This, then, being simply a limitation on the power of the State, simply withholding from it one of the powers which it heretofore possessed, the power of fixing the qualifications of electors, or restricting that power in a single particular, it is as plain, it seems to me, as the sun at noonday in a cloudless sky, that this amendment can only be held to speak of a State as a State; as a State in her political character, as a distinct autonomy, and does not deal with individuals at all.

"Now, sir, there is a case in which Congress might, perhaps, deal with individuals, the case supposed by my friend from California. Suppose, for instance, the State of Ohio should pass a law that no colored man should vote; or, to change it, suppose it should pass a law that no white man should vote, and the officers charged with the execution of that law should attempt to carry it into effect, they would be liable to civil actions without any act passed by Congress at all; but possibly in a case like that Congress might by law reach those individuals thus executing a State law, and therefore, acting in pursuance of an act of the State, which the Constitution of the United States forbids.

"That is one thing; but a wholly different thing from that is the unauthorized act of an individual, which tends to interfere with the right of another man to vote, and which unauthorized act is even in violation of the law of the State itself. Why, sir, take the case of a State; take Massachusetts, for instance. There is no distinction in the right to vote on account of race, color, or previous condition of servitude; and there has been none for a long, long time. I suppose Massachusetts has laws, as every other State has, that forbid any one to prevent a citizen from exercising his right to vote. When a man thus violates the law of the State of Massachusetts, when he thus renders himself liable to indictment and pun-

ishment under the statute of Massachusetts, can you say that that man is the State of Massachusetts, and that therefore he is doing what this constitutional amendment forbids, and that you will punish him? The prohibition here is upon the State. Can you undertake to punish an individual who is not acting under the authority of the State, but directly against the statute law of the State, and who is punishable under that statute law by indictment in the courts of the State? And yet you undertake to say that that individual, thus acting contrary to the law of his State, liable to punishment by his own State in her own courts, can be taken away from the jurisdiction of his State, removed from under the law which he has violated, and taken into a Federal court to be punished under an act of Congress.

"It is amazing to me that any lawyer can think for a moment that this bill in this respect where it acts on individuals—not officers of a State at all, mere private individuals, mere trespassers, mere breakers of the peace, mere violators of the State law—that this bill which seizes them and punishes them under this act of Congress and in the Federal courts, is warranted by the fifteenth amendment of the Constitution.

"But now what is proposed to be done? Now you propose to seize hold of a mere idler; now you propose to seize hold of a mere ruffian; now you propose to seize hold of some man who is simply a cheater at the election; all of whom are punishable under the State law; and under the pretence of restricting the power of the State, which declares the very acts complained of to be unlawful, and punishes those acts, you take the individual from under the State law, send him before the Federal court, and punish him in virtue of an act of Congress.

"Why, sir, if you can do this, if this is to be the interpretation of the fifteenth amendment and the right to pass appropriate legislation in support of it, then you may go the whole length. It is only a question, then, of discretion with you. You are foolish to talk about such a bill as this if this interpretation is right. Why not go the whole length at once? Why not take all the elections in your own hands? Why not provide by Federal law for the whole registration? Why not provide Federal judges of election, Federal boards of canvassers, and Federal machinery for the whole of the process of election from the time the voter goes to register until the time that the successful candidate is inaugurated into his office? You can do that just as constitutionally as you can pass this bill."

Mr. Sherman: "I will ask my colleague if he has any doubt about the power of Congress to prescribe the mode and manner of electing members of Congress, and all elections growing out of the national Government?"

Mr. Thurman: "I have not the least doubt in the world of the power of Congress to pro-

vide the mode and manner of electing members of Congress."

Mr. Sherman: "And the punishment for offences committed in consequence of the election?"

Mr. Thurman: "Undoubtedly that might be so. But let us see what that is. Is that this bill?"

Mr. Sherman: "I think that is yielding the whole matter."

Mr. Thurman: "Is this bill limited to the election of members of Congress? No, sir; it extends to all elections, from the highest office in this country, the President of the United States, down to the lowest office in the country, to a fence-viewer. It includes every single elective office in the country, either under Federal authority or the authority of a State, and therefore it derives no aid whatsoever from the power given to Congress to regulate the mode and the manner of electing members of Congress."

"But I have something to say on that subject, as my colleague has called my attention to it. That provision to regulate the mode and manner of elections never was construed to authorize Congress to fix the qualifications of electors. If such had been its interpretation you would not have needed your fifteenth amendment, so far as the election of members of Congress is concerned. Neither was it ever interpreted to take away from the States the right of providing officers of election and the mere machinery of elections. But the mode of that election, for instance, whether it should be by ballot or whether it should be *visa voce*, and the manner of that election, Congress is authorized to prescribe. But that provision was never intended in the world to dispense with the agency of the States, and substitute an agency provided by the Congress of the United States."

"We are considering a bill, as I said before, that reaches elections for all officers, from the President of the Republic down to the humblest township or town officer that can be found in the United States; that reaches the election of school directors in the humblest hamlet of the country as simply as it reaches the election of Governors of the States, the judges of courts, and the President and Vice-President of the United States. That is this bill, which goes to every popular election held in the States and says that under a provision which simply makes State laws void, which simply operates on the State as a State, which simply renders void all provisions in the constitution and laws of a State contrary to this fifteenth amendment, under a provision which goes no further than that, which does not reach to individual infractions of the law done under no color of State authority whatsoever, it is proposed to take the whole subject of elections in a State for State officers, county officers, township, city, and town officers, into the hands of Congress. I say again, if you

can do that, if you can pass this bill, you have just as much right to wipe out the whole State machinery of elections and supplant them by officers of your own."

Mr. Sherman: "Mr. President, there is one grievance that I feel ought to be dealt with at this moment, as we have this bill before us; a grievance which has become of greater magnitude even than the denial of the right to vote to colored people; and that is, the open, glaring, admitted frauds by wholesale in the great cities of this country, by which our Government is about to be subverted. If I were asked to point out the greatest evil that now threatens our country, I should point to the subversion of all authority by overthrowing the elective franchise. We have official documents without number in both Houses of Congress showing the growing evil of trampling down the rights of communities and States to representation in Congress in the election of members of Congress and in the election of Senators. At the last presidential election in the city of New York, according to an official examination in the other House, there was an attempt to subvert the election of a President of the United States by wholesale and glaring frauds. Does anybody deny or dispute it? It was sufficiently proven."

"Therefore I think we ought to avail ourselves of the pendency of the present bill to adopt some provision tending to guard the election of members of Congress and electors for President and Vice-President from these wholesale frauds. There has been handed to me a bill, very carefully prepared by a large committee of the House of Representatives; I believe a committee composed of fifteen members, upon which all parties and all sections were fairly represented. That committee, after a careful examination, have reported three sections to accomplish the purpose of preserving the purity of elections. There can be no doubt about the constitutional power of Congress in this particular, because it is in plain accordance with the provisions of the Constitution which authorize Congress to change and alter the mode and manner of electing members of Congress and electors for President. I propose to offer these three sections, which I find are embodied in substance in the laws of most of the States, but which are disregarded and nullified and overthrown in every election in the city of New York, as three independent sections, to come in at the end of the bill:

And be it further enacted, That if at any election for Representative or Delegate in the Congress of the United States any person shall knowingly personate and vote, or attempt to vote, in the name of any other person, whether living, dead, or fictitious; or vote more than once at the same election for any candidate for the same office; or vote at a place where he may not be lawfully entitled to vote; or vote without having a lawful right to vote; or do any unlawful act to secure a right or an opportunity to vote for himself or any other person; or by force,

threat, menace, intimidation, bribery, reward, or offer, or promise thereof, or otherwise unlawfully prevent any qualified voter of any State of the United States of America, or of any Territory thereof, from freely exercising the right of suffrage, or by any such means induce any voter to refuse to exercise such right; or compel or induce, by any such means or otherwise, any officer of an election, in any such State or Territory, to receive a vote from a person not legally qualified or entitled to vote; or interfere in any manner with any officer of said elections in the discharge of his duties; or, by any of such means or otherwise, induce any officer of an election, or officer whose duty it is to ascertain, announce, or declare the result of any such election, or give or make any certificate, document, or evidence in relation thereto, to violate or refuse to comply with his duty or any law regulating the same; or knowingly and wilfully receive the vote of any person not entitled to vote; or refuse to receive the vote of any person entitled to vote; or aid, counsel, procure, or advise any such voter, person, or officer to do any act hereby made a crime, or to omit to do any duty the omission of which is hereby made a crime, or attempt to do so, every such person shall be deemed guilty of a crime, and shall for such crime be liable to indictment in any court of the United States of competent jurisdiction; and on conviction thereof shall be punished by a fine not exceeding \$500, or by imprisonment for a term not exceeding three years, or both, in the discretion of the court, and shall pay the costs of prosecution.

And be it further enacted, That, if, at any registration of voters for an election for Representative or Delegate in the Congress of the United States, any person shall knowingly personate and register, or attempt to register, in the name of any other person, whether living, dead, or fictitious; or register, or attempt to register, at a place where he shall not be lawfully entitled to register; or register, or attempt to register, not having a lawful right so to do; or do any unlawful act to secure registration for himself or any other person; or by force, threat, menace, intimidation, bribery, reward, or offer, or promise thereof, or otherwise, unlawfully prevent or hinder any person having a lawful right to register from duly exercising such right; or compel or induce, by any such means, or otherwise, any officer of registration to admit to registration any person not legally entitled thereto; or interfere in any manner with any officer of registration in the discharge of his duties; or by any such means or otherwise induce any officer of registration to violate or refuse to comply with his duty, or any law regulating the same; or knowingly and wilfully receive the vote of any person not entitled to vote, or refuse to receive the vote of any person entitled to vote; or aid, counsel, procure, or advise any such voter, person, or officer to do any act hereby made a crime; or to omit any act, the omission of which is hereby made a crime, every such person shall be deemed guilty of a crime, and shall be liable to indictment and punishment therefor, as provided in the first section of this act for persons guilty of any of the crimes therein specified.

And be it further enacted, That if any person shall by force, threat, menace, intimidation, or otherwise unlawfully prevent any citizen or citizens from assembling in public meeting, to freely discuss or hear discussed the claims or merits of any candidate for the office of Representative or Delegate in Congress, or of any officer of the Government of the United States; or the laws or measures of Congress, or any measure existing, pending, or proposed, affecting the Government of the United States, or any Department or officer thereof; or if any person shall by any such means break up, disperse, or molest any such assemblage, or molest any citizen in or of such assemblage, every person so offending shall be deemed guilty of a crime, and shall be liable to indictment and punishment therefor, as provided in

the first section of this act for persons guilty of any of the crimes therein specified."

Mr. Thurman: "Mr. President, it is eighty-one years since this Government went into operation. During that period almost every party that has existed in the country has at some time or other been in the ascendency in these Halls; but never until now was such a proposition as that made in the Congress of the United States. For eighty-one years this people went on in a career of prosperity, of liberty, and of constitutional law—"

Mr. Stewart: "Will the Senator from Ohio allow me to interrupt him for a moment?"

Mr. Thurman: "I beg the Senator not to interrupt me in the middle of a sentence—without any human being supposing for an instant that such a proposition as that amendment could receive the sanction of an American Congress. But now, sir, within thirty days of the adoption of the fifteenth amendment, or the proclamation of its adoption, on the bill to enforce the fifteenth amendment, this proposition, which has no more relation to the fifteenth amendment than it has to the solar system, is introduced here in the last hours of a night session, and the American Senate is asked to adopt it.

"Mr. President, I do not know what this bill is to become. I do not know how much is to be carried under it. I do not know how much this love of the colored race, or, as I believe it, this struggle for negro votes, I do not know how much that proposition, that expectation, and that desire, are expected to carry with them. I know they will carry a great deal; but I trust there is still enough of reflection in the American Senate to prevent their carrying such a proposition as this. It is in no wise germane to this bill; it has nothing to do with this bill; and unless you want to make this a perfect omnibus bill, this amendment, which the mover of it has not seen fit to stay here and defend, ought to be cast out, and to stand on its own merits.

"But, sir, that is not all. This amendment is offered here without ever having passed the House of Representatives, or without ever having been considered by any committee of the Senate. You are asked here, at the hour of midnight, to adopt an amendment which no committee of the Senate has ever considered, which nobody in the Senate has considered. You are asked to adopt this amendment going into the most sacred rights of the States and of the people; to adopt an amendment the necessity for which, if there is any, equally existed eighty years ago, and yet which no statesman, no lawyer, no politician, for eighty years ever thought of proposing to the American Congress. You are asked at the hour of midnight to adopt this long amendment of three sections, without the slightest consideration by any committee whatsoever of this body. That is legislation for you! That is legislation

touching the rights of the United States, of the States, and of the people! That is legislation indeed, to propose such a thing as this at this hour, and to ask the Senate to vote upon it!"

Mr. Sumner, of Massachusetts, said: "Senators speak very lightly about voting this amendment down. I hope it will not be voted down. It is an important proposition, as important as any thing in the bill, and, in my judgment, germane to the bill; nor have I any question that it is entirely within the powers of Congress. I submit myself to the judgment of the Senator from Ohio I know, who says that no lawyer, no politician, no statesman, will affirm it. I affirm it. I do not doubt that it is completely within the powers of Congress; and if the Senator will go back to the language of James Madison, unless I am much mistaken, he will find that Madison specifically declares the plenary powers of Congress over this whole subject. I cannot be mistaken. But I do not need the authority of James Madison on this occasion. I take the text of the Constitution and the reason of the case. Those two are enough. The proposed amendment is constitutional. I cannot doubt it. I hope therefore that we shall not abandon it. We have it now within our power, and let us put it on the bill."

The Presiding Officer: "The Chair will state the question. The Senator from Ohio moved to amend the amendment of the Senator from Nevada, which was an amendment to the House bill. No further amendment can be entertained until the amendment moved by the Senator from Ohio is disposed of."

The amendment to the amendment was rejected—yeas 14, nays 26.

Mr. Hamlin, of Maine, said: "I now offer that same amendment, with the section omitted that I objected to—the third section."

The Presiding Officer: "The amendment will be reported."

The Secretary read the section omitted by Mr. Hamlin from the amendment, as follows:

And be it further enacted, That if any person shall, by force, threat, menace, intimidation, or otherwise, unlawfully prevent any citizen or citizens from assembling in public meeting, to freely discuss or hear discussed the claims or merits of any candidate for the office of Representative or Delegate in Congress, or of any officer of the Government of the United States; or the laws or measures of Congress, or any measure existing, pending, or proposed, affecting the Government of the United States, or any Department or officer thereof, or if any person shall by any such means break up, disperse, or molest any such assemblage, or molest any citizen in or of such assemblage, every person so offending shall be deemed guilty of a crime, and shall be liable to indictment and punishment therefor, as provided in the first section of this act for persons guilty of any of the crimes therein specified.

Mr. Hamlin: "The Secretary has read the section which I have omitted; and then I offer the identical amendment of the Senator from Ohio, omitting the section which has been read."

The Presiding Officer: "The question before the Senate is on the adoption of the amendment moved by the Senator from Maine, which contains the first two sections of the amendment moved by the Senator from Ohio."

Mr. Thurman: "Mr. President, I appeal to my friend from Maine, a man of cool, good judgment, as I know from an acquaintance of twenty-five years, to think for one moment what would be the condition of this bill if these two sections were added to it and the bill were passed. What do these sections propose, what do they cover? They cover the cases of elections for Representatives in Congress, as well as the election for electors of President and Vice-President. Now, what is the effect in regard to the election? In almost every State in the Union members of Congress are elected at the same time that the officers of the State are elected; I believe it is so in every State. I do not know a State in the Union in which there is a separate election for members of Congress. Very well, then—now mark it, and I pray Senators to listen to me—these two sections cover precisely the same elections that are covered by the bill under consideration. The bill covers elections for members of Congress and covers all State elections. These two sections cover all elections at which members of Congress are elected. Then if you put these two sections on the bill and pass the bill you have this beautiful thing to exhibit as to the wisdom of the Senate of the United States, that in the bill as it passed the House of Representatives, or in the substitute offered by the Senator from Nevada, there is one set of penalties for these identical offences mentioned in the amendment offered by the Senator from Maine, and in the amendment offered by the Senator from Maine there is a wholly different set of penalties."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Abbott, Carpenter, Chandler, Cole, Corbett, Cragin, Flanagan, Hamlin, Harlan, Harris, Howell, McDonald, Morrill of Maine, Morton, Nye, Osborn, Patterson, Pomeroy, Pratt, Ramsey, Revels, Rice, Sawyer, Scott, Spencer, Sprague, Stewart, Sumner, Thayer, Warner, and Yates—51.

NAYS—Messrs. Casserly, Davis, Fowler, Hamilton of Maryland, Johnston, McCreery, Pool, Ross, Stockton, Thurman, Vickers, and Willey—12.

ABSENT—Messrs. Ames, Anthony, Bayard, Boreman, Brownlow, Buckingham, Cameron, Cattell, Conkling, Drake, Edmunds, Fenton, Ferry, Gilbert, Hamilton of Texas, Howard, Howe, Kellogg, Lewis, Morrill of Vermont, Norton, Robertson, Saulsbury, Schurz, Sherman, Tipton, Trumbull, Williams, and Wilson—29.

The amendment to the amendment was agreed to.

Mr. Stewart: "I desire to make a verbal correction. After consulting several members of the Judiciary Committee, I move to amend the twelfth section of my amendment, in line two, by striking out the words 'or such person as he may empower for that purpose;' so that the section will read:

That it shall be lawful for the President of the United States to employ such part of the land or naval forces of the United States, or of the militia, as shall be deemed necessary to prevent the violation and enforce the due execution of this act.

The amendment to the amendment was agreed to.

Mr. Morton: "I desire to submit the following amendment, to come in as the fifth section of the Senate bill: "

And be it further enacted, That if any person shall prevent, hinder, control, or intimidate, or shall attempt to prevent, hinder, control, or intimidate, any person from exercising or in exercising the right of suffrage to whom the right of suffrage is secured or guaranteed by the fifteenth amendment to the Constitution of the United States, by means of bribery, threats, or threats of depriving such person of employment, or occupation, or of ejecting such person from rented house, lands, or other property, or by threats of refusing to renew leases or contracts for labor, or by threats of violence to himself or family, such person so offending shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than \$500 and be imprisoned not less than one month and not more than one year.

The Presiding Officer: "The question is on the amendment offered by the Senator from Indiana."

The yeas and nays were ordered; and being taken, resulted as follows:

YEAS—Messrs. Abbott, Anthony, Carpenter, Chandler, Cole, Corbett, Cragin, Flanagan, Hamlin, Harlan, Harris, Howell, McDonald, Morrill of Maine, Morton, Nye, Osborn, Patterson, Pomeroy, Pool, Pratt, Ramsey, Revels, Rice, Ross, Sawyer, Scott, Spencer, Sprague, Stewart, Sumner, Thayer, Warner, Willey, Williams, and Yates—38.

NAYS—Messrs. Casserly, Davis, Fowler, Hamilton of Maryland, Johnston, McCreery, Stockton, Thurman, and Vickers—9.

ABSENT—Messrs. Ames, Bayard, Boreman, Brownlow, Buckingham, Cameron, Cattell, Conkling, Drake, Edmunds, Fenton, Ferry, Gilbert, Hamilton of Texas, Howard, Howe, Kellogg, Lewis, Morrill of Vermont, Norton, Robertson, Saulsbury, Schurz, Sherman, Tipton, Trumbull, and Wilson—27.

The amendment to the amendment was agreed to.

Mr. Davis, of Kentucky, said: "I think that the white tenantry should have a special protection against the undue influence and oppression of the landlords and landowners. I therefore move to amend the amendment just adopted."

The Presiding Officer: "The Secretary will report the amendment now offered by the Senator from Kentucky to the amendment of the Senator from Nevada."

The Secretary read the amendment to the amendment, which was to insert as an additional section the following:

And be it further enacted, That no person shall enter into, hold, or attempt to exercise the powers or perform the duties of any office or public trust, which the Constitution or laws require to be filled by vote of the people, unless he shall have received at the election therefor a greater number of the votes of the electors entitled to vote at such election than any other candidate; and all persons entering into, holding, or attempting to exercise the powers, or perform the duties of such office or public trust, shall thereby commit a high misdemeanor, for which they shall be

subject to indictment and punishment of imprisonment for not less than one nor more than five years, and fine of not less than \$1,000 or more than \$5,000, one-half thereof to go to the informer; and all Treasury officers settling, passing, or paying any claim or account for pay or compensation of any kind, of any person entering into or holding, or attempting to exercise the powers or perform the duties of any office or public trust, against the provisions of this section, shall be guilty of a misdemeanor, thereby forfeit and be disqualified to hold his place, and be subject to indictment and punishment of imprisonment for not less than twelve months, and fine of \$1,000, one-half to the informer. All persons entering into, holding, or attempting to exercise the powers or perform the duties of any office or public trust, against the provisions of this section, shall also be subject to the civil suit of any person injured thereby.

Mr. Davis: "I will say a single word on that amendment. It proceeds upon the idea that no man shall claim to exercise the duties and to assume the rights of an office unless he shall have received a plurality of the votes of the people who are entitled to vote in the election; and it makes it a high misdemeanor if he does enter upon and assume the duties and responsibilities of any office that is so to be filled without having received the sanction of a larger number of votes than any other competitor.

"I frankly admit that my object in offering this amendment is to correct a modern abuse of the House of Representatives in these evil times. The people frequently have given a large majority to a particular candidate; the opposing candidate, who received a small minority of the vote, claimed the seat and contested the election; and it has been the custom of the House of Representatives, with a view to increase its majority, to displace the successful candidate, whom the people by their votes had placed in the seat, and to appoint in his stead the candidate who has received but a small minority of the vote."

The amendment to the amendment was rejected.

Mr. Pool, of North Carolina, said: "I desire to offer an amendment, consisting of two sections. I understand that the amendment which has been adopted on the motion of the Senator from Indiana has been inserted as section five. If so, I desire these to be inserted as sections six and seven:

And be it further enacted, That if two or more persons shall band or conspire together, or go in disguise upon the public highway, or upon the premises of another, with intent to violate any provision of this act, or to injure, oppress, threaten, or intimidate any citizen with intent to prevent or hinder his free exercise and enjoyment of any right or privilege granted or secured to him by the Constitution or laws of the United States, or because of his having exercised the same, such person shall be held guilty of felony, and, on conviction thereof, shall be fined and imprisoned; the fine not to exceed \$5,000, and the imprisonment not to exceed ten years; and shall, moreover, be thereafter ineligible to, and disabled from, holding any office or place of honor, profit, or trust, created by the Constitution or laws of the United States.

And be it further enacted, That if in the act of violating any provision in either of the two preceding sections, any other felony, crime, or misdemeanor

shall be committed, the offender, on conviction of such violation of said sections, shall be punished for the same with such punishments as are attached to like felonies, crimes, and misdemeanors, by the laws of the State in which the offence may be committed.

The amendment to the amendment was rejected.

Mr. Carpenter: "I offer the following amendment, to be added as a new section:

And be it further enacted, That any person who shall be deprived of or fail to be elected to any office except that of member of Congress or member of a State Legislature, by reason of a violation of any of the provisions of this act, or by reason of the denial to any citizen of the right to vote on account of his race, color, or previous condition of servitude, shall be entitled to hold such office and perform the duties and receive the emoluments thereof, and may recover the possession of such office by *quo warranto* or other appropriate proceeding in the circuit or district court of the United States for the proper district, or in any State court having jurisdiction of such proceedings.

"This is substantially restoring the fifth section of the bill. I do not desire to take up time, but to make a remark explanatory of my object in offering to restore this section. If we have any authority and constitutional power to legislate upon this subject at all, we have the power to pass such a law as will effectuate the purpose we have in view, to secure to the colored man of the South the right of voting, and the right of having the man for whom he votes hold the office provided he has received a majority of all the votes cast, or if he would have received a majority if the colored man had been permitted to cast his vote. The trouble with the bill as we are about to pass it, without this section, is that it is a mere bill to punish offences against that right, but it utterly fails to enforce the right, as it is the duty of Congress to do."

Mr. Carpenter subsequently modified his amendment by striking out the words "by reason of the violation of any of the provisions of this act," and inserting "who offered his vote at the election."

The yeas and nays were ordered; and, being taken, resulted as follows:

YEAS—Messrs. Cameron, Carpenter, Chandler, Cole, Cragin, Flanagan, Gilbert, Hamilton of Texas, Harris, Howe, Howell, McDonald, Nye, Osborn, Ramsey, Revels, Rice, Robertson, Sawyer, Spencer, Stewart, Sumner, Thayer, and Warner—24.

NAYS—Messrs. Abbott, Casserly, Corbett, Davis, Hamilton of Maryland, Harlan, Howard, Johnston, McCreery, Morton, Pomeroy, Pool, Pratt, Rose, Scott, Stockton, Thurman, Trumbull, Vickers, Willey, Williams, and Yates—22.

ABSENT—Messrs. Ames, Anthony, Bayard, Boreman, Brownlow, Buckingham, Cattell, Conkling, Drake, Edmunds, Fenton, Ferry, Fowler, Hamlin, Kellogg, Lewis, Morrill of Maine, Morrill of Vermont, Norton, Patterson, Saulsbury, Schurz, Sherman, Sprague, Tipton, and Wilson—26.

So the amendment to the amendment was agreed to.

Mr. Howard, of Michigan, said: "I wish to offer an amendment in section four, line three. It now reads:

That if any person, by force, bribery, threats, intimidation, or other unlawful means, shall hinder, delay, prevent, or obstruct, or attempt to hinder, delay, prevent, or obstruct, any citizen, etc.

"I am not entirely satisfied with the phraseology there. It appears to be too indefinite. What is an 'attempt to hinder, delay, prevent, or obstruct, any citizen?'

"Strike out 'attempt.' That is all I wish. It seems to me that is too indefinite; it is too vague; it will be found too difficult to put in practice, to ascertain what is meant by the word 'attempt.'"

The amendment to the amendment was agreed to.

It was ordered that the amendment be engrossed, and the bill read a third time. The amendment was to strike out all of the House bill after the enacting clause, and to insert in lieu thereof the Senate bill.

The bill was read the third time.

The yeas and nays were ordered; and the result was as follows:

YEAS—Messrs. Abbott, Anthony, Brownlow, Cameron, Carpenter, Chandler, Cole, Corbett, Cragin, Flanagan, Gilbert, Hamilton of Texas, Hamlin, Harlan, Harris, Howard, Howe, Howell, McDonald, Morrill of Maine, Morton, Nye, Osborn, Patterson, Pomeroy, Pool, Pratt, Ramsey, Revels, Rice, Ross, Sawyer, Scott, Spencer, Sprague, Stewart, Sumner, Thayer, Trumbull, Warner, Willey, Williams, and Yates—43.

NAYS—Messrs. Casserly, Davis, Fowler, Hamilton of Maryland, Johnston, McCreery, Thurman, and Vickers—8.

ABSENT—Messrs. Ames, Bayard, Boreman, Buckingham, Cattell, Conkling, Drake, Edmunds, Fenton, Ferry, Kellogg, Lewis, Morrill of Vermont, Norton, Robertson, Saulsbury, Schurz, Sherman, Stockton, Tipton, and Wilson—21.

So the bill was passed.

The House disagreed to the amendments of the Senate, and a committee of conference was appointed, which reported some verbal amendments and the following additions to the bill. These were agreed to by each House.

Provided, That every registration made under the laws of any State or Territory, for any State or other election at which such Representative or Delegate in Congress shall be chosen, shall be deemed to be a registration within the meaning of this act, notwithstanding the same shall also be made for the purposes of any State, territorial, or municipal election.

Insert the following, to come in as section twenty-one:

Sec. 21. *And be it further enacted*, That whenever by the laws of any State or Territory the name of any candidate or person to be voted for as Representative or Delegate in Congress shall be required to be printed, written, or contained in any ticket or ballot with other candidates or persons to be voted for at the same election for State, territorial, municipal, or local officers, it shall be sufficient *prima facie* evidence, either for the purpose of indicting or convicting any person charged with voting or attempting or offering to vote unlawfully under the provisions of the preceding sections, or for committing either of the offences thereby created, to prove that the person charged or indicted voted, or attempted or offered to vote, such ballot or ticket, or committed either of the offences named in the preceding sections of this act with reference to such ballot. And the proof and establishment of such fact shall be taken, held, and deemed to be presumptive evidence that

such person voted, or attempted or offered to vote, for such Representative or Delegate, as the case may be, or that such offence was committed with reference to the election of such Representative or Delegate, and shall be sufficient to warrant his conviction, unless it shall be shown that any such ballot, when cast, or attempted or offered to be cast, by him, did not contain the name of any candidate for the office of Representative or Delegate in the Congress of the United States, or that such offence was not committed with reference to the election of such Representative or Delegate.

Insert the following, to come in as section twenty-two:

Sec. 22. And be it further enacted, That any officer of any election at which any Representative or Delegate in the Congress of the United States shall be voted for, whether such officer of election be appointed or created by or under any law or authority of the United States, or by or under any State, territorial, district, or municipal law or authority, who shall neglect or refuse to perform any duty in regard to such election required of him by any law of the United States, or of any State or Territory thereof, or violate any duty so imposed, or knowingly do any act thereby unauthorized, with intent to affect any such election or the result thereof; or fraudulently make any false certificate of the result of such election in regard to such Representative or Delegate; or withhold, conceal, or destroy any certificate or record so required by law respecting, concerning, or pertaining to the election of any such Representative or Delegate; or neglect or refuse to make and return the same as so required by law; or aid, counsel, procure, or advise any voter, person, or officer to do any act by this or any of the preceding sections made a crime; or to omit to do any duty the omission of which is by this or any of said sections made a crime, or attempt to do so, shall be deemed guilty of a crime, and shall be liable to prosecution and punishment therefor, as provided in the nineteenth section of this act for persons guilty of any of the crimes therein specified.

Strike out all of the twenty-first section, and in lieu thereof insert the following, to come in as section twenty-three:

And be it further enacted, That whenever any person shall be defeated or deprived of his election to any office, except elector of President or Vice-President, Representative or Delegate in Congress, or member of a State Legislature, by reason of the denial to any citizen or citizens, who shall offer to vote, of the right to vote on account of race, color, or previous condition of servitude, his right to hold and enjoy such office and the emoluments thereof shall not be impaired by such denial; and such person may bring any appropriate suit or proceeding to recover possession of such office; and in cases where it shall appear that the sole question touching the title to such office arises out of the denial of the right to vote to citizens who so offered to vote, on account of race, color, or previous condition of servitude, such suit or proceeding may be instituted in the circuit or district court of the United States of the circuit or district in which such person resides; and said circuit or district court shall have, concurrently with the State courts, jurisdiction thereof so far as to determine the rights of the parties to such office by reason of the denial of the right guaranteed by the fifteenth article of amendments to the Constitution of the United States and secured by this act.

In the House, on June 18th, Mr. Davis, of New York, introduced a bill to establish a uniform system of naturalization. In the form in which it was presented to the House, the first section provides that in all cases where any oath, affirmation, or affidavit, shall be made or taken under or by virtue of any act or law relating to the

naturalization of aliens, or in any proceedings under such acts or laws, and any person or persons taking or making such oath, affirmation, or affidavit, shall knowingly swear or affirm falsely, the same shall be deemed and taken to be perjury; and the person or persons guilty thereof shall, upon conviction thereof, be sentenced to imprisonment for a term not exceeding five years and not less than one year, and to a fine not exceeding \$1,000.

The second section provides that if any person applying to be admitted a citizen, or appearing as a witness for any such person, shall knowingly personate any other person than himself, or falsely appear in the name of a deceased person, or in an assumed or fictitious name; or if any person shall falsely make, forge, or counterfeit any oath, affirmation, notice, affidavit, certificate, order, record, signature, or other instrument, paper, or proceeding required or authorized by any law or act relating to or providing for the naturalization of aliens; or shall utter, sell, dispose of, or use as true or genuine, or for any unlawful purpose, any false, forged, antedated, or counterfeit oath, affirmation, notice, certificate, order, record, signature, instrument, paper, or proceeding as aforesaid; or sell or dispose of, to any person other than the person for whom it was originally issued, any certificate of citizenship, or certificate showing any person to be admitted a citizen; or if any person shall in any manner use for the purpose of registering as a voter, or as evidence of a right to vote, or otherwise, unlawfully, any order, certificate of citizenship, or certificate, judgment, or exemplification showing such person to be admitted to be a citizen, whether heretofore or hereafter issued or made, knowing that such order, or certificate, judgment, or exemplification, has been unlawfully issued or made; or if any person shall unlawfully use, or attempt to use, any such order or certificate, issued to or in the name of any other person, or in a fictitious name, or the name of a deceased person; or use, or attempt to use, or aid, or assist, or participate in the use of any certificate of citizenship, knowing the same to be forged, or counterfeit, or antedated, or knowing the same to have been procured by fraud, or otherwise unlawfully obtained; or if any person, and without lawful excuse, shall knowingly have or be possessed of any false, forged, antedated, or counterfeit certificate of citizenship, purporting to have been issued under the provisions of any law of the United States relating to naturalization, knowing such certificate to be false, forged, antedated, or counterfeit, with intent unlawfully to use the same; or if any person shall obtain, accept, or receive any certificate or citizenship, known to such person to have been procured by fraud or by the use of any false name or by means of any false statement made with intent to procure, or to aid in procuring, the issue of such certificate, or known to such person to be fraudulently altered or antedated; or if any person,

who has been or may be admitted to be a citizen, shall, on oath or affirmation, or by affidavit, knowingly deny that he has been so admitted, with intent to evade or avoid any duty or liability imposed or required by law, every person so offending shall be deemed and adjudged guilty of felony, and, on conviction thereof, shall be sentenced to be imprisoned and kept at hard labor for a period not less than one year nor more than five years, or to be fined in a sum not less than \$300 nor more than \$1,000, or both such punishments may be imposed, in the discretion of the court. And every person who shall knowingly and intentionally aid or abet any person in the commission of any such felony, or attempt to do any act hereby made felony, or counsel, advise, or procure, or attempt to procure the commission thereof, is to be liable to indictment and punishment in the same manner and to the same extent as the principal party guilty of such felony; and such person may be tried and convicted thereof without the previous conviction of such principal.

The third section provides that any person who shall knowingly use any certificate of naturalization heretofore granted by any court, or which shall hereafter be granted, which has been or shall be procured through fraud or by false evidence, or has been or shall be issued by the clerk, or any other officer of the court, without any appearance and hearing of the applicant in court, and without lawful authority; and any person who shall falsely represent himself to be a citizen of the United States, without having been duly admitted to citizenship, for any fraudulent purpose whatever, shall be deemed guilty of a misdemeanor, and upon conviction thereof, in due course of law, shall be sentenced to pay a fine of not exceeding \$1,000, or be imprisoned not exceeding two years, either or both, in the discretion of the court taking cognizance of the same.

The fourth section extends the provisions of this act to all proceedings had or taken, or attempted to be had or taken, before any court in which any proceeding for naturalization shall be commenced, had, or taken, or attempted to be commenced; and the courts of the United States are to have jurisdiction of all offences under the provisions of this act, in or before whatever court or tribunal the same shall have been committed.

Mr. Eldridge, of Wisconsin, said: "I desire to move that the bill be rejected."

The question was taken; and it was decided in the negative, as follows:

YEAS—Messrs. Axtell, Beck, James Brooks, Burr, Calkin, Conner, Cox, Crebs, Dox, Eldridge, Fox, Getz, Gibson, Griswold, Hamill, Holman, Johnson, Kerr, Knott, Lewis, Marshall, Mayham, McCormick, McNeely, Morgan, Mungen, Niblack, Randall, Reeves, Rice, Ridgway, Rogers, Sherrod, Shober, Joseph S. Smith, Strader, Sweeney, Trimble, Van Auker, Van Trump, Wells, Eugene M. Wilson, Winchester, Wood, and Woodward—45.

NAYS—Messrs. Allison, Ambler, Ames, Arnell,

Asper, Atwood, Bailey, Barry, Beaman, Beatty, Benjamin, Bennett, Benton, Bingham, Blair, Boles, Boyd, George M. Brooks, Buck, Buckley, Buffinton, Burdett, Burdett, Benjamin F. Butler, Roderick R. Butler, Cessna, Churchhill, William T. Clark, Sidney Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Conger, Cook, Cullom, Davis, Degener, Dickey, Dixon, Donley, Duval, Ela, Farnsworth, Ferriss, Finkelnburg, Fisher, Fitch, Gilfillan, Hale, Harris, Hawkins, Hawley, Hedin, Hill, Hoar, Hooper, Hotchkiss, Ingersoll, Alexander H. Jones, Judd, Julian, Kelley, Kellogg, Kelsey, Ketcham, Knapp, Lash, Lawrence, Logan, Maynard, McCarthy, McCrary, McGraw, McKee, McKenzie, Mercur, Milnes, Eliakim H. Moore, William Moore, Daniel J. Morrell, Myers, Newsham, O'Neill, Orth, Packard, Paine, Palmer, Peck, Perce, Phelps, Platt, Poland, Pomeroy, Porter, Prosser, Roots, Sargent, Sawyer, Lionel A. Sheldon, William Smyth, Starkweather, Stevenson, Stokes, Stoughton, Strickland, Taffe, Tanner, Tillman, Twichell, Tyner, Upson, Van Wyck, Ward, Cadwalader C. Washburn, William B. Washburn, Whittemore, Wilkinson, Willard, John T. Wilson, Winans, and Witcher—121.

NOT VOTING—Messrs. Adams, Archer, Armstrong, Ayer, Banks, Barnum, Biggs, Bird, Booker, Bowen, Cake, Cleveland, Covode, Cowles, Dawes, Dickinson, Dockery, Dyer, Ferry, Garfield, Haight, Haldeman, Hambleton, Hamilton, Hay, Hays, Heaton, Hoge, Jenckes, Thomas L. Jones, Laffin, Loughbridge, Lynch, Jesse H. Moore, Morphis, Samuel P. Morrill, Morrissey, Negley, Packer, Peters, Potter, Sanford, Schenck, Schumaker, Scofield, Shanks, Porter Sheldon, Slocum, John A. Smith, William J. Smith, Worthington C. Smith, Stevens, Stiles, Stone, Strong, Swann, Taylor, Townsend, Van Horn, Voorhees, Wallace, Welker, Wheeler, and Williams—64.

So the House refused to reject the bill.

The question recurred on the motion of Mr. Davis, that the House suspend the rules and pass the bill.

The question was taken, as follows:

YEAS—Messrs. Allison, Ambler, Ames, Armstrong, Arnell, Asper, Atwood, Bailey, Banks, Barry, Beaman, Beatty, Benjamin, Bennett, Benton, Bingham, Blair, Booker, Bowen, Boyd, George M. Brooks, Buck, Buckley, Buffinton, Burdett, Burdett, Benjamin F. Butler, Roderick R. Butler, Cessna, Churchhill, William T. Clark, Sidney Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Conger, Cook, Cullom, Davis, Dawes, Dickey, Dixon, Dockery, Donley, Duval, Ela, Farnsworth, Ferriss, Ferry, Finkelnburg, Fisher, Fitch, Garfield, Gilfillan, Hale, Hamilton, Harris, Hawley, Hay, Hedin, Hill, Hoar, Hooper, Hotchkiss, Ingersoll, Alexander H. Jones, Thomas L. Jones, Judd, Julian, Kelley, Kellogg, Kelsey, Ketcham, Knapp, Laffin, Lash, Lawrence, Logan, Maynard, McCarthy, McCrary, McGraw, McKee, Mercur, Eliakim H. Moore, Jesse H. Moore, William Moore, Daniel J. Morrell, Samuel P. Morrill, Myers, Newsham, O'Neill, Orth, Packard, Paine, Palmer, Peck, Perce, Phelps, Platt, Poland, Pomeroy, Porter, Roots, Sanford, Sargent, Sawyer, Lionel A. Sheldon, John A. Smith, William Smyth, Stevenson, Stokes, Stoughton, Strickland, Taffe, Tanner, Tillman, Twichell, Tyner, Upson, Van Horn, Ward, Cadwalader C. Washburn, William B. Washburn, Wheeler, Whittemore, Wilkinson, Willard, Winans, and Witcher—180.

NAYS—Messrs. Adams, Axtell, Beck, James Brooks, Burr, Calkin, Conner, Cox, Crebs, Dox, Eldridge, Fox, Getz, Gibson, Griswold, Hamill, Holman, Johnson, Kerr, Knott, Lewis, Marshall, Mayham, McCormick, McNeely, Milnes, Morgan, Mungen, Niblack, Randall, Reeves, Rice, Ridgway, Sherrod, Shober, Joseph S. Smith, Strader, Swann, Sweeney, Trimble, Van Auker, Van Trump, Wells, Eugene M. Wilson, Winchester, Wood, and Woodward—47.

Not Voting—Messrs. Archer, Ayer, Barnum, Biggs, Bird, Boles, Calk, Cleveland, Covode, Cowles, Degener, Dickinson, Dyer, Haight, Haldeman, Hambleton, Hawkins, Hays, Heaton, Hodge, Jenckes, Loughridge, Lynch, McKenzie, Morphis, Morrissey, Negley, Packer, Peters, Potter, Prosser, Rogers, Schenck, Schumaker, Scofield, Shanks, Porter Sheldon, Slocum, William J. Smith, Worthington C. Smith, Starkweather, Stevens, Stiles, Stone, Strong, Taylor, Townsend, Van Wyck, Voorhees, Wallace, Welker, Williams, and John T. Wilson—53.

So (two thirds voting in favor thereof) the rules were suspended, and the bill was passed.

In the Senate, on June 25th, the bill from the House was considered, and the Committee on the Judiciary reported an amendment to strike out all after the enacting clause, and to insert as a substitute a new bill. It was agreed in the Senate to regard this substitute as the original bill for the purpose of amendment.

Mr. Sumner, of Mass., said: "I offer a new section, which has already been reported upon favorably by the Judiciary Committee:

And be it further enacted, That all acts of Congress relating to naturalization be, and the same are, hereby, amended by striking out the word 'white' wherever it occurs, so that in naturalization there shall be no distinction of race or color."

Mr. Williams, of Oregon, said: "I move to amend the amendment of the Senator from Massachusetts. It is to insert at the end of the proposed amendment the following:

But this act shall not be construed to authorize the naturalization of persons born in the Chinese empire."

The President *pro tempore*: "The question is on the amendment of the Senator from Oregon to the amendment."

Mr. Stewart, of Nevada, said: "I desire to be heard, and must be heard on a proposition of that character, which we of the Pacific coast have more knowledge of than others here. Here are two distinct bills pending, involving altogether different principles. Does an agreement to vote at a certain time upon one bill bind the Senate to take up another bill and put it upon that bill without a chance to say a word? I undertake to say that it is not germane, and upon that point I have a right to be heard. The proposition was that we should vote on a bill to regulate naturalization as to persons now entitled to receive it."

The President *pro tempore*: "The question is on the amendment of the Senator from Oregon (Mr. Williams), to the amendment of the Senator from Massachusetts (Mr. Sumner)."

Mr. Morton, of Indiana, said: "One word. This amendment involves the whole Chinese problem. Are you prepared to settle it tonight?"

Mr. Stewart: "Without discussion."

Mr. Morton: "And without discussion? The country has just awakened to the question and to the enormous magnitude of the question, involving a possible immigration of many millions, involving another civilization, involving labor problems that no intellect can solve without study and without time. Are you now

prepared to settle the Chinese problem, thus in advance inviting that immigration? I am not prepared to do it."

Mr. Sumner: "The Senator says it opens the great Chinese question. It simply opens the question of the Declaration of Independence, and whether we will be true to it. 'All men are created equal,' without distinction of color."

Mr. Williams: "I propose to withdraw my amendment to the amendment of the Senator from Massachusetts, with the understanding that that will be voted down. If it is not voted down, I shall renew my amendment and intend to stand here as long as I can and fight for it. I shall not submit to have these Chinese brought here."

Mr. McCreery, of Kentucky, said: "I offer this as an amendment to the amendment:

Provided, That the provisions of this act shall not apply to persons born in Asia, Africa, or any of the islands of the Pacific, nor to Indians born in the wilderness."

The amendment to the amendment was rejected.

Mr. Sumner: "Some time during the last Congress I had the honor of introducing a bill to strike the word 'white' from our naturalization laws. I tried to have it put on its passage. I was resisted then by the Senator from Vermont, who moved its reference to the Committee on the Judiciary. There it remained without any report until that Congress expired. During the first week of the present Congress, now more than a year ago, I introduced the same bill. It remained in the room of the Judiciary Committee from March, 1869, until very recently, when it was reported favorably.

"Such, sir, have been my efforts to bring the Senate to a vote on this question. Never till this moment has it been in my power to have a vote on a question which I deem of vital importance. I have here on my table at this moment letters from different States—from California, from Florida, from Virginia—all showing a considerable number of colored persons—shall I say of African blood?—aliens under our laws, who cannot be naturalized on account of that word 'white.'

"Now, sir, there is a practical grievance which needs a remedy. This is the first time that I have been able to obtain a vote upon it, and I should be unworthy of my seat here if, because Senators rise and say they will vote it down on the ground that it is out of place, I should hesitate to persevere. Senators will vote as they please; I shall vote for it. The Senator from Illinois (Mr. Trumbull) properly says it is in place. Never was there a bill to which it was more germane. You are now revising the naturalization system, and I propose to strike out from that system a requirement disgraceful to this country and to this age. I propose to bring our system in harmony with the Declaration of Independence and the Constitution of the United States.

The word 'white' cannot be found in either of these two great title-deeds of this republic. How can you place it in your statutes?"

The question was taken, and the result was announced, as follows:

YEAS—Messrs. Anthony, Carpenter, Fowler, Hamlin, Harris, Kellogg, Lewis, McDonald, Morrill of Vermont, Pomeroy, Pratt, Ramsey, Revels, Rice, Robertson, Ross, Sawyer, Schurz, Scott, Sprague, Sumner, and Trumbull—23.

NAYS—Messrs. Bayard, Boreman, Casserly, Corbett, Cragin, Davis, Drake, Edmunds, Gilbert, Harlan, Howe, Howell, Johnston, McCreery, Morton, Stewart, Stockton, Thurman, Tipton, Vickers, Warner, Williams, and Wilson—23.

ABSENT—Messrs. Abbott, Ames, Brownlow, Buckingham, Cameron, Cattell, Chandler, Cole, Conkling, Fenton, Ferry, Flanagan, Hamilton of Maryland, Hamilton of Texas, Howard, Morrill of Maine, Norton, Nye, Osborn, Patterson, Pool, Saulsbury, Sherman, Spencer, Thayer, Willey, and Yates—27.

So the amendment of Mr. Sumner was rejected.

The substitute to the House bill was then rejected.

Mr. Conkling, of New York, said: "I now move to amend the House bill."

The Secretary read the amendment of Mr. Conkling, which was, to add the following as new sections by way of addition to the House bill:

And be it further enacted, That in any city having upward of twenty thousand inhabitants, it shall be the duty of the judge of the circuit court of the United States for the circuit wherein said city shall be, upon the application of two citizens, to appoint in writing for each election district or voting precinct in said city, and to change or renew said appointment as occasion may require, from time to time, two citizens resident of the district or precinct, one from each political party, who, when so designated, shall be, and are hereby, authorized to attend at all times and places fixed for the registration of voters, who being registered would be entitled to vote for Representative in Congress, and at all times and places for holding elections of Representatives in Congress, and for counting the votes cast at said elections, and to challenge any name proposed to be registered, and any vote offered, and to be present and witness throughout the counting of all votes, and to remain where the ballot-boxes are kept at all times after the polls are open until the votes are finally counted; and said persons and either of them shall have the right to affix their signatures or his signature to said register for purposes of identification, and to attach thereto, or to the certificate of the number of votes cast, any statement touching the truth or fairness thereof which they or he may ask to attach; and any one who shall prevent any person so designated from doing any of the acts authorized as aforesaid, or who shall hinder or molest any such person in doing any of the said acts, or shall aid or abet in preventing, hindering, or molesting any such person in respect of any such acts, shall be guilty of a misdemeanor, and on conviction shall be punished by imprisonment not less than one year.

And be it further enacted, That, in any city having upward of twenty thousand inhabitants, it shall be lawful for the marshal of the United States for the district wherein said city shall be to appoint as many special deputies as may be necessary to preserve order at any election at which Representatives in Congress are to be chosen; and said deputies are hereby authorized to preserve order at such elections, and to arrest for any offence or breach of the peace committed in their view.

The question being taken, resulted as follows:

YEAS—Messrs. Anthony, Carpenter, Chandler, Conkling, Corbett, Cragin, Drake, Edmunds, Fenton, Gilbert, Hamlin, Harris, Howe, Howell, Kellogg, Lewis, McDonald, Morrill of Vermont, Morton, Patterson, Pomeroy, Pratt, Ramsey, Rice, Robertson, Sawyer, Scott, Sprague, Stewart, Sumner, Thayer, Tipton, Trumbull, Warner, Willey, Williams, and Wilson—27.

NAYS—Messrs. Bayard, Boreman, Casserly, Davis, Johnston, McCreery, Stockton, Thurman, and Vickers—9.

ABSENT—Messrs. Abbott, Ames, Brownlow, Buckingham, Cameron, Cattell, Cole, Ferry, Flanagan, Fowler, Hamilton of Maryland, Hamilton of Texas, Harlan, Howard, Morrill of Maine, Norton, Nye, Osborn, Pool, Revels, Ross, Saulsbury, Schurz, Sherman, Spencer, and Yates—26.

So the amendment was agreed to.

Mr. Sumner: "I now make the same motion on this bill that I made on the other."

The Chief Clerk read the proposed amendment, as follows:

And be it further enacted, That all acts of Congress relating to naturalization be, and the same are hereby, amended by striking out the word "white" wherever it occurs; so that in naturalization there shall be no distinction of race or color.

Mr. Sumner: "Now I have to say that that is worth all the rest of the bill put together. That is a section that is pure gold. It will do more for the character, and honor, and good name of this republic than all the rest of the bill. I am for the rest of the bill, but this is better than all the rest."

Mr. Stewart: "That is a proposition to extend naturalization, not to those who desire to become citizens, but to those who are being imported as slaves. I propose first to abolish slavery. I propose to liberate these persons before they shall be naturalized by their masters for the purpose of carrying elections."

Mr. Thurman, of Ohio, said: "We agreed to take the vote at a certain hour; we agreed to that unanimously. If this amendment is within the scope of that agreement, then there should be no debate upon it. Some Senators do not think it is within the scope of the agreement. I do not know whether it was in the minds of Senators when the agreement was made; but I think it is an amendment perfectly germane to the bill, and of which the Senator from Massachusetts had given us the amplest notice, months of notice, years of notice, and I therefore think, that being the case, the agreement ought to be applied to it, unless it be that Senators are taken by surprise. I hope, therefore, we shall vote on this question, and I hope my friends will have learned what the Declaration of Independence means by this time. That is all that is necessary."

The Secretary proceeded to call the roll, and the result was announced as follows:

YEAS—Messrs. Anthony, Carpenter, Conkling, Fenton, Fowler, Gilbert, Hamlin, Harris, Howe, Kellogg, Lewis, McDonald, Morrill of Vermont, Patterson, Pomeroy, Pratt, Ramsey, Rice, Robertson, Ross, Sawyer, Schurz, Scott, Sprague, Sumner, Thayer, and Trumbull—27.

NAYS—Messrs. Bayard, Boreman, Casserly, Corbett, Cragin, Davis, Drake, Edmunds, Harlan, Howell, Johnston, McCreery, Morton, Stewart, Stockton, Thurman, Tipton, Vickers, Warner, Willey, Williams, and Wilson—22.

ABSENT—Messrs. Abbott, Ames, Brownlow, Buckingham, Cameron, Cattell, Chandler, Cole, Ferry, Flanagan, Hamilton of Maryland, Hamilton of Texas, Howard, Morrill of Maine, Norton, Nye, Osborn, Pool, Revels, Saulsbury, Sherman, Spencer, and Yates—23.

So the amendment was agreed to.

Mr. Williams: "I offer an amendment; to insert:

Provided, That nothing in this act shall be construed to authorize the naturalization of persons born in the Chinese empire."

Mr. Stewart: "Now, what is the condition of the Chinese? About twenty years ago, after the discovery of gold in California, certain companies organized for the purpose of importing Chinese to work in the mines. The people of California imposed upon them foreign miners' licenses in a very oppressive manner. That I always resisted. There were other exactions imposed upon them. They were a toiling community, the most harmless in the world so far as that is concerned; but the great mass of them were bound to certain obligations.

"And here I wish to call the attention of the Senate to the situation of the Chinese coolies who were brought to this country. They were brought here under the same system under which they were taken to the West India islands; the same system that has made slaves of them in the Spanish dominions. They were brought here under precisely similar contracts made in Asia. They were brought here under contracts whereby they gave in security their families to be sold into slavery if they violated those contracts. They were brought here under contracts to labor a certain number of years and be returned to those families, dead or alive.

"The poor coolies have kept those contracts, have behaved themselves as well as any people could; but still they are not free men. They are brought here and held to service. I am anxious that they shall be liberated. We have taken from them the oppressive laws that State and territorial legislation imposed upon them. We have a bill pending to break up these coolie contracts.

"Sir, the Senate do not comprehend or understand this question. Suppose those contracts should be sufficient to bind them to become naturalized and to vote as their masters prescribe, is that the kind of citizens you want to invite here? Do you want to extend naturalization to men who are liable to be dictated to by their masters who brought them here as to how they shall vote? These contracts that bind them to labor for a certain number of years will bind them to any other kind of service. They have contracted that their dead bodies shall be returned to China. Is it a part of the theory of our Government that the

mockery of naturalization shall be entered upon with men who have contracted that their dead bodies shall be taken from the country, and who have pledged their families to be sold into slavery as a security that they will comply with their contracts and obey the behests of their masters who have brought them here? Are they fit subjects for naturalization?

"Is it not the duty of a humane Congress first to see that no more coolies are imported into this country under these contracts? Let us liberate them; and then when a Chinaman is naturalized, if that time should come, let him be naturalized because he is a freeman, and because he voluntarily chooses to become an adopted citizen, because he becomes attached to our form of government.

"Why, sir, you have no means of administering oaths to Chinamen. They do not understand the obligation of your oath. I am in favor of allowing them to come into court and tell their story, and leave to the jury to decide as to the weight of their testimony. I am in favor of allowing anybody who has been injured or aggrieved to do that. But they would understand as little of the oath that is to be administered to them with regard to naturalization as would the wild beasts of the forest. To them it would be simply jargon. But the oath that they took that they would be true to their own allegiance; that they would be true to their pagan faith; that they would be true to their pagan master; that they would redeem their families and not allow them to be sold into slavery, they will keep.

"Sir, they have not applied to become citizens. Let us wait a while. Let this question be examined and understood before we attempt any such legislation as this.

"Why, sir, I have seen a Chinaman commit suicide because a piece of his cue was cut off by a ruffian. I prosecuted the ruffian for that offence. I have been the Chinaman's friend. But look at the faith he has. That cue was a badge of his religion, a badge of his loyalty to his Government. It was only a little piece of hair, but yet it was the badge of his loyalty to his Government and of his faith, and because the cutting it off made him an outcast among his people he took his own life. Is a person thus situated, thus bound to paganism, fit to become an American citizen?

"The proposition of the Senator from Massachusetts (Mr. Sumner) is nothing more nor less than this: to extend naturalization to Chinese coolies, brought here under coolie contracts, by which they can be controlled by Chinese companies located in the city of San Francisco. They cannot only be controlled in their labor, but controlled in their applications to be naturalized, and they will be equally controlled in their votes. They are pagans in religion, monarchists in theory and practice, and believe in their form of government, and no other, and look with utter contempt upon all modern forms as dangerous innovations;

who believe in their monarchical form of government as they believe in their religion; who will sacrifice life for it; who will commit suicide for their devotion to their Government and their religion. The edict from China or from these Chinese companies will be as perfect a control of these men as could be possibly had. It will be absolute and unqualified. It is proposed to extend to them the elective franchise, which follows citizenship under your fifteenth amendment. There are probably about one hundred thousand Chinese, nearly all males, upon the Pacific coast. It will be very easy under these coolie contracts to bring in hundreds of thousands more if you do not check this coolie-trade; it will be very easy for them to have all these men under their control, and they will be able to sway, if the American people submit to it, the political destiny of the Pacific coast. I am no alarmist, but I propose to review this question calmly."

Mr. Sherman, of Ohio, said: "Mr. President, the amendment offered by the Senator from Oregon raises the question whether we shall engraft Chinese in the naturalized population of the United States. The amendment offered by the Senator from Massachusetts raises the question whether we shall adopt by our naturalization laws the whole pagan races of the world and engraft them in our population. These are among the most grave and difficult propositions that have ever been submitted to Congress. We have now but ten days of the session left. It is utterly impossible to discuss these questions in the light of enlightened statesmanship in the ten days left of this session. Indeed, my own study and conviction about the Chinese question and the extension of the naturalization laws would induce me to trespass on the time of the Senate for a good while if I chose to discuss it."

Mr. Trumbull, of Illinois, said: "All I wish to say in reference to this proposition is, that, if the Chinese are permitted to come to this country, I am for incorporating them as a part of the body-politic and making them citizens of this country. If you allow them to come at all I do not want them here as slaves or inferiors. I do not understand, on the principle upon which the great Republican party is based and on which it has triumphed, how we are to refuse to admit as members of the body-politic persons whom we allow to come here and dwell among us. What is to be their condition? Are they to be slaves or are they to be freemen? I understand our policy is to make freemen of all the men of this country. If the Senator from Oregon and the Senator from Nevada are right, then refuse them admission to this country; but, if you allow them to come, make them a part of the body-politic."

Mr. Sumner: "The Senator from New York has chosen to make an assault on me to-day because in the discharge of my duties I do not see my duty as he sees his duty; because on

this 4th day of July I choose to stand by the Declaration of our fathers. For that I am impeached by the Senator from New York.

"He presses me to postpone this proposition until to-morrow. When, sir, will that to-morrow come? Can the Senator tell? Is he adept enough to indicate the day or even the week when a vote can be had on it? The Senator knows, he must know, that if not voted on now it will fail during the present session. The Senator shakes his head; but he knows too much of the business now before the Senate not to see that I am right. What chance is there of getting before the Senate the original bill containing this proposition? Why, sir, the bill was introduced first in the month of July, 1867, now three years ago. I tried then to put it on its passage, deeming it so simple that there was no need of a reference to any committee. The Senator from Vermont (Mr. Edmunds) prevailed against me by insisting that it should be referred to the Committee on the Judiciary. It was referred, and there it slumbered until that Congress closed, thus sleeping the long sleep.

"On the 22d of March, 1869, which was in the next Congress, I introduced the same bill again—I have it before me—and again it slumbered in the hands of the Judiciary Committee until a few weeks ago, when at last it was reported to the Senate. Then it took its place on the Calendar, with the numerous other bills there, important and unimportant, some very important, all in competition with it.

"What chance have I had for a vote upon it? From the month of July, 1867, down to this hour, Saturday was the first day I was able to have a vote upon it; and now to-day Senators insist that I shall withdraw it and postpone the whole question to some 'to-morrow,' some indefinite, unknown to-morrow.

'To-morrow, and to-morrow, and to-morrow,
Creeps in this petty pace from day to day,
To the last syllable of recorded time;
And all our yesterdays have lighted fools
The way to dusty death.'

"Sir, I am not one of those 'fools.' I will not postpone this question to any 'to-morrow.' The Senate will do as they please; but, God willing, they shall have an opportunity to vote on it. Vote as you please, sir, but the time has come for a vote.

"Mr. President, this is not the only bill on the Calendar which concerns the rights of colored persons. There are two on the Calendar and one now before the Judiciary Committee. The first on the Calendar was reported by me from the Committee on the District of Columbia as long ago as February 8, 1870, and is entitled 'A bill to repeal the charter of the Medical Society of the District of Columbia.' That society has been guilty of an act which I have no hesitation, on all the testimony before us, in declaring to be one of infamy, for which they deserve the promptest judgment of Congress, which shall take from them the power to inflict indignity on their fellow-man. En-

joying a charter from Congress which dedicates them and sets them apart to the cultivation of medical science, they have undertaken to exclude persons otherwise competent simply on account of color. They have set up a test of membership founded on color. The evidence is irrefutable; and yet I have been unable to bring the Senate to a vote on that bill; and meanwhile colored physicians in this District are subjected to the indignity of exclusion from the society, and thus are shut out from opportunities of medical instruction.

"There is another bill which I reported from the Committee on the District of Columbia, May 6, 1870, entitled 'A bill to secure equal rights in the public schools of Washington and Georgetown.' That, also, I have tried in vain to press upon the Senate. There is then another bill which I had the honor of introducing May 13, 1870, entitled 'A bill supplementary to an act entitled "An act to protect all citizens of the United States in their civil rights, and to furnish the means for their vindication," passed April 9, 1866.' This important bill was duly referred to the Committee on the Judiciary, but I have heard nothing from it since. It slumbers on the table of the committee.

"Of all these measures which concern equal rights, the only one which I have been able to bring before the Senate is that under consideration; and I am now pressed to withdraw it so as to avoid a vote. Why, sir, again and again in other years have I been pressed in the same way, but it has not been my habit to yield.

"I doubt if Senators are aware of the practical bearing of this proposition on the Atlantic seaboard, and even in California. I said on Saturday that I had letters from various parts of the country attesting that there are colored aliens shut out from equal rights by that word 'white' in our naturalization laws. Here are Africans in our country shut out from rights which justly belong to them, simply because Congress continues the word 'white' in the naturalization laws. These men are humble, but they are none the less worthy of protection. Ay, sir, it is your duty to protect them. Even if few, you cannot afford to let them suffer wrong; but they are numerous; in Florida counted by the hundred and even the thousand.

"Strong as this measure is, as an act of justice, whether to many or few, it has another title. Its highest importance is found in its conformity to the requirement of the Declaration of Independence. Sir, this is the Fourth of July, when our fathers together solemnly declared as follows:

We hold these truths to be self-evident; that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these rights are life, liberty, and the pursuit of happiness.

"Now, sir, the great, the mighty words of this clause are that these great, self-evident,

inalienable rights belong to 'all men.' It is 'all men,' and not a race or color, that are placed under protection of the Declaration; and such was the voice of our fathers on the 4th day of July, 1776. Sir, such was the baptismal vow of this nation. According to this vow, *all men* are created equal and endowed with inalienable rights. But the statutes of the land assert the contrary; they declaring that only all white men are created equal.

"Now, sir, what better thing can you do on this anniversary than to expunge from the statute that unworthy limitation which dishonors and defiles the original Declaration? It is in your power to make the day more than ever sacred.

"How can you hesitate? There are the words. Does any one question the text? Will any one move to amend the text? Will any one insist that hereafter as these great words are read on our great anniversary the word 'white' shall be inserted to qualify this sublime Declaration? No one will venture such a suggestion. There they are; there they will remain as long as this republic endures. But, if you are not ready to change the original text, you must then change your statutes and bring them in harmony with the text. The word 'white' wherever it occurs as a limitation of rights must disappear. Only in this way can you be consistent with the Declaration.

"Senators undertake to disturb us in this judgment by reminding us of the possibility of large numbers swarming from China; but the answer to all this is very obvious and very simple. If the Chinese come here they will come for citizenship or merely for labor. If they come for citizenship, then in this desire do they give a pledge of loyalty to our institutions, and where is the peril in such vows? They are peaceful and industrious; how can their citizenship be the occasion of solicitude?

"We are told that they are imperialists; but before they can be citizens they must renounce imperialism. We are told that they are foreigners in heart; but before they can take part with us they must renounce their foreign character. Therefore do I say if they come for citizenship there is no peril; while if they come merely for labor, then is all this discussion and all this anxiety superfluous."

Mr. Williams, of Oregon, said: "Two objections are made to the adoption of the amendment by the Senator from Massachusetts, founded the one upon the Declaration of Independence and the other upon the Constitution of the United States. Now, sir, I ask the Senator, and I ask every candid man in this body, does the Declaration of Independence mean that Chinese coolies, that the Bushmen of South Africa, that the Hottentots, the Digger Indians, heathen, pagan and cannibal, shall have equal political rights under this Government with citizens of the United States?

"Sir, this is the absurd and foolish inter-

pretation which the Senator from Massachusetts gives to that instrument. Did the men who made the Declaration of Independence understand it to mean any such thing? Did the fathers of this republic understand the Declaration of Independence to contain any such doctrine? Have any statesmen in this country preceding those now upon the stage of public life claimed that the Declaration of Independence was susceptible of any such construction? Sir, the Declaration of Independence says that 'all men are created equal;' but that is not all that it says, for to that are added these other significant words, that it is the duty and the right of the nation to so organize the powers of its Government 'as to them shall seem most likely to effect their safety and happiness.'

"Now, if it be the judgment of the American people in Congress assembled that the exclusion of the Chinese or any other people from citizenship will conduce to the safety and happiness of this nation, it is the right of the Government so to decide under the Declaration of Independence.

"Sir, the Declaration of Independence has nothing whatever to do with the question of citizenship; for, if the position of the Senator be correct, then every nation and tongue and tribe on the face of God Almighty's earth have the same right to vote and hold office in the United States as has the Senator from Massachusetts. Does the Senator mean to say that the subjects of the British empire have the same right to vote in the United States as citizens of this country? Does he mean to affirm any such doctrine as that upon the Declaration of Independence? Does he mean to say that the enemies of republican institutions, wherever they may be found upon the face of the earth, have a right under the Declaration of Independence to come into this country and take control of the Government and so destroy, if they please, the existence of this nation? Did not the men who made the Declaration of Independence, and have not all the statesmen of this country from the beginning of the Government down to the present time, understood that the question of naturalization was a question exclusively within the jurisdiction and to be decided according to the judgment of Congress?

"Sir, the Senator says that my amendment is not compatible with the Constitution of the United States. Does the Senator know that the Constitution of the United States expressly provides that no man who is not a natural-born citizen of this country shall fill the office of President? Did not the men who made the Constitution proscribe persons who were born out of the United States so far as that office is concerned, and deny even to a foreign-born citizen, after he was naturalized, the right to hold that office? Does the Constitution, in that respect, violate the Declaration of Independence? Does it not make a political dis-

tinction between persons born in the United States and persons born in foreign countries? Will the Senator say that this violates the principles laid down in the Declaration of Independence?

"Moreover, the Constitution provides that no person not a citizen of the United States shall be a Representative in Congress or a Senator; and even after a man is naturalized and becomes a citizen, on account of his foreign birth he is for seven years ineligible to the office of Representative, and for nine years to the office of Senator in Congress.

"Does not the Constitution make a political distinction between persons of foreign birth and persons who are born in the United States? Does not that principle pervade the whole instrument from beginning to end; and is there any man so stupid as not to know that, if this nation was to destroy all political distinctions and powers between its own citizens and the subjects of foreign powers, this Government would cease to exist as a republican Government as soon as its enemies could sufficiently combine for its overthrow?

"Now, sir, Congress has plenary power over this question of naturalization. Congress may require persons to reside in this country one year or forty years, according to its judgment. Congress may require one oath or another oath as a qualification for naturalization, or it may dispense with all oaths. Congress, on this subject, is invested with exclusive power over the question of naturalization, and when it proposes to legislate it must exercise its judgment as to it may seem most conducive to the safety and happiness of the American people.

"I deny, therefore, that the Declaration of Independence or the Constitution of the United States requires us to admit to naturalization Chinese, or cannibals, or Indians, or anybody, except as in our judgment their admission to political rights may comport with the best interests of the nation."

Mr. Schurz, of Missouri, said: "A heated fancy—I cannot use any other expression—is drawing the picture before our eyes of thirty, forty, fifty, or one hundred million Chinamen suddenly flowing from their native homes across the Pacific Ocean, sweeping over this country, and fairly submerging, as under a deluge of barbarism, our whole civilization and all that is dear to us. It is a horrible picture. Now, sir, let us look the facts in the face. Chinese immigration to the Pacific coast commenced, as I understand, in the year 1848. From 1848 until 1868 the yearly average of that immigration amounted to not quite six thousand. Last year the number of Chinamen who arrived upon the Pacific coast was twelve thousand. We will suppose that it goes on increasing, and that for a number of years ahead the average will be twenty thousand. How long will it take to bring over, at that rate, a million Chinamen? Just fifty years; and considering that the immigration

as it now is does not stay upon the soil of this country, but is flowing back again, and is therefore diminished, first by death, and secondly by the return of many of those who have come, we may safely assume that to bring a million Chinamen to this country at the rate of twenty thousand a year will take about seventy-five years. Have you thought of it—what the aggregate population of this country is likely to be in seventy-five years?

"But let us assume that the Chinese will come at the rate of fifty thousand a year. Then it would take twenty years to bring over a million; and, counting the deaths and the returns, it is fair to assume that it would take about thirty years to show a round million Chinamen in this country.

"Now, sir, it appears that this tremendous deluge, if indeed it is to come, will not overwhelm us, after all, so very quickly, considering that within twenty or thirty years the population of this country will amount to about one hundred millions."

Mr. Carpenter, of Wisconsin, said: "The bill before us proposes to amend, in several respects, our naturalization laws. The Senator from Massachusetts has moved an amendment to strike the word 'white' from all laws upon the subject of naturalization; and our friends the Republican Senators from the Pacific slope are horror-stricken at the thought that the Chinamen may claim admission to citizenship under our laws thus amended; and the Senator from Oregon (Mr. Williams) proposes to amend this bill by declaring that no person shall be admitted to citizenship who was born in the Chinese empire. We have received the ambassador of that empire with more distinction than we ever received the ambassador of any foreign nation since we became a nation. Yet it is now proposed to say by law that no subject of that empire, no matter how long he has resided among us, nor how thoroughly he may have become identified in interest with us, and no matter what may be his character, intelligence, or virtue, shall ever become an American citizen.

"Whenever a new question arises in the details of administration, whenever a new subject is presented for legislative regulation, and doubts exist in regard to the course to be pursued, it is safer to be guided by principle than by prejudice or passion. What, then, is the American principle that should guide us here? There are, of course, many theories as to where the right of suffrage should be vested. Those writers on the science of government who believe that the few were designed to govern the many have long since predicted the ruin of our nation, because the right of suffrage is so widely extended. Some contend for a standard of intelligence; some would seek the standard in wealth; some in blood; some in one thing, and some in another. But we Americans have met all the discussions and arguments upon this subject with a broad American

principle, which is that every man who is bound by the law ought to have a voice in making the law. This single maxim, the corner-stone of our institutions, we have laid down as our ultimate determination of the whole matter.

"When the war closed, emancipating four million slaves, degraded and ignorant, we were confronted with the question whether they should be admitted to full rights of citizenship. It was objected that they were ignorant and degraded by their long condition of servitude. But, sir, we determined this question in a statesmanlike way. We said that every free man subject to the law ought to have a vote; that the freedman was free and subject to the law, therefore he ought to vote. The difficulty bravely met, the problem solved upon principle, the emergency has passed, and no man fears that our institutions are endangered.

"But now a new question arises. Shall Chinamen be citizens; or, permitted to emigrate to this country, shall they constitute a class inferior to citizens? And strange to say the very men who settled the former question upon principle now hesitate to apply the principle, tested by its success in that case, to the instance before us, and now interpose the very objections to the enfranchisement of Chinamen that Democrats urged against the enfranchisement of the freedman.

Mr. President, every candid man admitted that it was subjecting our American theory to a severe trial when we admitted the freedmen to citizenship; but there was no choice; we had to apply the principle that every free man bound by the law was entitled to vote, or we had to say to the monarchists of Europe that their theory of government was right and ours was wrong; that it would not do to permit all men subject to the law to participate in the Government; that there must be some limitations and some exclusions, and that the man who could not be trusted was the man who had a black skin. The latter view was so manifestly absurd that we determined to abide by our maxim and give the negro the benefit of it. And no man did more to carry the public mind to this commendable conclusion than the Senator from Oregon. And now, coming to the Chinese question, I would like to have that Senator show, if he can, how we are to escape the same dilemma. If all free men subject to the law ought to have a vote, then the Chinaman is entitled to vote. And if he be not entitled to vote, it is because the theory of free government, 'of the people, for the people, by the people,' is a delusion. Sir, for one, I propose to stand by our American principle of free government, and, applying it to the case before us, to say that the Chinaman who comes to reside among us, who conforms to our laws, shall be admitted to the rights of a citizen.

But, sir, suppose we were to make this admission to the monarchists of Europe, and confess that the dogma of self-government is a delusion, and that the Chinaman, although

residing in our midst, and intelligent, industrious, and virtuous, ought not to have a voice in making the laws by which he is to be governed, by which his property is to be taxed, and by which his life is to be rendered happy or devoted to misery. Is it not certain that the Democrats, taking advantage of this admission, would press you again with their objections to the enfranchisement of the African? And do you clearly see how, after this admission, you could meet their objections? And where are you to stop? Will you enter upon a discussion of the property qualification, the test of intelligence, and all the other anti-American standards by which the monarchists seek to measure the right of participation in government? While you stand upon our great principle of self-government, you have a ready answer against all objections. But, that principle surrendered, we are at sea, and nothing determined.

Sir, this American maxim, that all freemen, bound by the law, ought to have a voice in making the law, is either a truth or a falsehood. If it be a truth, the Chinaman is entitled to vote; if it be a falsehood, then you must call witnesses to prove that you are entitled to vote yourself."

Mr. Thurman: "Is the Senator from Wisconsin in favor of woman suffrage?"

Mr. Carpenter: "I do not see the bearing of that question upon the subject before us; but I am happy to inform the Senator that I am in favor of citizen suffrage without distinction of sex, color, or birthplace."

Mr. Thurman: "That is satisfactory. The next question is, is the Senator in favor of giving to the Indians of Alaska, who owe allegiance to our Government and obedience to our laws, the right of suffrage?"

Mr. Carpenter: "That is leaving the subject under consideration to deal with matters entirely foreign to it; but I can say to the Senator that if he should offer an amendment to this bill that no man born in Alaska should enjoy civil rights and political privileges, or any kindred amendment, I should vote against it. In other words, I am opposed to limiting principles geographically; I am opposed to saying that all men are created equal within certain parallels of latitude, but that God intended the people born north or south of those lines to be the subjects of despotism. A man is a man, no matter where he was born, no matter what may be the color of his skin, and is entitled to be treated like a man, and to enjoy the rights, privileges, powers, and immunities of a man, under any government which professes to be founded upon the principle that all men are created equal."

Mr. Thayer, of Nebraska, said: "Will the Senator permit the naturalization laws to be applied to the Indians, will he permit Indians to avail themselves of the benefit of the naturalization laws?"

Mr. Carpenter: "What Indians—Indians born in this country?"

Mr. Thayer: "Yes."

Mr. Carpenter: "I do not understand that they need much naturalization."

Mr. Thayer: "I did not mean in this country."

Mr. Carpenter: "The other Indians we are not discussing. I am not authorized to go beyond the Senator's question. He certainly did not call for any opinion as to Indians outside of this country."

Mr. President, this cross-examination is extending my remarks beyond what I had intended. I simply desire to state the conclusions of my own judgment and the reasons why I shall support the amendment offered by the Senator from Massachusetts. It seems to me that we must support that amendment or repudiate the principle upon which we have stood as a party; the principle upon which we have builded as a nation. Often during the war the darkness was so dense that the path before us as a nation could not be seen. But with the people, when sight failed, faith inspired them, and hand in hand and shoulder to shoulder, and with faces imploringly uplifted to Heaven, they walked hopefully and safely through the gloom that enveloped them. So let us do here. To admit the Chinaman to full participation in the rights of citizenship may well create some apprehension; but I would sooner apply our principles to him than confess them to be erroneous, and thus destroy the only foundation upon which free government can rest."

Mr. Fenton, of New York, said: "I move to reconsider the vote by which the amendment of the Senator from Massachusetts (Mr. Sumner) was adopted."

Mr. Trumbull, of Illinois, said: "I trust, upon principle, that the vote which has been given will not be reconsidered."

"The Senator from Missouri (Mr. Schurz) treated this subject very properly, as it seemed to me, when he showed that there was no occasion for the alarm which has been sounded here. The number of Chinese in this country is very small, and if the immigration were to continue as it has done for the last twenty years, or were to be increased threefold, it would take fifty years to get a million Chinese into this country, and by that time the population of the United States would be one hundred or perhaps one hundred and fifty millions. There is no danger at present that this country will be overrun by pagans, and there is no necessity that we should throw up our hands in holy horror against the paganism of the Chinese. I think this is an imaginary danger."

"On this subject of admitting Europeans, Asiatics, or anybody else to this country, in my judgment the people of the United States have a right to pursue such policy as they shall think proper. It has hitherto been the policy of the country to encourage immigration. It is but a few centuries since the first settlements were made upon this continent by immigrants, either

from Asia, or Africa, or Europe. The people that first settled here, and who now chiefly inhabit the United States, came from Europe. Originally few in numbers and feeble, it was to their interest to encourage immigration and the bringing of capital to the country, to strengthen themselves and build up governments.

"Now, what is the objection to naturalizing these Chinese? We do not compel anybody to become an American citizen, but we provide the means by which a person of foreign birth may become a citizen of the United States; we do that by a uniform rule, and whenever a Chinaman conforms to that rule it seems to me that he is clearly entitled to become a citizen as if he were born in England, or France, or Germany, or any other country outside of the United States.

"But, Mr. President, what looks to me as extraordinary at the present time is that the Republican party, which has achieved all its triumphs in the name of freedom and equality, which has emblazoned upon its banners, 'Equal rights to all men; no distinction on account of race or color,' should be alarmed lest the Chinese take possession of the country, and that Senators should be frightened, not only from their propriety, but from principle, and be willing to forsake the foundation upon which they have stood for twenty years advocating human rights and equal privileges to all men alike. I, sir, have not been extreme; I have sometimes been charged with lagging behind; but I never abandoned the great principle of equal rights, nor can I consent now to deny a man the rights of citizenship simply because of the color of his skin or the place of his birth.

"The pending amendment provides that persons from all nations may be naturalized except those who are born in China. Why exclude the inhabitants of China, the people from the oldest nation in the world, and who are so far advanced in arts and literature? Everybody else can be naturalized, the Hottentot and the cannibal, to use the language of the Senator from Oregon; but he proposes an amendment that shall exclude from naturalization the patient, that laborious, the industrious, the skilful, the intelligent Chinaman."

"Mr. Pomeroy: "There are several Senators who have been invited out to dinner, and we cannot sit straight on. I hope we shall take a recess."

Mr. Conkling: "If I can only consult the convenience of Senators in regard to this matter I should like to do it without consulting my own."

Mr. Sumner: "Have a recess."

Mr. Conkling: "The Senator from Massachusetts says, let us have a recess. I fear the Greeks. He has no good-will for this bill; and if New York ever holds an honest election it is to be in spite of the honorable Senator from Massachusetts, and not because he

gives one ounce of aid to the Republican party in that State."

Mr. Sumner: "I took the liberty of saying from my seat, 'Have a recess.' I said so sincerely. I am always in my place. I intended to be here to-night. I know not why the Senator from New York should strike back at me because I made that simple suggestion. He says that I gave no aid to his bill. I have voted for his bill from beginning to end on every proposition; and, as I now understand it, I shall to the end as faithfully as the Senator himself. But allow me to say that there is something higher than this bill; it is a great American principle which that Senator now, on the Fourth of July, declares his readiness to sacrifice. It shall not be sacrificed if I can save it."

Mr. Conkling: "I shall never be able with the ostentation of the honorable Senator from Massachusetts to vaunt my great achievements in the cause of human progress, human equality, and human rights; yet when the volume is closed, though it should close with the now setting sun, I will put against the record of that Senator the humbler consistency of my own record from first to last. Nor do I fear that those who vote with me, having some regard to common-sense, and not alone to declamation, sensation, and high-sounding professions, will find 'their ineffectual fires' pale before the blazing light of the distinguished Senator from Massachusetts.

"I will vote to eliminate this amendment from the bill, and going to my constituents I will say, 'As the last sands were running out, when the time had come when, if ever, the protecting shield could be thrown around the ballot-box, I had too much sincerity and too little regard for personal effect in the galleries and in the country to trample under foot a practical opportunity to do a good thing for the sake of a flourish of rhetoric or a vain and empty profession of love of human rights;' and pointing to the record of my votes, insignificant as that record may be, which has at least no vacant place where an entry might have been made in behalf of human progress and human rights, I will trust the intelligence and honesty of my constituents, by which they discern light from darkness, to discern also the difference between improving practically an occasion to do good and trifling it away by vaulting and hollow attempts which everybody knows can result in no good, and which mean nothing but pretension and popular effect.

"Therefore, the honorable Senator intending, as I presume he did, according to a favorite phrase of his, to give a 'black eye' to my position, and to affix to me with the force of his name the stigma of being unfaithful to human rights, I say to the honorable Senator that his shafts fall unheeded if not harmless at my feet. I listen with as much indifference to his sling as I have felt at other times when the same Senator has in other phrases depreciated

and disparaged his peers in this Chamber, and his equals in the sincerity with which they hold the principles they profess."

Mr. Sumner: "Mr. President, you have heard the Senator from New York, and there he sits. The Senate has heard him. Was there any thing in my remarks to-day to justify his assault? Is he not a volunteer, as he always is a volunteer, in assaulting me? Sir, I shall not repel his assault. My course in this Chamber needs no defence against him. There must be a stronger arm than his to call me to any effort."

"The simple question is a practical one. How shall we most serve our country? The Senator from New York says in one way. Humbly, sir, I say in another way. I am in favor of the bill which he is now pressing upon the Senate. It shall have my vote as thus far it has had my vote; but I also am in favor of another proposition that I wish to engraft upon that bill. Do I err? How? Why? Do I ask too much? What I ask I know has excited debate to-day; but has not every similar proposition, when brought forward and pressed to a vote, excited debate? Let the debate go forward and I shall accept the result. Meanwhile I shall not cease to strive for these two great objects: one the original purpose of the bill, to impose safeguards upon naturalization, the other I have now moved, to bring our naturalization law in harmony with the Declaration of Independence and the Constitution of the United States."

"Is not that a worthy object? Do I deserve censure, rebuke, assault, because I make this endeavor? I do it simply and sincerely, regarding it as my solemn duty. I should fail as a Senator if I did any thing less. Nor have I in any respect impeached any Senator who differs from me. I have made no allusion to the course of the Senator from New York except to say that his proposition now was to abandon the great principle of American institutions."

Mr. Conkling: "To sacrifice."

Mr. Sumner: "'Sacrifice;' that is the word I used, and it is the true word—to sacrifice a great principle. There it is emblazoned in the Declaration of Independence, and you are called now to drag it down. There it is, a mighty light to our political system, and you are called to blot it out; and this is on the 4th day of July! Sir, I will say nothing more now."

The question being taken, resulted as follows:

YEA—Messrs. Bayard, Boreman, Chandler, Conkling, Corbett, Cragin, Davis, Drake, Edmunds, Hamilton of Maryland, Hamlin, Harlan, McCreery, Morton, Nye, Ramsey, Saulsbury, Scott, Stewart, Stockton, Thurman, Tipton, Vickers, Warner, Willey, Williams, and Wilson—27.

NAY—Messrs. Brownlow, Fenton, Harris, Kellogg, McDonald, Morrill of Maine, Pomeroy, Revels, Robertson, Ross, Spencer, Sprague, Sumner, and Trumbull—14.

ABSENT—Messrs. Abbott, Ames, Anthony, Buckingham, Cameron, Carpenter, Casserly, Cattell, Cole,

Ferry, Flanagan, Fowler, Gilbert, Hamilton of Texas, Howard, Howe, Howell, Johnston, Lewis, Morrill of Vermont, Norton, Osborn, Patterson, Pool, Pratt, Rice, Sawyer, Schurz, Sherman, Thayer, and Yates—51.

So the motion to reconsider was agreed to.

The President *pro tempore*: "The question now recurs upon the amendment of the Senator from Massachusetts."

Mr. Morton, of Indiana, said: "The Senator (Mr. Sumner) has talked a great deal about the Declaration of Independence, and I have been trying to make the application of it; and he will facilitate my effort by answering a question. It is this: whether he places the right of a Chinaman, for example, to become naturalized, to become a citizen of the United States, upon the same natural and moral level that he does a colored man to be clothed with political rights, to have the right of suffrage, and to have political equality conferred upon him? In other words, has the Chinaman a natural and moral right to become a citizen of the United States?"

Mr. Sumner: "I answer that he has not; but I answer with equal confidence that, if the United States undertakes to legislate on naturalization, it is bound by the Constitution of the United States, interpreted by the Declaration of Independence, to make no distinction of color. I do not say that we are bound to admit everybody to our naturalization; but I do say, and I challenge question, criticism, and reply, that, if we undertake to legislate on the subject, we can make no distinction of race or color."

Mr. Morton: "One question further. The Senator admits now that the Chinaman has no natural or moral right to demand citizenship. Therefore, we may refuse it without violating any right that he has. I call the Senator's attention to the fact that the declaration of right made in the Declaration of Independence was of a natural and God-given right to every man, the right to life, liberty, and the pursuit of happiness, given by God, and which no earthly government had the right to take away from him. Now, according to the Senator's admission, and with the character of the Declaration of Independence, why quote that perpetually on this subject? I submit to the Senator that it has no application. I submit that the question as to whether we will naturalize the Chinaman is a question of policy and expediency, and not a question of natural right, and therefore is not to be discussed upon the Declaration of Independence. Nobody, I presume, objects to conferring the right of naturalization upon men of African descent or of African blood; but there is a feeling of dread in this country with regard to what might be considered as an inundation or an avalanche of the vast population of China. Therefore, the question, as to whether we shall invite Chinamen here by naturalizing them, is not a question of natural right to be discussed from

the high stand-point the Senator has been talking about here to-night at all, but it is simply a question of expediency, a question of policy. It seems to me there has been a sad confusion of ideas all through this discussion, and that the true point has been obscured by things which have no application to it at all."

Mr. Sumner: "Mr. President, that is a very sad confusion of ideas that shall be willing to recognize a difference between the statutes of this land and the Constitution of the United States and the Declaration of Independence. I insist upon their harmony. I strive to bring them into concord. Senators seek to make discord, and then say that there is a confusion of ideas. Surely there is a confusion of ideas when any Senator is willing to recognize the word 'white' in a statute."

Mr. Morton: "Will the Senator allow me one more question?"

Mr. Sumner: "Certainly."

Mr. Morton: "The Senator admitted to-day, expressly, that under the Constitution of the United States we had a perfect right to exclude Chinamen and everybody else; and with that admission, and now with the admission that Chinamen have no natural or moral right to demand naturalization, why does he talk about a conflict between the statutes and the Constitution? Is it not a confusion of terms?"

Mr. Sumner: "I beg to say no; it is not a confusion of terms. The confusion is in that idea which would keep up discord. I wish concord—concord between the statutes of the land and the Declaration of Independence."

Mr. Howe, of Wisconsin, said: "I move to amend the amendment by adding the following proviso:

Provided, That nothing in this or any other act of Congress shall be so construed as to authorize the naturalization of any person born in a pagan country, unless with his oath of allegiance the applicant shall take and file an oath abjuring his belief in all forms of paganism."

The amendment to the amendment was rejected.

The President *pro tempore*: "The question recurs on the amendment of the Senator from Massachusetts."

The question being taken, resulted as follows:

YEAS—Messrs. Fenton, Fowler, Harris, Howe, McDonald, Morrill of Vermont, Pomeroy, Rice, Robertson, Ross, Spencer, Sprague, Sumner, and Trumbull—14.

NAYS—Messrs. Bayard, Boreman, Chandler, Conkling, Corbett, Cragin, Davis, Drake, Edmunds, Gilbert, Hamilton of Maryland, Hamlin, Harlan, McCreery, Morton, Nye, Osborn, Ramsey, Saulsbury, Scott, Stewart, Stockton, Thayer, Thurman, Tipton, Vickers, Warner, Willey, Williams, and Wilson—30.

ABSENT—Messrs. Abbott, Ames, Anthony, Brownlow, Buckingham, Cameron, Carpenter, Casserly, Cattell, Cole, Ferry, Flanagan, Hamilton of Texas, Howard, Howell, Johnston, Kellogg, Lewis, Morrill of Maine, Norton, Patterson, Pool, Pratt, Revels, Sawyer, Schurz, Sherman, and Yates—23.

So the amendment was rejected.

Mr. Warner, of Alabama, said: "Now, I

presume there is but little objection to extending the naturalization laws to the alien Africans within this country. I offer an amendment to that effect:

And be it further enacted, That the naturalization laws are hereby extended to aliens of African nativity and to persons of African descent.

The question being taken, resulted as follows:

YEAS—Messrs. Chandler, Drake, Gilbert, Harris, Kellogg, McDonald, Morton, Osborn, Pomeroy, Rice, Robertson, Ross, Scott, Spencer, Sprague, Sumner, Thayer, Tipton, Trumbull, Warner, and Willey—21.

NAYS—Messrs. Bayard, Boreman, Conkling, Corbett, Cragin, Davis, Edmunds, Hamilton of Maryland, Hamlin, Howe, McCreery, Nye, Ramsey, Saulsbury, Stewart, Stockton, Thurman, Vickers, Williams, and Wilson—30.

ABSENT—Messrs. Abbott, Ames, Anthony, Brownlow, Buckingham, Cameron, Carpenter, Casserly, Cattell, Cole, Fenton, Ferry, Flanagan, Fowler, Hamilton of Texas, Harlan, Howard, Howell, Johnston, Lewis, Morrill of Maine, Morrill of Vermont, Norton, Patterson, Pool, Pratt, Revels, Sawyer, Schurz, Sherman, and Yates—31.

So the amendment was agreed to.

The bill was reported to the Senate as amended.

The President *pro tempore*: "The question is on concurring in the amendment made as in Committee of the Whole."

The amendment was concurred in.

Mr. Sumner: "I renew my proposition to strike out the word 'white.'"

The President *pro tempore*: "It has not been offered in the Senate, but it was offered in Committee of the Whole. The amendment will be read."

The Chief Clerk read the amendment, as follows:

And be it further enacted, That all acts of Congress relating to naturalization be, and the same are hereby, amended by striking out the word "white" wherever it occurs; so that in naturalization there shall be no distinction of race or color.

The question being taken resulted—yeas 12, nays 26, as follows:

YEAS—Messrs. Fenton, Fowler, Howe, McDonald, Morrill of Vermont, Osborn, Pomeroy, Rice, Robertson, Sprague, Sumner, and Trumbull—12.

NAYS—Messrs. Bayard, Boreman, Chandler, Conkling, Corbett, Cragin, Drake, Hamilton of Maryland, Hamlin, Harlan, McCreery, Morton, Nye, Ramsey, Saulsbury, Scott, Stewart, Stockton, Thayer, Thurman, Tipton, Vickers, Warner, Willey, Williams, and Wilson—26.

ABSENT—Messrs. Abbott, Ames, Anthony, Brownlow, Buckingham, Cameron, Carpenter, Casserly, Cattell, Cole, Davis, Edmunds, Ferry, Flanagan, Gilbert, Hamilton of Texas, Harris, Howard, Howell, Johnston, Kellogg, Lewis, Morrill of Maine, Norton, Patterson, Pool, Pratt, Revels, Ross, Sawyer, Schurz, Sherman, Spencer, and Yates—34.

So the amendment was rejected.

Mr. Trumbull: "I move to amend the amendment that was adopted on the motion of the Senator from Alabama (Mr. Warner) by adding the words 'or persons born in the Chinese empire;' so as to make it read:

That the naturalization laws are hereby extended to aliens of African nativity, and to persons of Afri-

can descent, and to persons born in the Chinese empire.

"I have offered this amendment so as to bring the distinct question before the Senate whether they will vote to naturalize persons from Africa, and vote to refuse to naturalize those who come from China."

The question being taken, resulted as follows:

YEAS—Messrs. Fenton, Fowler, McDonald, Pomeroy, Rice, Robertson, Sprague, Sumner, and Trumbull—9.

NAYS—Messrs. Bayard, Boreman, Chandler, Conkling, Corbett, Cragin, Drake, Gilbert, Hamilton of Maryland, Hamlin, Harlan, Howe, McCreery, Morrill of Vermont, Morton, Nye, Osborn, Ramsey, Saulsbury, Sawyer, Scott, Stewart, Stockton, Thayer, Thurman, Tipton, Vickers, Warner, Willey, Williams, and Wilson—31.

ABSENT—Messrs. Abbott, Ames, Anthony, Brownlow, Buckingham, Cameron, Carpenter, Casserly, Cattell, Cole, Davis, Edmunds, Ferry, Flanagan, Hamilton of Texas, Harris, Howard, Howell, Johnston, Kellogg, Lewis, Morrill of Maine, Norton, Patterson, Pool, Pratt, Revels, Ross, Schurz, Sherman, Spencer, and Yates—32.

So the amendment was rejected.

The amendments were ordered to be engrossed, and the bill to be read a third time. The bill was read the third time.

The question being taken, resulted as follows:

YEAS—Messrs. Anthony, Chandler, Conkling, Corbett, Cragin, Drake, Edmunds, Fenton, Gilbert, Hamlin, Harlan, McDonald, Morrill of Vermont, Morton, Nye, Osborn, Patterson, Pomeroy, Ramsey, Rice, Robertson, Sawyer, Scott, Spencer, Stewart, Sumner, Thayer, Tipton, Trumbull, Warner, Willey, Williams, and Wilson—33.

NAYS—Messrs. Bayard, Boreman, Hamilton of Maryland, McCreery, Saulsbury, Stockton, Thurman, and Vickers—8.

ABSENT—Messrs. Abbott, Ames, Brownlow, Buckingham, Cameron, Carpenter, Casserly, Cattell, Cole, Davis, Ferry, Flanagan, Fowler, Hamilton of Texas, Harris, Howard, Howe, Howell, Johnston, Kellogg, Lewis, Morrill of Maine, Norton, Poole, Pratt, Revels, Ross, Schurz, Sherman, Sprague, and Yates—31.

So the bill was passed.

In the House, on July 11th, the amendments of the Senate were concurred in by the following vote:

YEAS—Messrs. Allison, Ambler, Ames, Armstrong, Asper, Atwood, Ayer, Bailey, Banks, Beatty, Benjamin, Benton, Bingham, Blair, Boles, Boyd, George M. Brooks, Buck, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Roderick R. Butler, Cake, Churchill, William T. Clark, Sidney Clarke, Amasa Cobb, Coburn, Conger, Cook, Covode, Cowles, Cullom, Darrall, Davis, Dawes, Degener, Dickey, Donley, Duval, Ela, Farnsworth, Ferriss, Ferry, Finkelnburg, Fisher, Fitch, Garfield, Gilfillan, Hamilton, Harris, Hawley, Heflin, Hill, Hoar, Hooper, Ingersoll, Jenckes, Judd, Kelley, Kelsey, Ketcham, Knapp, Lakin, Lash, Lawrence, Logan, Loughridge, Maynard, McCarthy, McGrew, McKenzie, Mercur, Jesse H. Moore, William Moore, Morphis, Daniel J. Morrell, Myers, Negley, O'Neill, Orth, Packard, Pecker, Paine, Palmer, Peck, Peters, Phelps, Platt, Poland, Porter, Prosser, Root, Sargent, Sawyer, Schenck, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, William J. Smith, Worthington C. Smith, William Smyth, Starkweather, Stevens,

Stevenson, Stokes, Stoughton, Strickland, Taffe, Tanner, Taylor, Tillman, Townsend, Twishell, Tyner, Upson, Van Horn, Van Wyck, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Whittemore, Wilkinson, Willard, Williams, John T. Wilson, and Witcher—132.

NAYS—Messrs. Axtell, Barnum, Beck, Bennett, Biggs, Bird, Booker, James Brooks, Burr, Oalkin, Conner, Cox, Crebs, Dickinson, Fox, Gets, Griswold, Haight, Hay, Holman, Johnson, Thomas L. Jones, Kerr, Knott, Lewis, Marshall, Mayham, McCormick, McNesley, Milnes, Morgan, Mungen, Niblack, Potter, Randall, Reeves, Rice, Rogers, Schumaker, Sherrod, Slocum, Joseph S. Smith, Stiles, Stone, Swann, Sweeney, Trimble, Van Auken, Van Trump, Eugene M. Wilson, Winchester, Wood, and Woodward—58.

NOR VOTING—Messrs. Adams, Archer, Arnell, Barry, Beaman, Bowen, Cesana, Cleveland, Clinton L. Cobb, Dixon, Dockery, Dox, Dyer, Eldridge, Gibson, Haldeman, Hale, Hambleton, Hamill, Hawkins, Hays, Hoge, Hotchkiss, Alexander H. Jones, Julian, Kellogg, Lynch, McCrary, McKee, Eliakim H. Moore, Samuel P. Morrill, Morrissey, Newsham, Preece, Pomeroy, Ridgway, Sanford, Scofield, Shober, Strader, Strong, Voorhees, Wallace, Wells, and Winans—45.

In the House, on June 14th, Mr. Banks, of Massachusetts, from the Committee on Foreign Affairs, reported a joint resolution relative to the contest in Cuba, as follows:

Joint resolution in relation to the contest between the people of Cuba and the Government of Spain.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be, and hereby is, authorized and instructed to declare and maintain a strictly impartial neutrality on the part of the Government of the United States in the contest now existing between the people of Cuba and the Government of the kingdom of Spain.

Sec. 2. And be it further resolved, That all provisions of the statute approved 30th of April, 1818, entitled "An act in addition to the act for the punishment of certain crimes against the United States, and to repeal the acts therein mentioned," shall be construed to apply equally to each of the parties in the existing contest between the people of Cuba and the Government of Spain.

Sec. 3. And be it further resolved, That the President is hereby authorized and requested to remonstrate against the barbarous manner in which the war in Cuba has been conducted, and, if he shall deem it expedient, to solicit the coöperation of other Governments in such measures as he may deem necessary to secure from both contending parties an observance of the laws of war recognized by all civilized nations.

Mr. Orth, of Indiana, from the minority of the committee, reported the following substitute:

A joint resolution making it a misdemeanor to fit out or equip ships-of-war, with intent that they shall be employed in the service of any European prince or state, for the purpose of subduing American colonists claiming independence, and providing for the forfeiture of such ship or vessel.

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That if any person shall, within the limits of the United States, fit out, arm, or equip, or attempt to fit out, arm, or equip, or procure to be fitted out, armed, or equipped, or shall knowingly be concerned in the fitting out, arming, or equipping, of any ship or vessel, with intent that such ship or vessel shall be employed in the service of any European prince or state, for the purpose of subduing American col-

onists claiming independence, or shall issue or deliver a commission within the territory of the United States for any ship or vessel with the intent that she may be employed as aforesaid, every person so offending shall be guilty of a misdemeanor, and, upon conviction thereof, shall be fined in any sum not exceeding \$5,000, and be imprisoned for a period not exceeding two years, nor less than six months; and every such ship or vessel, with her tackle, apparel, and furniture, together with all materials, arms, ammunition, and stores, which may have been procured for the building and equipment thereof, shall be forfeited, one half to the use of the informer, and the other half to the United States.

Sec. 2. *And be it further resolved*, That in every case where a ship or vessel shall be fitted out, armed, or equipped, or attempted to be fitted out, armed, or equipped, contrary to the provisions of this act, it shall be lawful for the President of the United States, or such person as he shall have empowered for that purpose, to employ the land or naval forces, or the militia of the United States, or any part thereof, for the purpose of taking possession of and detaining any such ship or vessel.

Sec. 3. *And be it further resolved*, That the provisions of the act approved April 20, 1818, entitled "An act in addition to the act for the punishment of certain crimes against the United States, and to repeal the acts therein mentioned," shall be held to apply and be in force, as to all attempts of American colonies, or parts thereof, to assert their independence; and the words "colonies, districts, or peoples" in such act shall be held to apply to and include all such American colonists claiming independence, as described in the first section of this act.

Mr. Logan, of Illinois, said: "I offer an amendment, to add, at the end of the second section of the joint resolution reported by the Committee on Foreign Affairs, the following:

And shall be so construed as to give to both contending parties the same advantages of intercourse and trade with the United States, consistent with the law of nations, which have been or may be accorded to the Government of Spain."

Mr. Banks said: "The object of these resolutions is—

"1. To secure the recognition of an existing armed contest for liberty in Cuba;

"2. The neutrality of the United States in that contest;

"3. To place the Cubans upon an equal footing with the Spaniards in regard to intercourse and trade with the United States;

"4. To interpose the protest of the United States against the barbarous manner in which the war has been conducted.

"It is a misconception of fact to assume that by this action we grant belligerent rights to the Cubans. This Government has no power to create, confer, or define the rights of belligerents. That can be done by the general consent of civilized Governments only. They are defined by the law of nations. We are bound to observe them as the rule of the Christian world. The Cubans have an inalienable right to fight against oppression and for liberty. It does not depend upon the consent of Governments or men. It is our duty to recognize the fact of the contest and maintain our neutrality. The Administration has already informed the Government of Spain that the law of nations would justify our in-

tervention in the contest in the interest of humanity; but intervention is the policy of personal, not of republican Governments. Impartial neutrality is our duty. It would be criminal for us to strengthen the hand of the oppressor. If we cannot espouse the cause of liberty, we ought, at least, to stand neutral. Without a recognition of the contest neutrality is impossible. When we recognize its existence and declare our neutrality, the law of nations, the enlightened code of the civilized world, defines the rights and duties of neutral nations and applies to the contestants the law of belligerents. This is the action recommended. It is in the interest of peace. It localizes the war, restrains the power of the conqueror, protects the lives of the vanquished, shields non-combatants from the penalties of war, extends the authority of neutrals, and substitutes for the rapine and murder of barbarous ages the restraints which are now everywhere enforced by Christian nations. We believe this recognition to be consistent with our obligations to Spain, with the law of nations, the interests of humanity, the law of justice, and to be demanded by every consideration of private and public duty.

"The recognition of existing war in Cuba by the United States can give no just cause of offence to Spain. The Spanish Government recognized the rebellion against the United States sixty-five days after the first shot was fired against Fort Sumter, and before a single life had been sacrificed by the armed forces of the contending parties. The United States made no protest against the Spanish proclamation, which several times described the rebels as 'belligerents,' but commended it as a 'friendly action.'

"Mexico, Chili, and Colombia, have already recognized the Cubans as entitled to the rights of belligerents under the laws of war, without protest on the part of Spain. Peru has recognized Cuba as an independent State; yet Spain, so far from considering this action as cause of war, discontinued the war which she had long waged against Peru, claiming, even against the protest of Peru, that 'the war with that power was ended,' and that Spain could not 'be induced to recommence it.' (Ex. Doc., 160, p. 51.)

"It is not to be assumed that the United States, which suffers from the contest in Cuba more than any other nation, can be deprived of rights which every other American State is at liberty to exercise, not only without disturbing its peace, but without protest or complaint on the part of Spain.

"What, then, is the duty of the United States?

"Clearly it is to recognize the actual condition of affairs, and to take such measures as are prescribed by the law of nations for the protection of our rights until peaceful, permanent government can be established. It is no longer a 'civil commotion,' as it has been hitherto

regarded by the United States; nor a mere 'domestic question,' as it is represented by the Spanish Government. It is protracted and atrocious civil war.

"A civil commotion is directed against individuals or against civil magistrates. It may reach the standard of sedition or insurrection in which a sovereign may be disobeyed: but it is still a State crime, to be suppressed and punished by State authority without intervention, and without affecting the rights of foreign Governments. A civil war, on the contrary, is a contest of arms between a part of the citizens on one side, and the sovereign or those who obey him, on the other; in regard to which the action of foreign Governments may become absolutely necessary. 'It is sufficient,' Vattel says, 'that the malcontents have some reason to take up arms in order that the disturbance should be called civil war and not rebellion.' (Vattel, liv. iii., ch. xviii., secs. 290-295.)

"The people of Cuba present the best reasons for the contest they wage. It has every claim to the sympathy and support of the friends of liberty, equality, and justice. It is a race struggling for independence; an enslaved people contending for liberty; a nation fighting for national existence. The contest in which they are engaged has all the attributes of barbarous and bloody civil war, aggravated by the disorders and crimes of anarchy. Our first duty is to treat it as war, and, in accordance with the law of nations, to declare and maintain, in regard to the parties engaged therein, a strict and impartial neutrality.

"A civil war,' Vattel says, 'is when a party arises in a State which no longer obeys the sovereign, and is sufficiently strong to make head against him, or when in a republic the nation is divided into two opposite factions, and both sides take up arms.'

"Civil war breaks the bonds of society and of the Government; it gives rise in a nation to two independent parties, who acknowledge no common judge. They are in the position of two nations who engage in disputes, and, not being able to reconcile them, have recourse to arms. The common laws of war are in civil wars to be observed on both sides. The same reasons which make them obligatory between foreign States render them more necessary in the unhappy circumstances where two exasperated parties are destroying their common country.' (Vattel, liv. iii., ch. xviii., secs. 290-295.)

"When a nation becomes divided into two parties absolutely independent, and no longer acknowledges a superior, the State is dissolved, and the war betwixt the two parties in every respect is the same as that of a public war between two different nations. The obligation of observing the common law of war is therefore absolutely indispensable to both parties, and the same which the law of Nature obliges all nations to observe between State and State.' (Vattel, *Droit des Gens*, liv. iii., ch. xviii., secs. 290-295.)

"When a part of a State takes up arms against the Government, if it is sufficiently strong to resist its action and to constitute two parties of equally-balanced forces, the existence of civil war is thenceforth determined. If the conspirators against the Government have not the means of assuming this position, their movement does not pass beyond a rebellion. A true civil war breaks the bonds of society by dividing it in fact into two independent societies; it is for this consideration that we treat of it in international law; since each party forms, as it were, a separate nation, both should be regarded as subject to the laws of war. This subjection to the law of nations is the more necessary in civil wars, since these, by nourishing more hatred and resentments than foreign wars, require more the corrective of the law of nations in order to moderate their ravages.' (Riquelme, *Elementos de Derecho Público*, cap. 14, tom. i., p. 172.)

"When a faction is formed in a State which takes up arms against the sovereign in order to wrest from him the supreme power or impose conditions on him, or when a republic is divided into two parties which mutually treat each other as enemies, this war is called civil war. Civil wars frequently commence by popular tumults, which in nowise concern foreign nations; but, when one faction or party obtains dominion over an extensive territory, gives laws to it, establishes a government in it, administers justice, and, in a word, exercises acts of sovereignty, it is a person, in the law of nations; and however so much one of the two parties gives to the other the title of rebel or tyrant, the foreign powers which desire to maintain their neutrality ought to consider both as two States, independent as respects one another and other States, who recognize no judge of their differences.' (Bello, *Principios de Derecho Internacional*, cap. 10, p. 267.)

M. Bluntschli, whom Laboulaye places in the first rank of jurists and publicists, and styles 'the illustrious professor of Heidelberg,' in one of the most recent and learned of the works of international law, is more emphatic as to the duty of Governments to recognize contending factions as belligerents.

"In this code of international law, in defining the character of war and the principles of neutrality, he says: 'War is an armed contest between different States upon a question of public right.' 'They recognize the quality of belligerents in armed forces, who, not having been recognized by any State already existing as having the right to contend in arms, have secured to themselves a military organization, and combat in good faith—in the place of and as a State—for a principle of public right.' (Bluntschli, pp. 270, 271.)

"There is an exception,' he continues, 'to the rule that wars can take place only between States. When a political party seeks the realization of certain public objects, and organizes itself as a State, it becomes in a cer-

tain measure the State itself. The laws of humanity demand that the quality of belligerents should be accorded to that party, and that its people should not be considered a mass of criminals. A party that is sufficiently strong to create a power analogous to that of a State, which offers by its military organization sufficient guarantees of order, and gives evidence by its acts of its intention to become a State, that party has a natural right to demand for its army the same treatment that is accorded to a State already in existence. The sacrifices of war are in that way diminished not only for the new party, but for all its adversaries. If, on the contrary, the volunteers of the new party are pursued as criminals, the contest becomes more savage, and neither of the adversaries will allow itself to be surpassed by the other in the barbarism of its acts or the cruelty of its reprisals. Under this head are ranged the expeditions undertaken by certain forces called *corps francs*, or free corps. When these corps are regularly organized and respect the laws of war, they ought to be considered as belligerents.' (Blunt-schli, pp. 271.)

"Mr. Phillimore, in his work on international law, which is of the highest authority, says:

"There is no proposition of law upon which there exists a more universal agreement of all jurists than that the virtual and *de facto* recognition of a new State (recognizing the commercial flag and sanctioning the appointment of consuls to its ports) gives no just cause of offence to the old State, inasmuch as it decides nothing concerning the asserted rights of the latter.' He makes a distinction between the 'virtual' recognition of a new State by admitting its commercial flag and the appointment of consuls and the formal recognition by sending ambassadors and entering into treaties with the new State by foreign powers, which should not be done until after 'a practical cessation of hostilities,' though it does not demand a 'perfect and undisturbed internal tranquillity' within its borders. This would, in fact, be an admission of the competency of the new powers to negotiate and contract engagements under the law of nations. (Phillimore's 'International Law,' vol. ii., pp. 17-22.)

"In case of revolution, Wheaton says the civil war does not necessarily extinguish the existence of the sovereign or parent State, but that, 'until the revolution is consummated, while the civil war involving a contest for the Government continues, other States may remain indifferent spectators of the controversy, still continuing to treat the ancient Government as sovereign, and the Government *de facto* as a society entitled to the rights of war against its enemies, or may espouse the cause of the party which they believe to have justice on its side. In the first case, the foreign State fulfils all its obligations under the law of nations, and neither party has any right to complain,

provided it maintains an impartial neutrality.' (Part i., ch. ii., sec. 6.)

"And, again, he says: 'It has already been stated that while the contest for the sovereignty continues and the civil war rages, other nations may remain passive, allowing to both contending parties all the rights which war gives to public enemies; or may acknowledge the independence of the new State, forming with it treaties of amity and commerce, or may join in alliance with one party against the other. In the first case neither party has any right to complain, so long as other nations maintain an impartial neutrality and abide the event of the contest.' (Wheaton, part i., ch. ii., sec. 10.)

"Such are the views of modern jurists. In the late civil war in America all the nations in Europe recognized and acted upon this doctrine. Belgium, France, the Netherlands, Portugal, Denmark, Prussia, Russia, Spain, and Great Britain, issued proclamations declaring their neutrality, and setting forth regulations for the government of their subjects. Our government protested against the manner in which some of these declarations were made, and against the manner in which they were executed, but it never denied the right of any Government to declare its neutrality in any contest.

"The declarations of Great Britain and Spain were substantially alike. That of Great Britain was as follows:

BY THE QUEEN—A PROCLAMATION, VICTORIA R.

Whereas, we are happily at peace with all sovereigns, powers, and States; and whereas hostilities have, unhappily, commenced between the Government of the United States and certain States styling themselves the Confederate States of America; and whereas we, being at peace with the Government of the United States, have declared our royal determination to maintain a strict and impartial neutrality in the contest between the said contending parties, we therefore have thought it fit, by the advice of our privy council, to issue this, our royal proclamation, etc. Dated May 13, 1861.

"That of Spain was as follows:

PROCLAMATION BY THE QUEEN OF SPAIN.

Considering the relations which exist between Spain and the United States of America, and the expediency of not changing the reciprocal feelings and friendly understanding on account of the grave events which have happened in that republic, I have resolved to maintain the strictest neutrality in the struggle engaged in between all the Federal States of the Union and the Confederate States of the South; and in order to avoid the losses which our subjects might suffer, both in shipping and commerce, for want of definite rules to which their conduct might conform, in accordance with my council of ministers, I decree as follows (and then the regulations which govern neutral nations are given as in the British proclamation). Dated June 17, 1861.

"We protested against the manner in which the British proclamation was issued, and the faithless manner in which it was executed; but we made no protest against that of Spain, whose declaration was identical with that of England, except that it repeated the word

'belligerents,' which was not used in the British proclamation. On the contrary, we accorded to the Spanish Government our thanks for its prompt and friendly action.

"Mr. Schurz, American minister at Madrid, writes to Mr. Seward, July 15, 1861, as follows: 'Señor Calderon Collantes then asked me whether the declaration of neutrality on the part of Spain in regard to our domestic troubles was satisfactory to my Government.' I replied 'that, as to the declaration of neutrality on the part of Spain, I had received no expression of opinion from my Government; and that I thought it would be considered satisfactory.'

"Mr. Schurz writes to the Spanish Minister of State, Señor Calderon Collantes, July 31, 1861, as follows:

Sir: Yesterday I received a dispatch from the Secretary of State of the United States, informing me that the President has read, with the greatest satisfaction, the proclamation of her Catholic Majesty concerning the unfortunate troubles that have arisen in the United States; and it affords me the sincerest pleasure to express to your Excellency the high sense which the President entertains of her Majesty's prompt decision and friendly action upon this occasion.

"A measure that is right in itself cannot be made wrong, because it is in accord with the practice of all civilized nations; nor can the action of this Government in defence of its rights against the policy of Spain in Cuba be less defensible, because it follows literally and exactly the precedent of Spain in its action with regard to the civil war in this country. All nations have been notified that we should follow the examples set by other Governments in their conduct to us, when other methods of redress of wrongs were closed against us. The President, in his inaugural address, made that declaration. 'I would respect the rights of all nations,' he said, 'demanding equal respect for our own. If others depart from this rule in their dealings with us, we may be compelled to follow their precedent.' (*Inaugural Address*, 4th March, 1869.)

"What objection can Spain make to a proclamation of neutrality in the case of Cuba, identical with her own 'prompt decision and friendly action' in the case of the United States? What objection can the European nations, who instantly proclaimed their neutrality in the civil war in this country, urge against the neutrality of the United States in the war between Spain and Cuba, after the unparalleled atrocities of twenty-one months and the brutal murder of scores of American citizens and repeated insults to our consular and commercial agents?

"Great Britain declared her purpose, in regard to the American rebellion, in the House of Commons the 6th of May, 1861, twenty-three days after the attack on Fort Sumter, and before a single life had been sacrificed, or a drop of blood had been shed; except in the conflict between soldiers and citizens in Balti-

more, the 19th of April, 1861. Spain issued her proclamation of neutrality, describing the contestants as belligerents, the 17th of June, sixty-five days after the fall of Fort Sumter, and before a single life had been sacrificed, except at Baltimore.

"What objection can Spain make to a declaration of neutrality on the part of the United States in the Cuban contest, after a bloody and brutal civil war of nearly two years?

"The limitations and conditions under which neutrality should be declared are sternly and strongly stated by Mr. Adams in his correspondence with Lord John Russell upon the Alabama claims. To every position assumed by him our assent is cheerfully conceded:

Whenever an insurrection against the established Government of a country takes place, the duty of Governments under obligations to maintain peace and friendship with it appears to be, at first, to abstain carefully from any step that may have the smallest influence in affecting the result. Whenever facts occur of which it is necessary to take notice, either because they involve the necessity of protecting personal interests at home or avoiding an implication in the struggle, then it appears to be just and right to provide for the emergency by specific measures, precisely to the extent that may be required, but no further. It is, then, facts alone, and not appearances or presumptions, that justify action. But even these are not to be dealt with further than the occasion demands; a rigid neutrality in whatever may be done is, of course, understood. If, after the lapse of a reasonable period, there be little prospect of the termination of the struggle, especially if this be carried on upon the ocean, a recognition of the parties as belligerents appears to be justifiable; and at that time, so far as I can ascertain, such a step has never in fact been objected to.

"It is impossible to affirm that there is the slightest departure by this Government from the stern rules laid down by Mr. Adams either in its past action on the Cuba question or in the course now proposed. So far from taking any step that could affect disadvantageously the cause of Spain, we have rendered her important assistance in the suppression of the Cuban rebellion. Who can question, in the face of the record presented to this House by the President, that 'facts' have occurred which not only involve, but demand, the protection of our personal interests at home? Who can deny, in the face of the constant protests of the Secretary of State against the outrages upon the rights and persons of American citizens, that it has been difficult for us to avoid 'an implication' in the Cuban struggle? The record would justify the Government in recognizing the independence of Cuba or a declaration of war; but we propose only 'to provide for the emergency by specific measures, precisely to the extent required, but no further.' 'It is,' then, 'facts alone, and not appearances or presumptions, that justify (our) action:' and this not only 'after the lapse of a reasonable period,' but after a brutal internecine war of twenty-one months; after nearly two hundred armed conflicts; after the slaughter of thousands of lives; and when there is not only

'little' but no 'prospect of a termination of the struggle.' And it is to be noticed, especially, that the resolutions proposed follow the specifications of Mr. Adams in another essential point—that it contemplates a continuance of the struggle on the land, and not 'upon the ocean.' It is perfectly within the power of the Government to maintain the neutrality of the United States within this limit under the resolutions for which we ask the favor of the House.

"But, while the resolutions are thus within the almost bloodless schedule of 'facts' prescribed by Mr. Adams, it is gratifying to know that they approach at least the elevated standard of action which this Government has hitherto adopted whenever and wherever the cause of liberty has been involved.

"The principles which have governed the American people in cases of this character are stated by Mr. Webster in his letter, as Secretary of State, to the representative of the empire of Austria, at Washington, December 21, 1850. No State paper was ever more enthusiastically or unanimously approved by the American people than the 'Hulsemann letter.'

"It carries us back to the doctrines of the founders of our Government. It recalls the declaration of Phillimore, the ablest of English commentators on international law, that the right of a Government to protect its citizens wherever commorant, and the right of one Government to recognize the existence of another, constitute the foundation of the law of nations. It is the American protest against the doctrines of the Holy Alliance, as expressed in the Laybach circular, that new States could only be tolerated when recognized by existing Governments. Had Mr. Webster only lived to make this declaration, his life would have been a victory.

"It is the right of every independent State," said Mr. Webster, 'to enter into friendly relations with every other independent State. Of course questions of prudence naturally arise in reference to new States, brought by successful revolution into the family of nations; but it is not to be required of neutral powers that they should await the recognition of the new Government by the parent State. No principle of public law has been more frequently acted upon within the last thirty years by the great powers of the world than this. Within that period eight or ten new States have established independent Governments within the limits of the colonial dominion of Spain on this continent; and in Europe the same thing has been done by Belgium and Greece. The existence of all these Governments was recognized by some of the leading powers of Europe, as well as by the United States, before it was acknowledged by the States from which they had separated themselves. If, therefore, the United States had gone so far as to acknowledge the independence of Hungary, although, as the result has proved, it would have been a

precipitate step, and one from which no benefit would have resulted to either party, it would not, nevertheless, have been an act against the law of nations, provided they took no part in her contest with Austria.' (Works of Daniel Webster, vol. vi., pp. 498, 499.)

"These are indisputable American doctrines; but we do not go so far as to ask the House to apply them in the case of Cuba.

"Mr. Canning said, upon the same subject, in the House of Commons, February 4, 1825, that, "as to the propriety of admitting States, which had successfully shaken off their dependence on the mother-country, to the rights of nations, there could be no dispute. There were two ways of proceeding: were the case more questionable, recklessly and with a hurried course to the object, which might soon be reached, or almost as soon lost; or by another course, so strictly guarded that no principle was violated and no offence given to other powers.' (Hansard's 'Parliamentary Debates,' second series, vol. xii., p. 78.)

"It is not by formal stipulations or solemn declarations," said Sir James Mackintosh, in speaking of the proposed acknowledgment of the Spanish-American colonies by Great Britain, 'that we are to recognize the American States, but by measures of practical policy, the most conspicuous part of which is the act of sending or receiving diplomatic agents. It implies no guarantee. No alliance, no aid, no approbation of the successful revolt, no intimation of an opinion concerning the justice or injustice of the means by which it has been accomplished. The tacit recognition of a new State, not being a judgment of the new Government or against the old, is not a deviation from a perfect neutrality, or a just cause of offence to the dispossessed ruler.' (Mackintosh's Works, p. 749.)

"But we do not ask the assent of the House to such self-evident and patriotic doctrines. We ask only that in the armed contest in Cuba, the existence of which it would be a crime to question, the neutrality of the United States shall be proclaimed and enforced. We ask for Cuba nothing but justice; that justice which, it is said, is the chief concern of mankind."

Mr. Orth, of Indiana, said: "Mr. Speaker, the report of the minority recommends the adoption of a permanent foreign policy for the future, in reference to contests that may spring up on the American Continent, or in the adjacent islands, between the colonies and the parent Governments. That policy is this: that in all such contests we shall say through our national Legislature that our Government and citizens shall not take any part whatever.

"If struggles arise, we are to remain strictly neutral between the contending parties. Should any of the British provinces, for instance, revolt against the home Government, it is not our interest or our duty to lend them any assistance; and so, on the other hand, should Great Britain attempt to subjugate the

insurgents, she shall not have any assistance from us in accomplishing her object. This, with us, is the part of wisdom; and let us now declare to the world that hereafter this shall be our position.

"We want peace with all the world, entangling alliances with no nation or peoples. We have our own duty and our own destiny, and that is to do justice to others, to compel, if need be, justice to ourselves; to engage in no quarrels, or strifes, or wars, which we can with honor avoid; to husband our resources; to educate and elevate our people; to develop the material wealth with which a kind Providence has blessed us; to repair the great losses, the terrible destruction of our late troubles, and to continue to give the world the bright example of a nation discharging all its duties and all its functions in the spirit of an enlightened and elevated humanity. We are not a nation of buccaneers or filibusters. We have wise laws upon our statute-books; we desire to have those laws obeyed. We have upon us the obligations of treaties, into which we have voluntarily entered; let us honorably stand by and respect every such obligation. Such has been our past history, and such I fondly hope and believe will be our future history.

"The gentleman from Massachusetts (Mr. Banks) has, among others, invoked the name of General Jackson. Sir, that is a name revered by all Americans, and I am glad he has appealed to it. I thank him for doing so. There are many within the sound of my voice who will recollect the feeling that grew up in this country consequent upon the declaration of independence by Texas against the republic of Mexico. Many of our own people had gone there to seek homes, and in process of time had raised the flag of independence. Our sympathies were naturally enlisted in their favor, because they were men speaking our language and deeply imbued with a love of our institutions.

"The language and sentiments of President Jackson are so wise and prudent, and those of President Grant are in such strict accord with them, that I ask the Clerk to read from Jackson's message."

The Clerk read as follows:

The acknowledgment of a new State as independent and entitled to a place in the family of nations is at all times an act of great delicacy and responsibility; but more especially so when such State has forcibly separated itself from another of which it had formed an integral part and which still claims dominion over it. A premature recognition under these circumstances, if not looked upon as justifiable cause of war, is always liable to be regarded as a proof of an unfriendly spirit to one of the contending parties. All questions relative to the government of foreign nations, whether of the Old or New World, have been treated by the United States as questions of fact only, and our predecessors have cautiously abstained from deciding upon them until the clearest evidence was in their possession, to enable them not only to decide correctly, but to shield their decisions from every unworthy imputation. In all the contests that have arisen out of the revolutions of France, out of the dis-

putes relating to the crowns of Portugal and Spain, out of the separation of the American possessions of both from the European Governments, and out of the numerous and constantly-occurring struggles for dominion in Spanish America, so wisely consistent with our just principles has been the action of our Government that we have, under the most critical circumstances, avoided all censure, and encountered no other evil than that produced by a transient estrangement of good-will in those against whom we have been by force of evidence compelled to decide.

"Mr. Speaker, the doctrine thus enunciated by President Jackson was not new. It was the doctrine held by Washington in the troubles with France; it was the doctrine held by Madison and Monroe in the troubles arising in connection with the South American and Central American republics. This is the doctrine upon which the Administration has planted itself to-day; and it is the doctrine that will commend itself to the sound sense and patriotism of the American people. It is the only safe doctrine, and we should not endeavor to establish any other. It is the policy that comes down to us from the wisdom of the fathers. I hope and trust that no appeals to the finer feelings of our nature, when we see horrors and crimes committed in a neighboring isle, will deter us from the duty which we owe to ourselves and those who may come after us.

"Do gentlemen who are pressing this question of recognition desire the acquisition of Cuba? If so, permit me to say to them that in my judgment this course will retard, if not entirely destroy, the realization of their hopes.

"In my judgment the island of Cuba must inevitably gravitate toward us, and sooner or later be added to our possessions. Its proximity to our coast; its geographical position, standing in the very door-way of the Gulf, and thus commanding a very large portion of our commerce; the increasing weakness of the Spanish Government—these, and many other considerations, point most clearly to the ultimate destiny of that rich gem of the Antilles. When the apple is ripe it will fall; and fall into our lap; it is not the part of wise statesmanship, in view of the inevitable, prematurely to hasten that fall; at least, let us not in our eagerness commit ourselves to any measures that may mantle our cheeks with the blush of shame.

"To my mind the future relations of this Government to the North American Continent and the adjacent isles of the ocean are as clear as the sunbeams that are now dancing so brightly on the dome of this beautiful capitol. European Governments, European policy, and European power, will soon cease to exist in all the vast domain that stretches from the north-pole to the equator; and throughout that entire region yonder flag shall float, and under it all human beings shall enjoy the blessings of free government, guaranteed by our Constitution, improved as it has been by the terrible struggles through which we have passed; and

this people will go on in a career of prosperity for which the history of the world from its beginning to this hour can show no parallel."

The Speaker: "The question is on the amendment of the gentleman from Illinois to the resolution of the majority of the committee."

The question was taken, and decided in the negative, as follows:

YEA—Messrs. Adams, Archer, Artell, Ayer, Banks, Beatty, Beck, Bird, Booker, Boyd, James Brooks, Burr, Calkin, William T. Clark, Sidney Clarke, Cleveland, Clinton L. Cobb, Conner, Cox, Degener, Dickinson, Dox, Eldridge, Ferriss, Fitch, Fox, Getz, Gibson, Griswold, Haight, Hambleton, Hamill, Hamilton, Hay, Holman, Ingersoll, Johnson, Julian, Knott, Lash, Lewis, Logan, Marshall, Mayham, McKenzie, McNeely, Milnes, Morgan, Morphis, Morrissey, Mungen, Newsham, Niblack, Prosser, Randall, Reeves, Rice, Roots, Schumaker, Lionel A. Sheldon, Sherrod, Shober, Joseph S. Smith, Stiles, Stokes, Strader, Swann, Sweeney, Van Horn, Van Trump, Ward, Wells, Whitmore, Eugene M. Wilson, Winchester, Wood, and Woodward—77.

NAY—Messrs. Allison, Ambler, Ames, Arnell, Asper, Atwood, Bailey, Beaman, Benjamin, Bennett, Benton, Bingham, Blair, George M. Brooks, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Roderick E. Butler, Cake, Cessna, Churchill, Amasa Cobb, Conger, Cook, Cowles, Dawes, Dickey, Dixon, Dockery, Donley, Duval, Dyer, Farnsworth, Ferry, Finkelnburg, Fisher, Garfield, Gilfillan, Hale, Harris, Hawkins, Hill, Hoar, Hooper, Hotchkiss, Judd, Kelley, Kellogg, Kelsey, Ketcham, Knapp, Ladlin, Lawrence, Maynard, McCarthy, McGraw, Mercur, Eliakim H. Moore, William Moore, Daniel J. Morrell, Negley, O'Neill, Orth, Packard, Palmer, Perce, Phelps, Platt, Poland, Pomeroy, Rogers, Sargent, Sawyer, Schenck, Scofield, John A. Smith, William J. Smith, William Smyth, Starkweather, Stoughton, Strickland, Strong, Taffe, Taylor, Townsend, Twichell, Tyner, Upson, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Willard, John T. Wilson, Winans, and Witcher—101.

NOT VOTING—Messrs. Armstrong, Barnum, Barry, Biggs, Boles, Bowen, Buck, Coburn, Covode, Creba, Cullom, Davis, Ela, Haldeman, Hawley, Hays, Heaton, Heflin, Hoge, Jenckes, Alexander H. Jones, Thomas L. Jones, Kerr, Loughridge, Lynch, McCormick, McKee, Jesse H. Moore, Samuel P. Morrill, Myers, Palmer, Peck, Peters, Porter, Potter, Ridgway, Sanford, Slocum, William J. Smith, Worthington C. Smith, Stevens, Stevenson, Stone, Tanner, Tillman, Trimble, Van Aiken, Van Wyck, Voorhees, Wallace, Wilkinson, and Williams—52.

So the amendment moved by Mr. Logan was not agreed to.

The question recurred upon the amendment moved by Mr. Bingham for the substitute reported by the minority of the Committee on Foreign Affairs.

The amendment of Mr. Bingham was to strike out all after the enacting clause of the substitute, and to insert in lieu thereof the following:

That the President is hereby authorized to remonstrate against the barbarous manner in which the war in Cuba has been conducted, and, if he shall deem it expedient, to solicit the cooperation of other Governments in such measures as he may deem necessary to secure from both contending parties an observance of the laws of war recognized by all civilized nations.

The amendment of Mr. Bingham was then agreed to, upon a division—yeas 100, nays 17.

The question then was upon substituting the proposition of the minority, as amended, for the proposition of the majority.

The question was taken upon the amended substitute for the majority report, and decided in the affirmative, as follows:—

YEA—Messrs. Allison, Ambler, Ames, Armstrong, Asper, Atwood, Beaman, Benjamin, Benton, Bingham, George M. Brooks, Buckley, Buffinton, Burchard, Roderick E. Butler, Cake, Cessna, Churchill, William T. Clark, Coburn, Conger, Cook, Covode, Cowles, Dawes, Dickey, Dixon, Dockery, Donley, Duval, Dyer, Ela, Farnsworth, Ferry, Fisher, Garfield, Hale, Harris, Hawkins, Heflin, Hill, Hoar, Hooper, Hotchkiss, Judd, Kelley, Kellogg, Kelsey, Ketcham, Knapp, Ladlin, Lawrence, Maynard, McCarthy, McGraw, Mercur, Eliakim H. Moore, Jesse H. Moore, William Moore, Daniel J. Morrell, Negley, O'Neill, Orth, Packard, Palmer, Perce, Phelps, Platt, Poland, Pomeroy, Rogers, Sargent, Sawyer, Schenck, Scofield, John A. Smith, William J. Smith, William Smyth, Starkweather, Stokes, Stoughton, Strickland, Strong, Taffe, Tanner, Tillman, Townsend, Twichell, Tyner, Upson, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Whitmore, Willard, John T. Wilson, and Winans—101.

NAY—Messrs. Adams, Archer, Artell, Bailey, Banks, Barry, Beatty, Beck, Biggs, Bird, Blair, Booker, Boyd, James Brooks, Buck, Burdett, Burr, Benjamin F. Butler, Calkin, Sidney Clarke, Amasa Cobb, Clinton L. Cobb, Conner, Cox, Cullom, Degener, Dickinson, Dox, Eldridge, Ferriss, Finkelnburg, Fitch, Fox, Getz, Gibson, Griswold, Haight, Hamill, Hamilton, Hay, Holman, Ingersoll, Johnson, Julian, Kerr, Knott, Lash, Lewis, Logan, Marshall, Mayham, McKee, McKenzie, McNeely, Milnes, Morgan, Morphis, Morrissey, Mungen, Newsham, Niblack, Paine, Porter, Potter, Prosser, Randall, Reeves, Rice, Roots, Schumaker, Shanks, Lionel A. Sheldon, Porter Sheldon, Sherrod, Shober, Joseph S. Smith, Stiles, Strader, Swann, Sweeney, Taylor, Trimble, Van Trump, Wells, Eugene M. Wilson, Winchester, Wood, and Woodward—88.

NOT VOTING—Messrs. Arnell, Ayer, Barnum, Bennett, Boles, Bowen, Cleveland, Creba, Davis, Gilfillan, Haldeman, Hambleton, Hawley, Hays, Heaton, Hoge, Jenckes, Alexander H. Jones, Thomas L. Jones, Loughridge, Lynch, McCormick, Samuel P. Morrill, Myers, Peck, Peters, Ridgway, Sanford, Slocum, Worthington C. Smith, Stevens, Stevenson, Stone, Van Aiken, Van Horn, Van Wyck, Voorhees, Wallace, Wilkinson, Williams, and Witcher—41.

The joint resolution, as amended by the adoption of the substitute, was ordered to be engrossed for a third reading; and, being engrossed, it was accordingly read the third time.

The question being on the passage of the joint resolution, it was passed.

The resolution was not acted on in the Senate.

The following act was also passed at this session, appointing a new legal holiday:

Be it enacted, etc., That the following days, to wit: The first day of January, commonly called New-Year's day; the fourth day of July; the twenty-fifth day of December, commonly called Christmas-day, and any day appointed or recommended by the President of the United States as a day of public fast or thanksgiving, shall be holidays within the District of Columbia, and shall, for all purposes of presenting for payment or acceptance for the maturity and protest, and giving notice of the dishonor of bills

of exchange, bank checks, and promissory notes, or other negotiable or commercial paper, be treated and considered as is the first day of the week, commonly called Sunday; and all notes, drafts, checks, or other commercial or negotiable paper falling due or maturing on either of said holidays shall be deemed as having matured on the day previous.

The action of Congress upon the tariff, the public debt, and the finances, is stated elsewhere.

The following message from the President was received, but no act was passed in compliance with the suggestions:

WASHINGTON, D. C., July 15, 1870.

To the Senate and House of Representatives:

Your attention is respectfully called to the necessity of passing an Indian appropriation bill before the members of Congress separate. Without such appropriation Indian hostilities are sure to ensue, and with them suffering, loss of life, and expenditures vast as compared with the amount asked for.

The latest intelligence from Europe indicates the imminence of a war between France and North Germany. In view of this, a sound policy indicates the importance of some legislation tending to enlarge the commercial marine of this country.

The vessels of this country at the present time are insufficient to meet the demand which the existence of a war in Europe will impose upon the commerce of the United States, and I submit to the consideration of Congress that the interests of the country will be advanced by the opportunity to our citizens to purchase vessels of foreign construction for the foreign trade of the country. An act to this effect may be limited in its duration to meet the immediate exigency.

The foreign mail service of the United States is, in a large degree, depending upon the Bremen and Hamburg lines of steamers. The Post-Office Department has entered into contracts in writing with the two companies above named and with the Williams & Guion lines, respectively, for a regular and continuous service of two years. The only arrangement that could be made with the Inman and Cunard lines is temporary, and may be broken off at any time. The North-German lines are first class in point of speed and equipment, their steamers usually making the trip across the Atlantic in from twenty-four to thirty-six hours in advance of the Williams & Guion line. Should the North-German steamers be blockaded or impeded by France, our postal intercourse with foreign nations will be greatly embarrassed unless Congress shall interpose for its relief.

I suggest to Congress the propriety of further postponing the time for adjournment, with the view of considering the questions herein communicated.

U. S. GRANT.

On July 15th both Houses adjourned, and the session closed.

CONNECTICUT. The financial condition of the State of Connecticut appears to be prosperous in a high degree. Besides paying the interest on her funded debt, she has been for several years making payments on the principal. Thus, in 1869, she paid the sum of \$346,600; thereby reducing her liabilities to \$6,806,925.23; while she had a surplus of \$548,408.81, carried to the credit of the new account for the fiscal year, beginning with April 1, 1870.

The value of the taxable property in the State is advancing rapidly. Its increase last year was little less than ten millions; the grand list for 1869 having been \$322,553,488,

against \$312,524,408, for 1868; which last sum exceeded by some eight millions the amount assessed for 1867.

The revenue from the State tax of 2½ mills on each dollar, assessed in the grand list for 1869, amounted to \$905,914.45. This sum, together with the moneys received from the savings-banks, mutual and foreign insurance companies, and other sources, including the collection of State and commutation taxes that had remained unpaid on April 1, 1869, raised the receipts in the fiscal year ending March 31, 1870, to a total of \$1,788,766.49.

The expenditures during the same year, including the interest paid on the funded debt, but exclusive of the sums employed in the purchase of State bonds, and those expended on public buildings and institutions, as appropriated by the Legislature, were, in the aggregate, \$1,227,797.48. The debenture and contingent expenses of the General Assembly for the session of 1869 were \$26,849.47 less than for the preceding year.

Of the State claims against the Federal Government for expenses incurred on account of the late civil war, the sum of \$21,400 was collected last year. A large portion of these claims, to the amount of above \$200,000, still remains unsettled. The Federal Government refuses to allow them, objecting to the vouchers presented therefor, on the ground that certain required formalities were omitted on the part of the State at the time when those expenses were made. It is anticipated that, under more favorable rulings at the Treasury Department in Washington, about a third or fourth part of these unsettled claims will be allowed and paid, as they are no less just than those which have been paid.

Four banks not organized under the regulations of the national system still remain in Connecticut, doing business under the laws of the State. They are banks of discount, with an aggregate capital of \$1,450,000, but issue no circulating notes.

On April 1, 1870, there were in the State fifty-eight savings-banks; three of them had been chartered by the General Assembly at the session of 1869. The amount of their deposits on January 1, 1870, was \$47,409,804.11; which exceeds by more than six millions the amount of their deposits on January 1, 1869. The sum of their loans, secured on real estate, was \$27,081,162.78.

The railway interest in Connecticut appears to be steadily growing in importance and magnitude; and the service of the several roads is improving with regard to facility and convenience. Concerning their value of stock and length of line, as well as the extent of their working expenses and earnings, an abstract is exhibited in the following table:

Chartered capital of railroads.....	\$32,545,300 00
Capital paid in.....	\$24,618,877 69
Amount of funded and floating debts.....	\$9,297,018 58
Cost of equipment of roads.....	\$31,091,779 26
Number of highways crossed at grade.....	993

Cost of fuel.....	\$547,964 38
Cost of oil and waste.....	\$91,957 31
Number of miles run by trains.....	8,951,459
Carrying passengers.....	6,797,463
Number of engines.....	203
Number of passenger-cars.....	398
Number of merchandise-cars.....	2,916
Number of men employed.....	4,373
Repairs of roads.....	\$1,041,454 02
Repairs of bridges.....	\$120,894 97
Total cost of maintenance of way.....	\$1,469,073 80
Tons of merchandise transported.....	1,853,575
Gross earnings.....	\$8,574,117 59
Net earnings.....	\$3,590,864 64
Undivided surplus.....	\$529,504 39
One mile of railroad to every 7.34 square miles of territory.	
One mile of railroad to every 894.3 inhabitants.	

Sixty-five accidents occurred on these roads during the year: thirty-two were fatal; twenty-eight not fatal; and of the remaining five the result is unknown. The cause of these occurrences is generally ascribed to the carelessness of the persons themselves injured, no great collisions of trains having taken place. Seven millions of people, who duly kept their seats in the cars, were safely carried to their destination.

But, the better to provide for the safety and convenience of the travelling public, and to perfect the service of the railways in other respects, the State Railroad Commissioners recommended the adoption of several precautionary measures by legislative enactment, as follows:

1. That the fiscal year of all railroad companies terminate on the 31st day of December of each year.

2. That all highway bridges hereafter constructed over any railroad track in Connecticut shall be built at a height fixed by the general railroad commissioners; but if said bridges by the formation of the ground are obliged to be less than eighteen feet in the clear above the top of the rail on the railroad track, then the said bridges shall be built with safeguards upon each side, so that a man standing on the top of the railroad car shall have warning that the train is approaching such a danger.

3. That an act be passed requiring the several railroad companies to place a telegraphic instrument in one ticket-office in each town through which their railroad runs, where a telegraph-office is not now established, and to furnish a competent person to operate the same during the usual business hours.

4. That the form of schedule for the returns of railroad companies be amended generally.

5. That an act be passed forbidding any town or city to build a highway or street over any railroad track at grade, or parallel thereto within the distance of seventy-five feet, without permission; and also giving authority to change and abolish grade crossings, and highways parallel to railroads whenever it is impossible to do so, throughout the State, upon or near any and all railroads.

6. That an act be passed defining the powers of the commissioners over the depot accommodations of old existing railroads.

7. That an act be passed giving to the commissioners the use of a room in the State House at Hartford, where their records shall be kept for examination and preservation, and where maps and profiles of the several railroads shall be deposited and kept, and that the Secretary of State be required to deliver to the chairman of the railroad committee all maps, profiles, and papers relating to railroads, which have previously been deposited by such roads in his office.

8. That the use of kerosene, or other inflammable oil or material, be forbidden in the passenger-cars of any railroad company in this State.

9. That the law regarding the fencing of railroads, embodied in sections 492, 493, and 494, of the general railroad act, be amended.

A law was made by the General Assembly at its last session, ordaining that "no highway or public street of any kind shall hereafter be laid out, or constructed, across any railroad in this State upon a level therewith, except under authority and permission in writing from the general railroad commissioners."

The number of births and deaths as well as of marriages and divorces, which took place in Connecticut during the year 1869, with some data indicating the duration of life of the inhabitants, was as follows: "In 1869 there were 12,481 births, or twelve more than the preceding year. Of these 6,505 were males, and 5,886 females, or a ratio of 52.5 boys to 47.5 girls in each 100 born. The number of plurality births was 125; the number of illegitimates, 113. September and March witnessed the most births.

The number of marriages was 4,754, twenty more than the previous year. The greatest gain in the number of marriages was in Hartford county. No marriages took place in the town of Prospect, and in Sterling and Killingworth but one each.

The deaths registered numbered 8,417, embracing 4,280 males, and 3,972 females. More than one-third died before the age of five, and little more than one-quarter had reached the age of sixty. Five were over 100 years old, three women and two men. One of the latter was a farmer in Colchester, who lived to be 110. About a quarter of the number of deaths was from diseases of the respiratory organs. The deaths from suicide were 29; from poisoning, 16; from burns and scalds, 47; from drowning, 106.

There were 491 divorces, the largest number ever reported, and bearing the proportion of nearly one divorce to ten marriages. The following table shows the details:

COUNTIES.	Divorces Granted.	Husband Petitioner.	Wife Petitioner.
Hartford.....	65	30	45
New Haven.....	138	40	89
New London.....	62	16	46
Fairfield.....	97	28	69
Windham.....	28	13	15
Litchfield.....	47	16	31
Middlesex.....	29	9	20
Tolland.....	25	13	12
Total.....	491	164	327

The grounds on which these divorces were respectively applied for and granted were the usual ones of cruelty, desertion, infidelity, intemperance, misconduct, single or combined together. In three cases, the dissolution of marriage was sued for and obtained for cause affecting its validity from the beginning, namely, for fraudulent contract.

As the number of these divorces is apparently too large in proportion to the population, they being at the rate of more than one mar-

riage dissolved in every ten contracted within the same period of time, the Governor urged on the Legislature at its session the propriety of giving their serious attention to the subject. He recommended a careful examination into the reasons assigned in the above-mentioned 491 cases, to the end of ascertaining whether any means can be found capable of mitigating, if not curing, this steadily-growing evil, either by limiting the grounds on which divorces are to be sued for, or by restraining the liberty of courts in granting them. He also recommended a thorough revision of the laws concerning divorce as they existed in the State. A movement in this direction was made by the Legislature at its last session, and the matter rather warmly debated, but without any decisive result; except the passing of a law which prescribes that "no decree of divorce shall be granted during the first term of the court after the bringing of the petition there, or unless the court shall find that the respondent has actually received notice that the petition is pending."

As to the marriages reported for 1869, though their total number appears to have been larger than in the preceding year, they were in reality less, so far as regards marriages contracted between persons born in the State. This excess was entirely due to the number of marriages where both parties were of foreign birth.

Public instruction of youth seems to be carefully attended to and provided for in Connecticut. During the session of the Legislature in 1868, a law was enacted, abolishing the "Rate Bill" system, till then in use, and substituting the "Free School" system in its place. Every thing connected with public schools has since developed itself in so satisfactory a manner as fully to prove the wisdom of the change. The whole number of children between four and sixteen years of age, on January 1, 1870, was 125,407; and the number of children registered as in attendance, for a greater or smaller portion of the year, on the public schools was 102,005; which is above 5,000 in excess of the attendance on public schools in the previous year, and more than four-fifths of the whole number of children within school age; notwithstanding the fact that there are numerous private schools and academies open for instruction throughout the State, all of which are reported to be in a more or less flourishing condition.

The number of pupils above sixteen years of age, not entitled to share in the benefits of the State School Fund, but who attended public schools last year, was 3,308.

The school fund, as appears from the records of the last biennial examination in 1868, is \$2,044,058.87. A portion of this, to the amount of \$86,425, was paid into the Treasury during the previous year, and reloaned on bond and mortgage, within the State. Out of this fund a *per capita* dividend of one dollar

for each child of school age was declared and paid last year to the several school districts in the sum of \$126,656.65; and \$8,808.15 were paid for salaries and expenses.

The total receipts for school purposes from all sources, during the year, amounted to \$1,269,152.82; which was \$226,066.12 more than the receipts of the preceding year. The aggregate expenditures for public schools in the same year were \$1,278,827.01. This outlay, though it is greater than in former years, was amply compensated by the advantages resulting from the working of the new system; as the public schools have now become absolutely free, instruction being open to all alike.

With a view of increasing the usefulness of public schools, a revision of the act in the General Statutes of 1866, entitled "An act concerning education," was suggested especially for the purpose of amending its section 103, so as to include drawing among the prescribed branches of elementary instruction. The object was that plain drawing might be taught in some uniform and practical system of mechanical and object-drawing; to the end that children, being thus early imbued with the rules of proportion and correctness of design, might be able, when practical artisans, to execute their work in a more finished and perfect manner, whatever should be their mechanical profession.

The Sheffield Scientific School at New Haven, which is regarded as "the Connecticut College of Agriculture and the Mechanic Arts," was attended in 1869 by 141 students, 71 of whom were from the State, and the remaining 70 from twenty-one other States. All of the scholarships in the gift of the State are now taken up.

The Normal School at New Britain, which had been closed two years, was reopened in September, 1869. Since its reopening it had fully resumed its regular course of training teachers, and fitting them properly to perform the laborious task of imparting instruction to youth in the public schools. Within the short time elapsed from its reopening to May, 1870, there had been received 180 students.

There are not a few public institutions established in Connecticut having distinct objects of charity for their purpose; and all of them are tenderly cared for by the State. In the General Hospital for the Insane, at Middletown, there seems nothing to be wanting to make it perfect in all respects, except an enlargement of its present capacity, which is ample, but not enough to accommodate all the patients for the reception of whom application is made. The total number of patients on the 1st of April, 1870, was 232, being an increase of 23 during the year. Of this number, 114 were males, and 118 females. There were admitted into the institution during the year 184 new patients, of whom 43 were discharged, recovered; 18 discharged, much improved; 27 discharged, not improved; 21 died (mostly

soon after entering the institution), and two were found not insane. Of the three classes for whom provision is made in the act of incorporation, there are, at the present time, 165 pauper patients, 57 indigent patients, and ten private patients. The total number of all classes treated during the year was 843, and the whole number discharged 111. There were 147 applications for admission, during the twelve months preceding the 1st of April, which had to be refused, all but 41 of whom were from this State.

It will be seen, from this statement, that the urgent want of the institution is more room. A similar asylum is also in operation at Hartford.

The solicitude which the State bestows on such of her children as are born weak-minded, commonly called "imbeciles," endeavoring to better their condition, and restore to them as much as possible what Nature seems to have denied, appears to be in a high degree commendable. An institution has been established for such persons at Lakeville, during the last twelve years, and the superintendent urges an enlargement of the building, with a suitable increase of yearly appropriations; and suggests that all weak-minded children should be sent thither, as it is only such that can be considerably improved. There have been 41 pupils in the school the past year; average attendance 88; the capacity of the building is sufficient for only 35. Although the standard of health is uniformly low with this class of unfortunates, there has been no death in the school during the year, and the general health of the pupils has been comparatively good. The institution has been established twelve years, and its success is no longer a question of doubt. The State pays \$3 a week for each of the indigent scholars. Almost complete idiots have been so far improved that they can read and do a great deal toward self-support. They are instructed in various branches of labor and trades, as well as in the primary and some higher grades of scholarship. Of the 87 inmates of the school since its commencement, 26 per cent. have been so far lifted up and educated that they have become comparatively useful members of society. The records show that this proportion have been dismissed, and that they can read and write, and now work in a mill or on a farm, and are "capable of self-support."

In the American Asylum for the Deaf and Dumb, there were last year 281 inmates under instruction. This institution is so favorably known for its good management, and its efficient manner of instructing the unfortunates is so well appreciated by the American people at large, that of the above-mentioned number of its inmates 50 only were born in Connecticut, 231 belonging to other States.

Those among her children who are deprived of sight, the State causes to be educated in some well-reputed institution abroad, at her

expense. Nine such are at present under instruction in the Perkins Institution and Massachusetts Asylum for the Blind at South Boston.

The Soldiers' Orphans' Home, Fitch's Home for Soldiers, and the State Hospitals at New Haven and Hartford are commended as of such benefit as to justify a continuance of the support they have hitherto received from the State.

The State Reform School at Meriden, established eighteen years ago, for the education and correction of wayward boys, is in full and successful operation. Its inmates, on March 31, 1870, were 267; which is 23 more than in the previous year. The number discharged within the twelve months preceding that date "was 108; of whom 42 by expiration of sentence; one by order of court; 46 consigned to parents, and friends, with the understanding that they should be returned to the institution if they proved disobedient; 18 placed with farmers; one died. The number of boys received into the school during the year was 131, varying in age from seven to fifteen years inclusive." The boys learn a great variety of manual pursuits; they are furnished also with literary instruction, being taught the common English branches used in the public schools. Good care is taken to impress them with the principles of morality and religious duty; they have religious instruction every Sabbath, and prayers morning and evening. The boys have made in the sewing-shop, 461 coats, 1,087 pairs of pants, 744 shirts, 181 vests, 415 pairs of suspenders, 240 caps, 215 aprons, and numerous other articles. The stock of the institution is valued at \$3,200, the farm produced \$9,053.64, and there is a balance in favor of the same, of \$1,577.33. The horses and carriages, wagons and sleighs, owned by the school are valued at \$1,975. The boys caned 58,599 chair-seats, 7,854 backs, and 266 settees; the institution received therefor over and above expenses, \$8,599.10. The farm consists of 168 acres. The total receipts of the institution last year amounted to \$54,900, of which \$26,146.70 for board, and \$5,000 for construction, from the State; \$20,887.05 from chair-shops; and \$1,087.08 from farm. The expenditures were in the aggregate \$53,117.50, leaving a balance of \$1,785.60 in the Treasury.

A similar school for girls was founded and commenced operations in 1870, at Middletown, under the style of "The Connecticut Industrial School for Girls." To prevent girls between eight and fifteen years of age from going astray, who for want of parental care are likely to do so, and to redeem others, is the object of the institution. For its establishment the State appropriated \$10,000; private persons contributed \$70,000; and the town donated a piece of land containing 46 acres. The principal buildings of the institution are two dwelling-houses, separate though near, and exactly alike; each capable of accommodating about thirty girls, and each

to be conducted upon the family system, under the control of a matron, with an assistant-matron, who is also the teacher of the inmates, and a housekeeper who has in charge all that relates to the domestic service. The only males within the precincts of the institution are the superintendent and the farmer, for whom separate residences, adapted to them respectively, have been built on the grounds. A third principal structure, the school-building, contains ten school-rooms, a library, and a spacious hall to be used for the daily devotional exercises, and all public purposes. By the end of June, 1870, one of the houses was ready for occupancy. Twenty-five girls had actually been received into the institution at that date, and applications had been sent in already for the admittance of as many more as would fill both houses.

Crime seems to be increasing in the State. The convicts in confinement in the State-prison on March 31, 1870, were thirty-six more than on March 31, 1869. The prison is so crowded that some of the male convicts had to be lodged in the female wards. They are made, however, to earn their bread and something more, for the State. The product of their labor last year was sufficient to pay all the current expenses of the prison, and clear a balance of \$5,977.48. Concerning the number of convicts, the quality of their offences, and duration of punishment, as well as their work and its result, the warden makes in his report the following statements: "The shoe-shops paid \$14,593.38, the burnishing-shops \$4,743.46, the rule-shops \$7,066.40. From visitors they received \$528.07; from the United States, for board of convicts, \$644.55, and interest, \$51.78; total, \$27,627.64. The expenditures were: Expense account, \$9,839; provisions, \$8,772.93; clothing and bedding, \$1,142.60; hospital, \$640.33; female department, \$597.64; transportation of convicts, \$206.99; repairs and improvements, \$650.87; balance net gain, \$5,977.48; total, \$27,627.64.

The whole number in confinement March 31, 1869, was 183, since received 99—total 282. Of these 51 were discharged by expiration of sentence, 6 by order General Assembly, 3 by death, 1 by suicide, and 3 transferred to lunatic asylum—leaving 219. Of these 208 are in for the first time, 8 for the second, 1 for the third, and 2 for the fourth. One hundred and seventy-one are white males, 43 colored males, 5 white females; 165 are Americans, 54 foreigners; 20 are under thirty years of age, 116 between twenty and thirty, 49 between thirty and forty, 22 between forty and fifty, and 12 over fifty. Nineteen are in for life, 49 for burglary, 47 for theft, 16 for horse-stealing, and 13 for manslaughter.

With regard to persons arrested and imprisoned in the jails of the State at large, the official returns, compiled by the Secretary of State, show as follows: "The whole number of persons committed during the year was

2,246, or 425 more than in the preceding year. The average number of prisoners in all the jails was 297 and a fraction, being about 52 more than in 1868. On the 1st of April, this year, there were 313 confined, or 69 more than at the same date last year. Of the whole number of prisoners during the year, 2,085 were whites—1,737 males and 29 females—and 211 colored—182 males and 29 females; 591 were natives of the State, 453 of other States, and 1,204 of other countries; 185 were strictly temperate, 1,220 moderate drinkers, and 727 habitually intemperate. The principal offences for which arrests were made are given as follows: Assault, 225; assault and battery, 152; assault with intent to kill, 25; adultery, 10; burglary, 10; breach of the peace, 51; common drunkards, 30; common prostitutes, 15; drunkenness, 812; larceny, 382; obtaining goods on false pretences, 22; resisting officer, 28; stealing from person, 38; vagrancy, 62; lewd conduct, 20; horse-stealing, 20; fornication and visiting houses of ill-fame, 14 each; rape, 8; and attempt at rape, 9; incendiarism, 9. The total receipts and expenses were as follows:

	Receipts.	Expenses.
Hartford.....	\$12,180 40	\$10,483 72
New Haven.....	14,080 98	11,301 90
New London.....	9,632 80	10,170 23
Fairfield.....	6,838 86	10,170 23
Windham.....	5,310 37	2,849 98
Litchfield.....	not stated	not stated
Middlesex.....	2,364 63	3,094 47
Tolland.....	845 07	8 00

The State militia is composed of thirty-nine companies of infantry, two batteries of artillery, a battery and a section of a battery drilling as light artillery. The whole number organized into companies and duly armed and equipped is 3,707, including field and staff officers. All of the companies have drilled two days in the spring and six days in the fall, for which they have received compensation. There have been 500 new enlistments within the year, and 642 have been discharged. The enrolment is as follows:

Inactive militia.....	40,930
Assessed \$2 each, commutation.....	23,760
Subject to duty in case of war or insurrection.....	7,433

Though the maintaining of this organized force is considered necessary, chiefly in aiding the civil authority in the repression of public disturbances, it is recommended officially that the infantry regiments be reduced to four, with eight companies in each, and each company be reduced to the minimum of the United States Army. Such reduction would at the same time save a part of the expenses, furnish force enough for the protection of the State, and secure better discipline. The expenditures for this branch of the public service last year amounted to \$116,955.95; and the receipts from the commutation-tax during the same period were \$59,427.95. The General Assembly at the last session passed a law "in alteration of an act for forming and conducting the military force," ordaining as follows:

It shall be the duty of the Governor of this State, the commander-in-chief, within thirty days from the day of the passage of this act, to appoint a committee of three suitable persons to prepare a revision of the laws regulating the military force of this State, and to report the same to the next session of the General Assembly.

On February 9, 1870, the Republicans held their State Convention for the purpose of nominating candidates for State officers at the general election, on April 4th ensuing. Marshall Jewell was renominated for Governor, Morris Tyler for Lieutenant-Governor; Hiram Appelman for Secretary of State; David P. Nichols for Treasurer; and James W. Manning for Comptroller. At the same meeting they unanimously adopted the following resolutions:

Resolved, We look with profound satisfaction and gratitude upon the record of the Republican party; its devotion to liberty and equal rights; its abundant patriotism, and its zealous fidelity to the true interests and honor of the country in time of peace; we reaffirm our cordial approval of its national platform at Chicago and the resolutions of the last State Convention.

2. The experience of the past year has confirmed our confidence in the integrity, ability, and patriotism, of General Grant; we congratulate him and the country upon the general and increasing prevalence of peace and good order in the lately rebellious States, the rapidly approaching completion of reconstruction, and the adoption by thirty States of the fifteenth amendment of the National Constitution, the crowning work of a magnificent struggle for the freedom and equal rights of all men.

3. The national Administration deserves the warmest praise for its economical expenditures and its scrupulous fidelity in the collection of the revenue, through which it has been able to reduce the debt over \$80,000,000 since March 1, 1869, and we accept its action as amply fulfilling the hopes and pledges of its friends and justifying the highest expectations of its future.

4. We rejoice that the first act of Congress under the present Administration was, in accordance with our declaration of the true policy last year, a formal affirmation that when the national debt is paid it must be in coin, except where it is otherwise expressly provided in the original contract, and solemnly pledging the United States to "make provision at the earliest practical period for the redemption of United States notes in coin." We denounce repudiation in all its forms, whether through taxation of the bonds, or their payment in paper. We are sternly opposed to the expansion of the currency; we call for all possible wise legislation and prudent management of the finances; by which we may as speedily as possible, without a violent disturbance of business, resume specie payment, and with it obtain a sound and uniform currency of coin, and of paper immediately convertible into coin, believing that no other currency will secure the just reward of either labor or capital.

5. In both national and State administrations we call for a continuance of strict economy in all its branches; the rejection of all appropriations and loans of credit for enterprise outside of the indispensable machinery of government, the impartial levy and vigilant and thoroughly honest collection of taxes, the application of a reasonable loan annually to the reduction of the debt, the removal of taxation from the necessities of life, and their imposition so far as possible upon luxuries.

6. We favor a tariff abundant for revenue, and as far as possible so devised as to relieve labor, equalize the burdens imposed, encourage a diversified indus-

try, and avoid strengthening monopolies. We deprecate frequent changes in tariff legislation as deranging the circulation of capital and inflicting unforeseen suffering upon labor.

7. We commend the action of the Legislature and the Board of Education in sustaining our system of common schools, so essential to a prosperous republican government, and we especially approve the efforts made to protect and educate the children employed in factories.

8. We thank the Republicans of the last General Assembly for their successful efforts to secure a short and economical session. While insisting upon economy, we approve a generous discharge of all charitable duties, and particularly our obligations to disabled soldiers and the orphans of those who died for their country.

9. We gladly welcome the speedily approaching proclamation of the fifteenth amendment, and insist upon an unhesitating compliance with this as with all other provisions of the national Constitution.

10. We recommend to the General Assembly the passage of a law providing for the election of members of Congress in the autumn.

11. We heartily applaud the administration of affairs by the Governor and his associate State officers during the past year, and confidently appeal to the people for a triumphant election of the ticket this day nominated.

On February 22, 1870, the Democrats met in State Convention to nominate candidates at the aforesaid election. For Governor, they nominated James E. English; for Lieutenant-Governor, Julius Hotchkiss; for Secretary of State, Thomas M. Waller; for Treasurer, Charles M. Pond; for Comptroller, Seth S. Logan. Before adjourning they adopted, by a unanimous vote, the following platform:

Resolved, That the Democracy of Connecticut now, as in the past, occupy the proud position of the defenders of the true principles of constitutional freedom, based upon the equality of the States; and for the success of their cause they rely upon the intelligence of the people, and their devotion to the same ideas, illustrated by the example of the fathers in the purer days of the republic.

Resolved, That the State of Connecticut is to-day the same free and independent State that it has been for more than two hundred years, with full power to declare who shall and who shall not be clothed with the elective franchise within its borders; and when this power is forcibly taken away, and its ballot-boxes subject to the hiring soldiery of the General Government, the State will have lost its boasted sovereignty, and become degraded to the position of a conquered province.

Resolved, That the fifteenth amendment, so called, to the Constitution of the United States, is in no sense an amendment to the Constitution, but is a radical change thereof, striking at the principle of State rights, which lies at the base of the compact formed by the various States in the Convention of 1788; and its forced and fraudulent adoption at the point of the bayonet will be the deadliest blow ever struck at the sovereignty of the States and the liberties of the people.

Resolved, That the Democracy of this State now, as heretofore, are the strenuous advocates of a tariff for purposes of revenue only; that the principle of protection for the sake of protection is at war with the diversified interests of the people of the States; and experience has shown its tendency to aggrandize a class in the community at the expense and to the injury of the producing and laboring millions, taxing their industry equally in violation of the authority of the Constitution, and of the great principle that should govern this people in their intercourse with the family of nations.

Resolved, That the Democrats of Connecticut, by the action of their State Convention in 1862, denounced the legal-tender act as a congressional usurpation, an infringement upon the letter and spirit of the Constitution, and in violation of the rights of the people of the States. In 1870, the Supreme Court of the United States affirms the position assumed by us in 1862, and we reiterate the declaration that there shall be but one currency for the government and for the people; and that one the constitutional currency proclaimed by Andrew Jackson; and we call upon the Administration to aid us, by honesty and economy in the public service, in the restoration of that currency to the uses of the people.

Resolved, That the language of Mr. Dawes, of Massachusetts, in which he asserts that, in the work of government economy, "the House could expect no aid from the other end of the Capitol" (meaning the Senate), "or from the other end of the Avenue" (meaning the President), should startle the country, and arouse all good men to unite in overthrowing a profligate Administration, which is confessedly extravagant and reckless at a time when all business interests are perishing under their heavy burdens, and labor is being pauperized with their intolerable taxation.

Resolved, That the bill now before Congress for the purpose of changing the law regarding naturalization is a direct attack upon all foreigners seeking the United States as a home for themselves and families. And the present corrupt and unprincipled leaders of the Republican party, having destroyed the constitutional rights of the people of all the States, robbing them of the power of determining the status of citizens, now seek to degrade the white immigrant below the level of the native negro!

Resolved, That the Democracy of Connecticut sympathize with the people who struggle for freedom everywhere, and send their cordial greetings to the patriots of Cuba, who are now valiantly contending for their freedom and their rights.

Resolved, That a direct tax levy, in Connecticut, of over eight hundred thousand dollars, besides half a million more upon savings-banks and other corporations, is a larger amount than should be taken from the people annually; and we demand that the public burdens be diminished by equality in taxation and economy in the expenditures.

Resolved, That, in presenting the honored name of James E. English as our candidate for Governor, we do so with full confidence that we appeal to the best judgment of a large majority of the people, and the sound patriotism of the State; and in the candidates associated with him we feel assured that worthy representatives of the people and their best interests have been selected.

The election resulted in the success of the Democratic State ticket. As to the members chosen for the legislative body, there were eleven Republicans and ten Democrats in the Senate, with a somewhat larger proportion of Republicans in the House of Representatives. This excess of Republicans in the General Assembly is wholly ascribed by the Democrats to the system now existing in Connecticut for choosing the members of that body. They denounce this system as worse than unjust, the right of choosing and sending members to the Legislature being unequally and, it seems, strangely distributed among the several sections of the State. Twenty-three small towns, containing an aggregate population of only 33,000, return to the Legislature, every year, 46 representatives; while Hartford and New Haven, with a population of about 90,000, are

entitled to only 4. Bridgeport, with 22,000 inhabitants, has but one representative; Union, with 1,000 inhabitants, has 2. Waterbury, Middletown, New London, Bristol, New Milford, and Litchfield, with a population of nearly 60,000, send 11 representatives to the Legislature; while the towns of Willington, Torrington, Durham, Hebron, Woodbury, Norfolk, Thompson, Ridgefield, Woodstock, Redding, Lebanon, New Hartford, Pomfret, and Plainfield, with an aggregate population of only about 83,000, return 28 members.

An increase in the number of senators, and an apportionment of senatorial districts, throughout the State, regard being had to an equality in the number of their respective inhabitants, seems now to be determined upon, as appears from the following resolution:

PROPOSED AMENDMENT TO THE CONSTITUTION.

HOUSE OF REPRESENTATIVES, }
May Session, A. D. 1870. }

Resolved, That the following be proposed as an amendment to the constitution of this State, which, when approved and adopted in the manner provided by the constitution, shall, to all intents and purposes, become a part thereof, viz.: From and after the first Wednesday of May, in the year of our Lord one thousand eight hundred and seventy-two, the Senate of this State shall consist of not less than twenty-five nor more than thirty-one members, and be chosen by districts. The General Assembly, which shall be holden on the first Wednesday of May, A. D. 1871, shall divide the State into districts for the choice of senators, which districts shall not be less than twenty-five nor more than thirty-one in number, and shall always be composed of contiguous territory, and in forming them no town shall be divided—regard being had to the population in said apportionment, and in forming said districts in such manner that there shall be a proper equality between said districts in respect to the number of inhabitants therein. The districts, when established, shall continue the same until the session of the General Assembly next after the completion of the next census of the United States; which said General Assembly shall have power to alter the same, if found necessary, according to the principles above recited; after which said districts shall not be altered nor the number of senators altered, except at any session of the General Assembly next after the completion of a census of the United States, and then only according to the principles above described.

Resolved, That the foregoing proposed amendment to the constitution be continued to the next session of the General Assembly, and be published with the laws passed at the present session.

Passed July 18, 1870.

B. A. HOUGH, Assistant Clerk.

During this session of about eleven weeks, it having been closed on July 22, 1870, the General Assembly transacted a vast amount of business. Among the most important matters of a general character submitted to its consideration was the calling of a constitutional convention for the purpose of revising the organic law of the State, framed fifty-two years previous, in order to adapt it to the requirements of the present time. The changes wrought in the ideas and habits of the people since 1818 are such, and so many, that much of what that instrument contains has now become obsolete, while much that would be of use at present is

not provided for in it. On July 18th, a majority of the committee on constitutional amendments in the lower House reported against a constitutional convention, and the report was accepted.

The bill proposing an amendment to the State constitution by striking out the word "white," and thus "changing the qualification of electors so as to omit the distinction of color," occasioned a warm debate between the opposite parties, especially because it was introduced in consequence of the fifteenth amendment to the Constitution of the United States, proclaimed by the President not long before.

It was generally admitted in point of fact that the fifteenth amendment had been adopted, and the word "white" in the State constitution was now a dead letter. On this account, the proposed amendment was thought unnecessary. The bill was defeated, having failed to receive the two-thirds vote required for its adoption. The voting seems to have been purely partisan: yeas 119, Republicans; nays 89, Democrats; the number of the members present being at the time 208.

Great animation characterized the debate concerning a final determination of the place of the seat of government in the State. It is now divided between Hartford and New Haven, each of these cities being, so to say, a semi-capital. New Haven appears satisfied with the present condition of things and would let them so continue; while Hartford contends that there should be only one capital, hoping, it seems, that she herself shall be declared such. The question is one of long standing, and the matter has been thoroughly discussed by the press. The action of the General Assembly was briefly as follows: A resolution was first offered in the Lower House by a member from New Haven, authorizing New Haven and Hartford to build State-houses. This resolution was subsequently amended to the effect that, if one of these cities failed to build, the other should be the sole capital; and, if both failed, then Middletown should be the capital. Then a resolution was presented by a member from Hartford, "providing for an amendment to the constitution so that there should be but one capital, the place to be determined by the people." This proposition was finally acted upon at the last session, as appears from the following resolution:

PROPOSED AMENDMENT TO THE CONSTITUTION.

HOUSE OF REPRESENTATIVES,
May Session, A. D. 1870.

Whereas, it is expedient that there should be but one capital in this State: therefore,

Resolved by the House of Representatives, That the following be proposed as an amendment to the constitution of this State, which, when approved and adopted in a manner provided by the constitution, shall, to all intents and purposes, become a part thereof:

SECTION 1. After the first Wednesday of May, A. D. 1874, all sessions of the General Assembly shall be held at the State capital, except that in cases of public necessity the person administering the office of

Governor may convene said Assembly at any other place in this State.

Sec. 2. After the first Wednesday of May, A. D. 1874, said capital shall be either at Hartford or New Haven, as a majority of the electors of the several towns in this State shall designate, in a manner to be provided by law, by their ballots, cast in town meetings, legally warned and held for that purpose, at some time within six months subsequent to the adoption of this amendment.

Resolved, That the foregoing proposed amendment to the constitution be continued to the next session of the General Assembly and be published with the laws passed at the present session.

Passed June 16, 1870.

E. B. BENNETT, Clerk.

Among the measures which excited the most general interest in the Legislature and among the public at large, was that commonly styled "The Consolidation Omnibus Bill," permitting the connecting railways in the State to merge and consolidate into one corporation. Though conceived in general terms, embracing all the roads of Connecticut, the bill was believed to regard chiefly, perhaps exclusively, the New York and New Haven and the New Haven and Hartford Railroad Companies. The opponents of the measure objected, among other reasons, that the proposed consolidation would resolve itself into a gigantic monopoly, to the prejudice of all the other roads in the State, as these would be compelled sooner or later to consolidate with those two, or rather be absorbed by them, or be at their mercy. It was also maintained that the consolidation could not but work injuriously to the public in the increased rates of freight and passenger fare, which were complained of as being already extravagantly high, beyond those charged on the roads of other States. "The Hartford and New Haven charges three cents and one-third per mile. The New York and New Haven charges, on that portion of the road in Connecticut, over three cents a mile." The bill was lost in the House of Representatives on July 8th, the vote having been: yeas 2, nays 128. It met with a different reception in the Senate, where it was voted upon on July 14th. A senator proposed to amend the bill so as to allow in express terms "only the New York and New Haven and the New Haven and Hartford Railroads to consolidate," and in this form it passed.

Considerable attention is given by the State to the protection of fish and increasing the variety of their species in her waters. The endeavors to introduce black bass into the lakes and ponds last year were successful. The object has been also to restore to the waters of the State migratory sea-fishes, as shad and salmon, now almost extirpated by the avidity and improvidence of men, but chiefly by the dams and pound fishing at the mouths of the rivers. It is stated that the artificial hatching of shad at Holyoke three years ago has been attended with good results. For the introduction of salmon, it is decided to select the Farmington River, which was once famous for

them. Fish-culture is regarded as a great means of supplying abundance of food to the people, and more remunerative, to those who duly attend to fishing, than agriculture or stock-raising. An act was passed at the last session "regulating the taking of shad in the Housatonic River," and two acts "for encouraging and regulating fisheries."

The woman-suffrage movement, which began twenty years ago, was unusually active and made great progress in Connecticut last year, entering even into the halls of the Legislature, and engaging much of its attention. Early in the session, a petition was presented to the General Assembly, "asking for an amendment to the State constitution so as to extend suffrage to women on the same terms with men." The Assembly entertained the petition and appointed a special joint committee of nine to examine into the matter. On June 7th, and on several stated days afterward, the committee held public hearings of the case at the Senate-Chamber, and at the more capacious Hall of Representatives, when many, both men and women, spoke in favor of the measure, and some against it. The members of the committee disagreeing among themselves as to the justice and expediency of giving women the right to vote, a majority report signed by five of them was submitted on July 14th, "recommending to the General Assembly the passage of the following resolution:

PROPOSED AMENDMENT TO THE CONSTITUTION.

HOUSE OF REPRESENTATIVES, }
May Session, A. D. 1870. }

Resolved, That the following be proposed as an amendment to the constitution of this State, which, when adopted and approved in the manner provided by the constitution, shall, to all intents and purposes, become a part thereof, viz.:

Every white citizen of the United States, without distinction of sex, who shall have attained the age of twenty-one years, who shall have resided in the State for a term of one year next preceding, and, in the town in which such citizen may apply to be admitted to the privileges of an elector, at least six months next preceding the time of such application, and shall be able to read any article of the constitution, or any section of the statutes of the State, and shall sustain a good moral character, shall, on taking such oath as may be prescribed by law, become an elector.

Resolved, That the foregoing proposed amendment to the constitution be continued to the next General Assembly, and be published with the laws passed at the present session.

E. A. WOODWARD, Ch'n, Senate,
ROBERT L. WARNER,
JOHN COTTON SMITH,
A. E. GOODRICH,
TALMADGE BAKER.

A minority report, signed by the remaining four members of the committee, was also submitted, concluding "that they cannot honestly comply with the prayers of the petitioners," and that "the petitioners have leave to withdraw." The General Assembly ordered the report to be printed; but seems not to have come to any final decision on the subject.

The population of Connecticut, according to the census of the United States, is as follows:

COUNTIES.	1870.	1860.
Fairfield.....	95,276	77,476
Hartford.....	109,007	99,993
Litchfield.....	43,737	47,318
Middlesex.....	36,099	30,859
New Haven.....	121,257	97,845
New London.....	66,534	61,731
Tolland.....	22,003	20,709
Windham.....	33,518	34,747
Total.....	537,418	460,147

CONY, SAMUEL, Governor of Maine during the war, born in Augusta, Me., February 27, 1811; died there, October 5, 1870. He was educated in Augusta, and at Brown University, from which he graduated in 1829; studied law, and, being admitted to the bar in 1832, settled at Oldtown, Me., in the practice of his profession. He was elected to the Legislature in 1835, in 1839 was chosen a member of Governor Fairfield's Executive Council, and from 1840 to 1847 was Judge of Probate for Penobscot County. In 1847 he was appointed land agent, and in 1850 elected State Treasurer, which office he held for five years. He removed to Augusta in 1850. Up to 1861 he had acted with the Democratic party, but, coming out decidedly in favor of the war, he was rejected by his party, and in 1862 was elected to the Legislature as a Union man, and in 1863 chosen Governor. His administration was every way so admirable and efficient that he was twice re-elected by very large majorities. His excessive labors so impaired his health that he refused a renomination in 1867, and never recovered his former vigor and strength, but, like Governor Andrew, of Massachusetts, was a martyr to his zeal for his country's success and welfare.

CORROSION OF SHIP-PLATES. Upon this point some very interesting experiments have been recently carried out in France at the works of the Terrenoire Company, near St. Etienne. Samples of plates were cut to exactly similar dimensions, and carefully weighed. These samples were plates of best wrought-iron, of hard Bessemer steel, and of the softest kinds of Bessemer steel, particularly those qualities which are made at Terrenoire for boiler-plates, without spiegeleisen, by means of Mr. Henderson's well-known alloy of ferro-manganese. These samples were immersed in sea-water, and the effect of the chemical action was put to an immediate quantitative test by means of a galvanometer. The plate was connected with one of the galvanometer wires, and the other, which carried a piece of platinum at the end, was immersed in the sea-water without touching the steel plate. This established a complete galvanic battery, of which the plate under test was the only variable element (since the same galvanometer and the same platinum piece were applied to each test plate.) The amount of electric force

which was measurable by the galvanometer was therefore in direct proportion to the quantity of chemical action which took place between the sea-water and the plate, and the indication of the galvanometer gave, therefore, the exact proportionate amount of corrosive effect produced by the sea-water upon each of the plates. The experiments at Terrenoire have confirmed the fact that the corrosion of steel containing more than $\frac{1}{4}$ per cent. of carbon is more intense than that of wrought-iron, but the corrosion of the softest kind of steel containing from $\frac{1}{4}$ per cent. of carbon downward is *less* than that of wrought-iron. In fact, the amount of corrosion of different kinds of steel seems to follow the exact proportion of the percentage of carbon contained in the metal. The relative quantities, as read off the galvanometer when some of the most characteristic specimens were under test, were as follows:

Corrosion of steel containing 1 per cent. carbon	80
Corrosion of wrought-iron plate	65
Corrosion of soft Bessemer steel plate	55

The evidence of these galvanometric tests has been corroborated still further by keeping the different plates immersed in sea-water for several months, and ascertaining the loss of weight of the plates regularly every week. The result of this prolonged experiment showed an exact coincidence of the proportionate weights with those indicated by the galvanometer. The regularity is so great that the same galvanometer always indicates the same figures when applied to the plate after a considerable lapse of time.

The experiments of the Terrenoire Works show in a very conclusive manner that soft steel plates, such as are usually—and ought to be always—employed in ship-building, are *less* liable to suffer from the corrosive action of the sea-water than iron plates. The advantage of the steel plates is, therefore, enhanced by this newly-discovered superior resistance to corrosion, which is a property of the softest kinds of steel.

CUBA. (*See SPAIN.*)

CUTTING, FRANCIS BROCKHOLST, an eminent jurist and political leader of New-York City, born in New-York City, in 1805; died there, June 26, 1870. He graduated from Columbia College about 1825, studied law with

great assiduity, devoting his attention particularly to commercial law, and being admitted to the bar rose to eminence, both as an attorney and counsellor, with almost unprecedented rapidity. In 1836, when he first commenced political life as a legislator, he had already attained so high a rank among the great commercial lawyers of his time, some of them the most eminent in the country, that he was considered as an authority on commercial questions. He was, moreover, a graceful and brilliant public speaker, and in the legislative sessions of 1836-'37 rendered efficient service to the Democratic party, with which he was affiliated. But his great love for his profession forbade his abandoning it for an exclusively political life. During fifteen years, from 1840 to 1855, there were very few cases tried in the metropolis involving questions of commercial law in which Mr. Cutting was not retained as the leading counsel on one side. From 1853 to 1855 he represented one of the districts of New-York City in Congress. This was during the feverish political excitement caused by the Kansas and Nebraska questions. Mr. Cutting refused to follow the lead of the Southern Congressmen. By this refusal he gave great offence to the Conservative branch of the Democracy, which then controlled the party, and became involved in a personal difficulty with the Hon. John C. Breckinridge, which attracted much public attention. Mr. Cutting resisted all intimidation from the friends of Mr. Breckinridge, but the matter was finally adjusted without resort to a duel. From 1855 Mr. Cutting took no active interest in politics until the beginning of the war, when he became prominent as a "War Democrat," working vigorously for the cause of the Union. He aided in the second election of President Lincoln, and his influence upon a large circle in New York was of much service to the country throughout the entire war. During the last few years he has appeared only in social and business circles (having declined active participation in important causes), taking care of a large fortune, and moving among his personal friends, esteemed and admired as a man of fine intellect, graceful accomplishments, and kindly manners. In person he was a handsome man, tall, and of commanding presence.

D

DAHLGREN, JOHN A., a Rear-Admiral in the United States Navy, born in Philadelphia, in 1810; died in Washington, D. C., July 12, 1870. He was appointed midshipman from the State of Pennsylvania, February 1, 1826. His first cruise was in the frigate *Macedonian*, of the Brazil squadron, in the years 1827-'29. From 1830-'32 he was attached to the sloop *Ontario*, of the Mediterranean squadron, and

in the latter year was promoted to passed midshipman. From 1836 to 1842 he was employed on coast-survey duty, being commissioned as lieutenant in 1837. In 1844-'45 he was attached to the frigate *Cumberland*, of the Mediterranean squadron. Between 1847 and 1857 he was engaged on ordnance duty, during which time he perfected the invention of the Dahlgren gun. He was commissioned as com-

mander in 1855, commanded the ordnance-ship *Plymouth* in 1858-'59, and was on ordnance duty at the Washington Navy-Yard in 1860-'61. While most of the officers of the Washington Navy-Yard at the beginning of the war manifested their sympathy with the Confederates, and went South, Commander Dahlgren remained faithful to the flag, and was appointed by President Lincoln commandant of the Washington Navy-Yard, and commissioned as captain in July, 1862, and shortly afterward appointed chief of the Bureau of Ordnance. On the 7th of February, 1863, Captain Dahlgren was promoted to be rear-admiral, and in the summer following was first actively engaged in the great struggle between North and South. Admiral Dupont had unsuccessfully endeavored to reduce the fortifications in Charleston harbor with his fleet of monitors, and was indisposed to make further efforts in that direction. It was determined to relieve him, and Rear-Admiral Foote was appointed to his place in command of the South Atlantic squadron. Foote died in New York just after he had been assigned to this command, and Admiral Dahlgren received the appointment. Previously the operations against Charleston had been exclusively naval, but in July, 1863, General Gillmore with land and Admiral Dahlgren with naval forces began a combined attack upon the defences of that city. On the 10th of July a joint attack was made upon the works on Morris Island, but without important results. A few days later the *New Ironsides* was brought over the bar, and with other iron-clads was laid abreast of Fort Wagner, to coöperate in an intended assault by the troops. The fort was silenced during the day, but darkness came on before the land assault was made, and the admiral discontinued his fire, not knowing whether it would take effect upon friend or foe. The enemy, therefore, returned to their guns, and General Gillmore's attack was repulsed with great slaughter. For some time after this failure there was no important action, although every day two or three of the iron-clads indulged in target practice at Fort Wagner and the Cummings's Point Battery. On August 17th General Gillmore opened all his batteries upon Fort Sumter, firing over Fort Wagner and the intervening space, and about the same time Admiral Dahlgren brought a few of his monitors abreast of Fort Wagner, and silenced it during the day, while the *Passaic* and *Patapsco*, with rifled guns, took position about 2,000 yards from Fort Sumter and coöperated with Gillmore's attack. The iron-clads received no material injury, but the service suffered a severe loss in Captain Geo. W. Rodgers of the *Catskill*, killed by a flying piece of fractured plating. On the 23d, five iron-clads took position about 800 yards from Sumter, and opened on the fort, but retired after a bombardment of some three hours, in which the fort was considerably damaged. September 6th, the enemy evacuated

Fort Wagner and Battery Gregg, on Cummings's Point, and, after a refusal on the part of General Beauregard to surrender Sumter, Admiral Dahlgren planned to capture the fort. His operations, however, terminated in the demolition of Sumter, and no further attempt was made in the inner harbor, but a complete blockade of the fort was kept up. In February, 1864, a successful expedition, commanded by Admiral Dahlgren in person, ascended the St. John's River to aid in throwing a military force into Florida. In December, 1864, General Sherman, after marching from Atlanta to the sea, established communications with Admiral Dahlgren in the vicinity of Savannah, and the latter made the best possible disposition of the naval forces for the capture of that city, which fell into Sherman's hands December 23d. In February, 1865, Charleston was evacuated by the enemy. Admiral Dahlgren was engaged in the movement against that city, and entered it with General Schimmel, pressing close upon the rear of the retreating foe. The evacuation of Charleston was followed by that of Georgetown, which place was immediately occupied by Dahlgren. In 1866 Admiral Dahlgren was ordered to the command of the South Pacific squadron. He returned from that service in 1868. In the fall of 1869 he was ordered to the command of the Washington Navy-Yard, which post he held to the time of his death. In addition to the heavy gun for naval service known by his name, the admiral had invented a rifled cannon for naval purposes which was successfully used, and projected the light boat-howitzers with iron carriages, which are now much prized by the navy. He also contributed several valuable reports on matters connected with ordnance. Without possessing those high executive and administrative talents which qualified him to take rank among the great naval commanders of our time, Admiral Dahlgren, by his personal bravery, and his dignified and courteous manners, had endeared himself to those under his command, and his death was felt as a great loss to the service.

DALE, Very Rev. THOMAS, M. A., an English clergyman, professor, poet, and theological and classical writer, born in Pentonville, London, August 22, 1797; died in London, May 15, 1870. He was educated at Christ's Hospital School and Corpus Christi College, Cambridge, where in 1818, while yet an undergraduate, he published an epic poem, "*The Widow of Nain*," and followed it not long after by two other volumes of poems, "*The Outlaw of Taurus*," and "*Irada and Adah, a Tale of the Flood*." Having graduated, he was ordained in 1822, and, while filling various curacies and lectureships from 1822 to 1828, he took private pupils at Greenwich and Beckenham to supplement his small income. In 1828 he was appointed Professor of the English Language and Literature at the London University, but resigned his professorship in 1830. In 1836 he

was appointed to the same chair in King's College, London, and held the position till 1839. Meantime he had been advanced in the Church, being appointed Minister of St. Matthew's Chapel, Denmark Hill, in 1830; Vicar of St. Bride's, Fleet Street, London, in 1835, and Canon of St. Paul's in 1843. In 1846 he exchanged the vicarage of St. Bride's for that of St. Pancras, and in 1857 resigned this and was appointed Rector of Thirfield, Herts. Late in 1869 he was appointed Dean of Rochester, but did not long enjoy the dignity. Mr. Dale's poems were collected and republished in a single volume in 1836. His other works were "A Translation of Sophocles," 1824; "Sermons preached at St. Bride's," 1840; "Sermons preached before the University of Cambridge as one of the Select Preachers," 1832-'36; "The Sabbath Companion," 1844; "The Good Shepherd, a Commentary on the Twenty-third Psalm," 1845; "The Domestic Liturgy and Family Chaplain," 1846; "The Golden Psalm," 1847; a volume of special sermons, and an excellent edition of Cowper's poems, with biography and critical remarks. Mr. Dale ranked very high as a preacher, and his style as a writer was remarkable for its purity and vigor.

DELAWARE. The population of Delaware, according to the census of 1870, is 125,015. The share of each county with the increase since 1860 is exhibited in the following table:

COUNTIES.	1870.	1860.	Increase.
Newcastle.....	63,515	54,797	8,718
Kent.....	29,804	27,804	2,000
Sussex.....	31,696	29,615	2,081
Total.....	125,015	112,216	12,799

The only city in the State is Wilmington, which had 30,904 inhabitants in 1870, against 22,258 in 1860, an increase of 8,646.

The following are the largest towns of the State, excepting Wilmington:

TOWNS.	1870.	1860.	Increase.
Smyrna.....	2,110	1,873	237
Dover.....	1,913	1,989	624
Newcastle.....	1,766	1,566	200
Delaware City.....	1,645	1,325	190
Seaford.....	1,308	624	684
Lewes.....	1,090	970	120

There are 687,065 acres of improved land in the State, and the agricultural products in 1869 were as follows:

PRODUCTS.	Acres.	Bushels.	Value per bush.
Wheat.....	61,480	890,000	\$1 28
Rye.....	5,000	85,000	97
Oats.....	172,800	1,723,000	45
Buckwheat.....	923	12,000	1 10
Corn.....	177,777	3,200,000	70
Barley.....	250	6,000	90
Potatoes.....	2,857	200,000	65

There were also 80,000 tons of hay produced, valued at \$20 per ton, and 8,438 bushels of peas and beans. The value of domestic animals in the State was \$5,144,706, and their number was as follows: horses, 25,160; mules and asses, 4,112; milch-cows, 24,198; young

cattle, 35,840; sheep, 19,540; swine, 51,860. The dairy products were 1,430,503 pounds of butter, and 6,579 pounds of cheese. Large quantities of fruit are also raised in the State for the New York and Philadelphia markets.

At the beginning of the year 1871 the aggregate indebtedness of the State of Delaware was \$1,632,000, an increase of \$176,000 in two years. The State has investments amounting to \$1,074,150, which is \$224,000 more than it held at the beginning of 1869. The revenue collected during the year 1870 was as follows:

From sales, manufactures, investments, private bankers, etc.....	\$73,547 61
From taxes on banks.....	9,050 25
From county officers, including taxes on process and collateral inheritances.....	2,586 06
From tax on insurance companies.....	2,586 18
From the Philadelphia, Wilmington, and Baltimore, and from the Junction and Breakwater Railroad Companies.....	25,854 25

Making an aggregate of..... \$130,577 73

The Legislature of 1869 passed an act taxing railroad and canal companies incorporated under the laws of the State and doing business within its limits, upon their capital stock, net earnings, and rolling-stock. The Philadelphia, Wilmington, and Baltimore Railroad Company claimed that this tax was unconstitutional, and one of its stockholders brought a suit against the State in the United States District Court, and asked for an injunction against the collection of the tax. The court decided "that the tax on the capital stock of this company, and on net earnings, is constitutional; but the tax on locomotives, passenger-cars, and other rolling stock, is unconstitutional." Judge Strong, who delivered the opinion of the court, said: "The case, in any view of it, decides that a State cannot directly or indirectly tax persons for passing through or out of it. That is enough for the case I have before me. The Delaware statute of April 8, 1869, does directly levy a tax upon both persons and property for transit through the State, into it, and out of it. It is, therefore, in my opinion, so far in conflict with the Constitution of the United States. I shall, therefore, enjoin against any steps for the assessment, collection, or payment of the tax prescribed by the twenty-first section of the act of April 8, 1869, namely, the tax for the use of locomotives, passenger-cars, freight-cars, and trucks, and I shall refuse the injunction prayed for to prevent the collection and payment of the taxes prescribed by the fifteenth section, upon the actual cash value of every share of the capital stock of the company defendant, and I shall also refuse an injunction against the collection and payment of the tax described by the twentieth section upon the net earnings or increase of the company."

The case was appealed to the Supreme Court, which has not yet decided the question involved.

The railroads of the State are generally in a flourishing condition. The Philadelphia, Wil-

Wilmington, and Baltimore, which crosses the State, has only twenty-three miles within its territory. The Delaware Railroad, which is leased and controlled by the same company, traverses nearly the entire length of the State and the Eastern Shore of Maryland, and has numerous connections with places at a distance from the line. The Junction and Breakwater Railroad connects with the Delaware at Harrington, and runs thence to the ocean at Lewes. The value of the line will be greatly increased by the completion of a pier at Lewes, for which the United States has appropriated \$225,000.

The school system of the State is not well organized or efficient. It is thus spoken of by the National Commissioners of Education in a recent report: "The provisions for education in Delaware remain the same as before emancipation. There is no State supervision, no State provision for training teachers, no school law adequate for keeping schools open; municipalities may tax themselves for school purposes or not, as they see fit. The schools generally are of an inferior class, and, so far as organized under the school law of the State, provided only for the education of the whites. It is noticeable that the school fund is divided among the three counties on the basis of the population as it was forty years ago, in 1880."

A movement was set on foot, during the year, for the establishment of a Normal School and Polytechnic University at Wilmington, but no practical steps toward the accomplishment of the purpose of the movers has been reported. The colored children of the State are not at present admitted to the public schools. The "Delaware Association for the Improvement and Education of the Colored People," which was organized about four years ago, has done much for them, but has not the means to accomplish the work which is needed. The Howard School, at Wilmington, has had about 180 pupils in the primary department, and 50 in the higher classes. Besides this, there are 23 schools under the charge of the Association in different parts of the State, with an aggregate attendance of 1,470. The work is carried on by private subscriptions, and during the past year \$10,488.94 were received by the treasurer.

The ratification of the fifteenth amendment to the Federal Constitution was celebrated by the colored people and their friends at Wilmington, on the 14th of April. At a preliminary meeting, in which this action was determined upon, the following resolutions were adopted:

Whereas, The nation has restored political rights to the colored citizens deprived of these rights heretofore simply on the ground of the color of the skin; and

Whereas, The nation has thus planted itself anew upon the imperishable doctrines of the Declaration of American Independence:

Resolved, That our grateful thanks are first due to that God who is Lord of lords and King of kings; who controls the destinies of nations, and who maketh even the wrath of man to praise Him.

Resolved, That the President, Cabinet, Congresses,

Legislatures, and loyal people, who proposed and sustained this restoration to us of political rights and privileges, have won our lasting gratitude.

Resolved, That we hereby pledge to them to prove the fitness of the trust, by the worthiness of our conduct. That, realizing the responsibilities resting upon us, we mean to use the ballot for no merely narrow or selfish ends, but for the best good of the State and nation, thereby aiding to perpetuate a Union which our fathers and their fathers, their brothers and our brothers, together helped to save.

Resolved, That, as soon as convenient after the official announcement of the ratification of the fifteenth amendment of the United States Constitution, we commemorate the grand event by a general celebration in the city of Wilmington, in the following manner:

1. All business to be as much as is possible suspended at 9 o'clock A. M.

2. Sermons or other religious services in the various churches, under the direction of the pastors, at 10 o'clock A. M.

3. A grand procession, composed of the various society orders, societies, clubs, mechanical and other associations, day and Sunday schools, and citizens, with music, badges, banners, and other decorations, forming at half-past one and moving at two.

4. A jubilee mass meeting in the Wilmington Institute (if it can be obtained) at 7 o'clock, to be addressed by white and colored friends of the cause, the meeting to close not later than 10 o'clock.

5. Such other festivities as may be arranged by societies or individuals.

The people of the entire State, and the adjacent counties of Maryland, Pennsylvania, and New Jersey, were invited to participate in the celebration, which proved to be a very enthusiastic one.

The political canvass of the year in Delaware had more interest than usual, owing to the fact that the colored citizens would exercise the right of suffrage for the first time under the operation of the fifteenth amendment. It was estimated that there would be about 4,500 negroes in the State who would be qualified voters, and if the Republicans could secure all these, without breaking their own ranks, they could overcome the usual Democratic majorities, as the whole number of voters in the State was little more than 20,000. On the other hand, the Democrats hoped, on account of the prejudice against negro suffrage which existed in the State, to draw off considerable numbers from the Republican party on that issue alone, and thus preserve, if not increase, their superiority in the State. Accordingly, the cry of "White man's party" was raised, and a convention was called to meet at Dover, on the 10th of May, for the purpose of forming such an organization. The convention was held, but the leading members of the Democratic party in the State were not present. A series of resolutions was adopted.

The first congratulated the Democratic party on its past history.

The second denounced the radical party, and arraigned it for creating a public debt, banishing the circulation of gold and silver, and substituting in its place a "worthless currency," and for striking down the dearest guarantees of liberty.

The third denounced the radical party for

the passage of the fifteenth amendment, and declared it an outrage upon the people and a flagrant violation of the Constitution.

The fourth declared that they would interpose no obstacles in the way of negroes voting, as long as the fifteenth amendment was the assumed law of the land.

The last gave a general invitation for all white men to unite with the Democratic party as a "white man's party."

The regular Republican State Convention was held at Dover, on the 14th of June. Thos. B. Coursey, of Kent County, was nominated for Governor, and Joshua T. Heald, of Newcastle County, for Representative in Congress. The following was the platform adopted:

Resolved, By the Republican Party of the State of Delaware, in State Convention assembled: 1. That in the recent amendments of the Constitution of the United States, securing the right of suffrage and equal rights before the law to all loyal citizens of the republic, we recognize a final and just settlement of a vexed question.

2. That we hope and believe the time is near at hand when all of the restrictions and disfranchisements imposed upon persons engaged in the rebellion may be removed without danger to the peace of society.

3. That the conduct of public affairs, under the Administration of President Grant, the vigilant collection of the public revenues, and their economical and honest disbursement, with the great decrease of the national debt, and the reduction of taxation, are in striking contrast both to the Democratic rule preceding his election, and the present corrupt and extravagant management of this State, and we hereby cordially express our confidence in, and support of, his Administration.

4. That a liberal and well-regulated system of public instruction is one of the essential safeguards of a free government; that it is the duty of the State to provide free schools for her children, of every class and condition; and, in the judgment of this convention, this object can be more effectually and harmoniously secured by the provision of schools, for the children of the newly-enfranchised citizens, separate from those now established.

5. That the present condition of State affairs, the direct result of mismanagement by the faction which has held entire control for the past six years, makes imperatively necessary a radical change of policy, in which economy shall take the place of extravagance, prudence of recklessness, and liberal patriotism of local and personal aggrandizement.

6. That the debt of the State, now nearly a million and a half of dollars, accumulated under Democratic rule, is burdensome, and disproportionate to the public wealth and revenues; that it was incurred in aid of the rebellion; contracted with shameful blunders written on its face, and by methods which greatly swelled its amount; that by culpable and impotent mismanagement it has been increased instead of lessened; that revenues, by solemn enactment devoted to its liquidation, have been recklessly and illegally perverted to other purposes, and, while we recognize the obligation of every citizen to bear his fair proportion of this heavy and odious burden, we protest, on behalf of the people of the State, against the present system of State taxation, as unprecedented, unjust, and unequal, discriminating against particular classes, and indvidously oppressing special branches of industry.

The Democrats held their regular nominating convention at Dover, on the 24th of August. James Ponder, of Sussex County, was

nominated for Governor, and Hon. B. T. Biggs for Member of Congress. In their platform they express their "devotion to the Union, now, as in the past;" declare that the Federal and State Governments were formed for the benefit of white men; denounce the fifteenth amendment and the enforcement act; oppose the importation of coolies; favor the existing school system, which provides for the education of white children only; and declare their opposition to the "extravagance and wasteful expenditure" of President Grant's Administration.

An Independent Democratic Convention was held in October, in opposition to what was known as the "Saulsbury clique," which was said to control the Democratic party of the State. In the platform adopted at this convention, the delegates declared that they are:

1. Now, as in the past, Democrats—attached to the interests and devoted to the principles of the Democratic party.

2. That they inaugurate the present movement, not with the intent to injure the party with which they have labored, nor to offer any opposition to the State ticket nominated by acclamation on the 24th day of August last, but with the honest and patriotic desire to divest it of cliques, and to correct and reform the errors and abuses which now afflict the administration of State and county government through unwise and injudicious leadership.

3. That they are opposed to and denounce as anti-Democratic the wasteful extravagance and lavish expenditure of the public money which have characterized the official conduct of those charged with the administration of public affairs in the State for the past few years.

4. That, while they are in favor of a wise, judicious, and impartial tax law for the prompt payment of the interest, and the gradual but sure reduction of the principal of the State debt, they believe that the revenue law of the State is unwise, injudicious, and objectionable—unwise, in the awkward and expensive machinery required to carry it into operation; injudicious in driving capital from the State, and selecting many useless and unprofitable objects of taxation; and objectionable in incorporating into its provisions many of the most odious and harsh features of the Federal tax law, such as the frequent and unnecessary administration of oaths and affirmations, prying into and exposing the private business affairs of our citizens, and imposing on our people the necessity of keeping separate business accounts, to be able to make the annual and quarterly returns exacted.

5. That they hold it to be one of the fundamental principles of the Democratic party that the strictest and most rigid economy should be practised by those who are intrusted with the disbursement of the public funds; and they believe that, by a judicious and wise system of retrenchment and reform in the management of our public affairs, the taxes will be greatly lessened, while sufficient money will be saved to maintain the credit of the State, and meet all demands necessary for the proper administration of our State and county governments.

The election was held on the 8th of November, and resulted in the success of the Democratic ticket. The total vote for Governor was 20,594; of which Ponder received 11,464, and Coursey 9,180, giving the former a majority of 2,384. Biggs, for Congress, received a majority of 2,296 over Heald. At the last election, in 1868, the whole vote was 13,537; of

which 10,901 were Democratic, and 7,666 Republican. The Legislature, which consists of three Senators and seven Representatives from each of the three counties, is unanimously Democratic in both branches.

There were several slight disturbances at the elections, owing to a disposition in some places to intimidate the negroes from voting, and the presence of United States officers at the polling-places to secure them in the exercise of that privilege. Both the enfranchisement of the negro, and the interference of the Federal Government at elections, have been stubbornly opposed by the dominant party of Delaware from the first. Governor Saulsbury, in his message to the Legislature of 1871, apparently expresses the sentiments of his party when he says: "In disregard of constitutional obligations, Congress and the Federal Executive have sought, by revolutionary means, to centralize and consolidate all political power in their own hands by attempting to control elections in the States. Without the power by direct act to amend the Constitution or alter its provisions, and unable to secure the voluntary consent of the number of States requisite for that purpose, they have forced some of the Southern States to consent to proposed amendments of the Constitution as a condition to representation in Congress, and have thereby nullified the legally-expressed will of other States whose consent could not be secured, and whose proper and legal relations with the Federal Government had never been interrupted. Such action is a fraud upon the non-consenting States, and upon the people of the whole country. It is a subject of congratulation, however, that the people in the late elections rebuked these acts of usurpation and tyranny, and we may well indulge the hope that the spirit of true patriotism will assert its superiority over party subserviency, and remove from power the representatives of a political organization which has failed, during a period of five years of profound peace, to bring the country back to the healthy condition in which it found it at the time of its advent to power in 1860. Until recently no political party in the country has ventured to claim for the Federal Government any authority to determine the qualification of electors in the States, or to interfere with their own local elections. The fifteenth amendment, adopted by fraud and coercion, and in opposition to the will of the white people of the country, has been condemned by the popular voice in almost every State of the Union, and in none more signally than our own. Its effects upon both races must prove injurious, and it is to be hoped that its condemnation by the people of the country will, at no distant day, lead to its repeal as a part of the Federal Constitution."

DENMARK, a kingdom in Europe. King,

Christian IX., born on April 8, 1808; succeeded King Frederick VII. on November 15, 1868. Heir, Prince Frederick, born June 8, 1843; married to Princess Louisa of Sweden, on July 28, 1869; oldest son, born at Copenhagen, September 27, 1870. A new Cabinet was appointed on May 28th, composed of the following members: Holstein-Holsteinborg, President of the Council; Rosenørnlehn, Foreign Affairs; Haffner, War and Marine, *ad interim*; Fonnesbech, Interior; Krieger, Justice; Fenger, Finance; Hall, Public Worship. Area of Denmark Proper, 14,698 English square miles; of the dependencies, Faroe, Iceland, Danish settlements in Greenland, the islands of St. Croix, St. Thomas, and St. John, in the West Indies, 40,214 square miles. Minister of the United States in Denmark, M. J. Cramer (November, 1870). Minister of Denmark in the United States, F. E. de Bille, appointed in 1867. According to the official census of February 1, 1870, the population of Denmark was as follows:

Zealand	Moen, Samsoe.....	636,506
Fühnen	Langeland, Arroe.....	236,269
Lolland	Fallster.....	91,017
Bornholm	81,846
Jütland.	787,937
Total.....		1,733,565

The population of the Danish dependencies was, in 1860, 108,983.

The population of the largest cities was as follows in 1870: Copenhagen, 180,866 (with Fredericksburg, 197,151); Odense, 16,970; Aarhaus, 15,025; Aalborg, 11,721 (with Nørre Sundby, 12,380); Randers, 11,354; Horsens, 10,501.

In the budget for the year 1869-'70, the revenue is estimated at 22,039,391 rix-dollars; the expenditures at 22,358,024. The public debt, on March 31, 1869, amounted 119,141,100 rix-dollars. The army, in 1869, was composed as follows:

	First Call (Line and Reserve).		Second Call.	
	Officers.	Men.	Officers.	Men.
Infantry.....	730	26,750	267	12,127
Cavalry.....	126	2,122
Artillery....	189	6,532	37	2,361
Engineers...	86	590	23	740
Total.....	1,081	35,973	346	15,258

On a war footing the total army numbered 52,656.

The fleet, at the close of 1868, consisted of 80 steamers, inclusive of 6 iron-clads, with an aggregate of 812 guns, 2 sailing-vessels, 27 gunboats, and 21 transports.

The imports in the year 1868-'69 amounted to 20,010,000 hundred-weight; the exports, to 7,270,000 hundred-weight.

The emigration from Copenhagen has been active only during the last few years. In 1869 it amounted to 12,141 persons (against 5,600 in the year 1868); among the former, 4,360 emigrants were Danes, while 6,514 were

Sweden, etc. The emigrants, with a few exceptions, were bound for the United States.

On opening the Danish Diet, Oct. 4, 1869, the King thus expressed himself with regard to the Schleswig question: "Like the people of North Schleswig, we hope for a reunion with the districts which are Danish and desire to remain so. The Government of Prussia, it is true, has not found a sufficient occasion in the circumstances to resume the negotiations, but our conviction as to what is demanded by justice, and the rightly-understood interests of both countries, is so firm that we cannot but hope that the Government of Prussia will bring on a settlement, calculated to strengthen the friendly relations between Germany and Denmark."

On the outbreak of the war between France and Germany, public opinion not only strongly sympathized with the former, but it was commonly expected that Denmark would openly espouse the cause of France and declare war against Prussia. The defeat of the French prevented this, and Denmark, officially, declared in favor of neutrality.

The new session of the Diet was opened on October 3, 1870. The King, in his speech from the throne, stated that by maintaining a policy of neutrality he had succeeded in saving the country from the evils of war. Although no human foresight could tell what would be the result and the consequences of the present war, the King said he entertained a firm hope that the question which was still pending between Denmark and Prussia would meet with a solution that would insure the future independence of the country, and strengthen Denmark's good relations with her powerful southern neighbor. The speech from the throne further declared it to be desirable that the session of the Rigsdag should be short.

The political parties in Denmark may be divided, as in all other constitutional states, into three main groups—a conservative "right," a moderately progressive "centre," and a more radical "left." Within each of these parties there exist further divisions of every political shade and complexion. The "right" is chiefly made up of the great proprietors of the soil, who are largely represented in the Landsting, but are almost unknown in the Folkething, the Lower Chamber. The Danish nobility has, properly speaking, only in late years participated in the political life of the nation. Being from the first decidedly opposed to liberty, it kept aloof—with some very few exceptions—from the court during the whole reign of Frederick VII. (1848-1863), and from all political movements. At that time the "right" was composed of the higher ranks of public functionaries—the bureaucracy—who have now almost disappeared from the Rigsdag, being supplanted by the landed aristocracy. The right, both the former and the present, has on several occasions joined the left against the moderate liberal party, and the

last Danish ministry, Frijs-Frijsenborg, came to power by such a coalition, though not a single member of it was selected from the party of the left, with which it indeed did not long harmonize. The centre, or the so-called national liberal party, represents the views generally prevalent in Copenhagen and the corporate towns. It was this party which, before 1848, made itself most conspicuous in the struggle for liberal institutions, and on that account was particularly obnoxious to the government of the absolute kings. It came to power for the first time in 1848, and its leaders have ever since, up to 1864, with but short intermissions, been at the head of government. While the domestic policy of this party has been shaped with reference to a steady but cautious progress in a liberal spirit, its foreign policy has chiefly been based upon the preservation of Danish national independence, and its particular aim was to unite Schleswig by more intimate bonds to the kingdom proper, while it at the same time loosened its connection with the duchy of Holstein, which was a member of the German Confederation. As this policy brought on the war with Prussia, which resulted in the loss of Schleswig and Holstein, this party lost for a while its influence, but lately its leaders have again got seats in the Cabinet, through the coalition between their party and the liberal landed proprietors, and it has constantly enjoyed the support of the educated middle classes. Lately it has branched off into two groups, a "right" and "left centre," and, while in the Landsting these groups make essentially one party, they are distinctly separate in the Folkething—in which Assembly the "right centre" forms the right wing of the "Thing," a proper "right" being wanting, and the "left centre" constitutes its centre. The "left wing" is particularly supported by the small proprietors of the soil, the "Bondea." The Danish peasants, who up to the close of the last century were little better than serfs, and only in 1848 received equal rights with the other estates, are still not very enlightened. They are, consequently, more than any other class, liable to be led by men who are not always by knowledge or ability entitled to the amount of influence they exercise. The party of the left is again divided into three distinct groups—one, which has its headquarters among the Jutish peasants; another, which heads the peasantry of the Danish isles; and a third, which has taken its name from that of the poet and theologian, Grundtviig, whose peculiar religious and political tenets have been adopted by it. The common name for members of these three groups is the Bondevenner (the peasants' friends). The Jutish Bondevenner are, on the whole, rather cosmopolitan in their views, and the most radical of the three branches. The followers of Grundtviig are, on the contrary, very ultra-national. The island Bondevenner occupies the middle ground between the two others. In 1869, the three

groups amalgamated in one united left, which has now a majority in the Folkething, and on October 3, 1870, elected the Speaker of the Chamber, two vice-presidents, and four secretaries, out of its own ranks. The common object of the left wing is in the direction of country reforms, and to some of its members also radical ecclesiastical reforms, with a view to an eventual disestablishment of the state Church. A striking peculiarity of the Danish radicals is that they do not subscribe to some of the dogmas which are the main pillars of strength to radicalism abroad. The great majority is even royalistic in its tendencies. Republican ideas, which, on the whole, find but little acceptance in Denmark, are indifferently represented in the left centre, and by the followers of Grundtvig.

DICKENS, CHARLES, the most eminent of modern novelists, born in Landport, one of the suburbs of Portsmouth, England, February 7, 1812; died at Gadshill, Kent, June 9, 1870. He was the eldest son, and second child of Mr. John Dickens, who at that time held a position in the Navy pay department, from which he retired on a pension in 1815, and, removing to London, became a parliamentary reporter for one of the daily papers. In London, his son attended good schools, and received a fair education, but never attempted a collegiate course. When he had reached the proper age, he was placed as clerk in an attorney's office. He remained there for a brief period, a year or so; long enough to acquire a sufficient mastery of the machinery and phraseology of the law to be able to use it with capital effect in his subsequent writings; but not long enough to subdue his lively imagination, or to dull his keen and rich humor. On abandoning the law, he entered upon his father's profession, that of a newspaper reporter. In "David Copperfield," which is understood to be in more than one particular a partial reflection of his own life, we have some amusing descriptions of David's troubles in learning how to take down speeches in short-hand, and his still more serious trouble in learning how to decipher his own notes. There was a better field, however, for the young reporter than the gallery of the House of Commons. The streets of London, the prisons, the lodging-houses, the cheap halls of amusement, the great realm of Cockaigne in all its subdivisions, and that rich variety of life which Thackeray has immortalized as the "Shabby-Genteel," were full of opportunities which waited to be developed, humors so racy and so obvious that, now the master has shown them, we wonder they were so long concealed. His first engagement was on the *True Sun*, a liberal journal then struggling for existence. His connection with this paper, however, was brief and not very profitable. Dickens next attached himself to the *Morning Chronicle*, and it was while associated with this paper that he first earned reputation for ability and originality. He attracted the attention of the editor, who

requested him to contribute articles other than those in the regular performance of his reportorial duties. He at once complied with this request, and published in the *Morning Chronicle* a series of papers, under the title of "Sketches of English Life and Character," which became very popular. It was in these sketches that he first used the *nom de plume* of "Boz"—"the nickname," he tells us, "of a pet child, a younger brother, whom I dubbed Moses, in honor of the Vicar of Wakefield, which, being facetiously pronounced through the nose, became Boses, and being shortened became Boz." The name of Boz, however, was not peculiar to the *Morning Chronicle*; it had been appended also to some clever sketches in the old *Monthly Magazine*, and the author tells, in a preface to a late edition of "Pickwick," how his first article, the "Sketch," entitled *Mr. Minns and his Cousin*, was dropped stealthily one evening at twilight, with fear and trembling, into a dark letter-box, in a dark office, up a dark court in Fleet-street. When it "appeared in all the glory of print," continues he, "I walked down to Westminster Hall, and turned into it for half an hour, because my eyes were so dimmed with joy and pride that they could not bear the street, and were not fit to be seen there." From that modest beginning came so soon a certain degree of fame, that the Sketches were still running in *The Chronicle* when Messrs. Chapman & Hall, the publishers of *The Monthly Magazine*, conceived the excellent idea of employing Boz to write the text illustrative of a series of sporting pictures by the comic artist, Seymour, which it was proposed to publish in monthly numbers. There was a great rage in those days for caricaturing the haps and mishaps of cockney sportsmen, and the new series of drawings and sketches was originally intended to record the doings of a "Nimrod Club;" but Mr. Dickens, being no great sportsman, objected to this, and demanded permission to write what he chose, letting the pictures arise naturally out of the text. So came into existence the immortal *Pickwick Club*—Mr. Pickwick himself being drawn from the life, and Mr. Winkle put in for the express benefit of Mr. Seymour. The preliminary advertisements informed the public that "the *Pickwick Papers*, the *Pickwick Diary*, the *Pickwick Correspondence*, in short the whole of the *Pickwick Papers*, had been purchased from the patriotic secretary at an immense expense, and placed in the hands of Boz, the author of 'Sketches of Every-day Life and Every-day People,' a gentleman whom the publishers consider highly qualified for the task of arranging these important documents and placing them before the public in an attractive form, and who is at present deeply immersed in his arduous labors." The first number appeared on the 31st of March, 1836. Before the second was issued Mr. Seymour committed suicide, and Hablot K. Browne—"Phiz"—was employed to complete his unfinished task. For

many years afterward Phiz and Boz were associated with the monthly appearance of those serial novels, in green-paper covers, which set all England and America laughing and weeping by turns. As for *Pickwick*, its success was almost unparalleled. "In less than six months from the appearance of the first number of the *Pickwick Papers*," says *The Quarterly Review*, "the whole reading public were talking about them—the names of Winkle, Wardle, Weller, Snodgrass, Dodson and Fogg, had become familiar in our mouths as household terms; and Mr. Dickens was the grand object of interest to the whole tribe of 'Leo-hunters,' male and female, of the metropolis. Nay, *Pickwick* chintzes figured in linen-draper's windows, and Weller corduroys in breeches-makers' advertisements; Boz cabs might be seen rattling through the streets, and the portrait of the author of 'Pelham' or 'Orichton,' was scraped down or pasted over to make room for that of the new popular favorite, in the omnibuses. This is only to be accounted for on the supposition that a fresh vein of humor had been opened; that a new and decidedly original genius had sprung up; and the most cursory reference to preceding English writers of the comic order will show that, in his own peculiar walk, Mr. Dickens was not simply the most distinguished, but the first." *Pickwick* was still under way when Bentley made an offer to the young novelist to become editor of his magazine, and to furnish a serial novel for its pages. The proposal was accepted, and the result was "*Oliver Twist*," the two novels being actually written together, month by month, and neither ever getting more than a day ahead of the printer's demand for manuscript. The suit of *Bardell vs. Pickwick*, with the plaintiff's consequent incarceration in the Fleet, did more perhaps than any other one thing to break down the bars of the loathsome debtor's prison; the story of *Oliver Twist*, as an American critic has well said, "turned the cold poor-house inside out, and warmed it with the sun of human charity;" "*Nicholas Nickleby*," which came next, at an interval of only a few months, swept away the barbarities of Yorkshire schools, and, as we well remember, called down upon the writer the direst threats from at least a score of real school-masters who recognized their own lineaments in the portrait of Mr. Squeers. In this work, Mr. Dickens manifested, more fully than in any of his previous ones, his wonderful power of individualizing common types of character, of whose humor the world has been unaware, though it lay open at every turn. Mr. *Pickwick*, Sam Weller, Mr. Bumble, the Fat Boy, were creations: Mrs. *Nickleby* was a discovery. "Mrs. *Nickleby*," exclaims Thackeray, "lay undescribed until Boz seized upon her and brought that great truth to light, and yet every man possesses her in the bosom of his family." The same power of seizing upon common but neglected types appears in all his subsequent novels, though in the next of the

series, "*The Old Curiosity Shop*," it is less conspicuous than the development of his rare power of pathos in the character of Little Nell. "*The Old Curiosity Shop*," and its successor, "*Barnaby Rudge*," were published originally under the title of "*Master Humphrey's Clock*," as stories read or told at meetings of the revived *Pickwick Club*. It was just after the completion of "*Barnaby Rudge*" that Mr. Dickens made his first visit to America, landing with his wife in Boston on the 22d of January, 1842. Everybody who understood English had, as Thackeray used to say, a corner in his heart for him, and his tour through the principal cities of the Union was a triumphal progress. He visited several of the larger cities, and was received with so much adulation, and sometimes such pertinacious and annoying attentions, that it was not surprising that a young man of thirty should have been, by turns, amused and disgusted, and disposed to ridicule the failings, while he failed to discern the good qualities, of a people who on this occasion gave him very little opportunity of seeing their best side. He was, moreover, by nature and training, a humorist, and the oddities, eccentricities, and impertinences of many of those who crowded to see him were fair game for him. He said nothing more severe of America than he had said before and afterward of Englishmen; but his ridicule, in his "*American Notes for General Circulation*," and his "*Martin Chuzzlewit*," of pretentious Congressmen, sharp speculators, and inquisitive Yankees, gave great offence for years. His own manly and generous apology for the unintentional pain he had caused, made during his second visit here in 1868, and after his return home, was sufficient to extinguish the last spark of animosity which had been felt on this account. He spoke of his surprise at the physical and social changes which a quarter of a century had wrought in a country of which his first impressions he confessed to have been extreme, and, whatever he might have said in the past, he pledged himself that, in every future copy of the two offending books, a record of his later impressions should be printed as an appendix, "not in mere love and thankfulness, but because I regard it as an act of plain justice and honor." He closed his remarks with these generous and noble words, which should efface all remembrance of his youthful indiscretions of language, if they deserve that name: "It is a duty with which I henceforth charge myself, not only here but on every suitable occasion whatsoever and wheresoever, to express my high and grateful sense of my second reception in America, and to bear my honest testimony to the national generosity and magnanimity." Before the appearance of "*Martin Chuzzlewit*," Mr. Dickens began a new series of works of which but little need be said, for who is there that knows them not by heart? "*The Christmas Carol*," in 1843, was the forerunner of a little bundle of annual books, which chanted the hymn of thankfulness, of generos-

ity, of domestic virtue, of patience and brotherly love, as few even of England's rarest poets had ever chanted it before. These perhaps, if not the best of his writings, are the creations which most clearly, as Thackeray says, rank as personal benefits. Filled with "sweet store of gracious thoughts," and "figures so delightful that one feels happier and better for knowing them, as one does for being brought into the society of very good men and women," "The Christmas Carol," "The Chimes," and "The Cricket on the Hearth," are books which the world must be better and happier for owning.

During part of the years 1844 and 1845, he travelled with his family in Italy, and, unlike every other man of genius who has visited that country, he found in it principally new material for humorous and racy description. When he returned to London it was to enter once more upon the profession of journalism. His engagement with Bentley had lasted but a little while, and indeed the "Answers to Correspondents" in the *The Miscellany*, while it was under his charge, displayed sometimes a comical sort of irritability which hinted significantly at his unfitness to bear with bores and donkeys. But his present undertaking was nothing less than the establishment of a new daily newspaper, Liberal in politics and cheap in price. This was *The Daily News*, which, after many vicissitudes, has become, next to *The Times*, the strongest and most influential of the English dailies. Mr. Dickens, however, came near killing it. Political discussion was not his strong point; and, of the brilliant staff who gathered around him, including Mr. C. W. Dike, father of the present editor of *The Athenaeum*, and Mr. George Hogarth, the historian of music, none were much better qualified for manager than himself. He soon resigned the uncongenial post, and devoted himself to "Dealings with the Firm of Dombey and Son," wherein he gave the beautiful sketch of Little Paul, the fine satire of Dr. Blimber's Academy, Toots and Susan Nipper, dear, ridiculous Captain Cuttle, and the pure fun of Jack Bunsby. The pathos of Paul Dombey is not so genuine and wholesome as the sad story of Little Nell; indeed, we begin to trace in all Dickens's novels from this time a more frequent prevalence of sombre hues—coloring certain chapters with a sickly tinge, and deepening at other times into tragic blackness. There is much of this in "Dombey and Son;" there is perhaps less in "David Copperfield," which followed in 1850. This novel is, in our judgment, the greatest of them all; the most perfect in construction, the most varied in its characters, the most natural in incident, while there is very little of the morbid element which is now and then conspicuous in so many of the other novels. In humor Dickens never did any thing superior to Mr. Micawber; in pathos he never surpassed Peggotty's narrative of the search for Emily. "Bleak House," which appeared in 1858, with

the never-to-be forgotten Jellybys, and Mr. Jarndyce, and the great Guppy, with the stinging satire on Chancery practice, the model detective, and the Smallweed family, may be said to have been the last of his great works, if we except "The Tale of Two Cities," which some critics rate above even "David Copperfield." In all the other novels since "Bleak House" there is traceable a growth of mannerism in style, an increasing tendency toward the sensational and grotesque, and a falling off, not in the quality, but in the abundance of the humor. "Little Dorrit," however, will be immortalized by the Circumlocution Office; "Hard Times," by its noble appeals for the rights of the working-classes against the tyranny of capital; "Great Expectations," by Joe Gargery and Uncle Pumblechook. "Our Mutual Friend" appeared in 1864, and, despite many characteristic excellences, caused general disappointment. "The Mystery of Edwin Drood," begun after a six years' cessation from serious literary labor, promised a revival of the old power, though the blackest gloom brooded over it from the opening scene in an opium-hell, to the significant, almost prophetic closing words of the last chapter published in *Every Saturday*: "There, there, there! Get to bed, poor man, and cease to jabber!" With that he extinguished his light, pulled up the bedclothes around him, and, with another sigh, shut out the world."

The miscellaneous labors of the last twenty years must be passed over briefly, though they were, indeed, not light. The weekly periodical, *Household Words*, was conducted by Mr. Dickens from its foundation, in 1850, until, through some disagreement with the publisher, after several years, he established *All the Year Round*, of which he remained really or nominally editor up to the time of his death. He wrote for these periodicals the sketches entitled "The Uncommercial Traveller," and began, about a year and a half ago, a series of "New Uncommercial Samples," of which, however, he completed only five or six. For many years it was his custom to issue, in connection with these periodicals, a Christmas budget of stories and sketches by five or six of his contributors, with a connecting thread, or a tale, or something happy, from his own hand; and it is to these that we owe some of the pleasantest of his lighter characters—such as Mrs. Lirriper, Chops the Dwarf, and the Cheap Jack. No complete collection of these minor papers has ever been made.

During the last few years Mr. Dickens had been winning almost as much fame and money as a reader of his own writings as he ever won by his books. There had long been rumors of his extraordinary abilities as an actor, and the favored few who obtained admission to the private theatricals at Tavistock House were loud in their praises of his histrionic talent. When he gave occasionally a reading of the Christmas Carol or the Chimes for a charitable

object, the hall was always thronged. It was not until 1858 that he began to read regularly for his own benefit. From that time until his farewell to the rostrum a few months ago, wherever he went, in England and America, he moved to laughter and to tears all who could come within reach of his voice. Critics differed about the merits of his performance, as critics differ about the merits of his books, but the people never tired of either the one or the other. It was for the purpose of giving readings that Mr. Dickens made his second visit to the United States, in 1867. He landed at Boston, and gave his first reading there before a highly-distinguished audience on the 2d of December. His visit was, in a much higher and better sense, than his first, a great success. Wherever he gave his readings they were attended by very large and delighted audiences, and the impression which he left of his own character and worth, both as a man and an author, was highly favorable.

Of his private life at home, quiet and uneventful as it was, there is not much to be told. In town he had apartments in Wellington Street, Strand, over the office of *All the Year Round*, but lived chiefly at the Garrick Club. His residence proper was at Gadshill in Kent, on the road to Canterbury, and about an hour's ride from London by railway, a spot celebrated in Shakespeare as the scene of Jack Falstaff's encounter with the men in buckram. That his domestic relations were not altogether happy, was perhaps more his misfortune than his fault. In the unhappy separation from his wife, in 1858, no stain rests upon the reputation of either. It was one of those cases of complete incompatibility of temper, aggravated, possibly, by mental disorder, where both the parties were happier apart, under the limited divorce, than they would have been together. "He was a man of practical charity," says one who knew him well both here and abroad, "and gave large sums judiciously every year. Indeed, he would get up in the night and go ten miles to aid any one who was suffering. The prevailing idea that he was accustomed to a very generous diet, which has mainly arisen from the jovial tone of his writings, is incorrect, for he was very careful in such matters." He was extremely popular in the place where he lived, and when he returned from America the neighboring farmers draped their houses with flags to receive him. Mr. Dickens was a great and original genius; he owed nothing to books, he borrowed from no one, he imitated no one, he was as creative as Homer; and, though the subjects he employed were common and familiar, as humanity is always common, yet his manner of treating them was his own; and every one of his creations, which live in the memories of his readers as real personages, had all the freshness of a new vitality. He has peopled literature and men's thoughts with characters as distinct as any in history.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. The correspondence concerning the foreign relations of the United States is contained in the various papers transmitted to the Houses of Congress in the second session of the Forty-first Congress and in the documents accompanying the annual message at the opening of the third session of that Congress. The latter documents are arranged in one volume of 536 pages, entitled "Foreign Relations."

CHINA.—On the 31st of August, 1869, the Department wrote to Mr. Bancroft (in reply to his statement that Mr. Burlingame was coming to Berlin, and that he desired the Department to indicate what was the policy of this Administration toward China) that, "unless it shall appear that they have already decided not to ratify the treaty of 1868, or unless you shall be satisfied that such will be their decision, and that the policy inaugurated by Mr. Burlingame is to be reversed, you will render him and his associates whatever assistance you can in securing the coöperation of North Germany in the new Chinese policy. You will also doubtless have an opportunity to impress upon Mr. Burlingame the importance to China of an early ratification of the treaties. I have stated already that the President has no solicitude as to the purpose of the Emperor's advisers in that respect. But he thinks it would be well to have defined in a permanent law, as soon as possible, the relations that are hereafter to exist between the United States and China."

The general policy of the United States toward China, as approved by the President, is indicated in the following instructions of the Secretary of State to Mr. Low, dated December 3, 1869:

You will observe that the President adheres to the policy adopted in 1868, when the articles additional to the treaty of 1858 (commonly known as the Burlingame treaty) were concluded. You will, therefore, so shape your private as well as your official conversation as to demonstrate to Prince Kung the sincerity of the United States in its wishes for the maintenance of the authority of the central government and for the peaceful spread of its influence. You will make clear to the government to which you are accredited the settled purpose of the President: to observe with fidelity all the treaty obligations of the United States, and to respect the prejudices and traditions of the people of China when they do not interfere with rights which have been acquired to the United States by treaty. On the other hand, you will not fail to make it distinctly understood that he will claim the full performance, by the Chinese Government, of all the promises and obligations which it has assumed by treaties or conventions with the United States. On this point, and in the maintenance of our existing rights to their full extent, you will be always firm and decisive. While you will put forward these claims, where occasion requires, with prudence and moderation, you will be unyielding in demanding the extreme protection to American citizens, commerce, and property, which is conceded by the treaties, and in requiring the full recognition of your own official position to which you are entitled.

Correa.—Some time in 1868, a number of French priests were murdered in Correa, and,

about the same time, a portion of the crew of the American vessel General Sherman became embroiled in a row and were arrested by the Korean authorities. A force sent from the Sherman rescued the men and seized two native officers as hostages. An excited populace attacked the vessel, killed eight of the crew, and captured a number of prisoners. The Korean government gave evidence of its desire to explain these occurrences and to make a treaty of amity and commerce with the United States.

DEPARTMENT OF STATE, }
WASHINGTON, April 20, 1870. }

SIR: It has been decided to authorize negotiations to be had with the authorities of Korea, for the purpose of securing a treaty for the protection of shipwrecked mariners, and to intrust the conduct of the negotiations to you. Should the opportunity seem favorable for obtaining commercial advantages in Korea, the proposed treaty should include provisions to that effect; but the President principally aims in this mission to secure protection and good treatment to such seamen of the United States as may unhappily be wrecked upon those shores.

The enclosed copies of the treaties concluded with Japan at Kanagawa in 1854, and at Yeddo in 1858, will serve to point out the kind of protection which you will seek to secure as well as the commercial articles which it may be desirable to enter into. These copies, together with the copies of dispatches from Consul-General Seward, which are enclosed, indicate fully what you are to endeavor to obtain.

Little is known of the shores or internal waters of Korea, or of the people who inhabit that country. Before leaving to carry out these instructions, you will endeavor to gather all the information on these subjects that can be obtained in Peking. Some political connection exists between China and Korea, which may make it advisable for you to secure, in advance, the good will and, possibly, the good offices of the Peking government. You will, of course, do whatever can be done in that way.

Admiral Rodgers will receive instructions, a copy of which has been forwarded you in my No. 8 from the Navy Department, to place at your disposal accommodation upon the flag-ship, and to accompany you himself upon this mission, with a display of force adequate to support the dignity of this Government. You will maintain entire frankness and unreserve with Admiral Rodgers, conferring freely with him in every stage of the negotiations.

In arranging the time for carrying out these instructions, it is also desirable, if possible, to secure the presence and cooperation of Consul-General Seward, who has had great experience in Oriental character, and who has also made a study of this question. Admiral Rodgers has instructions to take that officer with him in case he returns to China before you go. It is not supposed here that you will be able to comply with these instructions before next year, in which case Mr. Seward will probably be at his post.

It will also be necessary, in making your arrangements, to consult the convenience of Admiral Rodgers, and to defer to his superior knowledge of the best season for navigating those waters.

The Department relies upon you, in fulfilling these instructions, to exercise prudence and discretion, to maintain firmly the right of the United States to have their seamen protected, to avoid a conflict by force unless it cannot be avoided without dishonor, and to seek in all proper ways the harmonious and friendly assistance of the Chinese Government.

You will keep an account of your necessary expenses in carrying out these instructions, and draw upon Messrs. Baring Brothers & Co., of London, for

the amount thus expended, and furnish the necessary vouchers therefor. HAMILTON FISH.

Piracy.—On the 19th of February, 1870, Baron Gerolt, the North-German minister at Washington, addressed an official note to Mr. Fish, proposing "combined measures on the part of the maritime powers for the extermination of piracy in the Chinese waters." Mr. Fish, on the 31st of March, replied that the President had taken great pleasure in complying with the request of Count Bismarck by directing instructions to Admiral Rodgers to cooperate for that purpose with the naval forces of North Germany and such other powers as shall receive similar instructions. He added: "The cooperation of Admiral Rodgers and of the forces under his command will, however, be limited to cases of recognized piracy. He will be instructed to proceed in such a way as not to wound the sensibilities of the Chinese Government, or to interfere with the lawful commerce of the Chinese subjects, or to conflict with the peaceful policy toward China in which the Government of North Germany and the United States so happily agree."

Suspension of Hostilities in Chinese Waters.—On November 1st, the Secretary of State instructed Mr. Bancroft to ascertain if it were possible to obtain a suspension of hostilities and cooperative action between the squadrons of France and Germany, in the Chinese waters, so far as the protection of lives and property of Americans and Europeans might require; and instructed Mr. Motley to communicate the fact to Lord Granville. This step received the approval of the Prussian Government, and the cordial sanction of that of Great Britain.

Tien-tsin Riot.—Mr. F. F. Low, on the 27th of June, 1870, reported to Mr. Fish that on the 21st of June, 1870, a riot occurred at Tien-tsin which resulted in the death of sixteen French subjects, three Russians, and the destruction of the French consulate, Roman Catholic cathedral, and the establishment of the Sisters of Charity. Several native Christians were also killed. He further reported that the massacre appeared to have been incited by rumors that the Sisters of Charity in Tien-tsin were purchasing children and killing them to get their hearts and eyes for the purpose of manufacturing some sort of a medical specific. Mr. Low, in giving the details of the massacre, and enclosing other accounts of it, said that the action of the mob appeared not to have been directed against foreigners because they were foreigners, but rather against Catholics, not because Catholics were Christians, but because of their action in filling their asylums with children against the wishes of the Chinese. All French subjects were considered as accomplices in the supposed crime, because France appeared to be the guardian of the Catholic missions. The action of the French consul in not giving his consent to reasonable means for disabusing the Chinese mind of its prejudices, and allaying the excitement, and

in firing a pistol into a crowd of people, precipitated the bloody collision between natives and foreigners.

The ministers of the Western powers, residing in China, addressed a joint note to Prince Kung, requesting the prompt punishment of the offenders, and stating that it was indispensable, while other countries should hear the tidings of the crime, that they should at the same time be informed that justice was being done.

Delay occurring in the administration of the proper punishment, and affairs being still in such threatening condition as to cause the withdrawal of the American missionaries from Tunchow to Chefoo, Mr. Low, on the 13th of September, addressed a note of expostulation to Prince Kung. In the note the following paragraph occurs:

The traditional policy of the United States in their intercourse with China is peace, which it is the earnest desire of the undersigned, as well as his Government, to maintain, and nothing will cause a departure from this policy, except the flagrant violation of the rights and privileges of their citizens by the people, and the failure of the Imperial Government to apply the proper remedy promptly. In view of these considerations, I again most earnestly call your attention to the condition of affairs at Tunchow, to the end that you will cause such measures to be adopted as will assure citizens of the United States of their safety, and hasten the return of the missionaries to their homes and their posts of duty.

Though regarding the general tenor of Mr. Low's note as judicious and proper, the Secretary of State informed him on the 29th of November that the remarks above quoted contained too strong an assurance of forbearance, and it seemed to be proper that Prince Kung should understand that any violation of the rights of our citizens, and any flagrant violation of treaty stipulations of other powers, might cause a change in the policy of the United States.

The correspondence, continued through several months, depicts at length the causes for further disquietude, and the steps taken by the treaty powers to secure the protection of foreigners.

FRANCE.—The good offices of the United States were requested by the French Republic, to be exercised jointly with those of European powers in the interest of peace. Answer was made that the established policy of the United States forbade them to interfere in European questions jointly with European powers. It having been ascertained, informally and unofficially, that North Germany was not disposed to listen to such representations from any power, the President declined to take a step which could only result in injury to the true interests of the United States, without advancing the object for which the intervention was invoked.

Recognition of the Republic.—Early in September, and after the surrender of the Emperor at Sedan, the dynasty of Napoleon III. was declared at an end, and a provisional government, with General Trochu at its head, was

organized. On the afternoon of the 5th of September, amid great excitement, Gambetta proclaimed the republic from a balcony of the Hôtel de Ville.

Mr. Washburne having communicated the facts to this Government, by telegraph, he was instructed, by the same means, to recognize the republic. On the following day, the congratulations of the President and of the people of the United States, on the successful establishment of the republic, were telegraphed to Mr. Washburne for communication to its representatives. Mr. Washburne, on the 7th of September, communicated the intelligence to M. Jules Favre, the new French Minister for Foreign Affairs, who desired that an expression of his gratitude and profound emotion should be made known to the United States. The correspondence which took place on this occasion follows:

Mr. E. B. Washburne to M. Jules Favre.

LEGATION OF THE UNITED STATES,
PARIS, September 7, 1870. }

SIR: I have the honor to state that your communication of the 5th instant was received at this legation at 11 o'clock last night, in which you inform me that the Government of the national defence has, by a resolution of its members, confided to you the department of foreign affairs.

It affords me great pleasure to advise you that I have this morning received a telegraphic dispatch from my Government instructing me to recognize the Government of the national defence as the Government of France.

I am, therefore, ready to put myself in communication with that Government, and, under your permission, to transact all such business as may properly appertain to the functions with which I am charged.

In making this communication to your Excellency, I beg to tender to yourself and to the members of the Government of the national defence the felicitations of the Government and the people of the United States. They will have learned with enthusiasm of the proclamation of a republic in France, accomplished without the shedding of one drop of blood, and they will associate themselves in heart and sympathy with that great movement, confident in the hope of the most beneficial results to the French people and to mankind.

Enjoying the untold and immeasurable blessings of a republican form of government for nearly a century, the people of the United States can but regard with profoundest interest the efforts of the French people, to whom they are bound by the ties of a traditional friendship, to obtain such free institutions as will become to them and to their posterity the inalienable rights of "life, liberty, and the pursuit of happiness."

In conclusion, I desire to say to your excellency, that I congratulate myself that I am to hold relations with the Government of the national defence, through a gentleman so distinguished as your Excellency, and one so well known in my own country for his high character and his long and devoted services in the cause of human liberty and free government.

I take this occasion to assure your Excellency that I have the honor to be, with great respect, your obedient servant,
E. B. WASHBURN.

His Excellency JULES FAVRE, Minister of Foreign Affairs.

M. Jules Favre to Mr. E. B. Washburne.

(Translation.)

PARIS, September 8, 1870.

SIR: I look upon it as a happy augury for the French Republic that it has received as its first diplo-

matic support the recognition of the Government of the United States. No one can better remind us in words, both just and noble, of the inappreciable benefits of a republican government than the representative of a people which has given to the world the salutary example of absolute liberty.

You have founded your wise and powerful institutions upon independence and upon civic virtue, and, notwithstanding the terrible trials sustained by you, you have preserved with an unshaken firmness your faith in that grand principle of liberty, from which naturally spring dignity, morality, and prosperity.

Nations, masters of their own destinies, should strive to follow in your footsteps. They cannot be truly free unless they are devoted, fearless, moderate; taking for their watchword the love of labor and respect for the right of all. This is the programme of the new-born Government of France, springing from the painful crisis provoked by the follies of despotism, but at the hour of its birth it can have no other thought than to save the country from the enemy. Here, too, it meets the example of your courage and your perseverance.

You have sustained a gigantic contest, and you have conquered. Strong in the justice of our cause, rejecting all lust of conquest, desiring only our independence and our liberty, we have firm hope of success. In the accomplishment of this task we count on the aid of all men of heart, and of all governments interested in the triumph of peace. The adhesion of the Cabinet at Washington would alone give us this confidence. The members of the government beg me to communicate to you all their gratitude for it, and to request you to transmit its expression to your Government.

For my part I am happy and proud that fortune has permitted me to be the link of union between two peoples bound together by so many glorious memories, and henceforward by so many noble hopes, and I thank you for having, with so great kindness toward myself, expressed all which I feel toward you, as well as my desire to strengthen more and more the relations of affectionate esteem which should unite us forever.

Accept the assurances of the high consideration with which I have the honor to be, sir, your humble and obedient servant,
JULÉS FAVRE.

Mr. WASHBURN, Minister of the United States.

Mr. E. B. Washburne to Mr. Fish.

LEGATION OF THE UNITED STATES, }

PARIS, Sept. 9, 1870. (Received Sept. 22, 1870.)

SIR: At about 4 o'clock yesterday afternoon a large crowd of French people came to the legation, bearing the French and American flags, repeating the cries, "Vive l'Amérique!" "Vive la France!" A delegation, composed of very respectable gentlemen, waited upon me in my private room and read a short address, begging that I would transmit to my Government the thanks of a great number of French citizens for the promptness and cordiality with which it had recognized the French Republic. I beg to transmit you a copy of the address to me, and my response.

E. B. WASHBURN.

(Translation.)

LÉGATION DES ÉTATS-UNIS, }

PARIS, le 8 Septembre, 1870—4 P. M.

We come in the name of a large number of French citizens, certain that we shall be approved and followed by the whole nation, to beg you to present our thanks to your Government for the spontaneity with which it answered to the notification of our French Republic. To you, sir, reverts a large part of our thanks for the gracious words which your heart dictated in communicating to us the recognition by your Government. The French people will long remember the excellent words of the American minister. We did not expect less of this great and generous nation, whose aspirations and principles have always been in communion with the ideas of France. Amer-

ica and France are sisters, sisters as republics, that is to say, sisters in liberty. The ocean which separates us is less deep than the sentiments which unite us.

GENTLEMEN: On behalf of my Government I thank you for this demonstration. I shall take pleasure in transmitting the thanks which you have so eloquently expressed for the action which the Government of the United States has taken in recognizing the new republic of France. In my communication, to which you so kindly allude, I only expressed the sentiments of the President and of the people of the United States. The American people feel the greatest interest in the grand movement which has just been inaugurated in France, and will indulge in the most fervent wishes for its success, and for the happiness and prosperity of the French people. Living themselves under a republican form of government, they know how to appreciate its blessings, and to-day, with warm hearts and eloquent words, they felicitate their ancient ally in the accomplishment of that peaceful and bloodless revolution which must challenge the profound interest of all lovers of liberty throughout the world.

Mr. E. B. Washburne to Mr. Fish.

LEGATION OF THE UNITED STATES, }

PARIS, Sept. 9, 1870. (Received Sept. 22, }

SIR: I have the honor to enclose you herewith the proclamation of the Government of the national defence, together with certain decrees issued yesterday, and appearing in the official journal this morning. You will perceive that an election is ordered for the 16th proximo for members of a National Constituent Assembly, to consist of one hundred and fifty delegates.

E. B. WASHBURN.

GREAT BRITAIN. *Alabama Claims.*—The correspondence on the Alabama claims, which has not been noticed in the ANNUAL CYCLOPEDIA, runs through the years 1869-'70.

After the rejection of the Johnson-Clarendon Convention, Mr. Motley was instructed to say that this Government, in rejecting the recent convention, abandons neither its own claims nor those of its citizens, nor the hope of an early, satisfactory, friendly settlement, and to base the cause of grievance against Great Britain not so much upon the issuance of her recognition of the incipient state of war, but upon her conduct under and subsequent to such recognition. That minister did not represent to Lord Clarendon the hope of an early, satisfactory, and friendly settlement. He said that the President recognized the right of a sovereign power to issue proclamations of neutrality between the insurgent portion of a nation and the lawful government, when such insurrection should have gained the necessary magnitude, consistency, and extent of organized power and probability of justification be success, but that such measures must always be taken with a full view of the grave responsibilities assumed. His course in this respect being disapproved by the Government, negotiations were withdrawn from London, and, it appearing by a subsequent dispatch that he had submitted an account of the interview to Lord Clarendon for verification, he was instructed to inform Lord Clarendon that his course had been disapproved.

On the 25th of September, 1869, Mr. Fish instructed Mr. Motley to read a dispatch of

that date to Lord Clarendon, in which he stated that

The President does not deny, on the contrary he maintains, that every sovereign power decides for itself, on its responsibility, the question whether or not it will, at a given time, accord the status of belligerency to the insurgent subjects of another power, as also the larger question of the independence of such subjects, and their accession to the family of sovereign states.

But the rightfulness of such an act depends on the occasion and the circumstances, and it is an act, like the sovereign act of war, which the morality of the public law and practice requires should be deliberate, reasonable, and just, in reference to surrounding facts; national belligerency, indeed, like national independence, being but an existing fact, officially recognized as such; without which such a declaration is only the indirect manifestation of a particular line of policy.

Mr. Fish further said :

We hold that the international duty of the Queen's Government in this respect was above and independent of the municipal laws of England. * * * The President is not yet prepared to pronounce on the question of the indemnities which he thinks due by Great Britain to individual citizens of the United States, for the destruction of their property by rebel cruisers fitted out in the ports of Great Britain.

Nor is he now prepared to speak of the reparation which he thinks due by the British Government for the larger account of the vast *national* injuries it has inflicted on the United States.

Nor does he attempt now to measure the relative effect of the various causes of injury, whether by untimely recognition of belligerency, by suffering the fitting out of rebel cruisers, or by the supply of ships, arms, and munitions of war, to the Confederates, or otherwise, in whatsoever manner.

Nor does it fall within the scope of this dispatch to discuss the important changes in the rules of public law, the desirableness of which has been demonstrated by the incidents of the last few years now under consideration, and which, in view of the maritime prominence of Great Britain and the United States, it would befit them to mature, and propose to the other states of Christendom. * * * Although the United States are anxious for a settlement on a liberal and comprehensive basis of all the questions which now interfere with the entirely cordial relations which they desire to exist between the two governments, they do not now propose or desire to set any time for this settlement. On the contrary, they prefer to leave that question, and also the more important question of the means and method of removing the causes of complaint, of restoring the much-desired relations of perfect cordiality, and the preventing of the probability of like questions in the future, to the consideration of her Majesty's Government. They will, however, be ready, whenever her Majesty's Government shall think the proper time has come for a renewed negotiation, to entertain any proposition which that Government shall think proper to present, and to apply to such propositions their earnest and sincere wishes and endeavors for a solution, honorable and satisfactory to both countries.

To this Lord Clarendon, on the 6th of November, made reply, in which he stated :

The Government of her Majesty, equally with the Government of the United States, earnestly desire that all differences between the two nations may be adjusted amicably and compatibly with the honor of each, and that all causes of future difference between them may be prevented; and they would heartily cooperate with the Government of the United States in laying down as between themselves, and in recommending for adoption by other maritime nations,

such principles of maritime law as might obviate the recurrence of similar causes of difference between them.

And it is because they earnestly desire to hasten the period at which these important objects may be accomplished, that her Majesty's Government have determined not to follow Mr. Fish through the long recapitulation of the various points that have been discussed in the voluminous correspondence that has taken place between the two governments for several years.

And further :

But her Majesty's Government fully agree with Mr. Fish in considering that it would be desirable to turn the difficulties which have arisen between the two governments to good account, by making the solution of them subservient to the adoption, as between themselves in the first instance, of such changes in the rules of public law as may prevent the recurrence, between nations that may concur in them, of similar difficulties hereafter.

You may assure Mr. Fish that her Majesty's Government will cooperate with the Government of the United States for so salutary a result, which would redound to the mutual honor of both countries, and, if accepted by other maritime nations, have an important influence toward maintaining the peace of the world.

He also enclosed more informal notes, which became the subjects of considerable correspondence in the course of the following winter to ascertain their character.

After the death of Lord Clarendon, it being supposed that the new minister might perhaps desire to reopen negotiations, Mr. Motley was invited to resign, in order to afford the Government an opportunity to be represented by a person in harmony with it. Declining to do so, he was removed.

Fisheries.—Early in the season of 1870, the Dominion authorities revoked the system of fishing-licenses hitherto existing under their laws; and the Canadian Parliament, on the 12th of May, enacted a law which authorized British officers to bring vessels, hovering within three marine miles of any of the coasts, bays, creeks, or harbors of Canada, into port, to search the cargo, to examine the master on oath touching the cargo and voyage, and to inflict upon him a heavy pecuniary penalty, if true answers were not given; and if such a vessel should be found "preparing to fish" within three marine miles of any such coasts, bays, creeks, or harbors, without a license, or after the expiration of the period named in the last license granted to it, it was provided that the vessel, with her tackle, etc., should be forfeited.

The limits of Canada, as defined by the act of Parliament of 1825, exceed the limits existing at the conclusion of the treaty of 1818 between the United States and Great Britain. The late acts of the Canadian Parliament relating to inshore fishing infringe the treaty so far as they are applied to the coast beyond the Canadian boundary of 1818. The Secretary of State, in his note of May 31, 1870, to Mr. Thornton, communicated the views of this Government as to that point. Mr. Thornton, in reply, said that, while he thought the Secretary

of State was right in his statement as to the boundary of Canada, he would refer the subject to the Canadian Government and report their reply. Since the receipt of this acknowledgment, no further information to change the view of the United States Government has been received.

A discrepancy which would have resulted to the disadvantage of United States fishermen, having been discovered between the instructions issued to Vice-Admiral Wellesley by the Admiralty, and those issued by him to the British vessels under his command in Canadian waters, the Secretary of State, on the 8d of June, called the attention of Mr. Thornton to the subject. Mr. Fish was assured, in reply, that the vice-admiral's instructions would be modified so that fishing-vessels would not be seized unless it were evident and could be clearly proved that the offence of fishing had been committed, and the vessel itself captured, within three miles of land. Mr. Thornton expressed an apprehension that the circular of the Secretary of the Treasury upon the subject of inshore fishing might lead to misunderstanding, inasmuch as it limited the jurisdiction of the Dominion of Canada to three marine miles from the shores without regard to its jurisdiction over creeks and bays, or to the stipulations of the Treaty of 1818, in which, he claimed, the United States renounced the right of fishing within three miles, not of coasts only, but of bays, creeks, or harbors of British dominion in America. In reply to the last statement, the Secretary of State, on 30th of June, informed Mr. Thornton that the President directed the British Government to be informed that the description of the limits of Canadian maritime jurisdiction contained in the Treasury circular was adopted for the sake of brevity in expressing the interpretation heretofore placed by the United States on the first article of the Treaty of 1818, and not for renewing a controversial discussion on the subject.

In August last the Dominion Government prohibited United States fishing-vessels from entering any harbor under its jurisdiction for the purpose of leaving fish in bond, and subsequently reshipping them. This prohibition was extended to the obtaining of supplies. This measure was the occasion of the abandonment of many voyages and consequent damage to the fishing interests of the United States.

The purpose of the Dominion Government seems to have been to compel the conclusion of a reciprocity treaty by the United States.

On the 18th of September, the Assistant-Secretary of State requested information from the consul of the United States as to whether the practice of transshipment in bond was not permitted before the existence of the late Reciprocity Treaty, whether the American fishing-vessels were admitted to ports of entry in British North America for that or any other

purpose prior to the date of that treaty, and if it was prohibited by any colonial law; if any prosecutions for the violation thereto had taken place, and their results. It was ascertained that the practice of procuring supplies at colonial ports had long prevailed with mutual advantage; that since the abrogation of the Reciprocity Treaty it had been the practice of the colonial authorities to permit the transshipment in bond of American-caught fish. It was not ascertained that any prosecutions had arisen out of the exercise of these privileges. Subsequent seizures, by British authorities, of United States fishing-vessels, under circumstances which did not seem to warrant such a severe measure, were the occasion of the following correspondence between the Secretary of State and the United States consul-general at Montreal:

Mr. Fish to Mr. William A. Dart.

DEPARTMENT OF STATE,
WASHINGTON, October 29, 1870. }

SIR: Several seizures of American fishing-vessels are reported by the consular officers within your consulate-general, and by the parties interested. Some of the vessels thus seized, upon the charge of violating the laws of the Dominion of Canada, or the other British North American provinces, have been taken into port for adjudication by the tribunals to which that function is assigned by the laws of the respective provinces. It is to be presumed that those tribunals will decide the cases respectively with intelligence and impartiality. It is the duty of the owners of the vessels to defend their interests before the courts at their own expense and without special assistance from the Government in the present stage of affairs. It is for those tribunals to construe the statutes under which they act. If the construction they may adopt shall appear to be in contravention of our treaties with Great Britain, or to be (which cannot be anticipated) plainly erroneous in a case admitting no reasonable doubt, it will then become the duty of the Government—a duty it will not be slow to discharge—to avail itself of all necessary means for obtaining redress. The present embarrassment is that, while we have reports of several seizures upon grounds as stated by the interested parties, which seem to be in contravention of international law and special treaties relating to the fisheries, these alleged causes of seizure are regarded as pretensions of over-zealous officers of the British Navy and the colonial vessels, which will, as we hope and are bound in courtesy to expect, be repudiated by the courts before which our vessels are to be brought for adjudication. It is the desire of this Government, nevertheless, that our consular officers should watch the course of proceeding in these cases, and give prompt and authentic information of any decision which may be made in them. In particular, if the charge against any American fishing-vessel is only that she has been preparing to fish, without actual fishing, in the prohibited limits, it is to be made known to the counsel of the owners of the vessel that this Government is not disposed to regard such mere preparation as an infraction of the obligations of our citizens engaged in the outfit and employment of fishing-vessels, and it is desirous of having the point distinctly presented and adjudicated, if possible, without being complicated with other questions, so that, if adversely decided, a case presenting that single issue may be made for appeal to the British tribunal of last resort. It is understood that the instructions of the Imperial Government of Great Britain do not authorize the capture of an American vessel *unless found fishing* within

three miles of the coasts from which they are prohibited, or of a line drawn across the mouths of bays whose mouths do not exceed six geographical miles in width. In any case of condemnation, it is desirable to have it appear with precision as well whether the vessel condemned was fishing within the prohibited distance, as whether the actual capture was made within that distance or beyond it, so as to be upon the high-seas, in the sense which this Government is disposed to attach to these words, for the purpose of questions arising out of the operations of our fishing-vessels on the northeastern coast.

In short, without incurring any expense in the employment of counsel till further instructed, it is expected that our consular officers in the districts where trials may take place of American vessels for supposed violations of the laws of the British imperial or colonial Governments will lend their countenance and aid to the parties interested, and give prompt information of any decisions which may be made. They will request, in courteous terms, of the proper officer of any court making a decision, a certified copy of the opinion which may be written in the cause, paying the proper fee therefor, which will be allowed in their quarterly accounts, and forward it with the least possible delay.

This Department has expected such information from the spontaneous activity of our consular officers, and attributes the absence of it to the provincial courts being now in vacation. If this is the fact, I shall be glad to be informed of the dates at which the respective courts, having jurisdiction in the premises, may be expected to convene for the dispatch of business.

You will call the attention of all the consuls in your jurisdiction to the contents of this instruction, who are located at points where vessels will be likely to be taken in for adjudication.

HAMILTON FISH.

Mr. William A. Dart to Mr. Fish.

CONSULATE-GENERAL OF THE UNITED STATES OF }
AMERICA FOR THE BRIT. N. AMERICAN PROVINCES, }
MONTREAL, Nov. 3, 1870. (Rec'd Nov. 6.) }

SIR: I have the honor to acknowledge receipt of your dispatch of the 29th ultimo, in reference to the seizure of American fishing-vessels off the coast of Nova Scotia and Prince Edward Island.

Upon the receipt of your telegram of the 28th ultimo, I sent a dispatch to all the consuls in the maritime provinces, calling their attention to their duty to report on cases of seizure by telegraph, and also in writing by mail.

Upon the receipt of yours of the 29th, which came to hand yesterday, I caused copies to be at once prepared, and dispatched the same by mail, accompanied by a letter to each, of which the enclosed is a copy. Two, at least, of the important consuls, that at Halifax and St. John, are now absent on leave from the Department, and I fear their deputies may not be as accurate in collecting information as the consuls would have been if at home.

It seems to me that the unfriendly construction given by the Dominion Government of the Treaty of 1818 was intensified in its harshness by the almost covert manner in which it was sought to be enforced. It was with the greatest difficulty that our consuls could ascertain from the commanders of the various armed vessels what they would consider cause for seizure and condemnation.

No adequate or suitable notice was given to the captains of American fishing-vessels, and they were seized for acts which they had been permitted to do from time immemorial, as well before as subsequently to the above-mentioned treaty.

Information has come to me from so many sources of declarations made by the various ministers of the Dominion Government, that I cannot doubt, and it is openly proclaimed here and believed to be true, that the enforcement of the above-mentioned treaty,

in the manner it has been enforced, has two objects, viz.: one of which is to create a Canadian sentiment in antagonism to the United States, with a view to check the spread of American sentiment here looking to ultimate annexation; the other object is, by the close control of the fishing interests to compel the United States, through her interests, to make a treaty of reciprocity of trade between the United States and the British provinces in North America.

The prevention of our vessels from purchasing supplies in Nova Scotia and Prince Edward Island is injuring the trade and commerce of those points, while the Dominion Government is deriving no corresponding advantage.

But a small fraction of the fish taken there is taken by the Canadians, and the exclusion of the people of the United States from there will not be likely, in view of the character of the inhabitants, and the duty upon fish, if maintained, to increase the number of Canadian fishermen.

I have the honor to be, very respectfully, your obedient servant,

WILLIAM A. DART, Consul-General.

CONSULATE-GENERAL OF THE UNITED STATES OF }
AMERICA FOR THE BRIT. N. AMERICAN PROVINCES, }
MONTREAL, November 2, 1870. }

SIR: I transmit herewith a copy of a communication which I have just received from the Department of State, giving its views and wishes in reference to the seizure of American vessels for alleged violation of the treaties and laws passed in pursuance to them, regulating the fishing-trade between the United States and the British North American provinces. I had supposed that the consuls within whose districts seizures have been made had kept the Department fully advised of each seizure and the ground upon which they were respectively made. I fear this duty has been neglected, which is much to be regretted considering the large interests involved, and the delicate and important questions that may arise. The neglect should be remedied at once and fully.

You will please report at your earliest opportunity what vessels have been seized, the date of seizure respectively, upon what alleged grounds; and what disposition has been made of the vessel. If a libel of information has been filed in the Admiralty Court, obtain a copy of it and transmit it to the Department. State when the courts commenced session, or when they will hold a session at which the several cases of seizure will be tried. Consult freely with the attorneys for the claimants of the several vessels, and make yourself familiar with the precise points which have arisen or will be likely to arise in each case, and with great care to accuracy, and transmit that information to the Department of State, and in cases where condemnation has already been had, procure and send to the Department the opinion of the judge condemning it; and it would be well, in case a vessel were released, to procure and send a like opinion.

You should keep the Department as freely and accurately advised of all these cases of seizure as a lawyer would his client in the progress and determination of an important suit.

Very respectfully, your obedient servant,

WILLIAM A. DART, Consul-General.

Northwest Boundary.—In April last, while engaged in locating a military reservation near Pembina, a corps of engineers discovered that the commonly-received boundary-line between the United States and the British possessions at that place is about 4,700 feet south of the true position of the forty-ninth parallel, and that the line, if correctly run, would leave the fort of the Hudson's Bay Company, at Pembina, within the territory of the United States. This information having been communicated

to the British Government, the United States were requested to consent, and did consent, to the present British occupation of the Hudson's Bay Company's fort. Deeming it important, however, that the boundary-line should be definitely fixed by a joint commission of the two Governments, estimates of the cost of such a commission were submitted by the President to Congress at the beginning of its present session.

International Coinage.—The Senate of the United States having, by resolution, requested the President to invite correspondence with Great Britain and other foreign powers, with a view to promote the adoption of a common unit and standard of an international gold coinage, the Secretary of State, by direction of the President, on the 11th of June addressed a circular, upon the subject, to the legations of the United States in Great Britain and in Continental Europe. The circular contains an elaborate and forcible statement of the reasons rendering the adoption of such a measure desirable, and suggests, as a plan favorable to the United States, the scheme known as the dollar scheme. This scheme proposes a reduction in the value of the dollar of three-tenths of one per cent., in order to make the coin of metrical weight, so

that three dollars coined of nine-tenths fineness, shall weigh five grammes, while two dollars shall contain three grammes of fine gold. It also contemplates that the British penny shall be equivalent to two metric cents, and that the sovereign and a new French coin of twenty-five francs, shall each be brought to the weight, fineness, size, and value of the half-eagle as reduced. It suggests (for consideration only, and not as the best theoretical solution of the question) that the international value of the coins of the nations that may become parties to any monetary convention, or who may in any other way arrange this question between themselves, shall be determined by the quantity of pure gold which it contains, which measure shall be expressed in a common standard of weight upon its face; and that, unless absolute unification can be obtained, all other questions of coinage be left to local law and experience. The French decigramme is suggested as the most convenient common measure by which to determine this quantity, and that it is desirable, if possible, to avoid running this expression into a fraction.

The Government of the United States suggests (also for consideration only) the following as a practicable table:

Country.	Denominations of Coin.	Present weight in decigrammes and decimal fractions of pure gold contained in coin.	Proposed weight of the same.	Percentage of change.
United States.....	Half-eagle.....	75.232	75	—3-10
Great Britain.....	Sovereign.....	73.224	73	—
France.....	Napoleon.....	58.065	58	—1-12
Prussia.....	Frederick d'or prior to 1858.....	80.302	80	—
Austria.....	Double ducat.....	68.838	69	+ $\frac{1}{2}$
Münzverein.....	Crown.....	100.00	100
Russia.....	Half-imperial.....	59.987	60	+1-20
Spain.....	Doubloon of 10 escudos, since 1864.....	75.488	75	—

These suggested changes are slight, and need scarcely be accounted for. If adopted, they afford in the decigramme an international unit which will be easily convertible from one expression into another, and fine gold is made the standard, without reference to the quantity of alloy.

On the 2d of July, Mr. Bancroft communicated to this Government a statement relating to the subject, which he had received from the Government of North Germany. He said that a reform of German coinage was contemplated; that certain steps of legislative inquiry indicated that fact. It seemed that the tendency in Germany was strong toward the adoption of the five-and-twenty franc gold-pieces as a standard.

JAPAN. Deportation of Christians.—In 1869 there were statements made to the representatives of Western powers in Japan, that native Christians in the islands of Soto had been persecuted to death by Japanese officers in charge of the islands. The investigations made by the Japanese Government failed to find any substantial grounds for the report. Early in 1870 it reached the ears of the for-

eign representatives that a system of deportation of the native Christians had been undertaken, and that the inhabitants of an entire Christian village were to be dispersed in the surrounding country.

On the 19th of January an interview was held in the city of Yeddo between the highest Japanese officers of state and the foreign representatives, in which the arrest of the deportation of Christians was under consideration. The result of the interview was a full understanding of the policy of the Mikado's government in decreeing that native Christians should be deported "to labor in the mines and live in the forests."

Mr. DeLong, United States minister in Japan, reported that a distinct and positive avowal was obtained to the effect that the Mikado's government, based upon the Sintoo creed, and depending for its perpetuity on the maintenance of that faith, foresaw in the propagandism of Christianity the overthrow of its faith and the fall of its dynasty.

The Government, while intrenching itself behind the legal shield of an abstract right to manage its own internal affairs without inter-

position, had no intention of practising cruelty in carrying out its policy.

It further appeared that the habit of propagandism, in contravention of Japanese law and treaty rights, by foreign missionaries, had caused the converts to assume contemptuous attitudes in relation to the sacred things of the Sintoo faith.

In his dispatch, No. 14, of January 22d, Mr. DeLong says: "It is quite clear that, by the deportation of over three thousand native Christians, the Mikado's government contemplates the conciliation of the Sintoo priesthood, the bigoted country squires, and all those numerous daimio's retainers and others in all parts of Japan, who are only by their own quarrels and feuds with their neighbors prevented from forming and organizing themselves into a great national anti-foreign party, which, if it were possible, would be overwhelming in its strength and unanimity on that basis."

The Secretary of State having received Mr. DeLong's account of the efforts of the foreign representatives in Japan to obtain a modification of the decrees of deportation, and having considered the disposition of the Japanese Government to comply therewith so far as consistent with its own security, informed Mr. DeLong on the 18th of April that his individual and coöperative efforts to prevent persecution were cordially approved by the Department.

Mr. Fish says further that these deplorable acts of the Japanese Government, however cruel and uncalled for, do not seem to have been done in violation of any treaty or agreement between Japan and the United States. They rather appear to have been done in the exercise of the internal authority which that government claims to possess over its subjects.

Until the views of the other treaty powers can be ascertained, the Department can give you no other instruction than to continue to act in the same spirit whenever occasion shall call for your interference.

An expression of the views of the other treaty powers having been invited by the Secretary of State, it was ascertained that the British Government, although desiring to use their influence on all occasions in favor of native Christians in Japan, would not think it advisable to put upon the Mikado such an amount of pressure as might, if successful, serve to imperil his position with his subjects in general; that it had learned with satisfaction that Mr. Fish had expressed himself entirely opposed, on grounds both of principle and expediency, to the employment of force in behalf of Christian converts in Japan.

The British Government commended to its minister in Japan the propriety of the Roman Catholic missionaries impressing upon their converts the necessity of not setting themselves, upon the strength of their conversion, in opposition to the law of the empire. In a communication to Lord Lyons, the Earl of

Clarendon seemed to regard the distribution of the converts in nineteen different localities as more calculated to facilitate the propagation of Christianity throughout Japan than their unmolested residence in their former or any one locality.

He also commended to the French Government the policy of sustaining the Japanese in the interdiction of the propagandism of Christianity by Roman Catholic missionaries.

The views of the British and French Governments, which corresponded with those of this Government, were communicated on the 18th of June to Mr. DeLong.

NORTH GERMANY. *Protection of North Germans in France.*—About the middle of July France declared war against North Germany, and the United States were invited by the North-German Government to assume the protection of its subjects in France during the continuance of hostilities. Mr. Washburne was instructed to ask the assent of the French Government to this arrangement. This assent was freely given.

The Swiss minister in France was charged with the protection of the subjects of Bavaria and Baden, and the Russian minister with that of the subjects of Wurtemberg.

The French Government felt called upon, shortly after the breaking out of the war, to forbid the departure from France of such Germans as were subject to military duty in their own country. Mr. Washburne endeavored to obtain a modification of this determination of the Emperor's Government, and protested against the doctrine held by the Duke de Gramont as to the right of belligerents toward enemies' subjects residing in the belligerent's country.

Mr. Washburne's notes received the approval of the Secretary of State, and are to be found on pages 82 and 96 of the Executive Document No. 1, third session, Forty-second Congress. In the last note of the Duke de Gramont to Mr. Washburne, the expulsion of all Germans from France is alluded to as a possibility of the future. In the middle of August Mr. Washburne was informed by the French minister of the Interior that it had been determined to order all Germans, in the most humane manner, to leave the country. A very interesting account of Mr. Washburne's measures to obtain a revocation of the order is to be found on pages 99 to 103 of the above-mentioned document.

The situation of the Germans was aggravated by General Trochu's proclamation of August 24th, expelling "useless mouths," and of August 28th, expelling foreigners.

The necessity of providing some pecuniary relief for its distressed subjects was made known to the North-German Government. By its order a credit was placed at the disposal of Mr. Washburne to pay the expenses, to the frontier, of Germans leaving France.

On the 2d of September Mr. Washburne in-

formed the Secretary of State that the United States legation had visased passports and given safe-conduct for thirty thousand subjects of the North-German Confederation, expelled from France, eight thousand of whom had been furnished with railroad tickets, and a less number with a small amount of money.

Rights of Neutrals.—The principles which formed the celebrated declaration of the Congress of Paris were early in the war accepted by France as the rule by which her conduct as to neutrals would be guided.

The Danish proclamation of neutrality also announced the adherence of Denmark to these principles.

The North-German Confederation officially communicated to the United States its intention of adhering to the principle that private property on the high-seas would be exempt from seizure by Prussian ships without regard to reciprocity. The Government of the United States was especially gratified by this announcement, and on the 23d of July the following note was addressed by the Secretary of State to Baron Gerolt:

DEPARTMENT OF STATE, }
WASHINGTON, July 23, 1870.

SIR: I have the honor to acknowledge the receipt of your letter of the 19th instant, communicating to this Government the text of a dispatch from Count Bismarck, to the effect that private property on the high-seas will be exempt from seizure by the ships of his Majesty the King of Prussia, without regard to reciprocity.

In compliance with the request further contained in your note, that communication has been officially made public from this Department.

It is now nearly a century since the United States, through Thomas Jefferson, Benjamin Franklin, and John Adams, their plenipotentiaries, and Prussia, under the guidance of the great Frederick, entered into a treaty of amity and commerce, to be in force for ten years from its date, whereby it was agreed that, if war should unhappily arise between the two contracting parties, "all merchant and trading vessels employed in exchanging the products of different places, and thereby rendering the necessities, conveniences, and comforts of human life more easy to be obtained, and more general, should be allowed to pass free and unmolested; and that neither of the contracting powers should grant or issue any commission to any private armed vessels, empowering them to take or destroy such trading-vessels, or interrupt such commerce."

The Government of the United States receives with great pleasure the renewed adherence of a great and enlightened German Government to the principle temporarily established by the Treaty of 1785, and since then advocated by this Government whenever opportunity has offered. In 1854, President Pierce, in his annual message to Congress, said: "Should the leading powers of Europe concur in proposing, as a rule of international law, to exempt private property upon the ocean from seizure by public armed cruisers, as well as by privateers, the United States will readily meet them on that broad ground." In 1856, this Government was invited to give its adherence to the declaration of Paris. Mr. Marcy, the then Secretary of State, replied: "The President proposes to add to the first proposition in the declaration of the Congress at Paris the following words: 'And that the private property of the subjects or citizens of a belligerent on the high-seas shall be exempted from seizure by public armed vessels of the other belliger-

ent, unless it be contraband. Thus amended, the Government of the United States will adopt it, together with the other three principles contained in that declaration.'" And again, in 1861, Mr. Seward renewed the offer to give the adhesion of the United States to the declaration of the Congress of Paris, and expressed a preference that the same amendment should be retained.

Count Bismarck's dispatch, communicated in your letter of the 19th instant, shows that North Germany is willing to recognize this principle (even without reciprocity) in the war which has now unhappily broken out between that country and France. This gives reason to hope that the Government and the people of the United States may soon be gratified by seeing it universally recognized as another restraining and harmonizing influence imposed by modern civilization upon the art of war.

Accept, sir, the renewed assurance of my very high consideration.
HAMILTON FISH.

On the 23d day of August, the President found it necessary to issue his proclamation enjoining neutrality as to the belligerents in the present war.

French cruisers appearing off the coasts and harbors of the United States, apparently with a view to abuse their hospitality by making such waters subservient to purposes of war, the President issued his proclamation on the 8th of October, defining the rights and obligations of the belligerents as to such neutral waters.

Rights of Legation.—After the circumvallation of Paris by the Germans, Count Bismarck wrote to M. Jules Favre that a courier with the dispatches of foreign ministers in Paris would be allowed to pass through the lines of the besieging army, on the condition that such dispatches should be unsealed, subject to the inspection of the Prussian authorities, and to contain nothing in relation to the war. The diplomatic corps in Paris unanimously determined not to accept the conditions.

On the 6th of October the representatives of foreign powers in Paris addressed a joint note to Count Bismarck, stating that, if the condition (viz., to send dispatches unsealed) was insisted upon, it would be impossible for the diplomatic representatives of neutral states to keep up official communications with their respective governments.

Count Bismarck, on the 10th of October, made the following reply:

VERSAILLES, October 10, 1870.

SIR: I have had the honor to receive the letter of the 6th October, by which the members of the diplomatic corps who still reside in Paris wished to inform me that it would be impossible for them to entertain official relations with their governments, if the condition was to be insisted on that only open dispatches could be addressed to them. When the refusal of an armistice by the French Government rendered the continuation of the siege of Paris inevitable, the Government of the King, at his own instance, notified the agents of the neutral powers accredited to Berlin, by a circular note of the 28th September, from the Secretary of State, M. Von Thile, that liberty of relations with Paris existed only so far as permitted by military events.

The same day I received, at Ferrières, the communication of the Minister of Foreign Affairs of the Government of the national defence, informing me of

the desire expressed by the diplomatic corps to send a courier each week with the dispatches for their governments. I did not hesitate, in accordance with the rules established by international law, to give the answer dictated to me by the exigencies of the military situation. It has seemed proper to the men actually in power to establish the seat of their government in the interior of the fortifications of Paris, and to choose this city and its environs for the scene of war. If the members of the diplomatic corps accredited to the preceding government have decided to share, with the Government of national defence, inconveniences inseparable from a stay in a besieged fortress, the responsibility for it does not rest with the Government of the King.

Whatever may be our confidence that the subscribers to the letter of the 6th October will submit personally, in the communications addressed to their governments, to the obligations which their presence in a strongly-besieged place may impose on diplomatic agents, in accordance with the rules of war, we must not the less take into consideration the fact that the importance of certain facts in a military point of view might escape them. It is evident, besides, that they could not offer to us the same guarantee for the messengers whom they are to employ, and whom we shall be obliged to allow to pass our lines. A state of things has been produced in Paris no analogous precedent to which is offered by modern history, viewed from the stand-point of international law.

A government, at war with a power which has not yet recognized it, is shut up in a besieged fortress, and sees itself surrounded by a party of diplomatists, who had been accredited to a government for which the Government of the national defence has been substituted. In presence of so irregular a situation, it will be difficult to establish, on the basis of the law of nations, rules which would be incontestable from all points of view.

I believe myself entitled to hope that your Excellency will comprehend the justice of these observations, and will appreciate the considerations which, to my lively regret, prevent me from giving assent to the desire expressed in your letter of the 6th October. Besides, if the subscribers cannot admit the justice of this denial, the governments which they have represented at Paris, and whom I shall, without delay, make acquainted with the correspondence exchanged between us, will put themselves in communication with the Government of the King, in order to examine the questions of the laws of nations, which are attached to the abnormal condition which events and the measures of the Government of the national defence have created in Paris.

I have the honor, etc., BISMARCK.

The Secretary of State, in receiving information of what had occurred, on the 11th of November addressed the following dispatch to Mr. Bancroft:

DEPARTMENT OF STATE,
WASHINGTON, November 11, 1870. }

SIR: The refusal of the German authorities at the investment of Paris to allow the United States minister there to send a messenger to London with a pouch, with dispatches from his legation, unless the contents of the pouch should be unsealed, must be regarded as an uncourteous proceeding, which cannot be acquiesced in by this Government. Blockade by both sea and land is a military measure for the reduction of an enemy's fortress, by preventing the access of relief from without, and by compelling the troops and inhabitants to surrender for want of supplies. When, however, the blockaded fortress happens to be the capital of the country where the diplomatic representative of a neutral state resides, has the blockading force a right to cut him off from all intercourse by letter with the outer world, and even with his own government? No such right is either expressly recognized by public law, or is even

alluded to in any treatise on the subject. The right of legation, however, is fully acknowledged, and, as incident to that right, the privilege of sending and receiving messages. This privilege is acknowledged in unqualified terms. There is no exception or reservation looking to the possibility of blockade of a capital by a hostile force. Although such blockades are not of frequent occurrence, their liability to happen must have presented itself to the minds of the writers on public law, and, if they had supposed that the right of sending messengers was merged in or subordinate to the belligerent rights of the assailant, they certainly would have said so. Indeed, the rights of legation under such circumstances must be regarded as paramount to any belligerent right. They ought not to be questioned or curtailed, unless the attacking party has good reason to believe that they will be abused, or unless some military necessity, which upon proper statement must be regarded as obvious, shall require the curtailment.

The condition upon which the sending of messengers was offered was humiliating, and could not be accepted by any diplomatic agent with any self-respect. Correspondence between those officers and their governments is always more or less confidential, and it is unreasonable to suppose that its inspection by the blockading force should be permitted. Indeed, the requirement of such a condition must be regarded as tantamount to an imputation both upon the integrity of the minister and the neutrality of his government.

You will consequently remonstrate against the exercise of authority adverted to, as being contrary to that paramount right of legation which every independent nation ought to enjoy, and in which all are equally interested.

Prussia has heretofore been a leading champion of the rights of neutrals on the ocean. She has, even during the existing war, made acknowledged sacrifices to her faith and consistency in that respect. The course of her arms on land does not seem to warrant or require any enforcement of extreme belligerent claims in that quarter as against neutrals.

An analogous privilege of legation was upon several occasions successfully asserted by this Government, during the late war between Brazil and her allies on the one side, and Paraguay on the other. Mr. Washburn, the United States minister to Paraguay, applied for a permit to take him through the hostile lines to Asuncion, his destination. The application, though at first rejected, was ultimately granted. Application was subsequently made for leave for General McMahon, his successor, to pass the same lines, and for the vessel which carried him to bring back Mr. Washburn. This, also, though at first refused, was ultimately granted. There is reason to believe that the course taken by this Government on those occasions was approved by other governments. It is probable that other governments would also sanction the claim of the United States in this case.

HAMILTON FISH.

On the 21st of the same month a note on the same subject was addressed to Baron Gerolt by the Secretary of State.

Mr. Fish to Baron Gerolt.

DEPARTMENT OF STATE,
WASHINGTON, November 21, 1870. }

SIR: The undersigned, Secretary of State of the United States, duly received the note of the 4th instant, with the accompanying documents, addressed to him by Baron Gerolt, envoy extraordinary and minister plenipotentiary of the North-German Union, relative to intercourse between the diplomatic representatives in Paris of the governments of neutral states and their respective governments. In that communication it is assumed that, Paris being in a state of siege by the German forces, the latter have a belligerent right, under the public law, to cut off all

intercourse between the diplomatic representatives of foreign powers there and their governments at home, or, if such intercourse should be allowed at all, that the besieging force may prescribe the conditions upon which it shall be permitted. The right seems further to be claimed upon the alleged impropriety of diplomatic agents continuing to reside in a beleaguered city which contains persons in authority whose title thereto has not been recognized by the assailant.

The undersigned, after a careful consideration of the subject, and with every disposition to acknowledge the just and necessary belligerent rights of the blockading force, cannot acquiesce in the pretension set up on behalf of that force. It is true that, when such a force invests a fortified place with a view to its reduction, one of the means usually relied upon for that purpose is, the interruption of ordinary communication by messengers or by letters. This is acknowledged to be not only a belligerent right, but also one incident to the actual sovereignty over the enemy's territory occupied by the assailant adjacent to the blockaded place. Paris, however, is the capital of France. There the diplomatic representatives of neutral states had their official residence prior to the investment. If they think proper to stay there while it lasts, they must expect to put up with the inconveniences necessarily incident to their choice. Among these, however, the stopping of communication with their governments cannot be recognized. The right of embassy to a belligerent state is one which it is both the duty and the interest of its enemies to acknowledge, and to permit the exercise of, in every usual or proper way. If this right should be denied or unduly curtailed, wars might be indefinitely prolonged, and general peace would be impracticable.

The privilege of embassy necessarily carries with it that of employing messengers between the embassy and its government. This is a privilege universally recognized by publicists. There is no exception or reservation made for the case of an embassy having its abode in a blockaded place. Indeed, the denial of the right of correspondence between a diplomatic agent in such a place and his government seems tantamount to insisting that he cannot elect to be a neutral, but must be regarded as an adversary if he continues to stay there, especially when the legitimacy of the authority of those directing the resistance is denied by the other assailant.

The opposite course, which it has suited the convenience of some neutral government to adopt, is obviously liable to be construed, partly, at least, the occasion of withholding the privilege of correspondence. Should this be a correct view of the case, no independent state, claiming to be a free agent in all things, could in self-respect acquiesce in a proceeding actuated by such a motive. The undersigned does not charge the Government of the North-German Union with being so actuated, but deems himself warranted in thus referring to the point, as it is adverted to by the representative of that Government both at Berlin and before Paris.

The undersigned is consequently directed to claim that the right of correspondence between the representatives of neutral powers at Paris and their governments is a right sanctioned by public law which cannot justly be withheld without assigning other reasons therefor than those which have hitherto been advanced. The burden of a proof of the sufficiency of those reasons, in furtherance of the belligerent rights of the assailant, must be borne by him.

While, however, the undersigned is directed to claim the right as due to all neutrals, he will not omit to acknowledge the partial exception made in favor of the minister of the United States for the reasons assigned.

The undersigned avails himself of this occasion to renew to Baron Gerolt the assurance of his very high consideration.

HAMILTON FISH.

Lately it is understood that the matter, so far as the United States are concerned, has been satisfactorily adjusted.

The United States Government have had occasion to remonstrate with the Government of Peru for the attempted detention by legal process of W. D. Farrand, bearer of dispatches from the legation of the United States. Upon the representation of Mr. Hovey, the United States minister, Mr. Farrand was released, and allowed to proceed on his way. The Peruvian Government contended that there were circumstances in the case which rendered the claim of Mr. Farrand to the privileges of his character as bearer of dispatches questionable.

The views of the United States are expressed in the following dispatch of Mr. Fish to Mr. Brent, of the 19th of October last:

DEPARTMENT OF STATE.

WASHINGTON, October 19, 1870. }

Sir: The question which arose between General Hovey and the Minister for Foreign Affairs of Peru, relative to the right of that government to obstruct the departure of Colonel Farrand, who had been appointed a bearer of dispatches by the general, seems to be of too much general importance to be left unnoticed by this Department. It is of no moment in the particular case, as the Peruvian Government ultimately connived at Colonel Farrand's departure.

The occasion for the colonel's employment in the character adverted to was the conclusion of two treaties between the United States and Peru, which were signed on the 6th and 12th of last month. General Hovey's instructions recognized his right to make such an appointment in such a contingency. The appointment was made accordingly on the 12th of September, and Colonel Farrand's passport in his official character issued to him on that day without any information to General Hovey that any branch of the Peruvian Government or any person objected to the colonel's discharging the duties of his trust. It seems, however, that subsequently, but before the colonel could start on his errand, a person claiming to be a creditor of his sued out judicial process forbidding him to leave Peru. General Hovey promptly complained of this proceeding as contrary to international law relative to the immunities of couriers, as set forth in Wheaton's treatise on that subject. The minister, in his reply, while acknowledging the authority of Wheaton, endeavors to restrict the privilege of couriers as there declared to those appointed by a government to its legations abroad, and enlarges upon the inconveniences which the more extensive enjoyment of such immunities would lead to. It is true that no abuse of the privilege in this case is alleged, but its existence is impliedly, at least, denied. This denial, however, has no support from Wheaton, or from any other writer on that branch of public law. If the Peruvian minister supposed that he had any reason to hesitate in acknowledging the unqualified character of the rule laid down by Wheaton, the plain and unequivocal terms in which Calvo speaks upon this point may be enough to remove any such hesitation. The work of this author on international law was published in Spanish at Paris, in 1868. It is remarkable as embracing every thing illustrative of the subject up to the time of its publication, and its clearness and precision are at least equal to its fulness. At paragraph 240, on page 350 of the first volume, may be found the words of which the following is a translation:

The inviolability which public ministers enjoy has also been extended to the messengers and couriers of the embassies and to those who proceed to them with official dispatches, and as a general rule to all who discharge, as cases may arise, any commission for those embassies.

This, it seems, should be conclusive of the question. If General Hovey had been aware that Colonel Farrand was justly liable to arrest, and had wilfully appointed him a bearer of dispatches to screen him therefrom, this would have been sufficient cause of complaint on the part of the Peruvian Government, and perhaps of censure of its minister by this Government. Even this knowledge on the part of the general, however, would not, it is conceived, have impaired the immunity of his courier under the public law. If alleged delinquencies or pretended claims are trumped up against persons appointed or about to be appointed couriers in foreign countries to prevent them from starting, the immunity guaranteed to them by public law may at any time be annihilated by an envious or malicious person. This is a result to be deplored and guarded against by all governments, by the Government of Peru as well as by the Government of the United States.

SPANISH AMERICA. *Commercial Relations with Spanish America.*—The Secretary of State, in a report, dated July 14, 1870, and addressed to the United States Senate, in reply to their resolution directing the President to institute an inquiry into the present condition of the commercial relations between the United States and Spanish America, reviews the growth of the United States in population and territory, and its relations both with Europe and South and Central America. After tracing the rise of the republics of South America, and the failure of the Panama Congress, the Secretary of State says:

It will not be presumptuous after the foregoing sketch to say, with entire consideration for the sovereignty and national pride of the Spanish-American republics, that the United States, by the priority of their independence, by the stability of their institutions, by the regard of their people for the forms of law, by their resources as a government, by their naval power, by their commercial enterprise, by the attractions which they offer to European immigration, by the prodigious internal development of their resources and wealth, and by the intellectual life of their population, occupy of necessity a prominent position on this continent which they neither can nor should abdicate, which entitles them to a leading voice, and which imposes upon them duties of right and of honor regarding American questions, whether those questions affect emancipated colonies, or colonies still subject to European dominion.

After reviewing the causes which have temporarily interrupted the commerce of the United States with the West Indies, and especially the Spanish islands, the Secretary says:

With none of the other Spanish-American states in North and South America are our commercial relations what they should be. Our total imports in the year ending June 30, 1869, from these countries, were less than \$25,000,000 (or not one-half the amount from Cuba alone), and our exports for the same time to them were only \$17,860,818; and yet these countries have an aggregate population nearly or quite as great as that of the United States; they have republican forms of government, and they profess to be, and probably really are, in political sympathy with us.

It appears that, notwithstanding the greater distance which the commerce has to travel in coming to and from Great Britain, notwithstanding the political sympathy which ought naturally to exist between republics, notwithstanding the American idea which has been so prominently and so constantly put forward by the Government of the United States, notwithstanding the acknowledged skill of American

manufactures, notwithstanding the ready markets which the great cities of the United States afford for the consumption of tropical productions, the inhabitants of the Spanish-American continent consume of the products of Great Britain more than twice the quantity they take of the products of the United States, and that they sell to us only three-fifths of the amount they sell to Great Britain. * * *

That their commerce with the United States is not large may be partially explained by the fact that these states have been subject to many successive revolutions since the failure of the Congress of Panama. These revolutions not only exhaust their resources and burden them with debt, but they check immigration, prevent the flow of foreign capital into the country, and stop the enterprise which needs a stable government for its development. * * *

These suggestions are, however, applicable to the British commerce as well as to our own, and they do not explain why we, with the natural advantages in our favor, fall so far behind. The Isthmus of Panama is the common point where the commerce of the western coasts of Mexico and South America meets. When it arrives there, why should it seek Liverpool and London rather than New York?

The political causes which have operated to divert this commerce from us the Secretary of State has endeavored to explain. A favorable time has now come for removing them—for laying the foundation of an American policy which shall bind in closer union the American republics. Let them understand that the United States do not covet their territories; that our only desire is to see them peaceful, with free and stable governments, increasing in wealth and population, and developing in the lines in which their own traditions, customs, habits, laws, and modes of thought, will naturally take them. Let them feel that, as in 1823, so now, this Government is ready to aid them to the full extent of its constitutional power in any steps which they may take for their better protection against anarchy. Let them be convinced that the United States is prepared, in good faith and without ulterior purposes, to join them in the development of a peaceful American commercial policy, that may in time include this continent and the West-Indian islands. Let this be comprehended, and there will be no political reason why we may not "secure to the United States that proportionate share of the trade of this continent to which their close relations of geographical contiguity and political friendship with all the states of America justly entitle them."

Copies of the report, with a request for information, were sent to the consular and diplomatic officers of the United States in South America. The replies of some of these officers have been printed in Executive Document one, third session, Forty-first Congress. They are very interesting and important explanatory statements of the reasons for the present condition of commercial intercourse between the United States and Spanish America.

SPAIN. *Good Offices of the United States.*—Under the head "Diplomatic Correspondence" in the last ANNUAL CYCLOPEDIA, page 222, it is inadvertently stated (with reference to the correspondence relative to the tender of good offices of the United States in the difficulties between Spain and Cuba) that the tender having been declined, the note was withdrawn, in conformity with diplomatic usage. The facts in the case are as follows: On the 28th of September, 1869, General Sickles informed Señor Silvela, the Spanish Minister of Foreign Affairs, that "the undersigned, in conformity

with his instructions, withdraws the offer of the good offices of the President of the United States, heretofore communicated to the government of his Highness the Regent; and, while both nations will reserve their full liberty of action, if the occasion shall hereafter arise when the United States may contribute by their friendly coöperation to the settlement of the questions at issue in Cuba, the undersigned is instructed to state that the President will be happy to assist in promoting a result so conducive to the interests of Spain and of America."

The Spanish Government, in its reply to General Sickles, stated that the withdrawal of the tender of good offices included the note of the 30th of September communicating them. As this statement was not warranted by the facts, and was incorrect in every particular, General Sickles insisted that it should be omitted. This the Spanish Government unwillingly assented to, and the note remained in accordance with the intention of the United States.

Indemnity Claims of United States Citizens against Spain.—Five different groups of proclamations have been promulgated by the superior political authority in Cuba, interfering in their effects with the rights and property of American citizens in the island. They relate to the mode of warfare to be adopted by the Spanish troops, the alienation of property, to embargoes, to trials by courts-martial, and to the maritime jurisdiction of Spain. The United States Government protested against the severe and unnecessary measures, and predicted that their operation would be fraught with injury to American interests. The apprehensions of the Government were soon verified. On the 9th of June there were thirteen United States citizens whose property had been embargoed, fifteen citizens who had been imprisoned *incomunicado*, and fifteen who had been arrested and imprisoned by the Spanish authorities in Cuba, without sufficient cause, and without opportunity of trial or defence. The Secretary of State, deeming the time a favorable one for bringing these several instances of the improper exercise of authority to the notice of the Spanish Government, and of announcing his determination to demand indemnification therefor, under the direction of the President, addressed a note upon the subject to Mr. Roberts, the Spanish minister.

Mr. Fish to Mr. Lopes Roberts.

DEPARTMENT OF STATE,
WASHINGTON, June 9, 1870. }

The undersigned is directed by the President to invite the earnest attention of Don Mauricio Lopes Roberts, envoy extraordinary and minister plenipotentiary of Spain, to the irregular and arbitrary manner in which the persons and properties of citizens of the United States are taken and held by the Spanish authorities in the Island of Cuba.

When Count Valmaseda in April of last year issued a proclamation declaring that every man from the age of fifteen years upward, found away from his habitation and not proving a sufficient motive therefor

would be shot; that every habitation unoccupied would be burned; and that every house not flying a white flag should be reduced to ashes, it became the duty of the undersigned to convey to Mr. Lopes Roberts the protest of the President against such a mode of warfare, and his request that the authorities in Cuba would take steps that no person having the right to claim the protection of the Government of the United States should be sacrificed or injured in the conduct of hostilities on that basis.

When, again, about the same time, it came to the knowledge of this Government that the Captain-General of Cuba had, on the 1st day of April, 1869, issued a proclamation which virtually forbade the alienation of property in the island, except with the revision and assent of certain officials named in the decree, and which declared null and void all sales made without such revision and assent, the President again directed the undersigned to say that he viewed with regret such sweeping interference with the rights of individuals to alienate or dispose of their property, and that he hoped that steps would be speedily taken to modify that decree so that it should not be applicable to the property of citizens of the United States, and so that disputes and complaints, that could not fail to arise if its execution should be attempted as to such property, might be prevented.

When, seventeen days later, a decree was issued creating an administrative council for the custody and management of embargoed property; and when three days afterward the Captain-General issued a circular extending the previous embargo to the property of all persons, either within or without the island, who might take part in the insurrection, whether with arms in their hands or aiding it with arms, munitions, money, or articles of subsistence, this Government confidently expected that the Cabinet of Madrid and the authorities of Spain in the Island of Cuba would regard the then recent expressions of its wishes, and would not willingly permit the rights of citizens of the United States to be interfered with or their properties to be sequestered without the forms of law to which they were entitled.

When the President directed the undersigned to invite attention to the possibility that the laws and decrees which had been promulgated in Cuba might lead to an infraction of the treaties between Spain and the United States, he was not unmindful of the disorganized condition of society in parts of that island, nor of the difficulties which attended the enforcement of the authority of Spain. On the contrary, he was induced to make such representation by a desire to avoid increasing those difficulties, and to prevent further complications so far as the act of this Government could do so.

The seventh article of the Treaty of 1795 between the United States and Spain provides—

That the subjects or citizens of each of the contracting parties, their vessels or effects, shall not be liable to any embargo or detention on the part of the other for any military expedition or other public or private purpose whatever; and in all cases of seizure, detention, or arrest for debts contracted, or offenses committed, by any citizen or subject of the one party within the jurisdiction of the other, the same shall be made and prosecuted by order and authority of law only, and according to the regular course of proceedings usual in such cases. The citizens and subjects of both parties shall be allowed to employ such advocates, solicitors, notaries, agents, and factors as they may judge proper, in all their affairs, and in all trials at law in which they may be concerned, before the tribunals of the other party; and such agents shall have free access to be present at the proceedings in such causes, and at the takings of all examinations and evidence, which may be exhibited in the said trials.

It is with great regret that the Government of the United States feels itself forced to say that it is informed that the provisions of this article of the Treaty of 1795 have not been kept in mind by the authorities in Cuba during the present struggle. It appears to the President that the sweeping decrees of April, 1869, have been put in operation against the proper

ties of citizens of the United States in violation of the treaty agreement that such property should not be subject to embargo or detention for any public or private purpose whatever.

Enclosed is a list of the citizens of the United States who, up to this date, have presented to this Government complaints of such embargo or detention of their property.

The decree of embargoes is of itself an extraordinary exercise of supreme power, outside of the ordinary and regular course of legal or judicial proceedings, and, even if properly exercised with respect to the subjects of Spain and their properties, appears to be in contravention of the rights secured by treaty to the citizens of the United States; and the proceedings under the decree against the properties of citizens of the United States have not, as is understood, been prosecuted by order and authority of laws only, but in the exercise of the extraordinary functions vested in or exercised for the occasion by the supreme political authority of the island, and have been arbitrary and unusual, and without the safeguards to personal rights and rights of property which ordinarily accompany legal proceedings and which the seventh article of the treaty guarantees.

It is understood that the citizens of the United States whose properties have been thus taken forcibly from them have not been allowed to employ such advocates, solicitors, notaries, agents, and factors, as they might judge proper; on the contrary, as this Government is informed, their properties have been taken from them without notice, and advocates, solicitors, notaries, agents, or factors, have not been allowed to interpose in their behalf. It is further understood that the names of parties whose properties are thus embargoed are from time to time published and their properties thereafter immediately seized, without opportunity to them or their agents to be present at any proceedings in regard thereto, or at the taking of examination or evidence.

In many instances these proceedings have been taken against the properties of citizens of the United States, who were not at the time, and who have not during the continuance of disturbances on the Island of Cuba been, within the jurisdiction of Spain. It is notorious that by going to the Island of Cuba, after the official denunciation of their alleged conduct, they would subject themselves to arbitrary arrest and possibly summary military trial, if not to the uncontrolled violence of popular prejudice.

The undersigned has also received representations from several citizens of the United States complaining of arbitrary arrest, and of close incarceration without permission to communicate with their friends, or with advocates, solicitors, notaries, agents, and factors, as they might judge proper. In some of these cases the parties have been released; in others they are understood to be still held in custody.

The undersigned has the honor to enclose a list of the citizens of the United States who up to this date have presented to this Government complaints of such arrest and detention.

In some cases, also, such arrests have been followed by military trial without the opportunity of access to advocates or solicitors, or of communication with witnesses, and without those personal rights and legal protections which the accused should have enjoyed; and such summary trials, when ending in conviction, have been followed by summary execution. Such cases, so far as they have come to the knowledge of the undersigned, are included in the list herewith transmitted.

What has been already done in this respect is unhappily past recall, and leaves to the United States a claim against Spain for the amount of the injuries that their citizens have suffered by reason of these several violations of the Treaty of 1795—a claim which the undersigned presents on behalf of his government with the confident hope that the Government of Spain, recognizing its justice, and making some

proper and suitable provision for ascertaining the amount which should rightfully come to each claimant, will also order the immediate restoration to the citizens of the United States of their properties which have been thus embargoed, and the release of those citizens of the United States thus held, or their immediate trial under the guarantees and with the rights accorded by the treaty.

As to the future, it is confidently expected that steps will be taken to insure against further violations of the treaty. The high sense of honor for which Spain is proverbial will (the President feels assured) prompt her to take vigorous steps to secure to citizens of the United States within Spanish dominions the full measure of the rights accorded to them by the Treaty of 1795.

The extraordinary powers as to affairs in Cuba which were conferred upon Mr. Lopez Roberts by his government, and which were communicated to the undersigned on the 12th day of August last, are understood by the Government of the United States to be broad enough to authorize him to arrest these infractions of the rights secured by the treaty, and to obtain the restoration of the properties. If, however, such is not the case, the undersigned then takes the liberty to ask Mr. Lopez Roberts to advise him of such absence of power, in order that instructions may be given to the minister of the United States at Madrid.

In closing this note, the undersigned must expressly reserve to the Government of the United States the right to restate its grievances on these points, as new facts may come to its knowledge showing further and other injuries to the properties of citizens of the United States from like causes.

The undersigned avails himself of this occasion to renew to Mr. Lopez Roberts the assurances of his highest consideration.

HAMILTON FISH.

Señor DON MAURICIO LOPEZ ROBERTS, etc.

Mr. Lopez Roberts to Mr. Fish.

WASHINGTON, June 24, 1870.—(Received June 25.)

The honorable Secretary of State of the United States was pleased to address, on the 9th instant, a note to the undersigned, inquiring whether the powers, with which he stated in his communication of August 12, 1869, that he had been invested, were or were not sufficiently ample to authorize him to interfere in cases of seizure of property and of arrests of citizens of the United States, which are declared by the Hon. Hamilton Fish to have been made in the Island of Cuba in a manner contrary to the spirit and letter of the treaties existing between the United States and Spain, the Federal Government proposing, in case that the undersigned is not in possession of the powers referred to, to send the necessary instructions to its representative at Madrid, General Sickles.

The undersigned has the honor to inform the honorable Secretary of State that, in view of the favorable situation in which the Island of Cuba now is, the government of his highness the Regent of the kingdom no longer deems it necessary to continue the powers which were granted to him at the time aforesaid, and which are mentioned by the honorable Secretary of State in his note.

The undersigned avails himself of this occasion to renew to the honorable Secretary of State the assurances of his highest consideration.

MAURICIO LOPEZ ROBERTS.

Hon. SECRETARY OF STATE of the United States, etc.

Mr. Fish to General Sickles.

DEPARTMENT OF STATE,

WASHINGTON, June 24, 1870. }

GENERAL: Enclosed you will find a copy of a note addressed to Mr. Lopez Roberts, on the 9th instant, relative to the claims of citizens of the United States against Spain, growing out of summary arrests and imprisonments, military executions, arbitrary embargoes of property, and other acts done by the Spanish authorities in Cuba to the persons and properties of

citizens of the United States, in violation of the provisions of the Treaty of 1795 between the Government of the United States and the Government of Spain. You will also find a further communication on the same subject in regard to a claim which was presented to the Department subsequent to the transmission of the note of the 9th instant. Each of the cases mentioned in the former of these notes had previously been the subject of instruction to the consul-general of the United States at Havana, to be brought to the attention of the authorities of the Island of Cuba, and of demand for redress.

You will observe that these notes were sent to Mr. Lopez Roberts under the supposition that the extraordinary powers as to Cuba, which were conferred upon him by his government last year, were still vested in him, and that they were broad enough to authorize him to arrest these infractions of the rights secured by the treaty, and to obtain the restoration of their properties to the citizens of the United States.

I am informed, however, by Mr. Roberts that these powers are no longer efficient, and that he can do nothing in the premises.

I have, therefore, to instruct you to bring this whole subject to the notice of the Spanish Government, and to say that the President hopes that immediate steps will be taken for the release of all the citizens of the United States who may be held in custody in Cuba in violation of the provisions of the Treaty of 1795, or for the immediate trial under guarantees, and with the rights secured by the treaty.

You are also instructed to ask for the restoration to the citizens of the United States of their properties and estates, so far as the same have been arbitrarily embargoed in violation of the provisions of the treaty.

You will also endeavor to secure some mode for the early and equitable indemnification and satisfaction, to the several parties whose rights have been violated, of the amounts which should rightfully come to each claimant for the illegal detention of his property or his person. You will say that this suggestion is made in the interest of peace, of justice, and of good-will, in order to secure a measure of damages in each case, which shall be just as between the two governments.

You will also say that it is extremely desirable to have the investigation conducted in this country. It cannot be done in Spain without subjecting the claimants to unnecessary expense. It cannot be done in Cuba at present without subjecting many of them to personal danger. In this connection I must again, on behalf of this government, express, in the interest of good-will and the continued good understanding which we desire to maintain with Spain, the strong desire of the President that the government at Madrid will confer fresh powers upon Mr. Lopez Roberts (or upon such other person on this side of the Atlantic as may be selected for that purpose) to arrange all such questions with this government.

The Spanish authorities in Cuba seem to be clothed with absolute power for the commission of such acts as are now complained of, but, when redress is sought, we are referred to the distant Cabinet at Madrid, where it is often found necessary to refer again to Cuba for information, and the case is thus suspended and delayed, to the grievous injury of the parties and at the hazard of irritation from the delay, of which the necessity is not apparent to the impatient sufferers or to the public.

The President has respected the Spanish claim of sovereignty over the Island of Cuba during the present contest against a strong sympathetic pressure from without. Spain owes it to the United States, as well as to her own traditional sense of justice, that her sovereignty shall not be used for the oppression and injury of the citizens of this republic. You will urge this point in every way that your good judgment may suggest. I am, general, yours, etc.,

HAMILTON FISH.

Major-General DANIEL E. SICKLES, etc., etc.

The fifth group of decrees relates to the maritime jurisdiction of Spain.

The first, dated March 24, 1869, and promulgated by Domingo Dulce, declares the disposition of the political authorities in Cuba to treat the crews of suspected vessels captured in the vicinity of the island as pirates, and further provides for the immediate execution of all persons so captured.

The cruel murder of Speakman and Wyeth was one of the lamentable results of this barbarous decree.

In the second decree, dated July 7, 1869, Captain-General de Rodas finds it convenient to unite and amplify several previous dispositions, and among others that of the 24th of March above described:

[Translation.]

FIRST SECTION.—GENERAL SUPERIOR OFFICES.—SUPERIOR POLITICAL GOVERNMENT OF THE PROVINCE OF CUBA.

HAVANA, July 7, 1869.

The custody and vigilance of the coasts of this island, adjacent keys, and territorial waters, being of the utmost importance in order to put an end to the parties of insurgents, which have been sustained by exterior aid, determined to give a vigorous impulse to their prosecution, and in order to explain certain doubts which have occurred to our cruisers as to the genuine interpretation of the decrees published by this superior political government under date of the 9th of November, 1868, and 18th and 26th of February, and 24th of March, of the present year, I have determined to unite and amplify in this all of the said dispositions, which therefore remain substituted by the present, and making use of the faculties with which I am invested by the government of the nation, I decree:

ARTICLE 1. There shall continue closed to import and export trade, as well for vessels in foreign commerce as also those in the coasting-trade, all the ports situated from Cayo Bahia de Cadix to Punta Mayso, on the north, and from Punta Mayso to Cienfuegos, on the south, with the exception of those of Sagua la Grande, Caibarien, Nuevitas, Gibara, Baracoa, Guantanamo, Santiago de Cuba, Manzanillo, Santa Cruz, Zaza, Casilda, or Trinidad, and Cienfuegos, in which there are established custom-houses or collection-offices.

Those who attempt to enter the closed ports or to hold communication with the coast shall be pursued, and, on being apprehended, prosecuted as infractors of the laws.

ART. 2. In accordance with the same there shall also be prosecuted vessels carrying powder, arms, or military supplies.

ART. 3. The transportation of individuals for the service of the insurrection is much more grave than that of contraband, and will be considered as an act decidedly hostile, being proceeded against in such case as an enemy, the vessel and its crew.

ART. 4. If the individuals to which the preceding article refers come armed, they will afford proof in fact of their intentions, and will be tried as pirates the same as the crew of the vessel.

ART. 5. There shall also be held to be pirates, in conformity with law, vessels which may be seized bearing a flag not recognized, whether the same be armed or not as vessels-of-war.

ART. 6. On the high-seas contiguous to those of this island the cruisers shall confine themselves to exercise over such vessels as may be denounced, or those that by their proceedings excite suspicion, the rights stipulated in the treaty signed by Spain with the United States in 1795, with Great Britain in 1835, and with other nations subsequently; and if in the

exercise of these rights vessels should be found recognized as enemies of the integrity of the territory, they shall be brought into port for the corresponding legal investigation and trial.

CABALLERO DE RODAS.

The United States Government regarded this decree as declaring the assumption of powers and rights over the trade and commerce of other peoples, as inconsistent with a state of peace, and to which they could allow their vessels to be subject only when Spain should avow herself to be in a state of war, or should be manifestly exercising the rights conceded only to belligerents in the time of war (Mr. Fish to Mr. Roberts, July 16, 1869).

In view of this announcement, the third decree is found to be a modification of that of the 7th instant, the sixth article being rescinded. This modification was promulgated on the 18th of July, 1869, by Captain-General de Rodas.

Speakman and Wyeth.—As before mentioned, by the decree of March 24, 1869, the execution of Speakman and Wyeth is attempted to be justified. The manner in which the demand for indemnity in these cases has been met is characteristic of the Spanish Government. The 14th of September, 1869, finds it promising that full reparation shall be made if facts are as alleged, and that investigation would be ordered. The 25th of March, 1870, finds Mr. Sagasta writing to Mr. Sickles that indemnity in Speakman's case cannot be allowed; that a report in Wyeth's case had just been ordered, and that Mr. Roberts has denied ever having given assurance of indemnity in the case of Speakman. The only rebutting evidence in this claim presented by the Spanish Government is contained in an affidavit of W. E. Welch, who claims to have been captain of the Grapeshot, the schooner on board of which Speakman and Wyeth were embarked. This affidavit was taken without notice to the Department of State and without an opportunity for any one representing the United States to be present.

The Secretary of State writes to Mr. Sickles on the 9th of March, 1870, that "as the deponent is regarded as an interested person, having an object in disproving the dying declarations of Speakman and Wyeth, and having himself been engaged in knowingly violating the laws of the United States, the Department is not supposed to give credence to his statements, nor to modify the instructions heretofore transmitted to you upon the subject."

The capture of the Lloyd Aspinwall was the result of the arbitrary policy of Spain, indicated in the decree just described. A short account of the circumstances attending the seizure of this vessel follows:

Lloyd Aspinwall.—The Lloyd Aspinwall, a steamer of New York, regularly cleared from Port au Prince, Hayti, for Havana, and having on board dispatches from Rear-Admiral Poor, addressed "To the care of the

United States Consul-General at Havana," was taken near Maternillas light-house near Nuevitas on the 21st of January, 1870, by the Spanish war-steamer Herman Cortes, brought into port, and detained by the Spanish authorities.

On the 5th of March Mr. Fish addressed Mr. Roberts a note on the subject. After recapitulating the circumstances of the seizure, he says:

On the 16th day of July last, the undersigned had the honor to address a note to Mr. Lopez Roberts, calling his attention to a decree then lately issued by the Captain-General of Cuba, contemplating an interference with the commerce of the United States on the high-seas.

In that note the undersigned made use of this language:

The freedom of the ocean can nowhere and under no circumstances be yielded by the United States. The high seas contiguous to those of the Island of Cuba are a direct pathway of a large part of the purely domestic trade of the United States. Their vessels, trading between their ports in the Gulf of Mexico and those of the Atlantic coast, pass necessarily through those waters. The greater part of the trade between the ports of the United States on the eastern side of the continent and those on the Pacific slope passes, of necessity, in sight of the Island of Cuba. The United States cannot, then, be indifferent or silent under a decree which, by the vagueness of its terms, may be construed to allow their vessels on the high-seas, whatever may be their cargo, to be embarrassed or interfered with. If Spain be at war with Cuba, the United States will submit to those rights which public law concedes to belligerents.

The decree to which the undersigned referred was, as the undersigned has been informed by the consul-general of the United States at Havana, modified by a further decree of the Captain-General on the 13th of July last.

The undersigned, cherishing the belief that there would be no further attempt on the part of the Spanish authorities to molest the commerce of the United States, has read with surprise the statements contained in the protest of the master of the Lloyd Aspinwall, sustained, as they are, by the authority of the acting consul-general at Havana.

The Government of the United States, remembering the long-established friendship between Spain and the United States, and the prompt response of the Captain-General of Cuba to the representations made by the undersigned to Mr. Lopez Roberts in July last, believe that the Spanish officials who have committed these affronts to the national honor of the United States and these wanton injuries to its citizens were not acting in compliance with orders. For it must be apparent that the Government of the United States cannot allow such acts to pass unquestioned or without full reparation.

The undersigned is instructed to ask Mr. Lopez Roberts to bring this subject to the attention of his government at the earliest possible moment, and to say that the Government of the United States trusts that that government will, when the matter shall have been brought to its notice, of its own accord offer to the Government of the United States a suitable apology for the indignity to the flag of the United States, and to the persons of the bearers of dispatches to this Government, and for the interference with the dispatches of the officers of this Government to this Department, and to the admiral in command of the squadron of the United States in those waters.

The undersigned is also directed to ask Mr. Lopez Roberts, in the exercise of the discretion which is understood to have been placed in him by his government, to cause the Lloyd Aspinwall to be forthwith set at liberty, and a proper compensation to be made to the owners of the vessel, and to all other

persons who may have suffered by the seizure or by the detention.

The undersigned avails himself of this occasion to offer to Mr. Lopez Roberts the renewed assurance of his highest consideration.

HAMILTON FISH, Secretary of State.

Señor Don M. LOPEZ ROBERTS, etc., etc.

On the 27th of April following, the vessel was released. Shortly afterward the Spanish Government agreed that the claim of the owners to indemnity for the improper detention of the vessel should be submitted to two commissioners, one appointed by each government, with power to select an umpire. The commissioners met and agreed upon an award in favor of the claimants. This award was promptly paid by the Spanish Government, and the case closed to the satisfaction of the United States Government.

Naturalized Citizens of the United States in Cuba.—The arrest and imprisonment of Gabriel Suarez del Villar, United States citizen by naturalization, at Trinidad de Cuba, gave rise to the following instructions of the Secretary and Assistant Secretary of State as to the status of naturalized citizens of the United States in the country of their nativity, and to the true interpretation of the doctrine asserted by Mr. Marcy in the case of Martin Kosta. The letters are given in full:

DEPARTMENT OF STATE, May 3, 1870.

I have to acknowledge the receipt of your dispatch No. 30, stating that in several cases native-born Cubans, after having been naturalized as citizens of the United States, have returned to Cuba, have resided there permanently without disclosing the change in their allegiance, and in some cases have accepted offices that can only be held by Spanish subjects; and asking instructions to guide you in such cases, should your official interference be asked. In reply I have to say that it is manifestly impossible to lay down rules to govern your proceedings in every such case that may arise.

Naturalized and native-born citizens are entitled to the same protection from the Government when in a foreign country; and both in such case are ordinarily subject to the laws of such country, and are bound to observe such laws to the same extent to which its own citizens or subjects are bound.

If they reside in such foreign country so as to become domiciled there, they further take upon themselves the duties and obligations toward the government of that country which attach to permanent residents.

It is also possible for a naturalized citizen, by returning to his native country and residing there with an evident intent to remain, or by accepting offices there inconsistent with his adopted citizenship, or by concealing for a length of time the fact of his naturalization, and passing himself as a citizen of his native country, until occasion may make it his interest to ask the intervention of the country of his adoption, or in other ways which may show an intent to abandon his acquired rights, to so far resume his original allegiance as to absolve the government of his adopted country from the obligation to protect him as a citizen while he remains in his native land.

In the cases that may come before you, you must exercise a sound discretion in determining whether each applicant for your interference has in good faith maintained his allegiance to the United States, assured that this Department will sustain you so long as you adhere to the principles of this instruction.

I am, etc., etc.,

HAMILTON FISH.

On May 12th the Department addressed the consul at Trinidad as follows:

DEPARTMENT OF STATE,
WASHINGTON, May 12, 1869. }

SIR: Your dispatch No. 5, enclosing copies of a correspondence between yourself and the Governor of Trinidad de Cuba, relative to the arrest and detention of four certain persons, all of Spanish origin, who (you claimed) were entitled to your official intervention, has been received.

It appears that, in April last, José M. Valdespino, Rafael Vingut, Gabriel Suarez del Villar, and Francisco de Yragorri, were arrested by order of the authorities at Trinidad de Cuba; that you interfered in their behalf, asking for the motives of 'their arrest,' claiming, as vice-consul of the United States, that they were American citizens; that correspondence in regard to this claim ensued, in the course of which you forwarded to the governor copies of the naturalization papers of each of these gentlemen; that the governor replied to this that he had examined the papers forwarded by you, and it appeared that only Mr. Suarez del Villar was a naturalized citizen of the United States, and that each of the other gentlemen had only declared his intention to become such citizen; that the governor thereupon conceded that Mr. Suarez del Villar was entitled to the prerogatives of United States citizenship, unless he had broken the laws of Cuba, or had renounced his adopted citizenship; and that, as to the three other persons, the governor demanded to know whether you still claimed for them the rights of citizens of the United States; that you replied, reasserting the right of these gentlemen to your official intervention and protection (referring to the case of Martin Kosta), and further saying that the case was submitted to your Government, and you must abide by its decision; and that the governor replied, reasserting his position, and denying the applicability of the Kosta precedent.

In reply, now, to your dispatch, I have to say that your action touching Mr. Gabriel Suarez del Villar is approved, and that your action in regard to the other gentlemen named in the correspondence is not approved.

The late distinguished Secretary of State, Mr. Marcy, was very careful, in his elaborate letter concerning the case of Martin Kosta, not to commit this Government to the obligation or to the propriety of using the force of the nation for the protection of foreign-born persons who, after declaring their intention to become at some future time citizens of the United States, leave its shores to return to their native country. He showed clearly that Kosta had been expatriated by Austria, and required to reside outside her jurisdiction; that at the time of his seizure he was not on Austrian soil, or where Austria could claim him by treaty stipulations; that the seizure was an act of lawless violence, which every law-abiding man was entitled to resist; and he took especial care to insist that the case was to be judged, not by the municipal laws of the United States, not by the local laws of Turkey, not by the conventions between Turkey and Austria, but by the great principles of international law. It is true that in the concluding part of that masterly dispatch he did say that a nation might at its pleasure clothe with the rights of its nationality persons not citizens, who were permanently domiciled in its borders. But it will be observed by the careful reader of that letter that this portion is supplemental merely to the main line of the great argument, and that the Secretary rests the right of the Government to clothe the individual with the attributes of nationality, not upon the declaration of intention to become a citizen, but upon the permanent domicile of the foreigner within the country.

To extend this principle beyond the careful limitation put upon it by Secretary Marcy would be dangerous to the peace of the country. It has been

repeatedly decided by this Department that the declaration of intention to become a citizen does not, in the absence of treaty stipulations, so clothe the individual with the nationality of this country as to enable him to return to his native land without being necessarily subject to all the laws thereof.

In the present unhappy state of things in Cuba the Secretary of State can see no reason for departing from so well-established and so wise a rule. He sees with horror the barbarous proclamations of the Spanish authorities, and hears with regret of the great destruction of property caused by the civil war. He earnestly exhorts you, and all other consuls of the United States, to spare no effort to protect the lives, the property, and the rights of American citizens in this emergency, and he will see with satisfaction any unofficial efforts you may make to shield the persons of those who have declared their intentions to become citizens from the barbarities of the Spanish volunteers, but he desires me to direct you hereafter in your official action to observe the rule laid down for your guidance in this instruction.

I am, sir, your obedient servant,

J. C. B. DAVIS, Assistant Secretary.

HORATIO FOX, Esq., U. S. Consul, Trinidad de Cuba.

Slavery Emancipation in Cuba.—It appearing from Mr. Sickles's dispatch to the Secretary of State, of December 29, 1869, that he considered himself to be acting unofficially in representing the wishes of his government as to the abolition of slavery in Cuba and Porto Rico, the Secretary of State on the 26th of January, 1870, informed him that it was his duty at all times, whenever in his judgment a fitting opportunity should offer, to do all in his power to secure complete emancipation, not only in Cuba, but also in Porto Rico.

The text of the proposed constitution for Porto Rico sent by Mr. Sickles with his dispatch 114 to the Department of State not only fails to make any provision for the abolition of slavery either by the local or general government, but even forbids the public discussion of the subject in the island.

On the 30th of May, 1870, Mr. Sickles enclosed to the Secretary of State a copy of the bill for the abolition of slavery in the Island of Cuba, presented to the Cortes by the Spanish Minister of the Colonies, with the remark that the project of law was shaped to suit the views of the slaveholders.

As passed on the 23d of June, it provided that all children of slave-mothers, born after the decree, should be free, but made no provision for their support; that all slaves born between the 18th of September, 1868, and the publication of the decree, might free themselves by the payment of \$50; that all slaves who reach the age of sixty-five years should be free. It abolished punishment with the lash, the separation of children under fourteen years of age from their parents, and husbands from their wives. The Secretary of State, commenting upon this measure, says in his dispatch of the 20th of June, 1870, to Mr. Sickles, that it may be called a project for relieving the slave-owners from the necessity of supporting infants and aged slaves who can only be a burden, and for prolonging the institution as to the able-bodied.

He further states that the President feels it to be his duty to endeavor to impress upon the Spanish Cabinet the policy as well as the propriety of making at once provision for an earlier and more thorough emancipation of slaves, and Mr. Sickles is instructed to communicate the views of the United States Government in a friendly but decided manner.

The United States Government having always considered the abolition of slavery in Cuba a condition of the termination of the conflict in the island, Mr. Sickles was again requested to call the attention of the Spanish Government to this view of the United States.

Mr. Sickles, in his communication to the Secretary of State of the 26th of June, says, after announcing the passage of the bill, that the Spanish Government has for the first time distinctly and practically committed itself to the policy of emancipation, and in this step toward freedom it must be a source of just satisfaction to the President that the influence of the United States has been conspicuous and beneficent.

Public sentiment in Cuba, so far as can be gathered from consular reports, seems to be in favor of a system of gradual emancipation. The Cuban insurgent assembly, as early as the 26th of February, 1869, decreed the abolition of slavery, with a promise of indemnification, and by article 24 of the insurgent constitution all the inhabitants of the island are declared free.

VENEZUELA.—Claims of the United States against Venezuela have arisen since 1811, and are for war supplies furnished that country in its struggle for independence, for personal service rendered the republic, for acts of forcible appropriation of property, for violated contracts, and for grave and solemn responsibilities incident to acts of outrage and murder perpetrated upon citizens of this country.

After pressing the payment of these claims with patient, persevering entreaty for a series of years, a mixed international commission for the definitive adjudication of the claims was accepted by Venezuela, and a treaty carrying out the idea was negotiated between the accredited representatives of the two countries at Caracas, on the 25th of April, 1866. A vexatious delay preceded the ratification of this document, which was not accorded by the Venezuelan Government until after the spring of 1870, and the recurrence of strong complaint on the part of our Government. By the terms of the treaty all claims pending in favor of citizens of the United States were to be submitted to a tribunal of arbitration, consisting of a commissioner of each country and an umpire, to be named by the diplomatic representative at Washington, of either Switzerland or Russia.

The commission, organized under the terms above quoted, closed its labors on the 5th of August, 1868.

By the third article of the treaty it was provided that—

The commissioners shall issue certificates of the sums to be paid to the claimants respectively, by virtue of their decisions or those of the empire; and the aggregate amount of all sums awarded by the commissioners, and of all sums accruing from awards made by the empire, shall be paid to the Government of the United States. Payments of said sums shall be made in equal annual payments, to be completed in ten years from the date of the termination of the labors of the commission; the first payment to be made six months from the same date. Semi-annual interest shall be paid on the several sums awarded, at a rate of five per cent. per annum from the date of the termination of the labors of the commission.

Pursuant to this article the commission issued certificates to the successful claimants, covering the amounts awarded, and the records of the commission, showing all its work and the testimony on which the awards were founded, were reported to the State Departments of the respective governments.

Two instalments of principal and three of interest upon the awards have matured, but the Venezuelan Government has not only neglected to make payment, but manifests its intention to evade payment entirely by repudiating the work of the commission.

When the first instalment fell due in February, 1869, in lieu of forwarding the required money, an agent was sent to interpose exceptions and objections to the conduct of the commissioners and to urge an annulment of their awards. In executing his mission his entire case became the subject of elaborate diplomatic correspondence between himself and Secretaries Seward and Washburne, and each of those secretaries emphatically pronounced the pretaxs, set up by Venezuela in excuse of payment, as inconclusive and invalid. The Venezuelan Government, however, persisted in its default, and, in the course of a few months after the last letter from Secretary Washburne, permitted another instalment of interest to mature and rest unpaid and unnoticed.

The objections against the commission were not again revived until in the fall of last year, and then only conversationally to the United States Minister Partridge, who notified our Government, and, in return, was instructed to ask from the Venezuelan Government specific charges accompanied by proofs, by a limited time, or an abandonment of all further complaint against the commission. Thus invited, the Venezuelan Government had a large mass of testimony taken in that country which it sent hither last February in charge of an accredited party and filed in the State Department, and which has since been laid before the House of Representatives by the Secretary of State.

DOMINION OF CANADA. This country seems to be gradually acquiring strength and expansion. The difficulties arising from the acquisition of the Hudson's Bay Territory, causing trouble and alarm toward the close of 1869, which continued for some months of the present year, were effectually removed by prudent measures on the part of the Dominion Government. Delegates from the population of the Territory were received at Ottawa, and on the 3d of May the Governor-General, Sir John Young, was enabled to telegraph the imperial authorities that negotiations with them closed satisfactorily. On the 12th of the same month (May, 1870) permanent effect was given to the arrangements thus arrived at, by an act of the Dominion Parliament, which created out of "Rupert's Land, and the Northwestern Territory," a new province containing 11,000 square miles, named Manitoba, to be represented in the Senate of Canada, for the pres-

ent, and until it shall have acquired a larger population, by two members, and in the House of Commons by four members. It is also provided that there shall be a local Legislature, to consist of a Lieutenant-Governor, and two Houses, styled, respectively, the Legislative Council and the Legislative Assembly—the former to consist of seven members, to be appointed by the Lieutenant-Governor in the Queen's name, the latter of twenty-four, elected every four years, each male person in the province being entitled to vote, subject only to the simple conditions of being of the full age of twenty-one years, a subject of her Majesty, by birth or naturalization, and a *bona-fide* householder.

The financial conditions upon which the new province is admitted into the Canadian Confederation are similar in principle to those upon which the eastern provinces entered, allowance being made for its becoming liable for the general debt, and ample provision guaranteed for the support of its government and Legislature. The customs-duties chargeable in Rupert's Land, previous to Manitoba being erected, are to continue without increase for three years, the proceeds to form part of the Consolidated Revenue Fund of Canada. It was understood that the chief cause of the insurrectionary movement of 1869, referred to in the last notice of the Dominion, was apprehension on the part of the half-breeds of the Territory that not only would future grants of land be made with a view to their injury as a people, but that existing rights would not be sufficiently respected. Much care is, therefore, shown in the Dominion law to remove all ground for such alarm. It is expressly provided that one hundred thousand acres of land shall be divided among the children of the half-breeds residing in the province at the time of the transfer to Canada, on such conditions as to settlement and otherwise as the Governor-General in council may from time to time determine; and following this is a series of enacting clauses for the quieting of titles, and assuring to the settlers in the province the peaceable possession of the lands now held by them.

Soon after the transmission of this message of peace, the newly-appointed Lieutenant-Governor of Manitoba, the Hon. A. G. Archibald, proceeded to Fort Garry, where he has since been engaged, and, as it would appear, with comparative success, in putting into operation the new and improved scheme of government. According to the latest accounts, the election of members to the Dominion and local Parliaments was about to take place. There is evidence that, in the approaching session of the Parliament of British Columbia, a majority will declare for confederating with Canada; and it is alleged that recent manifestations in Prince Edward's Island and Newfoundland are also favorable to that policy. Thus, it would appear that the design of Great Britain,

to erect a Union of States on this Continent upon the principle of the United States Confederacy, but still subject to and in sympathy with her own Government, is about being fully realized.

It is computed, according to the ratios which have been established, that the census to be taken this year will show that the population of this prospective Confederacy is about 4,677,864, thus apportioned:

Ontario, 2,186,808; Quebec, 1,422,546; New Brunswick, 827,800; Nova Scotia, 896,440; Newfoundland, 180,000; the Northwest, 110,000; Prince Edward's Island, 99,261; British Columbia, 55,000.

The legislation of the last session of the Dominion Parliament, although not extensive, embraced subjects of much importance. A new law was passed relative to banks and banking, introduced by the able Finance Minister, Sir Francis Hincks, which effected many and serious changes, all approved, however, by the principal bankers, and by the public at large. No bank can now commence business with less than \$200,000 paid-up capital; at least 20 per cent. of the subscribed capital must be paid up each year subsequently; notes in circulation are not to exceed the unimpaired paid-up capital; each bank must hold, as nearly as may be, one-half of its cash reserves in Dominion notes, never less than one-third; loans and discounts cannot be made on security of its own stock; no dividend nor bonus to be paid out of capital; directors knowingly concurring in such payment become jointly and severally liable for the amount to the bank; no dividend of over 8 per cent. to be paid until a reserve has been formed of at least 20 per cent. of the capital; a shareholder has a vote for each share held by him for three months previous to the day of meeting, and may always vote by a proxy, also, who must be a shareholder, but must not be a cashier, manager, or other officer of the bank; lists of shareholders, stating residences, amount held, etc., to be laid before Parliament each session; monthly returns to be made up on the first juridical day of each month according to a prescribed form; and making a false statement or return to be a misdemeanor, if not a higher offence. The charters of now existing banks are to expire at the end of the session of Parliament to be held in 1881. A Dominion Note Act was also passed, authorizing the issue of such notes, at first, to the extent of \$5,000,000, on security of specie and debentures—at least 20 per cent. of the former; this issue may be increased—not oftener than quarterly, and under other regulations—until the aggregate is \$9,000,000. To warrant this extent of issue, however, the Receiver-General must hold \$2,000,000 in specie. A "Civil Service Superannuation Fund" has been also authorized by law, to be created by deducting 4 per cent. from all salaries of \$600 or over, and 2½ per cent. from others, during 85 years' service, those who have paid

for ten years being entitled to full allowance. The benefit of this fund is confined to civil servants over 60 years of age, and to those who may become incapacitated by bodily infirmity. Notable among the changes in the tariff are imports on coal and flour, the former to pay 50 cents per ton; the latter, of wheat and rye, 25 cents per barrel; meal of Indian corn, oats, and other grains, 15 cents. The tax on coal was contended for by the representatives of Nova Scotia, in the interest of the mines of that province; and, it is said, somewhat in a hostile or retaliatory spirit toward the United States—and Western members availed themselves of the moment of divergence in the judgment of the House of Commons in favor of special interests, to demand a flour duty, as favorable to the agriculturists whom they represented. But a considerable vote was recorded against such a policy, and public opinion in the Dominion at large is so plainly opposed to it that it will, probably, soon be abandoned. As evidence of a higher tone of statesmanship, authority is given by the Customs Act to issue a proclamation admitting the following articles free, or at a less rate of duty than the present, whenever it appears that similar articles will be admitted free, or at the same rate of duty, from Canada into the United States, viz.: animals of all kinds, green fruit, hay, straw, bran, seeds of all kinds, vegetables, plants, roots and shrubs, coal and coke, salt, hops, wheat, peas, barley, rye, oats, Indian corn, buckwheat, and other grains; flour of wheat and rye, and other flour and meal; butter, cheese; fish, salted or smoked; lard, tallow, and meats, fresh, salted, or smoked. This indicates more the spirit of Canada than does the tone adopted by a party in Nova Scotia. The enactments by the several local Legislatures of the Dominion during the past year appear to be judicious, and well adapted to their respective purposes, those of Ontario taking the lead in extent and importance.

The prosperous condition of this province may be said to be without parallel in provincial history; its municipal and educational systems are admirably developed; the most liberal encouragement is held out to immigrants; recently various railway projects have been vigorously carried out; and the Government has just announced a policy of money loans, out of the large surplus on hand, to such lines of railway as will open up new districts to settlement. The last session of the Quebec Legislature was also most liberal in its assistance to railway enterprise. Large grants of land have been made to the North Shore, the Northern Colonization, and the Quebec and New Brunswick Railways; and it is stated that a grant of land will be made to the St. Francis and Megantic Railway early in the next session. Subsidies have been granted to immigrant roads, which must largely assist in the settlement of the hitherto unfrequented and comparatively unknown parts

of the province; and the privileges of colonization societies have been much extended. Marked progress has been made in railways in the different provinces constituting the Dominion. In 1850 there were not more than 55 miles in all. According to the latest returns, more than 20 lines are in operation, in which have been invested \$160,471,190, and the computed annual earnings of which exceed \$12,000,000. New lines are also being projected in all parts of the Dominion, and a Pacific Railway, to extend across the continent and unite the two oceans, is confidently looked forward to. With the view of promoting European immigration, an able pamphlet has been published by order of the Government for circulation in Europe, giving a clear and comprehensive view of the educational, social, political, and financial features of the Province, with a fair statement as to its soil and climate. In the appendix to this pamphlet is a table of exports, showing that for the fiscal year ending June 30, 1869,

The value of Products exported was.....	\$33,546,054
To which was added, for Coin and Bullion.....	1,987,790
Articles not Products of the Province.....	1,980,131
Estimated short returns.....	749,303

Total.....\$33,223,208

A somewhat vexed question has arisen between the Provinces of Quebec and Ontario respecting the apportionment, under the new system, of the debt of the former Provinces of Canada, which consisted only of these two Provinces. It was enacted in section 142 of the British North-American (Confederation) Act of 1867, that "the division and adjustment of the debts, audits, liabilities, properties, and assets of Upper Canada and Lower Canada shall be referred to the arbitration of three arbitrators." The provision as to this important matter went no further; no rule was laid down, or mode prescribed for the guidance of the arbitrators; and almost immediately did counsel on either side set up irreconcilable pretensions. It would be tedious, as well as to little purpose in an article like this, to enter into detail as to these differences, or to follow at any length the discussion which arose. The chief cause of difficulty seems to be the question whether the financial state of the respective Provinces at the time of the union of 1841, of Upper and Lower Canada, should now be taken into account; the counsel for Quebec contending that any division of the surplus debt of the late Province on the basis of population, whether that of 1861 or 1867, without doing so, would be grossly unjust. They showed that the debt of Upper Canada, when she entered the Union in 1841, was \$5,925,779, while that of Lower Canada was only \$80,996, and further, that, whereas Upper Canada was at that time on the verge of bankruptcy, its annual revenues not being more than \$312,000, the charge for interest on its debt, \$260,000, and the permanent expenses of its government, \$222,000, leaving an annual deficit of \$168,000,

Lower Canada had at its credit \$250,802, which, when reduced by the amount of the debt, \$60,996, left at command the sum of \$189,806. This view of the case the counsel for Ontario would not entertain, and contended that the arbitrators had no power to enter into the debts or credits of the two Provinces at the time of their union in 1841. On the 9th of July last a majority of the arbitrators rendered an interlocutory judgment upon this and other points adverse to Quebec, and the arbitrator for that province thereupon resigned. Notwithstanding this, the other two arbitrators continued their labors, and finally rendered an award. All proceedings subsequent to the resignation of their own arbitrator are, of course, repudiated by the Quebec government, who are, it is said, about to invoke the interference of the imperial authorities. Apart from this difficulty, the political horizon of the Dominion may be said to be cloudless, while of material prosperity and social order within its limits the best accounts can be rendered. In the trade and navigation tables presented to the Parliament at Ottawa during the last session, we have the latest returns of imports and exports to the end of the fiscal year 1869. The value of exports for that year was \$60,474,781, against \$57,557,888 for the previous year. The imports amounted to \$70,415,165. The value of goods entered into consumption was \$67,402,170. The amount of duty collected was \$8,298.99. The total trade of the Dominion, imports and exports, amounted to \$130,889,946; the total receipts from customs, excise, post-office, public works, etc., \$15,378,178; payments, \$12,900,574. Much increase in wealth is shown by bank returns and the extent of circulation of Government notes. The business of the chartered banks increased from \$14,792,044 in July, 1869, to \$17,742,095 in October, 1870. The Government circulation rose in the same period from \$4,792,000 to \$7,850,834. The increase in the post-office savings-banks was nearly one hundred per cent. The paid-up capital of the chartered banks steadily increased, month by month, from \$29,801,043 in July, 1869, to \$32,094,076 in October, 1870. The increase in deposits in the same period was from \$37,229,434 to \$48,412,905; in discounts, from \$50,620,505 to \$70,466,325. Consequent upon the United States ceasing to make specie payments, the Dominion markets were flooded with silver coins to an extent that was at length felt to be a serious evil, and was popularly denominated "a nuisance." Under the policy of Sir Francis Hincks, by which these coins have been demonetized, not less than \$9,250,000 worth of them have been exported from the Dominion during the past year, thus making way for the circulation to a similar extent of Government notes of the smaller denominations. It is expected that the establishment of a Dominion mint will soon be another result of the *quasi*-independence now enjoyed by the Canadians.

Australia coins for herself; Dominion greenbacks are manufactured at Ottawa; why not its gold, silver, and copper money? An important commission has lately been appointed by the Dominion Government to communicate with the respective Boards of Trade, and otherwise to obtain evidence respecting the necessity and cost of enlarging the present canals and constructing new ones. It is generally expected that they will recommend an Ottawa canal, extending to Georgian Bay on Lake Huron, as a means of lessening the navigable distance between tide-water and lake ports, and thus avoiding the present circuitous route, *via* Lakes Huron, Erie, and Ontario. The Intercolonial Railway, commenced in the latter part of 1869—the first direct result of consolidation—is progressing with a rapidity that promises completion in 1872. Before winter weather set in, not less than 7,000 men were engaged upon it, at a monthly cost of nearly \$300,000. Another decided step in the direction of "a new nationality" has recently been taken by the Imperial Government in the withdrawal of the troops from the North-American colonies. West of the city of Quebec, the Dominion is at this moment without a single regular soldier, and the few remaining in and around the old fortresses of the Canadian Gibraltar will have disappeared with the handing over, in a short time, of the barracks and other property hitherto used for military purposes, to the Dominion authorities. *Sono baroni genti*, said the old Greek, when he saw the last British man-of-war bearing away the last British soldier from the Ionian Islands. *Adesso siamo liberi*, joyfully exclaimed a young man who was looking on at the same eventful moment.

Much concern was felt in the Dominion consequent upon the remark in the last message of the President of the United States, commencing with the words, "The course pursued by the Canadian authorities toward the fishermen of the United States, during the past season, has not been marked by a friendly feeling." Under confederation the fisheries have been a pet question, and in a book of authority it is announced that effective measures have been taken to remove the long-standing abuses under which they have suffered. That the United States Government should consider that they are the victims of abuse is a source of amazement to Canadians in high places, and much feeling, together with much argument, has accordingly found vent in a pamphlet of nearly one hundred pages, issued from the Department of the Minister of Marine.

Death, in its fell swoop, did not spare Canada in the year 1870. Archbishop Baillangcon, of Quebec, a prelate of saintly character, and as such esteemed by all parties, passed to his reward. Mr. A. S. Ritchie, and Mr. Edward Hartley, men of science, one in connection with the Natural History Society, the other with the Geological Survey of Canada, also ceased their labors. Chancellor Blake, of On-

tario, whose great services as a statesman and a judge extended beyond a quarter of a century, was overcome by disease, which had its origin in unceasing professional toil; and it is announced that an eminent lawyer of Quebec, Henry Stuart, Esq., Q. C., nephew of the late Chief-Justice Stuart, is dead; also the widow of the late Hon. Thomas D'Arcy McGee, a lady of high character, endeared to the community of Montreal, not more by the sorrow of years than by a disposition of singular amiability and benevolence.

The Executive of the Dominion of Canada continues to be constituted as during last year. The Governor-General, then Sir John Young, has been created a Peer of Great Britain and Ireland, under the title of Lord Lisgar, taken from one of his estates in Ireland.

DUDLEY, BENJAMIN WINSLOW, M. D., LL. D., an eminent surgeon, surgical professor, and author, born in Spotsylvania County, Va., in 1785; died in Lexington, Ky., January 20, 1870. His parents removed to Kentucky when he was a child, and he enjoyed exceptionally good advantages for early education, entered Transylvania University at Lexington in 1799 and graduated in 1808, with the highest honors of his class. He then studied medicine in Philadelphia, attending the lectures of the University of Pennsylvania, from which he received his medical diploma in 1806. Not satisfied with the opportunities offered for studying his profession in the United States at that time, after some further study and hospital practice in Philadelphia, Dr. Dudley sailed in 1810 for Europe and became a pupil of Abernethy, the elder Cline, and Cooper, in London, and of Baron Larrey, Dubois, and Boyer, in Paris. After four years of careful study, observation, and hospital practice, by which he had become one of the most skilful operators in the great hospitals of Europe, the young surgeon returned home, and in July, 1814, opened an office in Lexington, Ky. His reputation had preceded him, and he did not find it necessary to wait for patients. He was speedily recognized as the ablest surgeon west of the Alleghanies, and in some operations his skill and success gave him a reputation inferior to that of no surgeon in the world. He was called, on the organization of the Medical Department of Transylvania University, to the chair of surgery in that institution, and filled it with remarkable ability. He also published a number of medical essays and reports of cases, which attracted much attention both in Europe and America. Though perfectly conversant with all the operations of surgery, and in all cases a skilful and admirable operator, Dr. Dudley had made the surgical treatment of calculus in the bladder his specialty. The difficult and often dangerous operation of lithotomy he had performed nearly three hundred times, and with the loss of less than three per cent. of his cases, a success entirely unprecedented elsewhere. His practice in these cases

was, to prepare his patients for the operation by two or three weeks, or longer if necessary, of careful attention to their general health, diet, etc., and to operate only when they were in the best condition for it. On reaching his seventieth year, Dr. Dudley, though still in the full vigor and maturity of his powers, retired from active practice, but was often called in consultation. In private life, Dr. Dudley was greatly esteemed and beloved. His genial temper, his strict temperance, his remarkable conversational powers, and his refined and polished manners and address, all contributed to make him one of the most agreeable of companions.

DUMAS, ALEXANDRE DAVY, Sen., the most prolific of novelists and dramatists, born in Villers Cotterets, Department of the Aisne, France, July 24, 1803; died in Dieppe, France, December 9, 1870. He was the son of the republican general, Alexandre Davy Dumas, a mulatto, born in St. Domingo, but distinguished for his strength and military prowess in the wars of the French Revolution. His father died, poor, in 1806, and he was brought up by his mother and received a scanty education, knowing little, at the age of eighteen, except how to ride and fence well, to play billiards, and to write a good hand. The little pittance left by his father was exhausted, and he came to Paris to find employment. After numerous rebuffs he obtained a situation as copying-clerk to the secretary of the Duke of Orleans (afterward Louis Philippe), through the influence of General Foy, an old friend of his father. His only qualification was his penmanship. His salary was a hundred francs (twenty dollars) a month. On this salary he contrived to support his mother and himself, and devoted every moment of leisure to repairing the defects of his early education and to composition. His dramas of this period were mere rubbish, which he could not persuade the theatrical managers to accept. At length, in 1827, he produced a classical tragedy, of somewhat greater merit than the plays which had preceded it, under the title of "Christine, ou Stockholm, Fontainebleau, et Rome," which was accepted, though not immediately put upon the stage. He spent so much time in the composition of this, and in running about after the managers, that the Duke of Orleans's secretary reduced his already small salary. Nothing daunted by this, he immediately produced the historical play of "Henri III.," which displays a profound ignorance of history (a defect which he never succeeded in remedying), and was constructed with utter disregard, if not in defiance, of all the canons of dramatic art. It had nevertheless many taking points, and as its author had the address to procure the attendance of the Duke of Orleans, and a number of princes and princesses who were visiting him, at its first performance, it was a triumphant success. From this time onward his dramas were the rage for twenty years, though

not at first without a severe struggle between his adherents and the disciples of the old school of the drama, which had made Racine its idol. He recast "Christine" to please a pretty actress, and this like a hundred other of his plays was very popular, and the now fashionable author, to whom a few months before twenty dollars a month was a fortune, found money coming in more rapidly than he, with his spendthrift habits, could get rid of it. Yet he soon became an adept in the arts of extravagance. The brilliancy of Dumas's costume and the delights of his luxurious banquets became the talk of the city. He was not only a second Shakespeare, but he was one of the greatest cooks in Europe; perhaps the mixture of French and negro blood ought to make an unparalleled cook. He lavished gold on women and horses, and meanwhile he kept steadily at work, writing by night and rollicking by day, stocking the stage with successful plays, and making himself the idol of an immense circle of worshippers. The Revolution of July, 1830, came in the first flush of his glory. According to his own story, he had an important share in overthrowing the Bourbon dynasty, and placing the citizen-king upon the throne. It may be permitted to doubt the value of his political services; but Louis Philippe gave him a decoration, and the princes of the house of Orleans took him into high favor. The Duke of Montpensier carried him to Spain as historiographer of his marriage. Perhaps Dumas was not just the man to write an epithalamium; but he performed his part apparently to the satisfaction of his princely friend, and till the Revolution of 1848 the familiar intercourse between the Duke and the dramatist remained, we believe, unbroken. The marriage contract between the Duke and the sister of Isabella bore the signature of Dumas, followed by a long string of titles. From Spain the French Government gave him a man-of-war to take him on a visit to Africa, and a terrible time was made about it afterward by the opposition in the Assembly. Coming home from this tour, he resolved (like Shakespeare) to have his own theatre, and so built a play-house, full of architectural eccentricities, to which he gave the name of the Théâtre Montpensier, afterward changed to Théâtre Historique. Probably in a venture like this it was inevitable that he should lose money; but if there was any question about that, the Revolution of 1848 soon settled it: Dumas and the Théâtre Historique came to ruin. A chorus of Girondists in his drama of "La Chevalier du Maison Rouge," then acting at the house, was taken up by the insurgents as a sort of Marseillaise; and when, in the midst of the fighting, the author, covered all over with decorations, set out for the Tuileries to pay his respects to the royal family, the mob, mistaking his sentiments, raised him upon their shoulders and bore him in triumph to the barricades. The charge of ingratitude to the Orleans family, which grew out of this

absurd incident, was probably undeserved; but Dumas had all the natural aptitude of a Frenchman for "accepting the situation." Accordingly we find him establishing a newspaper, *La Liberté*, and making a signal failure as a political journalist, on the Conservative side; then another periodical, *Le Mois*, which lived two years, but never had any influence; and finally presenting himself as a candidate for the National Assembly, in which character he also failed. In 1852 he was so far reduced in purse that he removed to Belgium to get rid of his creditors; but his exile was of short duration. He had begun his career as a novelist as early as 1835, when he published "*Isabelle de Bavière*" as the first of a series of romances on the history of France, constructed after the model of Walter Scott, from whom, we may say in passing, he used to steal a great deal, under the comfortable excuse that men of genius like William Shakespeare and Alexandre Dumas "do not rob, they conquer." It was with the appearance, however, of his famous "*Three Guardsmen*" in 1844, and the inimitable "*Count of Monte Cristo*," in the same year, that his glory as a novelist burst upon the world. The story-feuilleton, as an indispensable adjunct of the daily newspaper, received from these works its extreme development. The Parisian could no more dispense with his regular morning allowance of highly-seasoned romance than the New-York merchant can exist without his daily report of the stock-market. The most extravagant sums were offered M. Dumas by the conductors of rival journals, and he seemed equal to any amount of work that might be demanded of him. Sometimes he carried on three or four different romances at the same time in as many different periodicals. He wrote on an average thirty-two printed octavo pages a day. In 1846 he made a contract with two newspapers to furnish them an amount of manuscript equal to *sixty volumes a year*, apart from his continued labors for the stage. Of course such fecundity raised the question of the authenticity of the wares which he sent forth under his name. A lawsuit with the directors of the *Presse* and *Constitutionnel* was one of the results of this scandal, and though Dumas succeeded in proving to the satisfaction of the court that he had enough to do with the composition and plan of his own works to be justified in styling himself their author, many curious particulars were divulged respecting his method of working and liberal employment of assistants. Eugene de Mirecourt had published before this trial an account of the Dumas process, under the very happy title of "*Fabrique de romans, maison A. Dumas et Cie.*," and M. Querard had also made known some interesting details of the same business. He had no fewer than seventy-four collaborators or assistants, and among those who were justly entitled to the paternity of plays or novels which passed under the magic name of Du-

mas, were Anicet-Bourgeois, Hippolyte Auger, Paul Bocage, Brunswick, Louis Couailliac, Durrien, Florentino, Gérard de Nerval, Maquet, Maurice, and Souvestre. The labors of these gentlemen were materially reinforced by enormous plagiarisms from authors both living and dead. Dumas's favorite quarries were the works of Scott, Schiller, Chateaubriand, Augustin Thierry, and Victor Hugo. When he lived at Marly he used to say that "it took a man, two horses, and a locomotive, to transport his manuscripts every day to Paris." Notwithstanding the developments of his famous lawsuit, there was no decline in the popularity of his novels. "*The Three Guardsmen*" were compelled to continue their adventures through several additional works; and several subsequent romances, whose titles we shall not take the space to enumerate, fascinated the public hardly less than those most successful of modern novels. The best of them have been turned into almost all the European languages, and their author was decorated by various sovereigns and societies until his broad person hardly afforded room enough to display his orders. At various times Dumas travelled through nearly all parts of the Continent, and recorded his impressions in a series of sketchy volumes which contain a good deal of wit and a very little truth, and, though thoroughly worthless, are marked with such an engaging egotism that possibly it will repay one even now to read them. What was there, indeed, which Dumas did not touch with his pen? He has written history, and he has recorded his impressions of "*Fifteen Days on Mount Sinai*"—and, after those two exhibitions of temerity, what should appall him? It was announced some time ago that he had written a cookery-book; but he was well qualified to do that.

We have shown how he lost one fortune by his theatre. He lost another by a fanciful country-seat called the Chateau de Monte Cristo which he built near St. Germain. It was surrounded by an artificial pond, crossed by a drawbridge which the owner, as he sat by his table in a little *cabinet de travail*, could raise or lower by touching a golden knob. The extravagance of his wild fancy had full play in the furnishing of this fantastic abode, upon which he had spent 450,000 francs, when the Revolution of 1848 cut short his means. It was sold at auction in 1854 for less than a tenth of its original cost. Some of the later literary extravagances of the prince of romancers were no doubt prompted by the amusing vanity and devouring appetite for notoriety which were always among his chief characteristics. It was something of this kind which prompted him to join Garibaldi, in 1860, to share his campaigns, and write a "*Memoir*" of the Caprera hero; it was something of this kind which dictated his Autobiography, which, as long ago as 1856, had reached the disheartening magnitude of twenty-seven volumes; and

it was certainly a similar craving that induced him to undertake a lecturing tour in which he intended to embrace even the United States. He was as peculiar in his method of writing as in every thing else. In one place he describes himself as lying flat on his back for two days, on board a vessel in the Mediterranean, evolving a novel out of his inner consciousness. At the end of that time the novel was finished, and he got up and called for his dinner. Again, he tells us in his "Mémoires" that he used to repeat his dramas aloud to his intimate friends, making them up as he went along; he composed "Henri III." in that way. He wrote with astonishing rapidity. He says he could dash off a play faster than three expert scribes could copy it. He married Mlle. Ida Ferrier, an actress of the Porte St. Martin, in 1842. Three years afterward she removed to Florence, and died there in 1859. But the great fortunes which his remarkable literary activity had earned had been squandered in fast and riotous living, and from all his twelve hundred romances, and his almost equal number of dramas, the income was hardly sufficient to support him. His vices of sensuality and luxurious living had broken down his health, while they still held him in bondage. His connection with the notorious Adah Isaacs-Menken was one of the latest public performances of this consummate egotist. Either from the pressure of poverty or from sudden yearning for the renewal of the intellectual labors he had of late almost wholly abandoned, M. Dumas, in the spring of 1870, went to Madrid to collect material for his work entitled "The Past, Present, and Future of the Revolution in Spain." It is rare that a French feuilletoniste knows any thing outside of the Boulevard des Italiens, but this veteran romancer brought to the discussion of historical subjects a profound and thorough ignorance of the matters treated, which put to shame the sketchy misinformation of his frivolous imitators. He went to Spain, utterly ignorant of the history, the language, the customs of the people, to write in some six weeks the stories and intrigues and incidents of a lifetime, which had resulted in the destruction of the Bourbon dynasty in the Peninsula. In a few weeks, the untiring old man had covered his allotted portion of stationery with the most appalling mass of trash, and had gone back to Paris serenely to superintend the publication of his history. But, meanwhile, the war had commenced, and his manuscript was worthless. For some purpose he left Paris for Dieppe, where he was attacked with paralysis, and, though his physical condition improved, his mind was completely wrecked, and he died the day the Prussians entered the city. This extraordinary man never obtained a place in the very highest rank of French authors, but

he will be remembered as the most perfect representative of the Parisian romancer. With gifts of imagination that almost amounted to genius, a brilliant fancy, an inexhaustible fecundity of wit, a ceaseless activity of hand and brain, and a knack of composition which was not literary polish, but with the millions made a very good substitute for it, he was for a quarter of a century the idol and exemplar in France of the literature of amusement. The stage and the feuilleton, those two great instruments of popular entertainment which reflect the life and thought of Paris so perfectly, were mastered by him at a single effort; and, until age, and over-production, and gay living, combined to check his brilliant pen, he never ceased to captivate the fickle affections of his countrymen or to dazzle half the novel-readers of the world. Comparatively few of his works, artistically judged, have great permanent value as literary creations; but, as models of constructive ingenuity and marvels of invention, "The Three Guardsmen," "Monte Cristo," and some others, will hold honored places in the future museum of novels. In romance he was not poetical; in the historical novel he was conspicuous for a bold and sublime ignorance; in essays and travel he showed neither keenness of observation nor comprehension of the human heart; but in the hazy glories of the French literary paradise which lies between the borders of the poetical, the grotesque, the witty, and the sensuous, Alexandre Dumas was without a rival.

DURKEE, CHARLES, an American political leader, Senator, and at his death, Governor of Utah, born at Royalton, Vt., December 5, 1807; died at Omaha, Neb., January 14, 1870. He received a good academical education at Royalton, and entered into mercantile business. He removed to the Territory of Wisconsin about 1830, was a member of the first Territorial Legislature of Wisconsin in 1836, which was held at Burlington, Iowa and Minnesota then forming a part of the Territory of Wisconsin. In 1847 he was again a member of the Territorial Legislature; in 1848 he was elected to the first State Legislature of Wisconsin, and in 1850 was sent as a Representative to Congress. He was reelected in 1852, and was among the earliest friends, in that body, of the antislavery and free-soil principles urged by Joshua R. Giddings, Hale, David Wilmot, and others. He became a United States Senator in 1855, and served for six years, taking an active interest in the important questions of that exciting time, and was greatly esteemed for his integrity, his clear perception, and his sound judgment. In 1865 he was appointed Governor of Utah by President Johnson, which office he held at the time of his death. He left Salt Lake City on the 6th of January, and became so ill that he was obliged to stop at Omaha.

E

EARTHQUAKES. Northeastern America, from New Brunswick to Iowa, and from the river St. Lawrence to Cincinnati and Richmond, experienced the rare visitation of an earthquake shock, October 20th. A larger area may have been affected, but within the boundaries mentioned the effects were such as to cause the phenomenon to be noticed and reported upon. Although occurring at an hour of the forenoon when most people are awake and alert, the shock was not remarked by great numbers who were out of doors at the time, or living in strongly-constructed buildings. In its greatest manifestations, as reported, it was but a slight affair, which would have caused little or no comment in Central America, South America, or other countries commonly troubled by earthquakes. The interest of the event consists in the fact that the region disturbed has had but few, if any, such wide-spread shakings within the memory of man. In great cities, like New York, where there are many tall buildings, the earthquake was plainly perceptible, and caused much fright to their occupants. We give some illustrations, from the New-York papers, of the character and effect of the shock in that city.

At Connor's six-story type-foundry, corner of Duane and Centre Streets, the upper rooms shook so that the work-women were terrified and rushed into the street. But at the large establishment of Lorillard & Co., tobacconists, also on Centre, corner of Chambers, no shock was noticed. At Frank Leslie's newspaper-office, in Pearl Street, near Broadway, a vibration was remarked by all present; a large glass chandelier swayed to and fro, the pendants rattling against each other; and the compositors fled to the street for safety, exclaiming that the building was about to fall. They noticed two shocks, of about (estimated) twenty-five seconds' duration each, with an interval of ten seconds. At Lord & Taylor's, Grand Street, the fourth floor was somewhat shaken, and one woman employed there ran to a window and jumped to the roof of an adjoining shed, while another fainted from alarm. The twelve hundred children at the Public School in Fourteenth Street, near Second Avenue, were almost panic-stricken, and teachers had much difficulty in preserving order, but all made their way to the street uninjured. Glasses and bottles were thrown from a sideboard at No. 15 East Broadway. Engravers and printers on the upper floors of the *American Agriculturist* office felt the shock very distinctly. One of them suffered from nausea as soon as the wave passed. The gas-fixtures vibrated considerably. Persons tenanted upper-story rooms at the Astor House, and Metropolitan, St.

Nicholas, and other hotels, noticed the shock and were unpleasantly affected at the stomach. But in other high buildings in the city nothing was known of the earthquake until the evening papers reported it. In Brooklyn, Hoboken, and other places in the vicinity of the city, the shock produced about the same effect in some localities as those already described, while in other parts of the same cities, towns, or villages, it did not arrest attention. Observers in this neighborhood agree in maintaining two separate shocks, and that the oscillatory movement was from north-northeast to south-southwest.

This earthquake is the subject of a very complete investigation in the *American Journal of Science and Arts*, by Mr. Alexander C. Twining. He has collected all the data about it which could be obtained. Before proceeding to give details, he remarks that the movement of the earth was not level but rocking, and that this sensation is plainly indicative quite as much of a vertical displacement as of any alternations of inclination in the earth's surface after the manner of a wave, and a consequent vibratory condition of persons and objects. In estimating the duration of the two shocks, and the interval between them, he employed means to ascertain (at New Haven) the informants' mental impressions and recollections, applying to them his own measurement as to time. These would often give durations more than double of those in other instances. Taking, however, the most trustworthy, and allowing to the others a weight proportioned to their value, he found the first shock to have continued about nine seconds, the second about eleven seconds, and the interval to have been about five seconds. Mr. Twining says:

A careful comparison of the various newspaper paragraphs which have come to hand—nearly forty in number—makes it clear that the general phenomena were everywhere the same. Everywhere there were two shocks experienced, of a few seconds each, and a brief interval. These are about as variously stated in duration by the newspapers as the same were stated by different observers at New Haven: thus, at Troy fifteen to twenty seconds in all, at Montpelier thirty, at Cleveland fifteen to thirty, the prevalent authority being for the latter, at Boston eighteen to thirty, at Brunswick, Me., thirty to forty, at Cincinnati thirty and less, at Hartford twenty to sixty, at Cornell University, Ithaca, three shocks of fifteen seconds each—the three being too exceptional among the mass to be credited, and having but one other parallel, that is, Brooklyn. At Harvard College Observatory the duration of tremor was from eight to fifteen seconds by the estimate of different observers—two shocks with a continuous tremor between, and the component oscillations forty in a minute according to observer W. A. Rogers. At East Saginaw, Mich., the first shock is described as ten seconds, then an equal interval, then a second shock of ten seconds. A

very few of the statements are so abnormal, one or two in their brevity (one or two seconds) and about as many in their length (two or three minutes), that no weight can be accorded to them. On the whole, the entire duration—twenty-six seconds—at New Haven, is confirmed as having been about the duration in all other places observed—a uniformity probable in itself. In one instance the oscillations are spoken of as four or five in a second, and as being like the motions of a boat—also in one other (at Keene) they are described as having been vertical.

Respecting the relative amount of disturbance at different places, the sensations experienced by individuals would be but a fallacious test, because so much influenced by temperament; as well as by situations and positions. Persons sitting, for example, were far more sensitive than persons standing. Again, while operatives in upper rooms often rushed down—as here at New Haven—in a panic, persons standing or walking in the immediate vicinity below did not even perceive the phenomenon. The same remark applies to the reported swaying of walls and buildings ten inches to a foot, which is no doubt exaggerated in amount. But a vague conclusion may be derived from specific occurrences, such as the displacement of objects, the cracking of window panes or of ceilings, and the falling of chimneys, as

well as from the degree of public notice which the event excited. All that, in the present instance, can be rationally deduced from such indications would seem to be, that the amount of disturbance at New York, at Cleveland, at Milwaukee, and Detroit, was about the same as at New Haven; that it was greater at Boston, at Brunswick, at Montreal, and at Quebec; that it was less at Cincinnati, at Chicago, and at Dubuque, and was but just distinctly perceptible at Richmond, Va. In other words, the movement was more remarkable in the East and North, and less in the West, and particularly in the South. It is also believed that no like occurrence comparable in the aggregate with this one has been experienced in New England during the present century, nor since November 18, 1755—supposing the newspaper quotation, relative to that event, made by a Boston correspondent, from "a book published in 1786," to be correct and authentic.

He then constructs a table, comparing the times noted at various places from which sufficiently authentic information could be obtained.

Some of these were recorded by astronomers and meteorologists, others by other persons:

PLACE OF OBSERVATION.	Lat. of Place.	Time difference from N. Haven.		Simultaneous Local Times.		Empirical Times.		Obs'd Times.	Difference early or late.

Mr. Twining remarks that a nearly east and west progress is that which appears most consistent with the aggregate of times. Nor is there discovered in the table any decisive change of direction as between the east and the west of the Alleghanies, but the various accounts, so far as they go, indicate the very reverse. The best approximate result seems to be that the earthquake made progress from about E. 6° N., to about W. 6° S., at the rate of 160 miles a minute, being six and a half minutes from St. John to Chicago, while the ordinary direction of the subordinate undulation was about N. by E. But there was no absolute regularity of rate in any single direction.

Among the facts relating to the phenomenon, which the author gives, the following, supplied by Mr. Robert McCoord, a telegraph-operator at Quebec, are peculiarly interesting. He says:

All perceptible motion was over here by the time I had finished telegraphing to Montreal—*Do you feel earthquakes?* It would take about eight seconds to telegraph the words used. The operator's immedi-

ate reply was—*No*. About fifteen seconds after, he said—*Here it is*. The gentleman at Montreal afterward explained that, although he said *No*, he did experience a slight movement at the time, but was not aware that it was caused by an earthquake. He telegraphed—*Here it is*—on the instant that the shock became sensibly evident. He cannot say how long the vibration lasted after that period, accurately, but is of opinion it continued for nine or ten seconds. The following further particulars may be of interest. The shock passed over this district from a northerly direction—a rumbling sound accompanied the shock, resembling that produced by ponderous machinery—noise and motion increased steadily for some seconds, and gradually passed away. Buildings were violently shaken. Our office being in the upper part of a high brick building, the trembling was powerfully felt—the clock in the office was stopped by it at 11.20, but am not certain if the time by it previous to the shock was correct. Some observers say the shock was first felt here a few seconds before 11.24, and lasted forty seconds—others state fifty or sixty seconds. I am of opinion it lasted sixty seconds. No two opinions agree as to the commencement and duration.

At Bay St. Paul and Les Eboulements—places about ninety or one hundred miles northeast of Quebec—the ground opened in several places, and water was thrown up. Slight elevations of land in some

places were produced. The country in the vicinity of St. Paul's Bay is of volcanic formation, and slight shocks are of frequent occurrence. A gentleman from that vicinity informs me that they had twenty or thirty slight shocks within the past two weeks. The shock on the 20th, here, did not appear to have an undulating, upheaving motion, but to partake of a tremulous nature.

The operator at Richmond, a place ninety miles southwest of here, says the shock was just passing away there at the period when I made the inquiry of Montreal.

Commenting upon this, Mr. Twining remarks that, in the region about Bay St. Paul and Les Eboulements—a neighborhood of well-known volcanic character—probably lay the central spot of the disturbance. He adds:

The interpretation of Mr. McCord's interesting statements relative to the telegraphic communication seems to be as follows: He occupied the last eight seconds of the motion at Quebec with a question put to Montreal. That question, together with the answer "No," I find by careful trial at the American Telegraph-office, requires not less than eighteen seconds for transmission and reception. Then there are estimated fifteen seconds of interval. Then there was the second reply of not less than eight seconds; then there were nine or ten seconds to the end of the vibrations. In other words, there transpired not less than forty-two seconds between the end of the message and of the tremors at Quebec, and the end of the same at Montreal, ninety-six miles distant in longitude, and one hundred and fifty-nine in a line N. 51° E., and which, in the table above, had been and still remains credited with the empirical interval of thirty-nine seconds—showing a near accordance between these and the other facts, and one hundred and thirty-seven miles per minute of east and west progress.

Again, the Montreal "No" was given just as the tremors there began, and after—say six seconds after—the end of the shock at Quebec; that is to say, the beginning traversed from city to city in some six seconds more than the duration of the shock. Consequently the latter, in consistency with the above, must have continued about thirty-six seconds, in place of the twenty-six seconds ascertained at New Haven. Still again, the shock at Montreal began with the "No," which may have occupied four seconds. Then there were fifteen seconds of interval; then eight of reply; then nine to ten of estimated continuance; in all thirty-six or thirty-seven seconds for the duration of the shock.

Of the shock at Albany, Prof. Hough, of the Dudley Observatory, reports:

The shock of an earthquake was felt here at 11.15 A. M., October 20th, and lasted about one minute. The walls of the building had a very marked vibration, open doors were made to vibrate, objects hanging on the walls were put in oscillation, and even tables and chairs on the ground floor had a sensible tremor. At the time of the shock a rumbling noise was heard, the clock pendulums swinging north and south were made to vibrate east and west, showing that the earthquake passed in an eastward direction. Since nine A. M., of yesterday the barometer has been falling rapidly, the total fall amounting to seven-tenths of an inch. During the shock the mercury in the registering barometer was in a violent state of agitation.

The severest effects in the United States were remarked at Scranton, Pa., Cooperstown, Rondout, Hudson, and Troy, N. Y., Montpelier, Vt., New Haven, Conn., Boston, Mass., and Brunswick, Me. But Canada suffered from it far more.

We learn, as supplementary to the statements already given, that at Montreal bells in the public buildings were rung, and judges and others vacated their rooms precipitately. Chimneys were thrown down in Quebec, and two persons injured by falling bricks. The people there fled into the streets, and for a time much clamor and confusion prevailed. The steeple of St. George's Church at Toronto swayed to and fro, the walls of buildings were shaken, and furniture was moved from its place. At St. Catherine's windows were broken.

Earthquake shocks visited San Francisco, February 17th and April 2d, but did little damage.

Hon. S. A. Hurlburt, United States minister to Colombia, writing from Bogotá on the 6th of June, 1870, gives the following account of an earthquake at that place:

We have had rather an unusual phenomenon at this place in a remarkably well-developed earthquake. At about ten minutes before 10 P. M. of the evening of the 4th of April (Saturday), and without any previous warning that we had noticed, there occurred first, a moderate shock, not of any peculiar force, and consisting of a single vibration; this was momentary. In about two minutes afterward a very sharp movement took place, giving the impression of a lateral motion from north to south. The table on which I had my elbow at the time seemed to recede about 1½ to 2 inches, quiver an instant and return to its place; the beams of the houses creaked like the timbers of a ship in heavy weather. Doors and windows flew open. Those who were in bed at the time seemed to feel it much more, and the effect of the vibrations was to make many "sea-sick." This shock, they tell me, was the sharpest known here since 1828. I cannot learn of any damage done to buildings in the city.

The unequilibrium of the earth continued from the time mentioned until nearly 11 P. M., with a species of shuddering motion scarcely perceptible unless one were lying down. There was heard with each shock a peculiar muffled rushing sound, not as clear and distinct as the movement of wind, but something like it. At the moment of the principal shock I looked at my watch and found the time to be ten minutes of ten—Bogotá time. Time however, here, is not well regulated, as the observatory possesses no instruments and is neglected. The direction of the movement was very distinct from the north to the south. As earthquakes rarely have their centres in Colombia and are generally the result of action in Ecuador, it may be advisable to connect this observation with notices from that country. I believe there is but one volcano in action in Colombia—Puracé.

Some nights since we noticed for two hours after sunset in the west, and nearly in the range of Tolima, a well-defined column or line of light, on the Cordillera. This bore about due west. The character of the light I could not determine.

January 18th, shocks of earthquakes were felt at Marseilles and Toulon, France. The oscillations numbered from twenty to twenty-five, from southwest to northeast, each lasting about the third of a second. Some reports speak of the shocks as from north to south.

A series of earthquakes visited Mexico from the 11th to the 19th of May. The portion of country where they were most active underwent singular changes. Lake Chicagua en-

tirely disappeared, leaving a dry soil, with fish, alligators, and other aquatic animals, in it. In other places, Cayula among the number, a new lake was suddenly formed; old deep wells, which were dry years ago, became filled with water, and other wells dried up. Trees were uprooted by thousands, and whole villages disappeared. The loss of life and property was heavy.

A very disastrous earthquake occurred in the large city of Batang, on the Kinsha River, in Thibet, commencing April 11th and continuing with intervals till May 9th, when a great fire broke out laying waste a large portion of the city and destroying an immense number of lives—one account, probably much exaggerated, says 10,000. Several neighboring villages were ruined.

July 26th, an earthquake took place at Managua, Nicaragua, simultaneously with an active condition of the volcano of Momstombe. In the adjoining Republic of San Salvador an earthquake was reported July 27th, and another 28th, both severe, but inflicting no great damage.

A volcanic eruption and earthquake destroyed a number of villages in Nippon, May 21st.

Greece was shaken by an earthquake July 1st, the island of Santorin suffering severely.

In Calabria, an earthquake, October 7th, caused a great destruction of life and property.

In building a church in San Francisco, the Roman Catholics took into account the risks from an earthquake. The side-walls above the basement are only 30 feet high; from these a roof rises, which, with the main roof, is supported independently of the walls by two rows of pillars inside of them. Both roofs are firmly bound to the pillars, and the latter are fastened together by iron cross-beams, secured by heavy iron bolts, forming a net-work of great strength. It is supposed that, should the pillars be shaken down, the roof would be launched outside the walls, thus giving a chance of escape from the ruins.

Prof. David Forbes, F. R. S., in a lecture delivered at London in June, on volcanoes and earthquakes, said:

I cannot arrive at any other conclusion than that all volcanoes are connected with one another in depth, and have one common source, not necessarily situated at any enormous depth below the surface, but in which the molten matter—while always containing certain general characters—has undergone considerable modifications in composition, mineralogical and chemical, from time to time in the world's history; for, under the term volcanic rocks, I would here include all eruptive rocks without exception, whether called granites, syenites, porphyrites, basalts, or lava, all of which I regard as but so many members of one series, or simply as the products of the volcanic action of different geological epochs.

So much for the molten products of volcanoes. Now a few words on their gasiform emanations, which consist in greater part of the vapor of water, i. e., steam, along with volatile chlorides, hydrochloric and sulphurous acids, nitrogen and sulphuretted hydrogen gases. The sulphur, seen to be sublimed in so large quantities, is probably derived from the mutual

reactions of the sulphurous acid and sulphuretted hydrogen gases, as they come in contact with one another.

Now, if it be true that we have a vast accumulation of molten matter at a certain depth below the surface, which observation further informs us must, in major part, consist of the silicates and sulphides of the metallic elements, then, in my opinion, at least, it only requires the assumption that water from the sea should, by some means or other, find its way down into such a reservoir, to account for all the phenomena of volcanoes, both mechanical and chemical. The greater part of the water so introduced would be at once converted into steam, which, in its turn, would become still further expanded by a heat so great as that of molten lava, and would develop an enormous power. Calculations have been made which show that water, even when treated to a much less temperature, would exert an "ejection force," as it has been termed, even exceeding that developed in eruptions of the highest volcanoes known. Another portion of the water with the air carried down along with it, acting upon the highly heated sulphides, would become decomposed, and furnish the sulphuretted hydrogen, sulphurous acid, and nitrogen gases given off, while the common salt in the seawater, by its action on the hot silicates in presence of steam, would eliminate hydrochloric acid, and account for the appearances of it, as well as of the volatile chlorides found in volcanic fumes. If we accept this explanation, the chemical reactions would be but the effects and not the cause of volcanic phenomena.

The destructive effects attendant on volcanic convulsions are of two different characters, viz., those arising from the earthquakes which accompany and, as a rule, precede outbreaks; and those caused by the products ejected from the volcano itself. The connection of earthquakes with volcanoes has been noted from the oldest times; the earthquakes which commenced A. D. 68 were but the efforts made by Vesuvius to relieve itself, which culminated in the great eruption of 79; the same was the case in Mexico with Jorillo in 1759, and with the great earthquake of 1834 in Chili, which ended in the outbreaks of Osorno and three other volcanoes of the Andes; and, lastly, in 1888, the terrible earthquake which visited the coast of Peru, and totally destroyed the cities of Arica and Iquique, was followed by the eruption of Isluga, which, according to the latest news, still continues. There seems little reason to doubt that all earthquakes are of purely volcanic origin, and that volcanoes themselves may be regarded as so many safety-valves for blowing off the surplus steam, gases, and molten products from our great internal boiler; for, as a rule, it has been observed that earthquakes either cease altogether or diminish greatly in violence as soon as a neighboring volcano has cleared its throat.

EASTERN CHURCHES. At the beginning of the year, the Greek Archbishop Lycurgos, of Syra and Tenos, a distinguished scholar, who had studied at the German universities, made a visit to England, where he was received with marked honors. In his intercourse with the representatives of the Church of England, he avowed his sympathy with the movement for bringing about a closer union between the Anglican and the Eastern Churches. Thus, in reply to an address from the English Church Union presented to him on leaving England, the archbishop is reported to have said:

I have seen with joy in your renowned nation the prevalence of divine zeal for the true faith, and the just aversion to all novel adulterations of the divine teaching of the holy Scriptures; and, above all, the earnestness, well-pleasing to God, with which your

society is unremittently working for the accomplishment of that divine word—"That all may be one." That earnestness of yours is assuredly blessed by Him who gave us the commandment to love one another, and is recognized with joy by his Orthodox Church, which prays night and day for the union of all. And I now, on my return home, shall fulfil a most sacred duty in reporting to all the most reverend hierarchs in these parts what I have seen and heard among you; and in addition to this, also, your love and sympathy for the Orthodox Eastern Church, which not only possesses the privilege of reading the heavenly doctrine of the New Testament in the language in which it was originally written, but has also been counted worthy of the divine grace to preserve that very doctrine uncorrupted and unadulterated, and "rightly to divide the word of truth." But, in particular, I shall most gladly fulfil your request in reporting to his Holiness the Œcumenical Patriarch your respect and good-will; and, in fine, I will leave nothing undone, beloved brothers in Christ, to bring to a happy accomplishment, so far as in me lies, the truly evangelical and God-approved design which your society is pursuing.

The Patriarch of Constantinople received the report of Archbishop Lycourgos on the progress of the intercommunion movement in England with great joy, and thus expressed his feelings in a letter to the Archbishop of Canterbury:

Gregory, by the mercy of God Archbishop of Constantinople, the new Rome, and Œcumenical Patriarch, to the most holy Archbishop of Canterbury, Primate of the Christians in Great Britain of the Anglican Confession, the Lord Archibald Campbell, peace from God and the brotherly salutation in Christ. At the most revered and world-saving feasts of the immaculate Passion and of the life-bearing Resurrection of the Lord, we entertained here in joy and gladness of heart the Lord Alexander Lycourgos, the most holy Archbishop of Syra and Tenos, our beloved brother in Christ and fellow-minister, on his auspicious return from your renowned and Christ-loving country, and were gladdened in spirit, and revelled in the joy of mutual conversation, while he narrated and told at length, and we with affection and eagerness made inquiries, and listened to his account of all the good things that were said of our unworthy self, both by your Holiness, whom we highly regard in Christ, and by very many wise and powerful men, especially by the most eminent and distinguished Lords Gladstone and Redliff Kaningk [Lord Stratford de Redcliffe], as they praised and magnified our state here. It was with pleasure that we heard of all the conspicuous honors, kindly acts, and hospitable welcome, which were shown to the holy and accomplished Greek Archbishop by private individuals and by men in authority, by clergymen and divines, by members of the universities, and by almost all the noble and most hospitable people of England, not even its august and powerful Queen herself excepted—being proofs, and genuine and bright reflections, of the approved conversation in Christ, and of all the evangelical love and brotherly affection of the English people. But especially interested were we in hearing of all that his Holiness saw and heard in person throughout the whole extent of England, truly admirable and godly deeds and words, all characterizing the ardent and lofty reverence and sympathy toward the holy and Orthodox Eastern Church, which, glorying in the Lord over the long and terrible persecutions and conflicts of martyrdom, the heavenly bridegroom, having pitied and loved, did not deprive of the bright mystic candlestick, and of all the perfect and unsullied treasure of the faith—the apostolic and God-delivered faith, which, alien to profane and vain babblings and new dogmas, and to stratagems of error and compul-

sion—being wholly spiritual, heavenly, and radiant, is the one and indivisible soul of the one Church which the Spirit of God, the Spirit of truth, sanctifies, quickens, nurtures, influences, and rules, to all ages. These, beloved and most honored brother, these are the things good and profitable to men, faithful and undefiled, and one only, working through a love bearing many branches and every fruit. These things straighten, smooth, and prepare beforehand the ways and the paths of the spiritual unity and fellowship of the faithful everywhere, in the one faith and hope of our calling, who are as branches growing together on the one tree planted of heaven and watered of God, as inseparable members of the one Christ-bearing body, the Church, as bright morning stars of the light of truth. In return, then, for all these works and words, these good and brotherly sentiments and dispositions, which the whole Anglican body, eminently weighty and pure, and its most devout shepherds and rulers, exhibited, whether in the person of the said Orthodox Eastern Archbishop, or in our humble person, toward our Eastern Orthodoxy and true Catholicity, which by the mercy of God reverently keeps to the old paths, with the Holy Scriptures and the august Œcumenical Councils—in return, we say, for all these things, we render, as is due, and with all zeal, our hearty thanks, and call down that rich blessing and recompense which comes from God our Saviour, upon all the Christ-loving, glorious, and heroic Albion, which with such eagerness and in an unfettered spirit of freedom marvellously recurs to customs handed down from old time and genuinely apostolic; and we put as a seal to our prayers the apostolic words of St. Paul, which are at once a prayer and a command: "Speaking the truth in love, let us grow up unto Him in all things, who is the head, even Christ." May His grace and boundless mercy be with your Holiness, for whom we entertain deep regard and affection, and with all who are under your pastoral charge.

GREGORY.

April 30, 1870.

A similar letter was on June 20th addressed to the Archbishop of Canterbury by the Synod of the Church of Greece. After thanking the English people for their interest in the conflict of Greece for freedom, and the English Church for the honors shown to Archbishop Lycourgos, the letter of the Synod continues:

Accordingly, the Sacred Synod of the Church of Greece, wishing to give some sure token of brotherly love toward the English Church, and being of one mind with the Holy Synod assembled round the most Holy Œcumenical Patriarch, has determined by encyclical letters to direct the sacred clergy under it to show as far as possible brotherly kindness in all things to the Christians of your confession, and if any such Christian should die at a place where no priest of their own Church should happen to be present, to render them fitting burial, and the prayers of our Church for their souls.

In the Church of Russia considerable progress has of late been made in the circulation of the Bible. The Russian Bible Society has been formally authorized by the Government to resume its operations. The Holy Synod has its printing establishment fully occupied in preparing editions of the Scriptures. These are sent forth in such variety of form and type as to meet all requirements of popular taste and preference. From this source the agency of the British and Foreign Bible Society procures books. The circulation by that agency amounted, in 1868, to 64,830 volumes. They

were in various languages, as modern Russ, Slavonic, Lettish, Polish, Swedish, and many others.

The long-pending Bulgarian Church question found at last its solution by a firman, which was communicated to the Greek patriarchate on the 10th of March. The firman contains eleven paragraphs, which are substantially as follows :

ARTICLE 1. Provides for the establishment of a separate church-administration for the Bulgarians, which shall be called the Exarchate of the Bulgarians. ART. 2. The chief of the Bulgarian metropolitans receives the title of exarch, and presides over the Bulgarian synod. ART. 3. The exarch as well as the bishops shall be elected in accordance with the regulations hitherto observed ; the election of the exarch to be confirmed by the oecumenical patriarchs. ART. 4. The exarch receives his appointment by the Sublime Porte previous to his consecration, and is bound to say prayer for the Patriarch whenever he holds Divine service. ART. 5. Stipulates the formalities to be observed in supplicating for the appointment (installation) by the Sublime Porte. ART. 6. In all matters of a spiritual nature, the exarch has to consult with the Patriarch. ART. 7. The new Bulgarian Church, like the churches of Roumania, Greece, and Servia, obtains the holy oil (chrism) from the patriarchate. ART. 8. The authority of a bishop does not extend beyond his diocese. ART. 9. The Bulgarian Church and the bishopric (Metochion) in the Phanar are subject to the exarch, who may temporarily reside in Metochion. During this temporary residence he must observe the same rules and regulations which have been established for the Patriarch of Jerusalem during his residence in the Phanar. ART. 10. The Bulgarian Exarchate comprises fourteen dioceses : Rustschuk, Silistria, Schumla, Tirnovo, Sophia, Widdin, Nisch, Slivno, Veles, Samakovo, Kostendie, Vratsa, Lofdja, and Pirut. One-half of the cities of Varna, Anchiala, Mesembria, Slizeboli, and of twenty villages on the Black Sea, are reserved for the Greeks. Philippople has been divided into two equal halves, one of which, together with the suburbs, is retained by the Greeks, while the other half and the quarter of Panaghia belong to the Bulgarians. Whenever proof is adduced that two-thirds of the inhabitants of a diocese are Bulgarians, such diocese shall be transferred to the exarchate. ART. 11. All Bulgarian monasteries which are under the patriarchate at the present time shall remain so in future.

Soon after the publication of this firman, the Greeks demanded of the Patriarch that he should either reject it or hand in his resignation. Their indignation at this solution of the question at issue was beyond all bounds, and was increased by their own conviction that; had they made some reasonable concessions in due time, the difficulty might have been avoided altogether. For the party who had based their plans for a restoration of a Greek empire on the unity of the Church this was a severe blow, their hopes in the future foundation of a Greek empire extending to the banks of the Danube being thus entirely annihilated. That the reestablishment of a separate Bulgarian Church, analogous to the Servian, Roumanian, and Hellenic Churches, was not in contradiction with the canons of the Church, even the most orthodox opponents of the measure were forced to concede. But they all blamed the latter part of Article 10, which an-

titles two-thirds of the population of a district to claim an extension of the exarchate. This, it was thought, would be a fruitful source of bitter feuds between the two nationalities, and would contribute not a little to enhance their mutual dislike and jealousy. The Bulgarians, on the other hand, sent a special deputation to Aali Pacha, the Turkish minister, to express their gratitude for the firman. The Patriarch, in the month of April, convened the synod and the national council, who resolved to reject the firman as being in conflict with the canons of the Church. They were of opinion that an oecumenical council would have to be summoned. The Patriarch, in accordance with the above resolution, officially announced to the Sublime Porte his rejection of the firman concerning the Bulgarian Church question, contending that the Sublime Porte had no right to modify the legal position of the Church. On the 19th of April, the Grand-Vizier replied to the Patriarch that the Sublime Porte had all due respect and consideration for the rights of the patriarchate, but that, as the firman did not in any way trespass upon those rights, it should be maintained. He protested against the charge that the Sublime Porte had in any instance abandoned the old established principle of non-interference in the religious affairs of all the subjects of the Ottoman empire not adhering to the Church of the faithful. The solution of the conflict as given by the firman could not possibly be construed into such an intervention. On the contrary, it did not contain any thing but what the Sublime Porte had considered to be the views of his Holiness on the subject, with such slight modifications as had been proposed by the mixed commission appointed some time ago by the Porte and by the two contending parties. In accordance with this conviction, he would beg leave to notify his Holiness that the firman should be upheld and executed to its full extent.

To this the Patriarch replied :

To his Highness the Grand-Vizier :

Your Highness has been pleased to transmit to the patriarchate at the hands of Messrs. Christaki Efendi Sagrappas and Kara-Teodor the imperial firman on parchment, which solved the Bulgarian Church question after it has now been pending for the last ten years. The patriarchate, always conscious of its duty toward the master appointed by God to rule His peoples, has at all times remained foreign to the thought that the decisions of the august sovereigns in all political questions should not be respected and strictly obeyed. The Oriental Church has always willingly and respectfully obeyed her lawful sovereigns, while the latter have always respected the domain which is exclusively under the administration of the Church. The Sultans of glorious memory, as well as their present successor (whose power may be invincible), have always drawn a distinct line between civil and ecclesiastical authority ; they recognized the rights, privileges, and immunities, of the latter, and guaranteed them by Hatt-y-Hoomayooms. They never allowed an infringement of the original rights of the Church, which for five centuries has been under the immediate protection of the imperial throne. Your Highness ! if the firman had not been

any thing else but the sanction of a concordat between the patriarchate and the Bulgarians, we would respect and accept it. Unfortunately, however, matters are different. As it decides on Church matters, and as such decision is in contradiction with the canons, and does deadly injury to the rights and privileges of our holy see, the patriarchate cannot accept the ultimatum of the imperial Government. Highness! as the Bulgarians are unwilling to listen to the voice of the reconciliation which we are aiming at; as, furthermore, the imperial Government is not competent to solve a Church question in an irrevocable manner; as, finally, this abnormal condition of affairs injures and compromises ancient rights—the Ecumenical Patriarchate renews its prayer that the imperial Government may grant the convocation of an ecumenical council, which is alone entitled to designate the lawful solution of this question, binding for both parts. We furthermore supplicate the imperial Government to adopt proper measures for the suppression of the disorder which threatens the peace among our flock, and which is mainly attributable to the circulars of the Bulgarian leaders, dated the 15th instant. The Ecumenical Patriarchate hands its protest against these disturbances to the imperial Government.

Written and given in our patriarchal residence, on the 24th of March (old style), 1870.

(Signed) GREGORY CONSTANTINE, Patriarch.
(Countersigned) All the members of the Holy Synod.

On April 20th (old style, 7th of April) the Patriarch Gregory again wrote to the Grand-Vizier in reply to his justification of the Bulgarian firman. He protested against the name "Bulgarian Church," saying that there is only one indivisible and universal apostolic Church, to which several nations adhere, but the indivisibility of which had been ordained directly by the Holy Ghost, like all the laws for the administration of the Church. He furthermore said that it was impossible for him to recognize a regulation which had been set up with the coöperation of laymen, as the latter are incompetent in religious matters. He said that he had not neglected to call the attention of Aali Pacha, during the preliminary deliberations, to the firman in question. But as Aali Pacha, being a layman, could not decide upon religious affairs, and as he, in the capacity of Patriarch, could not recede one inch from the canons of the Church, he must insist upon the convocation of an ecumenical council, alone competent to decide the question at issue. As the supplication which he had sent in to the Grand-Vizier for that purpose belonged exclusively to the province of ecclesiastical affairs, and had nothing whatever to do with politics, he begged to reiterate his prayer for its sanction. The Bulgarian committee, on the other hand, issued a circular in which the solution of the question by the firman was declared to be entirely satisfactory, and corresponding with their just demands. They pointed out that the principal demand of the Orthodox Bulgarians had been, that their church and bishoprics should be intrusted to a clergy familiar with the Bulgarian language, and that they did not understand how the patriarchate could designate as unevangelical so legitimate a desire.

The Patriarch Gregory insisted upon his dismissal. In a letter to the Grand-Vizier, he declared the convocation of an ecumenical council to be indispensable, remarking that, should the convocation not be granted or in any way interfered with, he would be unable to discharge the duties of his holy office any longer. In his reply, Aali Pacha endeavored to induce the Patriarch to desist from his demand, saying that he was unable to see the necessity of convoking an ecumenical council for the solution of a purely administrative question, like the Bulgarian, while no such council had been convened for many centuries, although questions of far greater importance had been at issue from time to time. Should the Bulgarians, however, make an illicit use of the concessions granted them, the Sublime Porte would not hesitate to resort to energetic measures against them. But these promises, which were supposed to be given in order to avert the interference of Russia, did not prove satisfactory to the patriarchate. The twelve bishops of the Synod of Constantinople consequently sent a synodic letter to the Sublime Porte, in which they implore the Imperial Government to settle the Bulgarian question on the basis proposed by the Patriarch in 1869. This, they contended, would be the only way to preserve to the church a patriarch so much esteemed as Gregory, and to suppress the disturbances, which had been created by the Bulgarians in the capital as well as in the provinces.

This remonstrance apparently made a deep impression in Constantinople. The Grand-Vizier, whether actually convinced of the right of the Church to convene an ecumenical synod for the solution of the Bulgarian question, or actuated by motives of policy, sent a ministerial rescript to the patriarchate, by which he requested the latter to send to the Sublime Porte a programme of the questions to be discussed by the ecumenical synod, in order that it might obtain the imperial sanction. The unwillingness of the Porte to allow the question to be reopened, and the reluctance of the Russian Synod to take part in the dispute, were thus apparently overcome. Under date of November 15th, the Grand-Vizier acknowledges the receipt of another communication from the patriarchate and of a synodical letter or mazbata from the Metropolitan, confirmatory of the "tarkir" of his holiness; and expresses the hope that the caution and moderation of the Sublime Porte, in dealing with a question so subtle and delicate, and which has been the cause of incessant differences between two parties, both subjects of the empire, will be acknowledged and appreciated. While the Government of the Sultan will remain true to its former policy in regard to church questions, it will continue to watch for the prevention of all abuse, and for the suppression of all disturbances, from whatever quarter they may come. And, although the Government has not

deemed the convening of an œcumenical council necessary in order to find a proper solution of the question at issue, it is willing to yield to the earnest supplication of his holiness and of the Synod of Metropolitans on that point. But, says the Grand-Vizier in conclusion, "in order that the Sublime Porte may be enabled to come to a decision, it is necessary that a programme of the deliberations of the proposed Ecumenical Council and the limits of its action be made known; therefore, your holiness is respectfully solicited to submit such a programme to the approval of the Sublime Porte."

To this the Patriarch replied:

We had the honor of receiving the rescript (Tektare) which your highness has condescended to forward to us, as a reply to our letter and the Masbats of the Synod of Metropolitans. We perceive that we shall be authorized to convene the Ecumenical Council, to which will appertain the final solution of the Bulgarian question by canonical decision. Your highness expresses the desire to know beforehand the objects and the limits of the deliberations of the council, and invites us to submit a programme of the same. We have the honor of informing you that the Ecumenical Council, for whose convocation we requested the authorization of the Imperial Government, will have to investigate and to adjust the controversy which has arisen between the patriarchate and the Bulgarians. Your highness is aware that said controversy resulted partly from the circumstance that the Bulgarians did not consider satisfactory the concessions which we granted them in regard to the administration of the Church, partly from the fact that the Bulgarians demand something which is in direct opposition to the spirit of our faith and to the commands of the holy canons, although they pretend that their proposals are not at all in contradiction to the holy laws. Thus the labors of the council, which will not touch on any secular question, will be strictly limited to deliberations on the Bulgarian question; the demands by the Bulgarians, as well as the concessions made by the patriarchate, will be minutely and impartially scrutinized, upon which the council will come to a decision in accordance with the spirit of the canons, from which there can be no appeal.

Done and given at our patriarchal residence on November 16, 1870. GREGORY.

EASTERN QUESTION. The Eastern question, or the question as to the future fate of the peninsula of the Balkan and of the Turkish Empire, has during the last fifty years been one of the most serious and difficult complications of European politics. In November, 1870, it threatened Europe with another Eastern war, and although the real outbreak of hostilities was adjourned, as an International Conference of the great powers was called for the purpose of finding a peaceable solution of the pending difficulties, the danger of another Eastern war is by no means ended. It is, on the contrary, almost certain, that far-going changes in the present territorial condition of the Ottoman Empire will sooner or later be effected, and that, until the territory now constituting Turkey shall be reconstructed on a lasting basis, the Eastern question will not cease to agitate Europe and to threaten its peace.

The Turks entered Europe as conquerors, long after each country had obtained fixed landmarks and settled governments. They

appeared, therefore, to the rest of Europe as intruders, and the more so, because all Europe (with the exception of a small province of Spain, then occupied by the Moors) was Christian, and the Turks established a Mohammedan dynasty. The expulsion of these intruders was, therefore, regarded as a family affair for the whole of Christian Europe. The Turkish power attained its zenith under Solyman II., who even subdued Lower Hungary and Transylvania, made Moldavia and Wallachia tributary, and greatly enlarged his dominions in Asia and Africa. The Sultan was acknowledged as the head of all Mohammedans, and became, therefore, all the more objectionable to his own Christian subjects and to the Christian governments of Europe. With the death of Solyman (1666) the Turkish power began to decline, and its wars in Europe began to assume less of an aggressive than of a defensive character. But the greatest change in the position of Turkey with regard to the remainder of Europe dates from the reign of Peter the Great. It was thenceforth the traditional policy of the rulers of Russia to extend their empire on the one side to the Baltic, and on the other to the Mediterranean. Russia and Turkey became irreconcilable enemies. In 1774 Turkey was compelled to conclude the fatal Treaty of Kainardshi, which gives to Russia the right of free navigation on the Turkish seas, inclusive of the Dardanelles, as well as Taganrog, Kertsch, Kinburn, and Asov, advanced the frontier of Russia to the Bug, declared the independence of the Crimea, gave to Russia a protectorate over the Danubian principalities, and a right of guardianship over the Greek churches in Turkey. Only four years later the Empress Catharine occupied the Crimea, the island of Taman, and other portions of Turkey, and thus became mistress of the Black Sea. A new war between Russia and Turkey, under Selim III., ended January 9, 1772, in the Treaty of Jassy, by which Turkey lost Pozakov, and both banks of the Bug and the Dnieper. During the negotiations for concluding the Peace of Tilsit, in 1807, Alexander I. proposed to Napoleon a partition of Turkey. They arrived at an agreement concerning all points except the possession of Constantinople, which Alexander claimed, and Napoleon would not yield. "Once mistress of Constantinople," said Napoleon, at St. Helena, to Dr. O'Meara, "Russia would control the whole commerce of the Mediterranean; if it becomes a great naval power, and God knows what may come from it, it wants a war, marches a large army against India, and India is lost for England. Of all the powers, Russia is most to be dreaded. To oppose a bar to these barbarians, I meditated the restoration of Poland." In 1812 Turkey had to conclude the Peace of Bucharest, by which Russia received Bessarabia. From the Congress of Vienna, Turkey was excluded because Russia insisted that, in accordance with former treaties, she could not allow

the intervention of any foreign powers in the settlement of difficulties between her and Turkey. The Greek war of independence entailed on Turkey a considerable loss of territory; the establishment of a new kingdom, which was naturally bent on coöperating with any other enemy of Turkey for the overthrow of her power; the destruction of her entire fleet (October 20, 1827); the concession of a semi-independent position to the Pacha of Egypt, who only at this price was ready to fight for his sovereign; and the ratification of the Russian protectorate over the Danubian principalities and the Christian subjects of the Ottoman Empire. These severe losses and concessions were soon followed by others of still greater importance. War again broke out between Russia and Turkey in the following year, and resulted in the Treaty of Adrianople, by which Turkey was further humiliated, and the overwhelming influence of Russia firmly established. Besides the payment of an indemnity of ten million Dutch florins, Turkey had to grant the free passage of the Dardanelles, and consent to the regulation of her position toward the Danubian principalities, which reduced her right and title to those provinces to a mere ceremony of homage and the payment of a tribute. Count Nesselrode wrote to the Grand-duke Constantine: "The stipulations of the Treaty of Adrianople have secured the preponderance of Russia in the Levant, they have strengthened her frontiers, unfettered her commerce, guaranteed her rights, and advanced her interests beyond precedence." At the conclusion of the Hellenic War, Sultan Mahmoud resolved to improve his relations with his Egyptian vassal, but, as the French Government refused its assistance, and as Mehemet Ali proved too formidable an antagonist, the Sultan was unwillingly forced into an alliance, offensive and defensive, with Russia by the Treaty of Hunkiar-Skelessi (July 8, 1833). This treaty contained a secret clause, which stipulated, that the Dardanelles should eventually be closed to the commerce of France and England, but should always remain open to the Russian fleets. At the approach of the Russian army, Mehemet Ali signed the Peace of Koutaleh, in order to gain time for more extensive preparations and a more effective prosecution of his ambitious plans. In 1839 he resumed hostilities, refused the payment of tribute, took possession of Candia, and marched his troops to the borders of Cilicia. The Turkish army was totally defeated, on June 24, 1839, near Nesib, and the Turkish fleet went over to the Egyptians. The fear of another European war induced the great powers to form a quadruple alliance at London, in 1840; they promised assistance to the Sultan against the rebellious Viceroy and decided to bring the Eastern question to a close. Russia consented to certain modifications of the Treaty of Hunkiar-Skelessi. The Viceroy, in view of the determination of the great powers, was induced to surrender. The Porte was invited to par-

ticipate in the deliberations of the quadruple alliance, a fact not only of great importance with regard to her future position toward the other European powers, but altogether without precedent. The rights of the Viceroy of Egypt were guaranteed upon his promise of the payment of tribute and of the reduction of his army. Russia renounced the Treaty of Hunkiar-Skelessi, and the Porte made concessions in regard to the fortifying of the Dardanelles and to their permanent neutralization.

New differences arose, however, between Russia and Turkey, concerning the protectorate of Servia, and another war would have been the result, had not the great powers interfered in favor of the autonomy of Servia, as proposed by Russia. A wide-spread revolt in Albania, which was subdued by Omar Pacha at the head of a numerous army; the cruel and bitter feuds between the Druses and Maronites on the Lebanon; the differences with Greece, in 1847; and the revolutionary movements in the Danubian principalities, in 1848, kept the Sublime Porte in constant trouble. In spite of the protestations of the Turkish Government, Russia marched an army into the principalities, with a view to suppress the revolutionary spirit of the population, and Turkey was compelled, by the Treaty of Baltaliman, to concede to Russia equal rights in these provinces for the term of seven years, while Russia promised to withdraw her troops after the quelling of the Hungarian Revolution. When the quarrels of the Greeks and Roman Catholics concerning the possession of parts of the Church of the Holy Sepulchre, in Jerusalem, induced the French Government to interfere, the Emperor Nicholas sent Menchikoff on a special mission to Constantinople, with the formal demand of a general protectorate over all the members of the Greek Church throughout the Ottoman Empire. This was refused; Menchikoff and the Russian embassy left Constantinople on May 21, 1853; and Russia took full possession of the Danubian principalities as a pledge for her demand. This led to an immediate declaration of war on the part of the Porte; England and France entered into an offensive and defensive alliance, which was joined by Sardinia; while Austria tried to mediate by proposing a joint protectorate over the Christian subjects of the Sultan by the great European powers. This proposition was indignantly rejected by Nicholas, who thus inaugurated the Crimean War, terminated by the Treaty of Paris, on March 30, 1856. The independence and integrity of the Ottoman Empire were again recognized, all foreign interference with its internal affairs forbidden, and the fate of the Danubian principalities regulated by means of a joint guarantee of their liberties and prerogatives under the sovereignty of the Porte, the latter promising to grant them an administration in accordance with the wants and desires of the population. Russia was compelled to cede a part of Bessarabia, by

which it lost the control of the mouths of the Danube; the Black Sea was neutralized, and closed to vessels-of-war; Turkey and Russia were prohibited to construct or maintain arsenals on its coast; the protectorate over the Greek-Catholic population of Turkey by Russia was abolished; while the Sultan, on the other hand, conceded the adjustment of the religious and political rights of the Rayahs. On the 15th of April, 1856, France, England, and Austria, mutually agreed to guarantee the independence and integrity of the Ottoman Empire, and to consider any infraction of the treaty of March 30th a *casus belli*.

The Crimean War proved only an episode in the development of Eastern affairs. Soon the persecution of the Christians was renewed at Damascus and on the Lebanon; new insurrections broke out in Bosnia and the Herzegovina; and, on March 31, 1861, the two Danubian principalities, in spite of the Treaty of Paris, constituted themselves one state. In 1866 this new state chose a prince of the house of Hohenzollern its hereditary ruler. The Turkish Government seemed at first to be disposed to refuse the recognition of an hereditary prince, but finally yielded. The signers of the Treaty of Paris likewise gave their consent to this change.

Differences of a more recent date between the Sultan and the Viceroy of Egypt were amicably settled by mutual concessions. In Bulgaria, which has a population of about 5,000,000, the Porte established colonies of Tartars and Circassians after the close of the Crimean War, especially along the frontier of Serbia, with a view to strengthen the anti-Christian element, by adding to the limited number of inhabitants of Mohammedan faith. This step of the Government has had grave consequences, and an armed opposition was organized in 1867 against the further introduction of colonists, which was only suppressed after much bloodshed. The relations between the Porte and Serbia were likewise unsatisfactory. The Servians had formally demanded the withdrawal of the Turkish garrisons from their fortresses ever since the bombardment of Belgrade, in 1862, but the Porte steadily objected to that demand, until in 1868, when she yielded, at the joint instance of Austria, France, and England, who thought that by this concession a better understanding might be brought about between the two governments. The insurrection on the Island of Candia, in 1866, threatened most serious complications. As far back as 1830 the cession of this island (which has a population of nearly 280,000 Christians and 70,000 Mussulmans) to Greece had been seriously discussed, but the question was dismissed, in consequence of a declaration by the Emperor Nicholas that he would neither permit the aggrandizement of Greece, nor the establishment of a Byzantine empire. The island was then given to Mehemet Ali, but, as the experiment proved a failure, and as

the inhabitants revolted against the government of the Pacha, it came again under Turkish administration in 1841. In 1866 the inhabitants complained to the Sultan about the oppressive measures of the government, excessive taxation, the want of streets and bridges, the entire disregard of rights and privileges granted them in 1858, the suppression of personal liberty, the bad administration of justice, and the want of schools, and of freedom of conscience. Their remonstrances remaining unheeded, they rose in arms and declared the abolition of the Turkish Government, and the reunion of the island with Greece. The war which now followed was conducted by the Turks with the utmost cruelty, while the revolutionists fought with the courage of despair, and were secretly supported by Greece. Toward the month of December the great powers, fearing for the peace of Greece, and apprehending a general rising of the Christian inhabitants of the Ottoman empire, interfered. Russia recommended the annexation of the island to Greece, or the creation of an autonomy like that of the Danubian principalities. France recommended a *plébiscite*, to which proposition the other powers gave their assent, except England. In a note of May 17, 1867, Austria, France, Italy, Prussia, and Russia, demanded the appointment of a commission, which was to inquire into the wishes of the population, but the Sultan refused any interference of the kind, being encouraged by England in his opposition to the demands of the Continental Powers. The Porte, while promising reforms to the Cretans, assumed energetic measures against Greece, which, by supporting the Cretans, had prolonged the war. In December, 1868, she decreed the expulsion of all the Greek subjects from the empire, and on the 11th of December she sent an ultimatum to the Greek Government, demanding the disbanding of the free corps, and due regard for existing treaties. A conference of the European powers induced the Government of Greece to comply with the demands of Turkey.

The Osmanic Empire, in spite of numerous losses of territory, still occupies the eastern coast of the Mediterranean. Independent of its Asiatic and African possessions, with an area of nearly 1,700,000 square miles and 25,000,000 inhabitants, it has in Europe an extent of 200,920 square miles, with from 15,000,000 to 16,000,000 inhabitants. The population comprises a great variety of nationalities. The Slavic nationalities are represented by 4,000,000 Bulgarians; 1,000,000 Servians; 800,000 Bosnians; 400,000 Croats; 860,000 Dalmatians; 200,000 Montenegrins. There are, besides, 1,500,000 Albanians; 4,000,000 Wallachians; 200,000 Zingaris or Bohemians; 1,000,000 Greeks; and 400,000 Armenians. In the commercial cities there are 60,000 French and Italians, and 70,000 Jews. Turkey in Europe has about 2,100,000 Turkish inhabitants, who form the dominant class. The

Christian inhabitants are more or less at their mercy, and are treated like slaves. The Turkish Government, it is true, has lately introduced some essential reforms, which are partly due to the enlightened views of the present Sultan, partly to the influence of the foreign ambassadors at Constantinople. But these reforms, although conferring some privileges upon the Christian inhabitants, are still far from putting them on a level with the Mohammedan population.

Since the commencement of the war between France and Germany, Russia repeatedly manifested an intention to annul the principal stipulations of the Treaty of Paris. The clauses which Russia was, in particular, eager to have repealed were:

ARTICLE 11. The Black Sea is neutralized. While open to the mercantile navies of all nations, its waters and ports are formally and forever closed to vessels-of-war, whether belonging to nations having territory bordering on it or to others.

ART. 13. The Black Sea being neutralized, Russia and Turkey engage neither to construct nor to maintain any naval or military arsenal upon its coast.

The plans of Russia were finally matured in a note of Prince Gortschakoff, of October 31st, which was presented simultaneously at London, Vienna, Constantinople, Florence, and Tours, on November 9th, and is as follows:

TSARSKOE SELO, October 19 (31), 1870.

BARON: The successive alterations which the compromises considered to be the foundation of the equilibrium of Europe have in these last years undergone, have obliged the Imperial Cabinet to examine the influence upon the political position of Russia resulting therefrom. Among these compromises, that which interests us most directly is the treaty of the 18th (30th) March, 1856. The special convention between the two powers bordering on the Black Sea, annexed to this treaty, contains an engagement on the part of Russia to limit her naval forces to inconsiderable dimensions. In return, this treaty offered her the principle of the neutralization of that sea.

In the view of the signatory powers, this principle was to remove all possibility of conflict, whether between the powers bordering on the Black Sea, or between them and the maritime powers. It was to increase the number of territories called by the unanimous agreement of Europe to enjoy the benefits of neutrality, and so to protect Russia herself from all danger of aggressions.

The experience of fifteen years has proved that this principle, upon which depends the security of the whole extent of the frontiers of the Russian Empire in this direction, rests only on a theory. In fact, while Russia, disarmed in the Black Sea, has even by a declaration, recorded in the protocols of the conferences, legally denied herself the possibility of taking efficient measures of maritime defence in the adjacent seas and ports, Turkey preserved the right of keeping up unlimited naval forces in the Archipelago and the Straits, and France and England preserved the power of concentrating their squadrons in the Mediterranean.

Moreover, by the terms of the treaty the entrance to the Black Sea is formally and forever prohibited to the flag of war, whether of the riparian powers or any other power. But by virtue of the convention called the Straits Convention, the passage through these Straits is closed to flags of war only in time of peace. It results from this contradiction that the coasts of the Russian Empire remain exposed to all aggressions, even on the part of less powerful states as soon as they possess naval forces, to which Russia

would be able to oppose only a few vessels of small dimensions.

The treaty of 18th (30th) March, 1856, moreover, has not escaped the infractions to which most of the European compromises have been subject, and in presence of which it would be difficult to affirm that written law, founded upon respect for treaties as a base of public law and rule for the relations between states, has preserved the same moral sanction which it may have had in other times.

We have seen the principalities of Moldavia and Wallachia, the fate of which had been fixed by the treaty of peace, and by the subsequent protocols under the guarantee of the great powers, effect a series of revolutions as contrary to the spirit as to the letter of these compromises, and which led them first to union, then to the summoning of a foreign prince. These events occurred with the consent of the Porte, and the acquiescence of the great powers, or at least without the latter having thought it necessary to make their decrees respected.

The representative of Russia was the only one to raise his voice to point out to the Cabinets that by this toleration they would put themselves in contradiction to the explicit stipulations of the treaty. Beyond doubt, if these concessions, granted to one of the Christian nationalities of the East, had resulted from a general understanding between the Cabinets and the Porte, by virtue of a principle applicable to the whole of the Christian population of Turkey, the Imperial Cabinet would have had nothing to do but applaud. But they were exclusive.

The Imperial Cabinet then could not but be struck with the fact that it had been possible to infringe with impunity the treaty of 1856, but a few years after its conclusion, in one of its essential clauses, in the face of the great powers assembled in conference at Paris, and representing, as a whole, the high collective authority upon which rested the peace of the East. This infraction was not the only one. At several intervals, and under various pretexts, the entrance to the Straits has been opened to foreign ships-of-war, and that of the Black Sea to whole squadrons, the presence of which was a violation of the character of absolute neutrality ascribed to these waters, in order to secure the repose of the East and the European equilibrium.

His Majesty is convinced that that peace, and that equilibrium, will have a stronger guarantee when they shall have been placed on a more just and solid basis than those resulting from a position which no great power could accept as a normal condition of existence.

You are desired to read this dispatch to the Minister of Foreign Affairs, and leave a copy with him.

Receive, etc.

GORTSCHAKOFF.

To this, Earl Granville replied, November 10th, by the following note to Sir A. Buchanan, British ambassador at St. Petersburg:

FOREIGN OFFICE, November 10, 1870.

SIR: Baron Brunnow made to me yesterday the communication respecting the convention between the Emperor of Russia and the Sultan, limiting their naval forces in the Black Sea, signed at Paris on the 30th of March, 1856, to which you allude in your telegram of yesterday afternoon. In my dispatch of yesterday I gave you an account of what passed between us, and I now propose to observe upon Prince Gortschakoff's dispatches of the 19th and 20th ultimo, communicated to me by the Russian ambassador.

On that occasion, Prince Gortschakoff declares, on the part of his Imperial Majesty, that the treaty of 1856 has been infringed in various respects to the prejudice of Russia, and more especially in the case of the Principalities, against the explicit protest of his representative; and that, in consequence of these infractions, Russia is entitled to renounce those stipulations of the treaty which directly touch her interests. It is then announced that she will no longer

be bound by the treaties which restrict her rights of sovereignty in the Black Sea.

We have here an allegation that certain facts have occurred which, in the judgment of Russia, are at variance with certain stipulations of the treaty; and the assumption is made that Russia, upon the strength of her own judgment as to the character of those facts, is entitled to release herself from certain other stipulations of that instrument. This assumption is limited in its practical application to some of the provisions of the treaty. But the assumption of a right to renounce any one of its terms involves the assumption of a right to renounce the whole.

This statement is wholly independent of the reasonableness or unreasonableness, on its own merits, of the desire of Russia to be released from the observation of the stipulations of the treaty of 1856 respecting the Black Sea. For the question is, in whose hand lies the power of releasing one or more of the parties from all or any of these stipulations? It has always been held that that right belongs only to the governments who have been parties to the original instrument. The dispatches of Prince Gortschakoff appear to assume that any one of the powers who have signed the engagement may allege that occurrences have taken place which in its opinion are at variance with the provisions of the treaty, and although this view is not shared or admitted by the co-signatory powers, may found upon that allegation—not a request to those governments for the consideration of the case—but an announcement to them that it has emancipated itself, or holds itself emancipated from any stipulations of the treaty which it thinks fit to disapprove.

Yet it is quite evident that the effect of such doctrine, and of any proceeding which with or without avowal is founded upon it, is to bring the entire authority and efficacy of treaties under the discretionary control of each one of the powers who may have signed them; the result of which would be the entire destruction of treaties in their essence. For whereas their whole object is to bind powers to one another, and for this purpose each one of the parties surrenders a portion of its free agency, by the doctrine and proceeding now in question, one of the parties in its separate and individual capacity brings back the entire subject into its own control, and remains bound only to itself.

Accordingly, Prince Gortschakoff has announced in those dispatches the intention of Russia to continue to observe certain of the provisions of the treaty. However satisfactory this may be in itself, it is obviously an expression of the free will of that power which it might at any time alter or withdraw; and in this it is open to the same objections as the other portions of the communications, because it implies the right of Russia to annul the treaty on the ground of allegations of which she constitutes herself the only judge.

The question, therefore, arises, not whether any desire expressed by Russia ought to be carefully examined in a friendly spirit by the co-signatory powers, but whether they are to accept from her the announcement that by her own act, without any consent from them, she has released herself from a solemn covenant.

I need scarcely say that her Majesty's Government have received this communication with deep regret, because it opens a discussion which might unsettle the cordial understanding it has been their earnest endeavor to maintain with the Russian Empire. And for the above-mentioned reasons it is impossible for her Majesty's Government to give any sanction on their part to the course announced by Prince Gortschakoff. If, instead of such a declaration, the Russian Government had addressed her Majesty's Government, and the other powers who are parties to the treaty of 1856, and had proposed for consideration with them whether any thing had occurred which could be held to amount to an infraction of

the treaty, or whether there is any thing in the terms which, from altered circumstances, presses with undue severity upon Russia, or which, in the course of events, had become necessary for the due protection of Turkey, her Majesty's Government would not have refused to examine the question in concert with the co-signatories to the treaty. Whatever might have been the result of such communications, a risk of future complications, and a very dangerous precedent as to the validity of international obligations, would have been avoided. I am, etc.,

GRANVILLE.

P. S.—You will read and give a copy of this dispatch to Prince Gortschakoff. G.

The note of Prince Gortschakoff having been presented to the Minister of Foreign Affairs at Vienna, Count Beust replied that there could be no doubt as to the mutual obligations involved by the treaty of 1856, which could not by one party be modified or annulled. It was merely in deference to the Cabinet of St. Petersburg, that he, Count Beust, proceeded to analyze the arguments produced by Prince Gortschakoff. The fact that Turkey was able to maintain a fleet where Russia could not might justify a desire for a revision of the treaty, but not its arbitrary repudiation. Steps like those taken by Russia were sure to endanger all existing and future treaties. Turkey, he said, was not responsible for the alleged breach of treaty by the union of the Danubian Principalities. Turkey did not demand the sanction of this breach of treaty, which infringed upon her rights and interests. The entry into the Black Sea of foreign men-of-war having princes on board was a harmless proceeding, of which Russia should have complained at the time, if she regarded it as objectionable. The Austro-Hungarian Government had learned with painful regret the resolve of Russia, and must express its great surprise. It could not but direct the serious attention of the Government of St. Petersburg to the consequences of such a proceeding.

A further note of Count Beust, addressed to the Austrian ambassador, Count Chotek, at St. Petersburg, refutes the charge that Count Beust had taken the initiative in this matter, in January, 1867. At that time the Russian Imperial Chancellor himself deemed the action of Count Beust precipitate, as tending to excite the suspicions of the French Government, while no satisfactory result could be expected from a congress; besides, according to the proposals of Count Beust at that time, the signers of the treaty conjointly, but not a single power by itself, were to proceed to a revision of the treaty. At that time, too, the proposal of Count Beust had not been of a nature to call forth dangerous complications, while the present isolated proceeding of Russia created serious misgivings, as the Christian populations of the East would think that Russia deemed the moment opportune to take the solution of the Eastern question in hand.

The Italian Minister of Foreign Affairs, Visconti Venosta, acknowledges the receipt of a copy of the note of Prince Gortschakoff, in a

letter of November 24, 1870, addressed to the Italian ambassador at St. Petersburg, Marchese C. di Bella Caracciolo, stating that the friendly relations existing between the Imperial Government of Russia and the Government of the King of Italy imposed upon him the duty of a most minute examination of the contents of the imperial message. But, said he, a single perusal of the articles seven and fourteen of the treaty concluded March 30, 1856, sufficed to show that Italy could not arrogate to herself the right of relieving Russia of the engagements she had entered into with all the signers of the stipulations in question. He denied that the changes which had taken place in the East since 1856, and upon which Prince Gortschakoff had mainly rested his arguments in defence of the deplorable proceeding of Russia, had tended in any manner to impair the great influence and the high position which belonged to her. This was not the case, as all these changes had been effected for the sole and exclusive purpose of ameliorating the condition of the Christians in the East, an object which the policy of Russia herself had never lost sight of. As proof of this he refers to a note written by Prince Gortschakoff in November 21, 1866, to General Ignatieff, in regard to the acknowledgment of Prince Charles of Hohenzollern, as sovereign of the united Danubian Principalities, and cites the following passage: "The Imperial Cabinet can only rejoice at an event which is as much in harmony with the traditional links of sympathy by which Russia is united to her co-religionists, as it is in accordance with her constant desire that the Ottoman Empire may consolidate itself through concessions made to the wishes and legitimate wants of all the Christians who inhabit it." The modifications and reforms which had been introduced in Servia had been of a similar character, and had been followed by the same beneficial results. Therefore, his Majesty, the King of Italy, had come to the conclusion that the spirit of the treaty stipulations of 1856 had outlived the partial modifications which they had been subjected to. The assurance of his Eminence that the Government of Russia would strictly and conscientiously adhere to the general principles of the Treaty of 1856 had been highly gratifying to the King, who sincerely hoped that the harmonious feeling hitherto entertained by the signers of that treaty toward each other might not be disturbed by any precipitate action on the part of any of them.

During the earlier part of December, ministerial councils were held every night at Pera, by order of the Sultan, and every preparation was made in anticipation of serious contingencies. The Turkish fleet was kept under orders to be ready for immediate service, although General Ignatieff, the Russian minister to the Porte, gave assurance that there would be no rupture of existing relations between Russia and Turkey. In Egypt the army fur-

longhs were all withdrawn, in order that the full contingent could be placed at the disposal of the Sultan.

On December 2d, Prince Gortschakoff transmitted to Baron Brunnow the following reply to the note of Earl Granville:

TSAREWICH SELO, November 20 (Dec. 2), 1870.

MONSIEUR LE BARON: The ambassador of England has read and left with me a copy of Lord Granville's reply to our communication of the 19th of October, which I submitted to his Majesty the Emperor. Our august master was pleased to point out that it contained, in the first place, an expression of the earnest desire of the Cabinet of London to preserve the cordial relations between England and Russia; and, secondly, an assurance that the English Cabinet would not have refused to enter into an examination of the results of the treaty of 1856, so far as they have been modified by circumstances.

As for the question of strict right, stated by Lord Granville, we have no wish to enter into any discussion, to recall any precedent, or cite any example. Such a controversy would in no way promote the good understanding which we desire. Our august master had to discharge an imperious duty to his own country, without wishing to injure in any way the governments which were signatories of the Treaty of 1856. On the contrary, his Imperial Majesty appeals to their sense of justice and to their regard for their own dignity.

We regret to see that Earl Granville addresses himself principally to the form of our communication. The form was not our choice. We could have asked nothing better, surely, than to attain our end by an agreement with the signatories of the Treaty of 1856; but the principal Secretaries of State of her Britannic Majesty well know that the attempts made at different times to assemble the powers in a general conference, with a view to remove the causes of difficulty which disturb the general peace, have invariably failed.

The prolongation of the present crisis and the absence of a regular government in France postpone still further the possibility of such an agreement. Meanwhile, the position in which the treaty left Russia has become more and more intolerable. Earl Granville will agree that the Europe of to-day is very far from being the Europe which signed the Treaty of 1856. It was impossible that Russia should agree to remain the only power bound indefinitely to an arrangement which, onerous as it was at the time when it was concluded, became daily weaker in its guarantees. Our august master has too deep a sense of what he owes to his country to force it to submit any longer to an obligation against which the national sentiment protests. We cannot admit that the abrogation of a purely theoretical principle, not followed by its immediate application, and which visibly restores to Russia a right of which no great power could consent to be deprived, ought to be considered as a menace to peace, nor that, in avoiding one point of the Treaty of 1856, the abrogation of all is implied. The Imperial Cabinet never had any such intention. On the contrary, our communication of October 19th declared, in the most explicit terms, that his Majesty the Emperor maintains his adhesion to the general principles of the Treaty of 1856, and that he is ready to come to an agreement with the signatory powers of that treaty, either to confirm its general stipulations or to renew them, or to substitute for them any other equitable arrangement which may be thought suitable to secure the repose of the East and the equilibrium of Europe.

There seems, then, to be no reason why the Cabinet of London should not, if it please, enter into an explanation with the signatories of the Treaty of 1856. For our part, we are ready to meet in any deliberation having for its object the settlement of guarantees for the consolidation of peace in the East.

We are persuaded that fresh guarantees would be found in the removal of a permanent cause of irritation existing between the two powers which are the most directly interested. Their mutual relations would be more firmly established on the basis of a good and solid understanding.

You are desired, Monsieur le Baron, to read this dispatch, and leave a copy of it with him.

The principal Secretary of State of her Britannic Majesty has expressed to us the regret that he would feel if this discussion should disturb the harmony which the Government of her Majesty the Queen has striven to maintain between the two countries. Be good enough to express to his Excellency how entirely this regret would be shared by the Imperial Cabinet. We believe that friendship between the two governments is essentially useful to the two countries as well as to the peace of the world.

It is with lively satisfaction that we have seen this friendship during late years grow more and more close and cordial. The grave circumstances in which we find ourselves at this moment seem to us to make it more desirable than ever.

GORTSCHAKOFF.

A similar Russian reply to Austria was read by Minister Novikoff to Count von Beust, on December 2d. The conciliatory tone of the note made a very favorable impression, and, together with the verbal explanations of the ambassador, promised a satisfactory basis for the conference proposed by Prussia. The Governments of England, Turkey, Italy, Austria, and Russia, proclaimed their intention to accept the proposal of a European Congress on the subject of the Eastern question, to be opened in London, in January, 1871. Prussia, in accepting the proposal, expressly stipulated that no topic foreign to the question of the revision of the Paris Treaty of 1856 should be introduced into the deliberations of the body. Prussia maintained that, having, like Italy, signed only the treaty of the 30th of March, 1856, which was concluded, as mentioned in the introduction prefaceing the treaty, for the purpose of guaranteeing the independence and integrity of the Turkish Empire, she was not like England, France, and Austria, who concluded the additional treaty dated April 17, 1856, by which they bound themselves to consider any infraction of any one of the stipulations of the treaty of March 20th as a *casus belli*, or nearly so, and also mutually obligated themselves to fight for the maintenance of a clause to which a great power cannot submit forever, and which does not in any way infringe upon the principles of the first treaty. So far as Prussia was concerned, she, therefore, did not regard Russia's position as one threatening war, because the St. Petersburg Cabinet did not intend to endanger the independence and integrity of Turkey at present. The statesmen of Russia declared that any additional conquest of territory was undesirable, and they also relinquished the idea of creating a Greek empire at Constantinople, under the Russian protectorate; neither did they intend to establish any extensive naval arsenal on the coast of the Black Sea.

Under these circumstances it was confidently expected that, by diplomatic means, an un-

derstanding would be reached by which the parties which signed the Treaty of Paris would accede to the request of Russia regarding the neutralization of the Black Sea, to which end Prussia had offered her mediation. The meeting of the conference was, however, retarded by the peculiar position of France, for, although the provisional government had declared its unconditional acceptance of the same, it was necessary to apply for a passport permitting its representative to pass through the Prussian lines in order to reach London. This passport was issued to Jules Favre, Minister of Foreign Affairs, toward the latter part of December, but it was not known when he would leave Paris.

EAST RIVER BRIDGE—THE CAISSONS. AND THEIR CONSTRUCTION. One of the most extensive and important structures now engaging the attention of the engineering profession is the bridge across the East River, New York, designed by the late John A. Roebling, now being carried out under the direction of Colonel W. A. Roebling. The caisson sunk at the base of the Brooklyn tower forms an important feature in the construction of the foundation itself. It is, in fact, an immense pneumatic pile; but, unlike the piles used in the Harlem and other bridges in this country—piles rarely exceeding six feet in diameter—this is 168 feet long by 102 feet wide on the outside, the chamber in which the excavation is to be carried on being 166 feet wide by 98 feet, and 9 feet in height.

The caisson proper contains 105,000 cubic feet of timber, board measure. Of wrought-iron, there are 85,000 lbs.; in screw-bolts, 80,000 lbs.; of flat bars in frames and angle-irons, besides the large amount of drift-bolts and boiler-plate, making in the aggregate about 200,000 lbs. The whole structure weighs nearly 2,500 tons. The V portion forming the chamber is nine timbers in height, the lower side of the first course being eight inches across, and the upper course of headers nine feet in length; the face of the outer timbers having a batter of 1.6 in 12, and the inner face nearly 10.8 in 12. The first course, which is of oak, 18 by 15 inches, projects on the outside 1½ inch beyond the line of the succeeding timbers, so as to receive the sheathing-plank. The ends at the corners are halved, and the ends of the timbers coming together in the same course are spliced with a plane scarf of six feet in length. As the great weight of the structure will have a tendency to open the corners, precautions were taken to make that part as strong as possible; and, in the second course, a solid hackmatack knee was inserted at the corners, running twenty feet each way. The succeeding timbers and the remainder of the second course, which are of Georgia pine, one foot square, are laid in alternate courses of stretchers and headers. The tenth is the first course of the roof, which is carried up in alternate layers to five timbers in height.

Through the roof pass the water-supply and air-shafts, two of each, composed of one-quarter-inch boiler-iron, and arranged in pairs for convenience in working, as well as to guard against accidents and delays.

Before being bolted, each timber in a course is forced into place, both vertically and horizontally, by heavy iron clamps or dogs and wedges. The bolts and clamps, acting together, make the whole as near as possible like one solid piece. The joints of each course are filled with pitch, and the surface dressed off smooth and level, and again pitched and dressed before the succeeding course is applied.

The lower part of the V, which by its narrow edge is to aid the settling of the caisson into the earth, is shod with a cast-iron shoe, oval on the bottom, 8 inches wide on the top, and 24 inches through the thickest part, and cast in sections of eight feet in length, bolted to the bottom of the first course with four drift-bolts, and protected and held in place by an armor of boiler-iron, extending vertically three feet on the outside, and also three feet up the inner slope, and firmly bolted through and through. The figure shows a section of the shoe on a larger scale. The outside seams and those of the thirteenth roof-course are calked with the heaviest twelve-thread calking, and the inside seams well calked, but less heavily. This heavy calking rendered it necessary to use a large number of bolts to prevent the joints from opening under the pressure. As a further precaution against leakage, a layer of tin, between two of felt, is placed around the outside up to the thirteenth, and over the roof, between the thirteenth and fourteenth courses. The sheeting of tin is soldered to angle-irons about the shafts placed for that purpose, and on the outside is covered by a sheathing of plank four inches thick. To prevent water from following the bolts which pass through the tin and felt, a rubber washer is placed next the felt, which, like the other washers, are by the pres-

EAST RIVER BRIDGE CAISSON—LONGITUDINAL SECTION.

are forced hard against the bolts. After the caisson proper was placed, fifteen courses of timber and concrete were added. The timbers were laid one foot apart, and filled in with concrete; the next and each alternate course are laid across at right angles, and filled in in the same manner.

The top course is solid timber, on which engines are erected for doing the work of hoisting, removing materials, etc. The air and supply shafts, of 3 feet 6 inches and 1 foot 9 inches diameter respectively, are fitted with air-locks, like ordinary pneumatic piles, that of the air-shaft being 6 feet 4 inches diameter, and of the supply-shaft 2 feet 6 inches diameter. The water-shafts are nearly square, being 6 feet 6 inches by 7 feet, and extend below the general level of the bottom. When working, the water is forced out of the chamber by pneumatic pressure through the air-shafts, men and materials admitted to the interior through the supply-shaft, and the excavated

materials removed through the water-shafts by means of dredging-machines. The excavation is now finished. The chamber and shafts are being filled with concrete masonry, making a solid block 168 feet by 102 feet on the bottom, 164 feet 4 inches by 98 feet 4 inches on the top, and 29 feet thick, and weighing about 17,000 tons.

ECUADOR, a republic in South America. President for the term from 1869 to 1875, Garcia Moreno. Area, 218,984 square miles; population, 1,800,000. The value of exports from the port of Guayaquil (exclusive of precious metals) amounted, in 1869, to 8,418,996 piastres (that of cacao alone, 1,904,012). The foreign debt was, in 1865, 9,890,554 piastres, and the home debt, 8,692,955 piastres. The public revenue, in 1869, amounted to 1,401,800 piastres, of which 576,600 were the proceeds of import duties. The standing army amounts to about 1,500 men. The number of vessels entering the port of Guayaquil during the

year 1869 amounted to 153, together of 63,280 tons. The vessels belonged to the following countries: England, 61; Germany, 16; France, 10; Italy, 11; Peru, 26; Ecuador, 25; Central America, 3; Chili, 1. Minister of the United States in Ecuador, E. Ramsey Wing (1870).

EGYPT, a dependency of Turkey, in Northern Africa. The ruler bears the official title of Khedive,* the Arabic equivalent for Viceroy. This dignity is now hereditary in the family of Mehemet Ali. The present Pacha of Egypt is Ismail (born in 1816), who followed, on January 18, 1868, his brother Said as the fifth Viceroy of Egypt. A Council of State (created in 1856) is at the head of the administration. The area of Egypt is 859,000 English square miles. It has about 8,000,000 inhabitants, 5,215,065 inhabiting Egypt proper. The chief cities are: Cairo, 318,888 inhabitants; Alexandria, 288,888; Damietta, 60,000; Tantah, 55,000. Egypt proper is divided into three great districts, namely, "Maas-el-Bahri," or Lower Egypt; "El-Dustani," or Middle Egypt; and "Es-Said," or Upper Egypt—designations drawn from the course of the river Nile, on which depends the existence of the country. These three geographical districts are subdivided into eleven administrative provinces, which, according to an enumeration made by the Government, had the following rural population in 1862:

	Provinces.	No. of Villages.	Rural Population.
LOWER EGYPT	Behdreh.....	355	86,543
	Rodat-el-Bahrein.....	843	945,903
	Dakaliyeh.....	1,296	412,354
	Kaljubiyeh.....	574	463,418
	Gheezeh.....	167	209,234
	Total Lower Egypt.....	3,205	2,117,945
Mid. Egypt	Ninjah & Beni-Mezar.....	231	230,791
	Fayoom.....	104	143,889
	Beni-Sooef.....	169	95,402
	Total Middle Egypt.....	554	519,569
UPPER EGYPT	Silot.....	284	404,064
	Girgeh.....	151	347,055
	Keneh and Eneah.....	193	417,876
	Total Upper Egypt.....	630	1,168,995
	Total of Egypt Proper.....	4,379	3,806,522

Almost the entire rural population is in a state approaching serfdom, holding life and property at the good-will of the governing class. The inhabitants of the towns comprise 150,000 Copts, reputed descendants of the ancient Egyptians; 8,000 Jews; 8,000 Armenians, and about 25,000 domiciled Europeans, one-third of them Greeks. At Cairo and Alexandria there are numerous slaves.

The total receipts for the year ending April 2, 1870, according to the official budget, amounted to 1,469,000 purses, and the total expenditure to 1,177,811 purses (500 piastres = 1 purse, 20 piastres = 1 American dollar). Exclusive of the floating debt, Egypt has a very large consolidated debt, consisting chiefly of foreign loans. These are divided into two classes, namely, general loans, supposed to be contracted by the country, and loans of the Khedive, as sovereign and greatest of land-owners. The total general loans contracted

up to January 1, 1870, amounted to \$107,930,000, on which the interest and sinking fund for 1870 summed up \$12,748,115. The loans of the Khedive, on January 1, 1870, comprised \$24,751,200; interest and sinking fund, \$3,809,150. Not included in the foregoing statement is a loan of the Khedive of \$35,714,300, contracted in Paris and London, May, 1870, on the mortgage of his private domains, known as the "Daira Sanieh." The loan, bearing interest at 7 per cent., was issued at the price of 78½ per 100, and was announced to be repayable by half-yearly drawings at par, in 20 years.

The army is raised by conscription. It consisted, in January, 1869, of four regiments of infantry, of 3,000 men each; of a battalion of chasseurs, of 1,000 men; of 3,500 cavalry; 1,500 artillery; and two battalions of engineers, of 1,500 each. There is, besides, a regiment of black troops, of Soudan, numbering 3,000 men. The Egyptian navy comprised, in 1869, 7 ships-of-the-line, 6 frigates, 9 corvettes, 7 brigs, 18 gunboats and smaller vessels, and 27 transports.

The value of the commerce of Alexandria with foreign countries was, in 1869: imports, 517,800,000 piastres (234,700,000 from Great Britain); exports, 831,400,000 (612,400,000 to Great Britain and 109,000,000 to France). There entered in Alexandria, in 1869, 2,884 vessels, with a tonnage of 1,263,144; 1,061 of which vessels were steamers; passengers, 55,719. The length of telegraphs is about 2,000 English miles.

A report, presented in the early part of the year by M. de Lesseps to the meeting of Suez Canal shareholders at Paris, states that, during the year 1870, about 8,000,000 francs would be required to complete and improve the works. The total number of vessels that passed through the canal, from the day of its opening to the 15th of March, was 209, representing 146,631 tons. Of these, 56,052 tons were English vessels; 84,390 French; 17,666 Egyptian; 14,625 Austrian; 7,386 Italian; 4,178 Russian; 4,000 Norwegian; 3,200 Dutch; 880 German; 528 Spanish; 8,015 Prussian; 369 Portuguese, and 342 Turkish. Of the 209 vessels, 200 were steamers; the others were sailing-vessels. The tolls collected were from 79 vessels of 54,644 tons (180 vessels being exempt, having passed through on the occasion of the opening of the canal), realizing 593,411 francs, and the amount from small vessels as transit dues was 20,186 francs. With respect to England the report says: "England has from the first day been able to utilize the canal largely. You have seen what an imposing commercial fleet she has sent to it, and that fleet augments every day. Building-yards work literally night and day in the United Kingdom in transforming or building vessels. We could cite to you a single company which, in its calculations, has put down an annual payment of 2,500,000 francs for the canal." The number of vessels passing through the canal continues to increase in something like geometrical ratio month by month.

* See AMERICAN ANNUAL CYCLOPEDIA for 1869.

Thus, in December, 1869, the number was 10; in January, 16; in February, 28; in March, 52; while in the first ten days of April there had been already 21. An unexpected use for the canal has appeared in its affording passage for the returning Mohammedan pilgrims from Mecca. No less a number than 4,671 of such pilgrims were brought through in April, 1870, in six steamers; they came from Jeddah, on the Red Sea, to Suez, and from Port Said pursued their voyage north or west.

From the accounts of the Canal Company it appears that, stated in American dollars and in round numbers, there was expended from the beginning of the works to the end of the year 1869, in the actual construction of the canal itself, the sum of.....\$80,000,000

The interest allowed to shareholders and bondholders during the same period, including all the expenses of the loan, absorbed.....10,800,000

The current incidental expenses of all kinds were.....8,000,000

The company has cash, and cash assets (other property than the canal itself and its accessories).....6,100,000

Total.....\$90,700,000

On the other side of the account must be put:

The capital.....\$40,000,000

The loan.....20,000,000

First indemnity from the Egyptian Government.....16,800,000

Later do.....6,000,000

Profits of investments.....5,000,000

Current accounts payable.....1,800,000

Receipts from transit of boats and ships.....1,000,000

Total.....\$90,700,000

The administration of justice, in cases in which Franks (foreigners) are concerned, has long been found to be unsatisfactory. The Egyptian Government proposed therefore, in 1868, a plan of reform, to substitute a single new jurisdiction for all the consular jurisdictions, and for the native courts in cases to which Franks are parties. The plan as at first broached met with an outcry of opposition from the Frank residents of Egypt. It received some degree of support from the British Government, but was not very favorably regarded by the French Government. The Egyptian Government, nevertheless, persevered in pressing its plan upon the attention of the principal foreign powers, and obtained the acceptance by Great Britain, France, Italy, Russia, Prussia (or, rather, the North-German Union), Austria, and the United States, of the invitations which it addressed to those seven powers, requesting them to send representatives to an international commission to be held in Egypt to consider the plan and suggest such modifications as would tend to make it acceptable. All of these nations accredited their consul-generals in Egypt to attend the conference, and some of them appointed also a second commissioner to sit with the consul-general in the Conference. The Conference held a number of meetings, and at last, January 17, 1870, agreed upon a report, which was signed by the representatives of all the governments taking part in the Conference. On the suggestion of the commissioners, the Egyptian Government accepted very important modifications in the plan as originally presented.

It was proposed at first by the Government that the new courts should be composed partly of native and partly of Frank judges, the natives to have the majority. This was reversed, and the Frank judges are to have the majority in every court. It was proposed at first, that the lower courts should be composed of three judges; at the request of the commissioners, the number of judges in these courts has been increased to five, of whom three will be Franks. There are to be three of these lower courts (Alexandria, Cairo, and Tagazig). There is also to be a court of appeal at Alexandria, which the Government at first proposed should consist of five judges; it is now agreed that it shall consist of seven judges, of whom four will be Franks. The original plan of the Egyptian Government stopped with the three lower courts and the Court of Appeal; but, at the suggestion of the commissioners, a Court of Revision at Cairo has been added, to consist also of seven judges, of whom four will be Franks. The Frank judges are to be appointed by the Egyptian Government, but only after consultation with the Ministers of Justice or equivalent officer, as Lord-Chancellor, Attorney-General, or the like, of the foreign governments, and no person can be appointed without the sanction of his own government and a certificate from it that he is a fit and proper person to be judge. The Egyptian Government is bound to select them, as far as possible, from among persons actually serving as judges in foreign countries, or holding positions which would entitle them to be appointed judges in their own countries. The judges are to have fixed salaries paid by the Egyptian Government, and a permanent tenure of office; their promotion or removal (for cause only) is to be regulated entirely independently of the Egyptian Government. The judges are to appoint the officers of the court, such as clerks, interpreters, and constables, to serve processes, etc., and it is to have the power of removing them for misbehavior. The execution of sentences is to be done under the order of the courts themselves by their own officers, without any interference on the part of any administrative authority, either of the Egyptian Government or of the consulates. But, as a security against mistakes, the commissioners exacted, and the Government agreed, that the consul of the party interested shall be notified of the day and hour when a sentence is to be executed. The Egyptian Government itself, the private household of the Khedive, those of the princes and all public functionaries and officers, are to be subject to the jurisdiction of the courts. Government officials can be prosecuted in the courts, and this without previous authority of the Government; but the commissioners say, and this is agreed to by the Government, that this clause is not to be understood as exempting the Government from responsibility for the acts of its officials.

The assembly of representatives of the people

was opened on the 1st of February. By order of the Khedive, the Minister of Finance presented to the assembly the results of the last budget, which comprises the period between the 11th of April, 1869, and the 1st of April, 1870. The receipts are stated by the report to have amounted to 190,460,142 francs, and the expenditures to 152,665,068 francs, so that a balance of 37,795,074 francs would remain in the Treasury.

In July, the Khedive paid a visit to the Sultan, by whom he was received with great honors. He returned on August 2d, and expressed himself highly gratified with his reception by the Sultan.

ELECTRICITY. *Electricity and Molecular Motion.*—In studying the molecular motion of microscopic particles, Prof. Stanley Jevons soon became convinced that it was due to electrical action, by the close analogy with the circumstances in which electricity is produced by the hydro-electric machine, pure water alone developing much electricity; while almost any salt, acid, or alkali, prevented the action by rendering the water a conductor. The most active substances in this respect are the silicates, pure quartz crystal in fine powder maintaining a rapid oscillation; but charcoal, red phosphorus, antimony, and sulphur, are also very active; metallic oxides and earthy salts less so. But it cannot be said that any substance is entirely free from molecular motion. The motion appears to be closely connected with the suspension of fine powders in water. All oxides, alkalies, and salts, which check it, were found to facilitate the subsidence of suspended material. Gum-arabic, on the contrary, prevents subsidence, and greatly excites molecular motion. Ammonia and boracic acid have no effect either to stop motion or to facilitate subsidence. Acetic acid has the latter effect. Prof. Jevons is of opinion that the motion of suspended particles is related to the phenomena of osmose as a case of action and reaction; for, if a liquid is capable of impeding a particle in a given direction, the particle, if fixed, would be capable of impelling the liquid in an opposite direction with an equal force. The fact that osmose is chiefly an affair of very dilute solutions accords with the electric origin of the molecular motion. The author thinks it not unlikely that, when these phenomena are fully investigated, they will give strong support to Becquerel's theory that the movements of liquids in animals and plants are really due to electric action. In reference to Prof. Jevons's views, Mr. Dancer remarks that particles approaching to a spherical form show the greatest activity, with some few exceptions, as in the case of sublimed mercury and sulphur. He did not regard electric action as a satisfactory explanation of the phenomena, but thought the results of many experiments pointed to heat as a probable cause.

New Electro-Dynamic Law.—Mr. H. Highton announces in the *Mechanics' Magazine*, for

November, the discovery of a new electro-dynamic law, which in brief may be thus stated: First, in every galvanic circuit the net heat produced by the chemical decompositions is divided into three parts: that due to any local action arising from impurities in the positive metal, or to reformation of water from the nascent hydrogen, etc.; that which circulates through the battery and all other parts of the circuit, and which varies as the electromotive power of the negative element in relation to the electro-positive; and, lastly, the residue which remains in the battery. Second, the part which circulates through the whole circuit is distributed in each part of the circuit, including the battery, in simple proportion to the resistance of each part. To these propositions the author adds that the amount of net heat evolved depends principally on the positive element, and the proportion of it transmitted through the circuit chiefly depends on the negative element.

Duration of the Electric Spark.—During the early part of the year, MM. Lucas and Carin conducted experiments to ascertain the duration of the electric spark, at the Imperial Observatory in Paris. The chronoscope which they employed was constructed by M. Duboscq, and recalled the apparatus devised by M. E. Becquerel for his important investigations on the phosphorescence of bodies. The sparks passed between two metal knobs, 11 millims. in diameter and 2,292 millims. apart. The experimenters announce that, other things being equal, the duration of the electric spark is a fraction of the surface of the Leyden battery: or, in other words, of the number of jars which compose it. Each additional jar adds to the duration. One jar gave a shock lasting between seven and eight millionths of a second; two jars one of nearly twelve millionths of a second, and so on, until the spark from nine jars were found to last about twenty-eight and a half millionths of a second. In no case did the difference of the duration, as mechanically observed, and the duration as theoretically calculated, reach the millionth of a second.

Sub-permanent Magnetism.—Mr. E. Kernan sends to the *Chemical News* the following account of experiments by which what Prof. Tyndall calls sub-permanent magnetism may be easily produced—thus showing to a class quickly that which is effected by the earth slowly in soft iron lying in the magnetic meridian, and subject to molecular disturbance from percussion or other causes:

The requisites for the experiments are—a block of cast-iron (wrought-iron might, perhaps, do), slightly magnetized, a bit of soft iron wire, a hammer, and a magnetic needle for testing the wire.

Expt. 1.—Lay the iron wire on the block, and hammer it lightly from end to end, for a few seconds. Presented to the needle, the wire will be found magnetized, showing dis-

tinctly strong N. and S. poles, produced by the S. and N. poles of the block.

Expt. 2.—Place the wire *reversed* on the block, i. e., lay the N. pole of the wire on the N. pole of the block, and hammer as before. Tested again by the needle, the wire exhibits its poles reversed.

Expt. 3.—Lay the wire as in Expt. 1, and hammer; the original polarity is restored. Finally, by changing the position of the wire, the pole may be changed and rechanged as long as the wire lasts.

These experiments would seem to represent well the magnetizing action of the earth. The block personates the earth with its magnetism, which is not less comparatively than that of the cast-iron. Were the wire to remain for a considerable time lying on the block, it would be magnetized. The hammering effects *quickly*, in the whole wire, that molecular disturbance which is slowly and piece by piece produced in great masses of iron standing on the earth.

Gases in Metals deposited by Electricity.—M. B. Lenz, of St. Petersburg, has observed that iron, when thrown down from a mixed solution of ferrous sulphate and sulphate of magnesia, kept neutral by the presence of magnesian carbonate, is very hard and brittle. When heated to redness, however, it becomes softer and flexible, and in the calcination much gas is evolved—for the most part hydrogen. Some is carbonic acid, resulting from the neutralization of the electrolyte by carbonate of magnesia; and some is nitrogen, not accounted for. Layers of iron of different thicknesses absorb gas very unequally. The thinnest layer yielded 18.5 times its volume of gas; one of twice that thickness gave out only half that volume; and another three times as thick yielded only one-third as much. A piece of iron, from which the gas had been driven by heat, and placed in water, was found to decompose the water and absorb hydrogen. Copper, deposited by electrolysis, also occludes gas, of which 77 per cent. is hydrogen; but what the other gases are M. Lenz does not say.

Electro-Metallurgy.—M. T. Ohntaux, of Paris, claims an improvement on the common methods of the electro-deposition of metals, by the following process: He keeps the solution agitated by power supplied from the electric battery, which serves to do the plating—thus: a revolving-shaft, with a helix at its lower end, is placed vertically in the middle of the receptacle containing the solution. Its upper end, crossing a support composed of isolating material resting on the receptacle, is attached, by an endless band passing over grooved pulleys, to the shaft of a fly-wheel, operated by a connecting-rod attached to an armature, acted upon by the electro-magnet attached to the battery. The rotation given to the shaft is transmitted to the helix, an ascending current is established in the middle of the receptacle, and a descending current toward its sides, in such a manner that all the parts of the objects

operated upon are in a continual contact with a liquid of equal richness throughout, and the metal is thus deposited regularly and uniformly.

The *Journal of Applied Chemistry* mentions successful experiments of E. Klein, a Russian mining-engineer, in the electro-deposition of iron, suitable for printing, and combining cheapness with durability, respects in which copper stereotypes are wanting. The process is not described, but its efficacy is reported to depend almost altogether on the solubility of the iron anode, which Klein has succeeded in increasing by a peculiar composition. It was found that, on enlarging the surface of the anode beyond a certain point, the result was not improved. According to another authority, the material used to furnish the iron is a dilute solution of the double sulphate of the protoxide of iron with sulphate of potash, soda, or magnesia, and the apparatus, a battery of low power, usually two small Smee's elements. It is said that the iron thus deposited is of great beauty, has a beautiful lustre and a silky texture. No exact experiments have as yet been made on its tensile strength or conductivity. Faithful copies of examples of mediæval art of extreme intricacy have already been produced by this means, the moulds used being of gutta-percha, or, in fact, of any material commonly used by the electro-metallurgist for such purposes. The process has also been applied to the production of stereotypes, and to a number of other purposes.

The latest improvements in Mr. W. H. Walenn's invention to make electro-depositions of brass are thus described by the author in a paper read before the British Association:

Ordinarily, a solution containing the cyanides of copper and zinc, respectively, dissolved in a "solvent solution" consisting of a mixture of potassic cyanide with a salt of ammonium, is employed to deposit brass. This solution, however, evolves hydrogen copiously, and is only workable by means of two Grove's cells. The author finds that the evolution of gas may be either totally stopped, or much lessened, by dissolving as much of the metallic cyanides as the solution will take up, and then further charging the solution with the copper and zinc oxides. The evolution of gas may be totally stopped by the further addition of cupric-ammonide, which may possibly carry the combined oxygen to the cathode.

That is to say, before decomposition or chemical reaction takes place, the whole of the cupric ammonide, together with the eliminated hydrogen, goes to the cathode; after the decomposition or chemical reaction has taken place, metallic copper is deposited, ammonia is in solution, and water is formed.

In treating the ordinary cyanide copper solution for the prevention of the evolution of hydrogen, the zinc cyanides or oxides, mentioned in the instance of the brass solution, are left out.

When the evolution of hydrogen has been stopped, a single Smee's cell is sufficient to deposit the alloy; but, in practice, a single Grove's cell, or equivalent magneto-electric power, is employed, in order to shorten the time of immersion in the electro-coating bath.

The author prefers to use potassic cyanide and neutral ammonium tartrate, when mixed with water, to form the solvent solution for either brass or copper. The quality of brass (yellow or red) depends upon the heat of the solution.

Acid solutions, in general, give a spreading, or matted deposit; alkaline solutions, a bristling one. The contact of the coating is promoted by working the solution hot. The article should be pickled, scrubbed with sand, washed, scrubbed with a portion of the depositing solution, and then placed in the depositing-trough; after deposition, the article is washed, and dried in hot mahogany sawdust. Complete protection from rust, and a satisfactory coating for any purpose, are given by the use of the acid-depositing bath subsequent to that of the alkaline bath.

The subject-matter of this paper is illustrated by a calico-printing roll, weighing 125 lbs., with 29 lbs. of deposit upon it; and by twenty other results of the inventor's improvements.

The coating by means of the author's method of working is superior to that of any other known process. The invention is applicable to the prevention of rust, the coating of plungers and other portions of machinery, and the lining of cylinders, etc.; also applicable to architectural and other castings, and to many purposes which require the strength of iron and the beauty of brass.

Magnetic Changes of Iron.—The *Philosophical Magazine*, for September, contains a paper by G. Gore, F. R. S., detailing many experiments made upon iron at different temperatures to determine the changes caused by heat in its molecular and also its magnetic condition. His results may be briefly stated, as showing that, on gradually heating a bar of magnetic iron, when it attains a moderate red heat, a succession of small movements takes place among its molecules, and that on cooling it a succession of opposite movements occurs. A red heat in the middle of such a bar largely diminishes but does not entirely prevent the transmission of magnetism along it; while in the process of cooling the magnetism of the iron is greatly increased. The same peculiarities were noticed in steel, cast-iron, and nickel. Gore closes his communication by remarking that the phenomena described illustrate a very general (or universal) property of matter, viz., that every substance, even those of the simplest constitution, when acted on by a single external force, possesses the power of dividing the influence of that force in such a way that, instead of producing only one force, or one effect, it produces several; or, stated more briefly, matter has a universal property of dividing and multiplying forces and effects. He adds that the changes produced by heat in even so simple a substance as iron were so numerous in some of his experiments as to make the metal seem endowed with vitality.

Electrolysis of Nitric Acid.—Some curious effects in the electrolysis of nitric acid, of various degrees of dilution, are given in the *Mechanics' Magazine*, for May. When a very dilute acid is operated on, hydrogen only is evolved at the negative pole, and no secondary product is formed in the liquid contained in the negative compartment. With a less dilute acid, that is, one with about 125 equivalents of water, hydrogen is first given off, then a little nitrogen, and the liquid is found to contain traces of ammonia. In the case of a stronger acid with only 15 equivalents of water, while

oxygen is first given off at the positive pole, no hydrogen for some time escapes at the negative, all that gas reacting upon and combining with the acid in the compartment, the liquid assuming a distinctly blue color. After some time, however, hydrogen mixed with some nitrogen comes off, but soon gives place to an evolution of binoxide of nitrogen, which in its turn ceases, and hydrogen again appears. In the end a good deal of ammonia is found in the negative liquid and also much nitrous acid. Nitric acid with two equivalents of water gives off at first only binoxide of nitrogen, then hydrogen. Thus it appears that the reducing action of hydrogen on nitric acid according to the strength of that acid produces nitrous acid, binoxide of nitrogen, nitrogen, and ammonia.

Electricity and Ozone.—Houzeau makes the following deductions from a great number of estimations of ozone obtained by means of Ruhmkorff's apparatus:

1. The production of ozone is greater in air renewed from time to time than in confined air.
2. It is greater at the negative than at the positive pole.
3. The production of ozone increases only up to a certain point with the duration of the electric action.
4. The ozone increases with the electric intensity.
5. The ozone diminishes when the distance which separates the electrodes increases.
6. The production of ozone varies with the length or surface of the electrodes.
7. Other conditions being equal, the production of ozone is greater by utilizing the effect of the two electrodes.
8. The production of ozone is equally manifested, out of direct contact with the air, with metallic electrodes, when these last are surrounded for their whole lengths with tubes of thin glass playing the part of insulating sheaths, whether the extremities of these tubes are closed or not.
9. Still the production of ozone resulting from the passage of air over the naked metallic electrodes (direct contact with the platinum wires) is greater than that which arises from the passage of the air round the same electrodes, when sheathed and closed (no direct contact of the air with the naked metallic electrodes).
10. With closed sheathed electrodes the production of ozone varies equally with the length or surface of the metallic electrodes.
11. The production of ozone increases considerably with a diminution of the temperature at which the electrification of the air is effected.
12. All conditions being equal, the quantity of ozone produced with a definite volume of oxygen is always much more considerable (about eight or ten times) than that furnished by the same volume of air.
13. The ozone produced by the obscure electrification of air is accompanied by small quantities of nitrous compounds, while that which is furnished by pure oxygen, under the same circumstances, contains only traces. By attention to the conditions above described, the author has been able to construct a new apparatus, which he calls an *ozonizer*, and with which, according to his statement, quantities of ozone, hitherto unknown, may be prepared.

A Cause of Error in Electroscopic Experiments.—Sir Charles Wheatstone, F. R. S., read a paper with this title, before the Royal Society in April. In the course of some experiments on electrical conduction and induction, he had

frequently been delayed by what at first appeared to be very puzzling results. Occasionally he found that he could not discharge the electrometer with his finger, or only to a certain degree, and that it was necessary, before commencing another experiment, to put himself in communication with a gas-pipe which entered the room. The following chain of observations and experiments then led to the true explanation of the process by which he had become electrically charged:

I was sitting at a table not far from the fireplace, with the electrometer (one of Peltier's construction) before me, and was engaged in experimenting with disks of various substances. To insure that the one I had in hand, which was of tortoise-shell, should be perfectly dry, I rose and held it for a minute before the fire; returning and placing it on the plate of the electrometer, I was surprised to find that it had apparently acquired a strong charge, deflecting the index of the electrometer beyond 90°. I found that the same thing took place with every disk I thus presented to the fire, whether of metal or any other substance. My first impression was that the disk had been rendered electrical by heat, though it would have been extraordinary that, if so, such a result had not been observed before; but, on placing it in contact with a vessel of boiling water, or heating it by a gas-lamp, no such effect was produced. I next conjectured that the phenomenon might arise from a difference in the electrical state of the air in the room and at the top of the chimney; and, to put this to the proof, I adjourned to the adjacent room where there was no fire, and bringing my disk to the fireplace I obtained precisely the same result. That this conjecture, however, was not tenable was soon evident, because I was able to produce the same deviation of the needle of the electrometer by bringing my disk near any part of the wall of the room. This seemed to indicate that different parts of the room were in different electrical states; but this again was disproved by finding that, when the positions of the electrometer and the place where the disk was supposed to be charged were interchanged, the charge of the electrometer was still always negative. The last resource was to assume that my body had become charged by walking across the carpeted room, though the effect was produced even by the most careful treading. This ultimately proved to be the case; for, resuming my seat at the table and scraping my foot on the rug, I was able at will to move the index to its greatest extent. A gold-leaf electrometer shows the phenomena as readily.

The most essential condition appears to be that the boot or shoe of the experimenter must have a thin sole and be perfectly dry; a surface polished by wear seems to augment the effect. By rubbing the sole of the boot against the carpet or rug, the electricities are separated, the carpet assumes the positive state and the sole the negative state; the former, being a tolerable insulator, prevents the positive electricity from running away to the earth, while the sole of the foot, being a much better conductor, readily allows the charge of negative electricity to pass into the body. So effective is the excitation, that, if three persons hold each other by the hands, and the first rubs the carpet with his foot while the third touches the plate of the electrometer with his finger, a strong charge is communicated to the instrument. Even approaching the electrometer by the hand or body, it becomes charged by induction at some distance.

A stronger effect is produced on the index of the instrument if, after rubbing the foot against the carpet, it be immediately raised from it. When the two are in contact, the electricities are in some degree coerced or dissimulated; but, when they are separated, the whole of the negative electricity becomes free and expands itself in the body. A single stamp on the

carpet followed by an immediate removal of the foot causes the index of the electrometer to advance several degrees, and by a reiteration of such stamps the index advances 80° or 40°. The opposite electrical states of the carpet and the sole of the boot were thus shown: after rubbing, I removed the boot from the carpet, and placed on the latter a proof-plate (i. e., a small disk of metal with an insulating handle), and then transferred it to the plate of the electrometer; strong positive electricity was manifested. Performing the same operation with the sole of the boot, a very small charge was carried, by reason of its ready escape into the body. The negative charge assumed by sole-leather when rubbed with animal hair was thus rendered evident. I placed on the plate of the electrometer a disk of sole-leather and brushed it lightly with a thick camel's-hair pencil; a negative charge was communicated to the electrometer, which charge was principally one of conduction, on account of the very imperfect insulating power of the leather. Various materials, as India-rubber, gutta-percha, etc., were substituted for the sole of the boot; metal plates were also tried; all communicated negative electricity to the body. Woollen stockings are a great impediment to the transmission of electricity from the boot; when these experiments were made I wore cotton ones. When I substituted for the electrometer a long wire galvanometer, such as I usually employed in physiological experiments, the needle was made to advance several degrees.

Electrification of an Island.—Nature mentions a curious discovery made by M. Gott, superintendent of the French cable company's telegraph station at the little island of St. Pierre Miquelon. At that place there are two telegraph-stations, one worked in connection with the Anglo-American company's lines, and the other by the French Transatlantic company. The former uses a powerful battery and the ordinary Morse signal; the latter has exceedingly delicate receiving instruments, invented by Sir William Thomson. These instruments were found to be seriously affected by earth-currents, depending on some rapid changes in the electrical condition of the island, these changes causing currents to flow in and out off the French company's cables, interfering very much with the currents indicating true signals. This inconvenience was obviated by laying an insulated wire about three miles long, back from the station to the sea, in which a large metal plate was immersed. After this had been done, it was found that part of the so-called earth-currents had been due to the signals sent by the American company into their own lines, for when the delicate receiving instrument was placed between the earth at the French station and the earth at the sea, so as to be in circuit with the three miles of insulated wire, the messages sent by the rival company were clearly indicated, so clearly, indeed, that they have been automatically recorded by Sir William Thomson's siphon recorder. It must be clearly understood that the American lines come nowhere into contact, or even into the neighborhood of the French line. The two stations are several hundred yards apart, and yet messages sent at one station are distinctly read at the other station; the only connection between the two

being through the earth; and it is quite clear that they would be so received and read at fifty stations in the neighborhood all at once. The explanation is obvious enough: the potential of the ground in the neighborhood of the stations is alternately raised and lowered by the powerful battery used to send the American signals. The potential of the sea at the other end of the short insulated line remains almost if not wholly unaffected by these, and thus the island acts like a sort of great Leyden jar, continually charged by the American battery, and discharged in part through the short insulated French line. Each time the American operator depresses his sending-key, he not only sends a current through his lines, but electrifies the whole island, and this electrification is detected and recorded by the rival company's instruments.

The Electric Light in War.—The Paris correspondent of the *Engineer* writes that the French made great use of the electric light in the defence of that city. One of the varieties of apparatus set up on Montmartre by M. Bazin was electro-magnetic. The central cylinder supported four series of double coils, covered with copper wire enveloped in silk. The cylinder was rotated by a steam engine of three horse-power, making about 400 revolutions a minute. The lamp used was of the ordinary form, with the Foucault and Duboscq regulator. The reflector was parabolic, and the whole surrounded by a shield, to hide it from the Germans. The light, from its elevated position, commanded the whole of Paris and the surrounding plains. A spectator on Montmartre could see distinctly the details of the façade of a building 2,600 metres off; at 2,900 metres a man could be seen standing at a window; at 3,000 metres a mass of cavalry or infantry was distinguishable; and at 4,000 metres the dome of the Invalides, with its bands of gold, looked brilliant. On the ramparts, 800 metres from Montmartre, the light was sufficient to read a newspaper by. Thus, though the practical effect of the lamp only extended about 300 metres from its position, the field was illuminated to the extent of 700 metres for the benefit of all placed between the light and its object. A sentinel on the ramparts could see about 3,000 metres from the enceinte, and, by this means, strict watch was kept upon the plains around the city at night, as far, in one direction, as 1,000 metres beyond St. Denis. On one of the French corvettes the same apparatus was adapted for a night-telegraph, with the addition of a system of flashes and the aid of a colored lens, and signals made distinctly visible at a distance of eight miles.

Electro-Heating.—W. Leigh Burton, of Richmond, Va., describes, in *Van Nostrand's Engineering Magazine*, a new invention for utilizing electricity for heating purposes. He takes a magneto-electric machine, like Wilde's, and connects with it a chain or coil made up

of alternate obstructions and free conductors. The obstructions are pieces of platinum wire, say one-hundredth of an inch thick, and the free conductors or radiators are pieces of copper about one-eighth of an inch thick. These radiators also perform the part of reservoirs so as to produce an equal distribution of the current, and hence, when a sufficiently powerful current is sent through any length of chain, the same calorific effects take place in every portion of it. His invention he thinks peculiarly adapted to railway-cars. The magneto-electric engine would be placed under the car, and operated from an axle of the car-wheels; and by the chains heat would be conducted to metallic plates put under each seat, or not so thickly, and sufficient heat radiated from those points to warm the cars. The author, in this connection, gives an account of another invention which he terms a "circuit-changer," by the use of which large magneto-electric machines could be dispensed with, smaller ones being able to do the same heating work. He says:

By means of another invention of the writer's, which he has termed a "circuit-changer," very large machines may be dispensed with entirely; and of course the smaller the machine the less it would cost and the less power it would require to operate it. This instrument consists of a revolving shaft or barrel, one end of which is kept in constant connection with the battery or machine, by means of a brake. Placed on the shaft are a number of points arranged spirally, so that in revolving the instrument no two points approach the same line at the same time. Corresponding to these points are springs, and when the apparatus is in operation each point is brought consecutively in contact with corresponding springs. To give a better idea of the contrivance, it might be compared to a musical box, the difference being that in revolving it a contact is made instead of a musical sound. By means of this instrument a current of electricity may be sent consecutively through as many different circuits as there are points on the cylinder, the only limit being the number of the latter that can be placed on a cylinder of a certain length and diameter. It is easy to understand, therefore, if a current of electricity of a certain power will produce certain calorific effects by being sent through a certain circuit at the rate of, say five hundred times in a minute, it would produce the same effects by being sent through any other, or one hundred more, for the reason that the same current is sent through each different circuit the same number of times per minute; and, but for the wear which it would necessarily entail on the instrument, it could be revolved with such rapidity as to make it in each very nearly continuous.

In order to warm a railway-car, then, it would require a circuit-changer with points on it corresponding to the number of seats; and, if a passenger should find the heat under his feet uncomfortable, he could easily, by a contrivance for the purpose, cut off the current, and at once cause an abatement of it.

Chronoscope.—Such is the name given to an invention of Captain Noble, of England, for ascertaining the movement of a projectile within a gun—thus supplementing the office of a chronograph, which records the speed of a ball after it leaves the piece. The machine comprises wheel-work set in motion by a heavy weight, a dial which indicates the rate of motion, and a series of disks rotating on an

axis. Immediately in front of the edge of each disk is placed the terminal of an electric wire, the other end of which is connected with a gun, perhaps fifty or one hundred yards distant. Through the sides of the gun, at regular distances from breech to muzzle, iron plugs are screwed. In the centre of each plug works a piston, which by pressure against its inner end can be pushed slightly outward; to its outer end the wire is attached. When all is ready, the disks of the chronoscope are made to rotate by the wheel-work with great velocity; the gun is fired; the projectile, as it rushes along the bore, pushes the inner ends of the pistons one after the other; the outer ends give a slight jump, sufficient, however, to cut the wires thereto attached, and by this cutting a spark is on the instant produced at the terminal on the chronoscope. The edges of the disk have previously been coated with white paper under a film of lampblack; the spark burns off a minute speck of the black, leaving, of course, a speck of the white paper visible beneath. The first spark comes from the wire nearest the breech, the last from the one nearest the muzzle, and the intermediate ones in their order. The time between one and the other is almost inconceivably small, but, as the chronoscope will measure the hundred-thousandth part of a second, the movement of the projectile along the gun is accurately recorded by the sparks on the disks, and is read off on a scale to four or five places of decimals.

Electric Buoy.—During the early part of the year an electric buoy, the invention of M. E. Duchemin, was exhibited at Charbourg by order of the French Minister of Marine. The electricity was produced by the constantly-renewed action of sea-water on zinc, but the inventor has since demonstrated that an increase of intensity could be obtained by means of certain chemical agents held in suspension around the zinc, or the charcoal element. The new battery resulting from the experiments consists of a porous vase fixed on a wooden buoy or floater. The vase is surrounded by a thick zinc cylinder, pierced with holes, the wire of which represents the negative pole. Within the porous vase is placed a slab of gas-retort charcoal, to which is affixed the conductor of the positive pole; the charcoal is surrounded by pieces of coke and perchlorate of iron. The vase is carefully closed, and the battery, when plunged in the sea, immediately gives forth large quantities of electricity.

Electrical Resistance Pyrometer.—*Nature* says of this invention by Mr. C. W. Siemens, that it is the very salamander of pyrometers, and will measure the temperature of the most highly-heated furnace, which must render it indispensable in operations where intense heat is required, and to all experimentalists who know the imperfections of the pyrometer in ordinary use. The construction of the new instrument is based on the physical fact that

the resistance of pure metals to the electric current increases with increase of temperature in a simple absolute ratio. A platinum wire of known resistance is coiled upon a small cylinder of fire-clay, and is covered by a tube of the same metal, which protects the wire from the destructive action of flame, without preventing access of heat. Thus constructed, the pyrometer is placed in the furnace, and is connected by wires with a Daniell's battery of two cells, and with a compact resistance-measurer, specially devised by Mr. Siemens, on which the observer makes observations at his ease. As the fire burns, the electrical resistance of the platinum coil rapidly increases, and communicates its progress to the measurer, on which the indications of temperature may be read off as entirely trustworthy, even up to the melting-point of platinum.

Electro-magnetic Anemometer.—This invention, by Mr. J. J. Hall, for registering the velocity and pressure of the wind, is composed of two parts, one for each of these purposes. The velocity apparatus consists of a set of Robinson's hemispherical cups, which communicate their motion downward into a brass box, where it is reduced in angular velocity, and causes a contact disk or commutator (in which two platinum contact pins are fixed equidistant from one another) to revolve in $\frac{1}{100}$ th mile. An insulated metallic lever, having a platinum working face, stands on either side of the disk, so that upon the completion of every $\frac{1}{100}$ th mile one or other of the contact pins comes in contact with the two levers, thus uniting them and completing the circuit. The levers are raised a few degrees, and then fall back to their normal position ready to be taken up by the next pin, and so on. The recording apparatus consists of a train of wheels and pinions working in a frame or between two brass plates, the arbors of which project through a dial-plate whereon the circles and figures are engraved and carry the hands. These wheels are driven by a weight attached to a line wound round a barrel, and a locking-pin disk (the pinion of which works in the first wheel) is released, at every contact of the cup-apparatus, by an electro-magnet, which unlocks the pin-disk and allows the first hand to advance $\frac{1}{100}$ th mile on the graduated dial, by a jump similar to the minute-hands in remontoire clocks. By turning on a "strike-silent" stop a hammer lever is brought into connection with the escapement and strikes a bell at every contact. By this arrangement the observer has nothing to do but to notice the seconds-hand of his watch or chronometer while he counts the number of times that the bell is struck, each of which corresponds to the five-hundredth part of a mile, and by a formula arranged by Mr. Hall (who has also arranged a comprehensive series of tables for use with this instrument) the hourly velocity may be readily deduced. In noting velocities extending over long periods of time, the instrument

is read in the same manner as the ordinary cup and dial anemometer, or as a gas-meter. By means of the formula before mentioned (although the unit of measurement in this instrument is five-hundredths) the observer may arrive at results as near the truth as if the instrument were capable of registering the one-thousandth part of a mile, while the great advantage lies in the fact that the battery-power is less called into action, from which we may infer its elemental duration will be considerably longer.

A Magnetic Paradox.—Such is the term applied by S. Alfred Varley to an instrument exhibiting the phenomenon of the apparent repulsion of soft iron by a magnet.

The apparatus consisted of a compound magnet in a box, and when pieces of soft iron were placed on the box over the poles they became magnetic by induction and were attracted by the magnet; but, if a soft-iron bar, not by itself magnetic, was approached near to the pieces of iron, they leaped away from the magnet in the box and became strongly attached to the soft-iron bar, the pieces of iron appearing to be repelled by the magnet and attracted by the iron bar. The author stated the explanation demonstrated the duality of the magnetic force, and it would also prove, did we not already know it, that magnetic force was transmitted only by induction. He stated that if a piece of soft iron were placed over the poles of a magnet, the magnet develops the magnetic forces resident in the iron by separating them, and the iron is attracted only by virtue of the forces existing in the iron itself, and to the extent to which the forces are separated. If the magnet be bent, bringing the lower pole round and over the piece of soft iron, the magnetic forces resident in the soft iron will be more developed; but if the piece of soft iron be midway, it will not be attracted, as the forces on either side are equal and balance; another attraction will, however, be manifested if one pole be nearer to the piece of iron than the other. If, instead of bending the magnet as just described, the piece of soft iron placed over the magnet be approached by a soft-iron bar, the magnetic forces separated and rendered active in the piece of iron will develop the magnetic forces resident in the iron bar, and, if the bar opposed no resistance to the assumption of the magnetic condition, it would exert an attractive force for the piece of soft iron equal to that exerted by the magnet, provided always that the bar was at the same distance. It was stated that as the mass of iron in the iron bar was much greater than that of the piece of soft iron, the resistance opposed by the bar to polarization was comparatively small, and might be disregarded, and consequently it followed that as the dual forces resident in iron are equal, and the one force cannot be developed without equally developing the other; when the iron bar was approached nearer to the piece of soft iron it became attracted, leaping away from the magnet and attaching itself to the iron bar, and this notwithstanding that the attractive force exhibited by the iron bar has been called into being by the magnet in the box, which is nearer to the piece of soft iron than it is to the iron bar. The iron bar also collected the magnetic rays of force issuing from the magnets, and consequently it exerted a greater attraction for the piece of soft iron than any individual magnet forming part of the compound magnet. This was shown by placing a piece of soft iron on the pole of one of the magnets and removing it from the pole by the superior attractive force of the iron bar. It was also shown that, if only the thickness of a piece of writing-paper were placed between the magnets and the piece of soft iron, the appearance of repulsion could be prevented.

Nairn's Electrical Machine.—This machine has been modified and improved by suspending a Leyden jar from each of the conductors, and connecting the outer coatings of the two jars by a chain. The permanent and complete neutralization of the coatings thus united gives great energy to the condensation. By employing jars 180 millimetres high and 90 in diameter, M. Pérard has succeeded in piercing a plate of glass 6 millimetres thick, although the glass cylinder of the machine was only 50 millimetres in diameter, and the cushion 380 long. With this arrangement sparks 100 millimetres long can be obtained ordinarily, and even 170 when the atmospheric conditions favor. The spark, however, has not the intensity of that of Holtz's machine or Ruhmkorff's coil, but is much more powerful than the first, and may be compared to that of a large coil for amplitude and brilliancy. The detonation of the longest spark is as loud as that of the spontaneous discharge of a battery of six Leyden jars.

The New Thermo-Electric Pile.—Further experiments with the new pile contrived by Messrs. Mure and Clamard seem to demonstrate its economic value. Forty couples, acting for ten consecutive hours, consumed 785 litres of gas at an expense of 2½ centimes an hour. From this pile visible sparks were obtained between the two electrodes; the current reddened a platinum wire 0.3 millimetres in diameter and 35 millimetres long, and also decomposed water. The electro-motive force of 40 couples is equal to that of a Bunsen element. *Le Génie Industriel* gives the following detailed account of the structure of the improved pile:

It is made up of 60 elements. These consist of small bars of lead, or native sulphuret of lead, and of plates of steel. The bars are 40 millimetres long by 8 thick, and the plates of steel are 55 millimetres long by 5 broad, and 0.6 thick.

In these couples galena is the electro-negative element; iron, the electro-positive. The form of the bars is such that, by placing them side by side, they make a ring of 12 couples, of which the interior is formed by the extremities which are to be heated. They are united in tension by means of tin solder. They are isolated from one another by thin mica plates. By placing 5 of these rings in a vertical column, a battery of 60 couples is formed. These rings are isolated and separated by washers of asbestos. The whole is firmly held between 2 iron rings by means of 8 bolts.

The pile thus forms a hollow cylinder, the interior of which must be heated. The cooling of the junctions, whose temperature should be lower, is caused by radiation into the air. The interior cylinder measures 50 millimetres in diameter and about the same in height. The heated surface is about 78 sq. centimetres. The apparatus is heated by a gas-burner, consisting of a steel cylinder 56 millimetres in diameter, closed above, open below, and pierced with small orifices. This is placed in the centre of the pile. A tube pierced with holes surrounds this cylinder and distributes the gas uniformly around it. The gas rises, and, arriving at the orifices in the burner, meets the air which is escaping from it because of the draft of the tube of steel that surrounds the apparatus. Each orifice in the burner thus forms a blow-pipe, the jet of which strikes the opposite side.

Ingenious Electrical Experiments.—A course of seven lectures, delivered by Prof. Tyndall, at the Royal Institution during the summer, were illustrated by many novel and highly-ingenuous experiments, such as the following: The elongation of a solid bar of iron, when it is thrown in the magnetic state by being encircled in the folds of a voltaic current, conveyed by a helix, was shown by the starting of a spot of electric light some 6 or 8 inches on a screen, when the molecular condition of magnetism was excited by the passage of the current. The change in the position of the molecules of iron was proved by throwing the beam of light through a vertical cell of glass containing magnetic oxide of iron suspended in water. An artificial telegraph-cable, whose resistance to the transmission of the electric current was made identical with 14,000 miles of an actual marine cable, was formed by introducing, into the path of the current, gaps, consisting of feebly-conducting liquids and condensers, so distributed as to represent the respective distances, by telegraphic routes, of Gibraltar, Malta, Bombay, Australia, and many other places. Before the current was sent through this line, dots of light, one for each station, cast from mirrors by the instrumentality of electric illumination, lay upon the screen in a straight vertical range. When the current was passed, dot after dot started aside upon the screen, the movement of the dots indicating the points successively reached by the current, the interval of time between each representing the interval that would actually occur in telegraphing between the real stations. Another interesting beam-of-light illustration is the one employed to indicate the excitement of diamagnetic force in a tube of copper suspended between the poles of an electric magnet. The tube is carried by a string of silk, and rotates rapidly when the string is touched. The same string also carries above the tube a series of small mirrors which reflect the light of an electric beam, so that a continuous elliptical band of illumination is formed on the screen while the twisting is continued. The instant the electro-magnet is made active by the transmission of the current through its helix, the copper tube acquires diamagnetic polarity by induction, and under the influence of this polarity the rotation is arrested, and the band of lights upon the screen is changed into a small stationary spot of illumination. When the electro-magnet is unmade by the arrest of the voltaic current, the spot of light again becomes an elliptical band, under the resumption of the twisting of the silk string with its mirrors and copper tube. The sound produced by the molecular vibration in iron, when its mass is transiently magnetized by the voltaic current, is made audible by suspending an iron poker upon two sounding-boards, and making it the core of a helix, conveying an electric current. An assistant is converted into an extemporized electrophorus, by flapping his

black coat with fur while he stands upon a glass-legged stool. Small fish of gold leaf are made to float in the air-current given off from the knob of a charged Leyden jar. To demonstrate the relation of resistance to heating power, a long line of wire is arranged in alternate links of platinum and silver, and, when a voltaic current of due intensity is passed through the length, each stretch of the platinum wire is seen to glow with brilliant red heat, while the stretches of silver wire between remain still invisible. A beautiful series of Geissler's vacuum-tubes was brought into successive operation, in which the auroral discharge was broken into stratified leaves, in which the glow was extinguished by the approximation of the poles of an electro-magnet, in which a feeble glow was converted into bright stratified light by the influence of a magnet; and, beautiful beyond all the rest, the light from the enclosed negative terminal of the voltaic battery was arranged into the well-known lines of magnetic force, when subjected to the influence of the poles of a magnet.

New Forms of Battery.—M. Figuié has devised a cheap battery on the principle of Smee's. He makes plates of retort-coke, paints them with a strong solution of chloride of platinum, dries them, and then reduces the chloride on the coke by heating it in the fire, leaving the coke coated with metallic platinum. Silvered carbon may also be used, but that is obtained with more difficulty. Either of these kinds of plates the inventor thinks superior to those used in a Smee's battery, the irregular surface of the former preventing the escape of hydrogen. He gives a rough surface to the cut plates of retort-coke by spreading them over with a mixture of diluted white of egg or blood-albumen and syrup, and then carefully burning them until smoke is no longer given off. This process being repeated two or three times, myriads of points, the *aspérités* of minute vesicles, remain firmly attached to the original carbon plates. The plates thus made must be well washed in a large quantity of water, to remove any loose particles which might otherwise fix themselves accidentally upon the zinc, and set up local action. They are said to last in use at least three years.

Delavosier has contrived a battery capable of producing a very regular current without amalgamating the zinc, and evolving no gas. It consists of a galvanic cell, composed of zinc and carbon, placed in a fluid made up of 40 parts water, 4.5 parts bichromate of potash, 9 parts concentrated sulphuric acid, 4 parts sulphate of soda, and 4 parts double sulphate of potash and iron.

Nature speaks approvingly of Mr. J. Parnell's new secondary battery. It is so constructed as to do a large amount of heavy work, having forty cells, each containing a pair of copper plates immersed in a solution of the impure carbonate of sodium, known in commerce as "soda." By this employment of an alkali, the

electro-motive force produced is supposed to depend on the electrolytic reduction of the sodium. The battery is arranged in ten compound cells of four couples each, and is charged by a small battery of five Grove cells, and, after the connection has been established for a few seconds, a commutator of peculiar construction is brought into play, and excites the whole forty cells to activity. It is thought that a battery so constructed, which can be energized at pleasure by a brief communication with the small Grove, will be found of service in telegraphing through lines of great resistance.

Faure's new battery is a modification of Bunsen's, the poles consisting of carbon in strong nitric acid, and amalgamated zinc in dilute sulphuric acid. The carbon pole is made in the shape of a bottle, provided with a carbon or platinum stopper, and this bottle contains the nitric acid, whose fumes, so deleterious in the Bunsen battery, are thus prevented from escaping, only enough acid percolating through the charcoal to keep up the necessary electrolytic action of the elements. The bottle, which is at once pole and porous diaphragm, is placed concentrically in the interior of a cylinder of amalgamated zinc. And the whole is contained in an earthen-ware jar. When set up for action the bottle is nearly filled with the nitric acid, and the space containing the zinc, between the bottle and the outer jar, to the required height with the dilute sulphuric acid. The slight liberation of gas within the bottle causes a sufficient pressure to be exerted upon the nitric acid to force it gradually through the carbon. In this way the exterior of the carbon pole remains immersed in a very thin layer of nitric acid immediately opposite to the zinc, which is in course of dissolution in the dilute sulphuric acid.

Curious Effects of Lightning.—On the 17th of June, lightning struck a house near Hamburg, Germany, first demolishing a stack of chimneys, then finding its way to the well, along a zinc pipe for carrying rain-water from the roof downward. The pipe alluded to, previously sound, was perforated in three places; at one of the holes the metal was forced outward, while at the two other holes the metal had been forced inward in such a manner as to close the tube for the passage of water, at the point where the tube reached at the bottom the earthen-ware drain-pipe; the latter was smashed, the soil which covered it having been scooped out; no fire ensued by the striking of the lightning, nor was fusion of metal anywhere perceptible; none of the parties present in the house at the time of the occurrence were at all injured.

July 27th, lightning, at Versailles, France, struck and splintered to the fineness of match-wood the mast of a vessel lying in the canal; thence darted to an iron-foundry, and, after travelling its full length, escaped along the

iron stove-pipe placed in the foundry-office; thence proceeded up the steeple of St.-Géry, entering there, through a broken glass-pane, the room inhabited by the tower watchman. In that room the lightning fell upon a galvanic battery, employed to convey, by means of electricity, the movements of the clockwork to the town-hall clock, situated at several hundred metres' distance, causing such havoc and disturbance through the connecting wires that it was supposed the lightning had fallen on that building. Leaving the steeple of St.-Géry, the lightning flew to the house of an artist, and, after having broken some panes of glass therein, turned to the clock-tower of the college, melting, without any breakage, several panes of glass, and turning other panes of glass into a mass of curiously-colored, non-transparent substance; and, lastly, issuing again near the canal, slightly struck a soldier on duty there, and disappeared in the water.

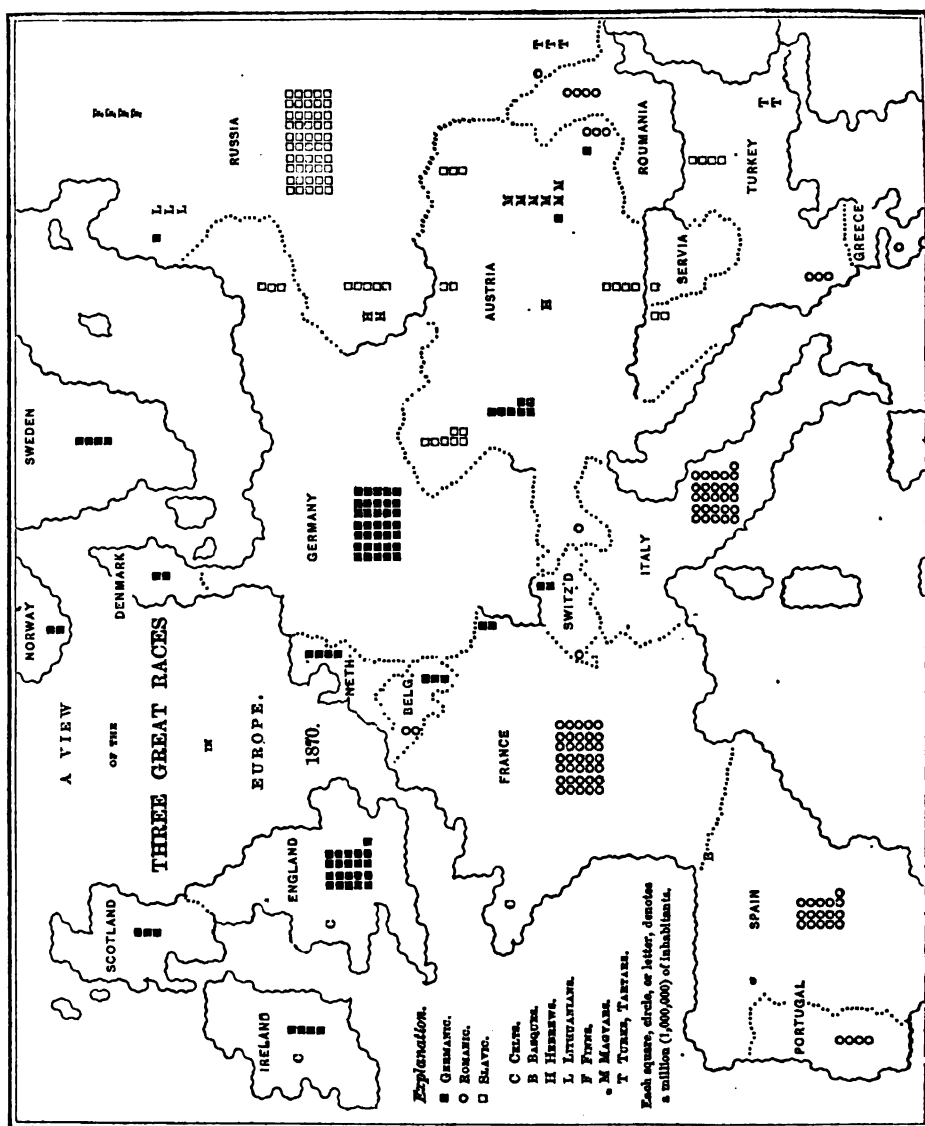

ELIOT, THOMAS D., a Massachusetts lawyer and political leader, born in Boston, March 20, 1808; died in New Bedford, June 12, 1870. Mr. Eliot's early days were passed in Washington, then the home of his father. He entered the Columbian College in the District of Columbia, and the year before his graduation delivered an English oration at the first commencement of that institution. He graduated in the year 1825, and delivered the Latin salutatory addresses on the occasion. Having chosen the profession of law, he entered the office of his uncle, William Cranch, Chief Justice of the Circuit Court of the United States for the District of Columbia, where he remained until the year 1830, when he removed to New Bedford, and finished his studies with C. H. Warren. Upon his admission to the bar he became a partner with Mr. Warren, and remained with him several years, but was afterward associated with Judge Robert C. Pitman. Judge Warren was subsequently appointed to a seat on the bench of the Court of Common Pleas, and Mr. Eliot found his practice widely extending, and of a pleasant as well as lucrative nature. It left him little opportunity or desire to leave it for the path of political preferment. He, however, served in the House of Representatives, and, after an interval of several years, a term in the Senate, of his State, with ability, and to the general acceptance of his constituents. In the spring of 1854 he was elected to fill the unexpired term of the Hon. Zeno Scudder, as Representative of the First District, and took his seat in the Thirty-third Congress in the midst of the intense excitement attendant upon the introduction of the Kansas-Nebraska Bill. His published speech on the subject is one of the many earnest and eloquent appeals which the occasion called forth. Mr. Eliot had always been a firm Whig, attached to the liberal wing of the party, but centring his hopes upon the success of that political organization. The whirlwind of Americanism swept that party

out of existence in the fall of 1854; and with it disappeared from Congress the Massachusetts delegation. Mr. Eliot shared the universal fate, and his term closed in March, 1855. Upon the dissolution of the Whig party he united with those members of various organizations who desired to found the Republican party; and in the proceedings at Boston which resulted in the convention at Worcester, in the fall of 1855, which nominated Hon. Julius Rockwell, he bore a prominent part. From that time he acted constantly and zealously with the Republicans. At the State Convention of 1857 he was unanimously nominated as their candidate for the office of Attorney-General, but declined, as he did subsequently offers of judicial stations in the Court of Common Pleas and on the new Superior Court bench. In the fall of 1859 Mr. Eliot was chosen to the Thirty-sixth Congress from the First Congressional District of Massachusetts, and was reelected with marked unanimity to the Thirty-sixth, Thirty-seventh, Thirty-eighth, Thirty-ninth, and Fortieth Congresses, having thus served during a remarkable period in the history of our country. He occupied a very prominent and influential position in the House of Representatives, and took a deep interest and prominent part in the national legislation bearing upon the protection and welfare of the colored race. Mr. Eliot retired from Congress against the wishes of his constituents. They felt that his retirement from public life was a loss to the State. He was cautious but fearless in the enunciation of his principles. On leaving Congress at the close of his term of service in March, 1869, he suffered from his exhausting labors in that body, and his friends missed the freshness and vigor of health which had always distinguished him. But it was hoped by himself and others that rest was all he required, and that this, enjoyed here at home, would soon restore his wasted energy. In this all were sadly disappointed. He daily grew weaker, until in March last he sought relief by a visit to Savannah, but without any benefit from the change, and, after about a month's sojourn there, he returned, and gradually sunk to his final rest.

ENGINEERING IN SOUTH AMERICA. Chili, during the last ten years, has built 8 roads, 517 miles in length, at a cost of \$29,750,000, on the 4 ft. 8½ in. gauge; and she has built 6 roads, 222 miles in length, at a cost of \$5,665,000, on the 3½ ft. gauge. This makes for Chili 14 railroads, 739 miles long, at a cost of \$35,415,000. Peru is not behind Chili in the march of railroad progress. She has built, during the same period, 5 roads, 618 miles long, at a cost of \$102,390,000, and she is constructing 7 other roads, all of them in a forward state, that will reach 481 miles, which, when completed, will make 12 trunk lines, 1,094 miles long. Besides, there are quite a number of short branch lines. Some of these roads are built by private contract; the majority of them are paid for by Government bonds secured by

guano in payment to contractors. The bonds were principally negotiated in Europe on favorable terms, and large amounts were thus arranged shortly before the French and Prussian War, so that there will be no interruption to the construction of the unfinished lines in consequence of the troubles in Europe. The Government of Peru has a fund of at least \$50,000,000 from this source to draw on to carry on the construction of her unfinished railways. This Government has granted a charter to an English company for a railroad to cost \$80,000,000. The bonds were to be put on the market by the French bankers, Eslingier & Co., of Paris. The war will, most probably, interfere with this arrangement until peace is established. The railroad to cross the Andes—150 miles—to ascend an altitude of 15,000 feet, to connect at the frontier with the Bolivian Government trunk line, and which runs through that state parallel with the Amazons, to be extended to a navigable seaport, has already cost \$31,000,000. The value of the guano crop to the Peruvian Government, as an article of revenue in the past and in the future, may be learned from the fact that up to this time it has produced a revenue of more than \$3,000,000,000, and there is enough to supply the wants of the world for twenty years to come. The Peruvian Government has also legalized a company, which is bound to put on a large number of first-class steamers to ply between New York and Bolivia. The Pacific Steam Navigation Company, probably next in importance to the Pacific and Oriental Company, have forty-nine steamers, some of them measuring 3,500 tons, now plying between Panama and Valparaiso, *via* Callao, and about fifty intermediate ports. They make weekly departures each way. They run their largest and best steamer through the Straits of Magellan to Liverpool, each way tri-monthly. They are now adding thirteen large first-class steamers to their already large fleet, making sixty-two steamers in all.

EUROPE. Few years in the history of modern times have been so eventful as the year 1870. The eyes of the whole civilized world have been fixed upon her, and the political changes which have taken place in some of the nations will form the most interesting and important events in the history of their existence. Baffled in all his plans which he had devised for arresting the union movement in Germany, and the establishment of a German empire, Louis Napoleon precipitated a war which resulted in a decided victory of Germany, the overthrow of his own throne, the setting up of a French republic, and the consolidation of all the German States into a new empire, with King William as first Emperor. Though at the close of the year the war was not ended, it was no longer doubted that the new Emperor of Germany would be able to enforce the conditions of peace, and that foremost among them would be the an-

The above table is intended to present a view of the three great races of Europe in 1870, and fragments of other races. The dark squares signify the Germanic race, the light squares signify the Slavic, and the light circles the Romanic race. Each square, circle, or letter, denotes one million inhabitants.

The squares denoting the scattered fragments of the Slavic and Germanic races in Russia, Austria, and Turkey, are so placed as to indicate the regions occupied by them.

The Basques are partly in France, but chiefly in Spain.

Only round numbers are indicated, and in the usual way, fractions over or under a million being expressed by the nearest million. All under five hundred thousand are left unrepresented.

The bird's-eye or brief notation for numbers used in this map, by which their relative proportions are presented to the eye in their geographical distribution, was first used and published by the author in his "Bird's-eye Views of Slavery in Missouri." * St. Louis, 1862.

* Entered according to Act of Congress, in the year 1862, by Edwin Leigh, in the Clerk's Office of the United States District Court for the Eastern District of Missouri.

neration to Germany of those eastern districts of France in which the German language is still spoken, namely, the whole of Alsace, and a part of Lorraine. (See GERMAN-FRENCH WAR and ALSACE.)

In almost immediate connection with the outbreak of the war between France and Germany, was the invasion of the Papal States by the King of Italy, and their annexation to his kingdom. For years the sovereignty of the Pope has needed for its undisturbed existence the protection of French bayonets. When they were withdrawn, the King of Italy did not hesitate to occupy the papal dominions and the city of Rome, and the people of the annexed territory were called upon to ratify the change of government. The Pope, of course, entered a protest against the loss of his independence, but none of the governments supported the protest. Some of them only intimated that they would demand for the Pope, as the spiritual head of the Catholics in every country, full freedom in the exercise of his ecclesiastical functions; and this freedom the Government of Italy declared itself willing to guarantee.

When it became apparent that the power of France would, for a long time to come, be paralyzed, Russia renewed the Eastern question by declaring that she would no longer recognize the Paris Treaty of 1856, and, in particular, that article which provides for the neutralization of the Black Sea. England and Austria earnestly objected to this one-sided violation of an international treaty, while Prussia reciprocated the sympathy which she had received from Russia in the war against France. For a time a new war seemed to be inevitable, but at length it was agreed to lay the matter before an international congress, which was to meet in London, in January, 1871.

The throne of Spain, after being vacant more than a year, was at length filled by the election of the second son of the King of Italy, Prince Amadeus. The election was followed by disturbances in the country and by the assassination of General Prim in the streets of Madrid. The prince arrived at the close of the year, and took possession of the throne, and was received in a very pacific and quiet manner; but soon disturbances again began to arise, which were indications of extensive dissatisfaction throughout the country.

The interest which has been created in European affairs during the year has led us to present numerous tables showing the population of the different countries, the debts of the various kingdoms, and their comparative military strength, also the relative proportions of the three great races which occupy that continent, together with fragments of other races.

The following table shows the area and population of Europe, at the close of the year 1870, and also the number of inhabitants per square mile:

COUNTRIES.	Sq. Miles.	Inhabitants.	Inhabitants per sq. mile.
N'th-German Confederation } States of South Germany... }	304,748	38,517,968	126

According to the *Gotha Almanac*, for 1871, the ecclesiastical statistics of Europe were as follows:

Besides, there were of Mohammedans, 2,000 in Poland, 2,092,000 in Russia, and 4,550,000 in Turkey. Of those whose religious denominations could not be ascertained, and of pagans, there were: 24,000 in France, 4,000 in the Netherlands, 5,000 in Germany, 8,000 in Denmark, 200,000 in Russia, and 200,000 in Turkey.

The following table exhibits the comparative

STATES.	Inhabitants.	LAND FORCES.			MARINE.		Budget for Land Forces.	Percentage of the A's Budget to the Revenue of the State.	Contribution of each Inhabitant to the Army Budget.	Cost of Sustenance of a Soldier per annum.
		Men.	Proportion of the Army to the Population.		Ships.	Guns.

The issue of the German-French War has again proved the remarkable influence which the principle of nationalities has had upon the modern history of Europe. It already has reconstructed, to a large extent, the map of Europe, as it was drawn up by the Congress

of Vienna, and it bids fair to produce other important changes in future. The following table, which shows the division of the population of Europe according to nationalities, will be a valuable aid in understanding the still-pending international complications:

STATES.	Germanic Nations.	Romanic Nations.	Slavic Nations.	Other Nationalities.	Total Population.
Belgium.....	2,617,000	2,308,000	1,000	4,927,000
Denmark.....	1,780,000	5,000	1,785,000
Germany.....	35,344,000	21,000	2,540,000	802,000	38,507,000
France.....	1,561,000	25,164,000	9,000	1,432,000	28,198,000
Greece.....	4,000	1,312,000	14,000	1,320,000
Great Britain.....	28,415,000	114,000	7,000	2,800,000	30,336,000
Italy *.....	32,000	26,226,000	83,000	36,000	26,500,000
Luxemburg.....	197,000	8,000	200,000
Netherlands.....	3,553,000	4,000	70,000	3,628,000
Austrian Empire.....	9,181,000	2,504,000	16,444,000	8,942,000	35,978,000
Portugal *.....	2,000	3,817,000	11,000	3,830,000
Roumania.....	11,000	4,941,000	77,000	372,000	4,701,000
Russia *.....	1,106,000	747,000	54,540,000	12,240,000	68,633,000
Sweden.....	4,133,500	1,000	27,000	4,161,500
Norway.....	1,672,500	27,000	1,699,500
Switzerland.....	1,762,000	750,000	1,000	4,000	2,517,000
Servia.....	1,000	210,000	1,083,000	42,000	1,306,000
Spain *.....	5,000	15,702,000	706,000	16,413,000
Turkey *.....	5,000	2,805,000	8,512,000	2,000,000	10,322,000
	91,401,000 = 31 per cent.	96,901,000 = 32.6 per cent.	80,519,000 = 27.2 per cent.	26,748,000 = 9 per cent.	295,569,000

On page 278 we give a map of Europe, on which the location of the three great races (Germanic, Romanic, and Slavic), and the other minor nationalities, the strength of each in the several European countries, and the complications to which the coexistence of different nationalities in countries like Austria and Turkey gives rise, are illustrated by means of diagrams.

* Italy, including the Papal States; Portugal, without the Azores; Russia, including Poland and Finland; Spain, including Andorra, but without the Canary Isles; Turkey, including Montenegro. Among the Germanic nations, there are 55,000,000 Germans, being 18.5 per cent. of the population of Europe; 28,400,000 Anglo-Saxons, 9.5 per cent.; 2,001,000 Scandinavians, 2.7 per cent. The Romanic nations include 41,300,000 French, Occitanians, and Catalans, 14 per cent.; 27,850,000 Italians and Rhetians, 9.3 per cent.; 15,101,000 Spaniards and Portuguese, 5.5 per cent.; 2,350,000 Daco-Roumanians, 2.8 per cent.;

In view of the great influence which the war of the year 1870 is likely to have upon the territorial reconstruction of Europe, we give below, from Kolb's *Handbuch der Vergleichenden Statistik* (Leipzig, fifth edition, 1868), two tables, showing the political divisions of Europe shortly before the outbreak of the French Revolution, and in 1812, when the First Empire had attained its zenith.

2,050,000 Greeks, 0.7 per cent.; 1,750,000 Albanians, 0.6 per cent. Among the Slavi there are 62,819,000 Russians and Ruthenians, 17.8 per cent.; 9,600,000 Poles, 3.3 per cent.; 2,900,000 Czechs and Vinces, 2.3 per cent.; 7,100,000 Servians, Croats, and Slovenes, 2.4 per cent.; 4,100,000 Slavic Bulgarians, 1.4 per cent.; 3,200,000 Celts, 1.1 per cent.; 2,000,000 Letts, Lithuanians, and Prussians, 1.0 per cent.; 4,500,000 Israelites, 1.5 per cent.; 10,000,000 Finns and Magyars, 3.4 per cent.; 1,750,000 Basques, Armenians, Gypsies, and Moors, 0.6 per cent.; 4,100,000 Turks, Tartars, and Mongolians, 1.4 per cent.

I. THE DIVISIONS OF EUROPE IN 1789.

COUNTRIES.	Square Miles.	Population.	Revenue.	Debt.
German Empire.....	255,128	26,250,000	\$34,000,000	\$40,000,000

II. THE DIVISIONS OF EUROPE IN 1812.

	Square Miles.	Population in 1812	Army Con- tingent.
I. The French Empire and its Dependencies :			
(a). The French Empire proper, comprising the present territory of France (inclusive of Alsace and Lorraine), Belgium, Holland, Luxemburg, parts of Germany (the whole of the territory on the left bank of the Rhine, as well as the territory at the mouth of the Weser and Elbe), parts of Italy (the continental territory of the Sardinian States, Parma, parts of Modena, Tuscany, and Rome), parts of Switzerland (Geneva, Neuchâtel, and Wallis), or altogether.....	289,145	42,856,000	660,000
(b). Vassal States of France, which were little more than French provinces :			
1. The Kingdom of Italy.....	33,316	6,500,000	50,000
2. Illyria.....	24,327	1,530,000
3. The Kingdom of Westphalia.....	17,540	2,100,000	30,000
4. The Grand-duchy of Berg.....	6,697	880,000	5,000
Total.....	80,790	11,010,000	85,000
(c). Other Vassal States :			
5. The thirty-three States of the Confederation of the Rhine, including Bavaria, Saxony, Würtemberg, etc.....	90,338	10,500,000	100,000
6. The Kingdom of Naples.....	88,800	4,600,000	60,000
7. The Grand-duchy of Warsaw.....	60,061	4,000,000	60,000
Total France and Vassal States.....	559,319	72,476,000	965,000
II. States under the preponderating influence of France :			
1. Swiss Confederation.....	13,183	1,500,000
2. Prussia †.....	61,018	4,600,000
3. Austria.....	219,607	20,000,000
4. Denmark (with Norway and Schleswig-Holstein).....	187,093	3,100,000
Total.....	473,900	39,200,000
III. Actually independent States :			
1. Great Britain.....	123,312	18,000,000
Vassal State, Island of Sicily.....	10,630	1,700,000
2. Russia in Europe.....	2,019,764	40,000,000
Total.....	2,153,706	59,700,000
IV. States struggling for the preservation of their independence :			
1. Spain.....	195,598	10,500,000
2. Portugal.....	88,369	3,500,000

* Prussia was entirely unencumbered by any debt, and had, besides, a balance in the treasury of about \$43,000,000. The republic of Poland comprised at that period, 1. Great Poland, consisting of the provinces of Warsaw, Posen, Kalisch, Gnesen, and Polozk; 2. Little Poland, with the provinces of Cracow, Gzenstochau, Lublin, Chelm, Luck, and Kaminiacz; 3. Lithuania, consisting of the provinces of Wilna, Grodno, Kovno, Brzesc, and Minsk; 4. The free cities of Dantzic and Thorn, with their dependencies; 5.

The Grand-duchy of Courland and Semgallen. Previous to 1773, Poland had an areal extent of 289,145 square miles, and a population of from 18,000,000 to 20,000,000.

† Prussia, which was not allowed to have a standing army of more than 43,000 men, was compelled to contribute a contingent of 30,000 men to the army of the first Napoleon, at the opening of the Russian campaign; while Austria had to place 30,000 men at the disposal of Napoleon, out of an army not exceeding 150,000 men.

EVANS, Sir GEORGE DE LACY, Bart., G.O.B., a British general and author, born in Milltown, Ireland, in 1787; died in London, January 9, 1870. He entered the army in 1807, and was sent to India the same year, and, after taking a part in many severe battles both there and in the Isle of France, returned to Europe in 1810, and joined the British forces in the Peninsula under Wellington. In this new field he added to the laurels he had won in the East, and was specially mentioned by the commander-in-chief in his dispatches to the Government, for the valor he displayed at the battles of Vittoria and Toulouse. In 1814 he was ordered on active service to North America, to take an important part in the war against the United States. He fought in the battle of Bladensburg, where his horse was killed under him. He was present at the capture of Washington, being the leader of the body of infantry that forced the Congress Hall. He also took part in the attack upon Baltimore, and was severely wounded at the memorable battle of New Orleans, fought in January, 1815, when Jackson inflicted so terrible a blow upon his country's invaders. He held the post of Assistant Quartermaster-General during this war, and in 1829 published a pamphlet, entitled "Facts relative to the Capture of Washington," with the view of correcting several inaccurate statements which had been made by Admiral Cockburn. He returned to Europe immediately after the battle of New Orleans, and, having, by the time he reached England, sufficiently recovered from his wounds to be fit for active service, he joined the army in Belgium as aide-de-camp to General Ponsonby, and was engaged at Quatre-Bras and Waterloo, where he had two horses shot under him. In 1835 he was appointed commander of the auxiliary corps of 10,000 men raised in England to support the claims of Queen Isabella against the pretensions of Don Carlos, and which was known as the Foreign Legion. At the head of this force he rendered the most valuable services to the cause of the Queen, defeating the Carlists in several battles, and capturing a number of their strongholds. He was rewarded for these services with the honorary title of Lieutenant-General of the armies of Spain, and with the Grand Cross of the Orders of St. Ferdinand and Charles III. At the commencement of the Crimean War he was appointed to the command of the Second Division of the English army. He fought in the battle of the Alma with his usual gallantry. In repulsing the

Russian attack upon the English lines before Sevastopol, he again distinguished himself; and he left his sick-bed to place himself at the head of his troops on the bloody field of Inkerman, where, although unable to do much, his counsels proved of invaluable service to the English. On his return home he received the thanks of Parliament, and was subsequently appointed to attend the council of generals of the allied armies, held at Paris, in 1856, under the presidency of the Emperor Napoleon. In 1828 Sir De Lacy Evans published a pamphlet under the title of "The Designs of Russia," in which he pointed out the danger to the Western powers of the preponderance of Russia in the East; and he exerted himself strenuously to promote the alliance between France and England, through which Russia was defeated in the Crimean War. In politics, General Evans claimed to be an advanced Liberal. He was three times returned to the House of Commons, in which he sat for thirty years altogether, retiring finally at the general election in July, 1865. He had been advanced to the rank of general on the retired list in 1861. During his military career he served with eight divisions of the army, and was present at no fewer than fifty great battles in Asia, Europe, and America.

EWBANK, THOMAS, a distinguished scientist and philosopher, born at Barnard Castle, in the county of Durham, England, in 1792; died in New-York City, September 16, 1870. At the age of thirteen years he was apprenticed to a tin and coppersmith in his native place. When he was twenty years old he went to London, and succeeded in getting employment there at making cans for preserved meat. By careful economy he saved enough from his wages to purchase a few books, and to them every hour he could spare from his work was devoted. During the seven years he lived in London he pursued a comprehensive course of scientific study. He had been elected a member of several learned societies, and was on the high road to business prosperity, when, in 1819, he gave up his English prospects, and came to New York. Here he occupied for a short time the factory at Powles' Hook, which had belonged to Robert Fulton. In 1820 he engaged in the manufacture of lead, tin, and copper tubing, which business he carried on till 1836. From that time he devoted himself entirely to his favorite pursuit—science. His first published work, "A Descriptive and Historical Account of Hydraulic and other Machines for raising Water, both Ancient and

Modern," appeared in 1842. This work at once gave him a high reputation, and is to this day the standard authority on the subjects of which it treats. A new edition, with the venerable author's last additions and corrections, has appeared since his death. In 1849 he was made Commissioner of Patents, holding that position till 1852. His annual reports to Congress during this time were distinguished for the amount of information and of original suggestion contained in them. In 1855 he published "The World a Workshop; or the Physical Relation of Man to the Earth," and in 1857 an interesting volume entitled "Life in Brazil; or, the Land of the Cocoa and the Palm," embodying the results of a visit to Brazil made in 1845. This work contained valuable illustrations of ancient South American arts, and of antique works in stone and metal found in Brazil. In 1859 the "Reminiscences in the Patent-Office, and of Things and Scenes in Washington," appeared. Among the best known of Mr. Ewbank's minor works were an essay called "Thoughts on Matter and Force," published in 1858; an essay read before the American Ethnological Society on "The Inorganic Forces ordained to supersede Human Slavery;" an essay on "Experiments in Marine Propulsion." As a member of the commission to examine into the strength of the marbles offered for the extension of the Capitol at Washington, he rendered valuable service, and discovered a method of largely increasing the resisting power of all kinds of building-stones. Mr. Ewbank's mind retained its activity, and he was a frequent contributor to scientific journals, up to the time of his death. Throughout his long life he was an enthusiastic student of the natural and exact sciences, and acquired distinction in their pursuit. His works rank with the best scientific and philosophic treatises which this country has produced.

FALCON, Marshal JUAN CRISOSTOMO, late President of the Republic of Venezuela, born in Caracas; died in Martinique of apoplexy, in May, 1870. He had been a successful soldier, and, being elected Vice-President in 1861, he became President of the Republic on the resignation of General Paez in 1863. The country was in such an anarchical state that, in 1865, he resigned, but was elected President in March, 1865, nineteen out of the twenty States of the Confederation voting for him. He entered upon his duties in June of that year. Venezuela is, however, in a chronic state of insurrection, with not infrequent acute paroxysms of the same disorder. Hardly was President Falcon seated in the Executive chair, when a young and ambitious general, Venancio Pulgar, commenced an insurrection against him. This was quelled, though with some difficulty, and Pulgar compelled to fly from the country. New insurrections were started, the veteran conspirator General Don Tadeo Monagas, who had been for a long time President, and was the

Santa Anna of Venezuela, prompting them, until in August, 1868, after a troublesome administration, General Falcon was compelled by the revolutionists to resign and give place to General Monagas, who, however, died in November following. (*See MONAGAS, ANNUAL CYCLOPEDIA*, 1868.) The unpopularity of the administration of the younger Monagas, who had succeeded his father, awakened new hopes of success in the mind of Marshal Falcon, who sailed from Europe, where he had been in exile, in the hope of regaining power, but died at Martinique.

FARRAGUT, DAVID GLASCOE, 'Admiral of the United States Navy, one of the most illustrious naval commanders of the century, born at Campbell's Station, near Knoxville, Tenn., July 5, 1801; died at Portsmouth, N. H., August 14, 1870. His father, George Farragut, was a native of Minorca, but at an early age became a sailor, and, coming to this country just before the Revolution, served for seven years in the American army, rising to the rank of major. After the war he married a Scotch girl, Miss Elizabeth Shine, in North Carolina, and emigrated with his family to East Tennessee, or, as it was then called, Frankland. Major Farragut after a time wearied of farming, and again longed for a sea-life. The War of 1812 coming on, he applied to his old friend Captain (then Commodore) David Porter, and through him obtained a commission as sailing-master in the Navy. It was owing to the good offices of the same kind friend that the boy David Farragut at eleven years of age received a warrant as midshipman and was ordered to Commodore Porter's own ship. This ship was the famous frigate *Essex*, and the young midshipman's first experience of naval life was that celebrated two years' cruise in the Pacific, which ended in the capture of the *Essex*. Of his personal share in the stirring events of this two-years' cruise we have only very meagre details. He was present at the capture of the *Nocton*, a British packet of 10 guns, on December 11, 1812; the *Alert*, March 14th; and the Peruvian corsair *Nereida*, on March 25, 1818. After the capture on May 29th, of the *Atlantic*, an English whaler of 8 guns, Farragut served on board of her as an acting-lieutenant, under command of Lieutenant Stephen D. McKnight, and cruised in company with the *Essex* and the fleet of eight captured vessels turned into cruisers. Shortly after the fleet was reduced to three, the *Atlantic* was renamed the *Essex Junior*, and Lieutenant McKnight giving up the command to Lieutenant-Commander Downes, Acting-Lieutenant Farragut appears to have returned to duty as a midshipman on the *Essex*. He continued in the *Essex* during the remainder of the remarkable cruise in which nearly every English whale-ship known to be in the South Pacific was captured. He appears also to have taken part in the memorable war in the Marquesas, where the *Essex* and *Essex Junior* refitted in October and November, 1813,

and for which privilege Commodore Porter was compelled to assist the tribe who held possession of the bay in which he had cast anchor. So severe was the havoc which the Essex had made on English commerce that the British Admiralty sent out a number of cruisers to destroy her. Two of these cruisers, the *Phœbe* frigate and *Oherub* sloop, found the Essex at Valparaiso, in the winter of 1814, and blockaded her for six weeks, the English commander, Captain Hillyer, refusing to fight the Essex with his single ship, though she was the larger vessel of the two, and had the heavier armament, and the greater crew by sixty-five men. He probably acted under instructions, as there was no reason for doubting either his skill or his courage. Captain Porter made an effort to get to sea, and left the port; but in going out his ship was seriously damaged, losing her maintopmast while trying to double the Point of Angels; and, before he could regain the port, he was attacked by both British cruisers, and the Essex taken, after an action that lasted two hours and a half, in which one hundred and fifty-five of her crew of two hundred and fifty-five men were lost. The action was a most unfair one on the part of the British; and it was a terrible initiation into the business of war for a boy of not thirteen years. Young Farragut went through the whole of it, and was wounded, though not severely. He was surrendered with the ship, and was paroled and placed on the Essex Junior, which was declared a cartel, and ordered to New York. When about to enter Sandy Hook, the Essex Junior was overhauled by the British ship-of-war *Saturn*, and declared a prize. From the vessel thus irregularly detained, as from a prison-ship, Commodore Porter and a part of his officers and crew escaped in a small boat and made their way to Babylon, Long Island. Farragut seems to have been left behind on the Essex Junior, which was finally released, and in her he soon after reached New York. On the return of peace in 1814, Porter secured a place for his namesake in a school at Chester, Pennsylvania, where he spent a year in the study of military and naval science. He was then ordered to the Washington, flag-ship of the Mediterranean squadron, in which he served two years. Mr. Charles Folsom, so well known for his high character and profound scholarship, was chaplain of the flag-ship, and became Mr. Farragut's instructor, and found him an apt pupil; and, when Mr. Folsom was appointed consul at Tunis, Mr. Farragut accompanied him. This intercourse was highly beneficial to the youthful sailor, and in time he became a man of learning, and was familiar not only with the principal European languages, but also with Arabic and Turkish, rare accomplishments under any circumstances, and especially rare with the members of a profession as laborious as it is useful and honorable. While his mental proficiency was thus carefully fostered, his moral training was not neglected

by his conscientious and capable preceptor. He grew up a manly youth of decided personal courage, but of quiet tastes, reserved manners, and pure morals. Returning from the Mediterranean, he was promoted to be lieutenant, and served in 1821-1823, in the Greyhound, under Lieutenant-Commodore Kearney, engaging in the capture of the piratical establishment at Cape Crea, Cuba. In 1823 he was ordered to the Norfolk Navy-Yard, where he remained on shore duty until 1833. Here he married Miss Loyall, daughter of a prominent citizen of Norfolk, but she became a hopeless invalid soon after their marriage, and died after several years of great suffering. Two years' service after 1833, in the Brazilian squadron, in the *Vandalia*, followed. On his return he was again sent to the Norfolk Navy-Yard. During his service he married his former wife's sister, Miss Virginia Loyall, by whom he had an only son, named Loyall Farragut. He was not afloat again until 1838, when he was ordered to the West Indies as lieutenant-commander of the war-sloop *Natchez*. In September, 1840, he was promoted to be commander, and put in command of the sloop-of-war *Decatur*, for a cruise in the South Atlantic. In 1843-1844 he was on leave of absence; then on duty again at Norfolk in charge of the receiving-ship *Pennsylvania*. A year's service in command of the *Saratoga* in the West Indies followed. Again at Norfolk in 1848, he was ordered to Washington as Inspector of Ordnance in 1851; and in 1854 to the San Francisco Yard. Here he remained, having been promoted to be captain, until 1858, when he was ordered to the Brooklyn and the home squadron. Later he was placed on the Naval Retiring Board, and stationed at New York. When the civil war began, he was living at Norfolk, and made no secret of his abhorrence of the disloyal action of most of the people of that place. He was told by his infatuated neighbors that he would not be allowed to remain in Norfolk if he gave utterance to his sentiments. "Very well," was his reply, "then I will go where I can live and utter them." When the yard was destroyed by Commodore McCauley, Farragut left the city and returned to his duty at New York. He left Norfolk on the 18th of April without money, and with difficulty reached New York. Here he encountered Commodore McCauley, who, at his solicitation, told him the circumstances of the destruction of the Norfolk Navy-Yard, and the noble vessels stationed there. After placing his family in safety at Hastings-on-the-Hudson, he hastened to Washington and tendered his services to the Government; but there was no ship for him to command, and for nine months this master-mind of the Navy was compelled to waste itself in weeding the service of disabled, unworthy, and incompetent officers. At length the time came for action. He was appointed to lead the fleet which was to attack New Orleans, on the 20th

of January, 1862, and on the 3d of February he sailed from Hampton Roads, having selected the Hartford as his flag-ship. He reached Ship Island on the 20th, and organized the West Gulf blockading squadron; and he was engaged for almost two months in preparing for his grand attack on the great city of the Southwest. The difficulties that lay in his way were of a nature to have dispirited any other than a man of iron energy. They were all surmounted by this able officer, and active operations began on the 18th of April. After six days' bombardment he found that the forts below New Orleans were not likely to yield, whereupon, instead of retiring, he determined to break the great chain which the rebels had stretched across the river, and engage their powerful fleet that was assembled above it. Accordingly, on the morning of the 24th of April, the fleet advanced, the chain was broken, and battle joined, the forts helping the enemy by a fire of tremendous weight. The action was one of the most singular combats ever known, and may be said to have been the inauguration of that new naval warfare toward which matters had been for some time tending, but which definitely dates from our civil contest. The enemy had iron-clads and rams, but they were utterly defeated, losing fourteen of their eighteen vessels. Forts and fleet had both been vanquished. The Federal gunboat Varuna was lost. Three of the assailants were disabled and obliged to fall back. With the rest of his fleet Commodore Farragut continued his course, and took possession of New Orleans on the 25th of April. His order of battle on this occasion was thoroughly characteristic of the man, in its promptness, readiness of resource, and its quiet, undaunted courage. We give but a single sentence, that in which, after detailing the needful preparations for the coming combat, he said: "Whatever is to be done will have to be done quickly. When, in the opinion of the flag-officer, the propitious time has arrived, the signal will be made to weigh and advance to the conflict. He will make a signal *for close action*, and abide the result—*conquer, or be conquered*."

Commodore Farragut ascended the Mississippi, in continuance of operations, and passed Vicksburg on the 27th of June, communicating with the commander of the Mississippi squadron, with whom an attack on Vicksburg was arranged. That attack proved unsuccessful, because there was no land force to coöperate with the fleet. Returning to the Gulf, he made Pensacola his headquarters, and was for some time employed in perfecting the blockade of the Gulf-ports, and in directing the attacks that were made on Corpus Christi, Sabine Pass, and Galveston, all of which places were taken. He was made senior rear-admiral on the 11th of July, for the capture of New Orleans—a well-deserved reward for well-performed services, and the bestowal of which

was warmly approved by the country. In the spring of 1863, Rear-Admiral Farragut coöperated with General Grant in his movements against Vicksburg. The passing of the enemy's strong works at Port Hudson was a repetition of what had been done the previous year at New Orleans. Only two of his vessels were able to get by them—the flag-ship and the Albatross. One vessel was destroyed, and some others injured; but the two that effected the passage blockaded the mouth of Red River for several weeks, and prevented the sending of supplies thence to Vicksburg, and the fall of that place was finally due to famine. Subsequently Rear-Admiral Farragut directed the naval operations against Port Hudson, which fell at the same time with Vicksburg. To attack the forts at Mobile, and render that port useless to the enemy, had long been a favorite project with the naval commander in the Gulf; but it was not until late in the summer of 1864 that he was supplied with the requisite force. A combined attack was arranged for the 5th of August, and was made with success. The enemy were confident of their ability to repulse their assailants, relying much on the power of their famous armored ship, the Tennessee, supposed to be the most powerful war-vessel in the world. They handled her well, and she and her associates made a vigorous resistance, and were most gallantly sustained by the forts; but all resistance proved vain in the end, though more than once, in the course of the action, the event seemed doubtful. The Tennessee was taken, and all the rest of the enemy's naval force was destroyed; and, on the 6th, one of the forts was abandoned, and another surrendered on the 8th. The third held out to the 23d of August, when it succumbed under a tremendous bombardment. These successes destroyed Mobile as a port of the enemy. There was no more blockade-breaking heard of in that quarter. Greatly against his will, Admiral Farragut yielded, at the beginning of the action, to the urgent appeals of the officers of the squadron, and suffered the Brooklyn to take the lead instead of the flag-ship, the Hartford; but when the Tecumseh monitor, commanded by the gallant Craven, was sunk by a torpedo, he could no longer be restrained, but dashed forward with the flag-ship, believing, he said, that the torpedoes had been so long in the water that they were probably innocuous. Though his own vessel was of wood, and the Tennessee an iron-clad of great strength, he did not hesitate to drive his flag-ship against her sides at full speed, and, as the event proved, with complete success. During a part of the action he was lashed in the rigging, the better to observe and give orders in the fight. Like all of his exploits, Rear-Admiral Farragut's actions at Mobile combined, to an extraordinary extent, usefulness with brilliancy, practicality with daring. The whole country was full of his praise, and the regard in which he was held

was unalloyed by any feeling of doubt or envy. Foreign countries were almost as loud in his praise as his own. The English, who are good naval critics, took the lead, and were as warm in lauding him as they were in singing the greatness of General Lee. The London *United Service Magazine*, which was by no means given to speaking favorably of the Union cause or commanders, said, "Farragut is Columbia's Nelson;" the highest praise an Englishman could bestow on a foreign naval officer. It also said that "the 5th of August, 1864, was a brilliant day for the United States Navy," and that "at Mobile Admiral Farragut displayed the attributes of an experienced naval officer, resolution and zeal, ingenuity and perseverance, ready ability and immediate dash." The Prince de Joinville said of the battle near Mobile, "The Americans there accomplished a feat of arms of which they have reason to be proud, for there is not a more transcendent one in the naval history of our time; and the skillfulness, the energy shown on this occasion, as in so many others, by Admiral Farragut, incontestably place him in the first rank among the naval officers of all nations." In November, 1864, Rear-Admiral Farragut went to Washington to give his views with regard to certain contemplated naval operations. The next month he received the thanks of Congress, and the grade of vice-admiral was created for our navy, and he was appointed to hold it, which placed him, under the President, at the head of the naval service. He returned to blockading duty in the Gulf, and toward the close of the war was sent to James River. In July, 1866, he was promoted to the rank of admiral, created for him. The merchants of New York, feeling that his services had been invaluable to the national commerce, spontaneously made up a purse of \$50,000 and presented it to him. He had been too busy in fighting the enemy to make profits, as some other of the naval officers had done, either in the capture of blockade-runners or the seizing of cotton. After the close of the war, he was sent on a cruise in the Franklin to European waters, and everywhere met with the most distinguished consideration and regard. After his return to this country, Admiral Farragut was an almost constant invalid. He had suffered greatly for the past year, and death came to him as a relief to a hopeless victim. No character in our national history has united more fully than did his a grand, honest, brave heart, with a simplicity and artlessness of manners which won the love of every true man.

FIELD, RICHARD STOCKTON, LL. D., an accomplished scholar and jurist of New Jersey, born in Princeton, N. J., in 1805; died there, May 25, 1870. He was connected with some of the most prominent historical families of New Jersey, being a nephew of Richard Stockton, one of the signers of the Declaration of Independence, and a cousin of Commodore Stock-

ton. He was educated in Princeton College, where he afterward filled the professorship of the law-school, having studied under James S. Green. He was Attorney-General of the State for several years, and occupied a seat in the United States Senate for six weeks in 1862 and 1868, following the decease of Senator Thompson. At this time he was appointed, by President Lincoln, Judge of the United States District Court for New Jersey, which position he filled with signal ability till his failing health compelled his resignation. He was a delegate to the Philadelphia Convention in 1866, and throughout his life was an unflinching and able advocate of the Union cause. After his elevation to the bench he lived comparatively secluded, in his splendid mansion at Princeton. Judge Field was a man of varied and profound learning, gentle, courteous, and dignified in his demeanor, and of a charitable disposition. He was closely identified with the interests of his *Alma Mater*, and some of his ablest essays and addresses have been delivered within its walls.

FINANCES OF THE UNITED STATES.

The general system of finance adopted by the Federal Government in 1869 was continued through the year 1870, with a constant improvement in the same features. The difference between gold and the paper currency steadily declined from 82.9 premium in 1869, to 15.2 per centum premium in 1870, which was equivalent to an average improvement in the paper currency of about 17 per centum. At the same time a gradual reduction was made in the amount of the public debt, by applying to its payment the excess of the revenue.

The receipts and expenditures for the quarter ending September 30, 1869, which is the first quarter of the fiscal year ending June 30, 1870, were as follows:

RECEIPTS.	
Customs.....	\$53,598,921 86
Internal revenue.....	47,926,353 51
Lands.....	893,864 06
Miscellaneous sources.....	7,412,423 57
Total, exclusive of loans.....	\$109,831,623 02
EXPENDITURES.	
After deducting the amount of repayments by disbursing officers and others:	
Civil service and miscellaneous.....	\$15,102,202 05
Indians and pensions.....	18,547,942 79
War Department.....	12,585,468 08
Navy Department.....	5,723,680 96
Interest on the public debt.....	87,452,970 74
Total, exclusive of loans.....	85,480,514 59
Receipts in excess of expenditures.....	\$23,351,107 43

The estimated receipts and expenditures for the three remaining quarters of the fiscal year were as follows:

RECEIPTS.	
Customs.....	\$135,000,000 00
Internal revenue.....	127,000,000 00
Lands.....	4,000,000 00
Miscellaneous sources.....	20,000,000 00
Total.....	\$286,000,000 00

Total receipts.....\$286,000,000 00

EXPENDITURES.
Civil service and miscellane-
ous.....\$40,000,000 00
Pensions and Indians.....21,000,000 00
War Department.....40,500,000 00
Navy Department.....14,000,000 00
Interest on the public debt 98,750,000 00

Total.....209,250,000 00

Estimated receipts in excess of ex-
penditures.....\$76,750,000 00

The entire receipts for the fiscal year ending
June 30, 1870, were as follows:

Customs.....\$194,538,374 44
Internal revenue.....185,128,850 37
Lands.....3,350,431 76
Miscellaneous sources.....28,267,763 06

Total.....\$411,255,477 63

The expenditures during the same
fiscal year were as follows:

Civil and miscellane-
ous purposes.....\$69,224,017 16
War Department.....57,635,575 40
Navy Department.....21,780,229 57
Indians and pensions.....31,743,140 83
Interest on the public debt 129,225,438 00

Total.....309,653,590 75

Surplus of receipts.....\$101,601,916 88

This surplus was applied to the payment of
the public debt, during the same period, and
shows the amount of reduction in the same
during the year. The receipts for the first
quarter of the fiscal year, ending September
30, 1870, were as follows:

Customs.....\$37,739,478 57
Internal revenue.....49,147,187 93
Lands.....43,487 67
Miscellaneous sources.....7,383,181 60

Total.....\$114,301,220 75

The expenditures for the same period, ex-
cluding payment on account of the sinking
fund, were as follows:

Civil and miscellaneous purposes.....\$18,207,242 49
War Department.....10,318,538 36
Navy Department.....4,815,287 53
Indians and pensions.....13,325,451 89
Interest on the public debt.....29,496,450 51

Total.....\$56,563,920 83

For the remaining three-quarters of the fiscal
year, ending June 30, 1871, the estimated re-
ceipts were as follows:

Customs.....\$138,000,000 00
Internal revenue.....98,000,000 00
Lands.....2,000,000 00
Miscellaneous sources.....16,000,000 00

Total.....\$244,000,000 00

The estimated expenditures for the same
period are:

Civil and miscellaneous purposes.....\$54,000,000 00
War Department.....30,000,000 00
Navy Department.....15,000,000 00
Indians and pensions.....24,500,000 00
Interest on the public debt.....80,000,000 00

Total.....\$203,500,000 00

This statement presents a surplus of \$69,-
038,309.92 applicable to the payment of
the public debt, or to any other purpose which
Congress might direct.

The amount of the public debt on July 1,
1869, was \$2,588,452,213.94; the amount of
the same on July 1, 1870, was \$2,480,672,427.81:
thus showing a reduction of the debt during
the fiscal year of \$107,779,786.13.

The outstanding principal of the debt of the
United States, on July 1st of each year, from
1860 to 1870 inclusive, has been as follows:

1860.....	\$64,848,237 88	1866.....	\$2,773,226,173 00
1861.....	90,580,973 73	1867.....	2,678,126,106 87
1862.....	534,176,412 13	1868.....	2,611,687,851 19
1863.....	1,119,773,138 63	1869.....	2,588,452,213 94
1864.....	1,815,734,370 57	1870.....	2,480,672,427 81
1865.....	2,080,647,500 74		

In the following table (see page 322) is given
a statement in detail of the public debt on June
30, 1870, including the cancellation of certain
bonds ordered on July 14th, and which are not
deducted in the preceding statement.

The views of the Secretary of the Treasury
relative to funding a portion of the public
debt, presented to Congress in December, 1869
(see ANNUAL CYCLOPEDIA, 1869, FINANCES, etc.),
were subsequently approved by that body.
An act was therefore passed in July, 1870, au-
thorizing the Secretary to issue, in a sum or
sums not exceeding in the aggregate \$200,000,-
000, coupons or registered bonds of the United
States, in such form as he might prescribe, and
of denominations of fifty dollars, or some mul-
tiple thereof, redeemable in coin of the present
standard value after ten years from the date of
issue, bearing interest at five per cent. per
annum; also a further sum of \$300,000,000
payable after fifteen years from the date of is-
sue, and bearing interest at the rate of four
and a half per cent. per annum; also a further
sum of \$1,000,000,000, payable after thirty
years from the date of issue, and bearing inter-
est at the rate of four per cent. per annum.
These bonds were to be made exempt from the
payment of all taxes or duties of the United
States, as well as from taxation in any form by or
under any State, municipal, or local authority.
The said bonds were ordered to be sold at not
less than their par value for coin, and the pro-
ceeds thereof were to be applied to no other
purpose than the redemption of any outstanding
five-twenty bonds of the United States at
their par value; or, said bonds might be ex-
changed for five-twenty bonds par for par.
The act in full was as follows:

An Act to authorize the refunding of the National Debt.
Be it enacted, etc., That the Secretary of the Treas-
ury is hereby authorized to issue, in a sum or sums
not exceeding in the aggregate \$200,000,000, coupon
or registered bonds of the United States, in such form
as he may prescribe, and of denominations of fifty
dollars, or some multiple of that sum, redeemable in
coin of the present standard value, at the pleasure of
the United States, after ten years from the date of
their issue, and bearing interest payable semi-annually
in such coin, at the rate of five per cent. per annum;
also a sum or sums not exceeding in the aggregate
\$300,000,000 of like bonds, the same in all respects,
but payable at the pleasure of the United States, after
fifteen years from the date of their issue, and bearing
interest at the rate of four and a half per cent. per
annum; also a sum or sums not exceeding in the ag-
gregate \$1,000,000,000 of like bonds, the same in all

STATEMENT OF THE PUBLIC DEBT OF THE UNITED STATES, JUNE 30, 1870.

respects, but payable at the pleasure of the United States, after thirty years from the date of their issue, and bearing interest at the rate of four per cent. per annum; all of which said several classes of bonds, and the interest thereon, shall be exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority; and the said bonds shall have set forth and expressed upon their face the above specified conditions, and shall, with their coupons, be made payable at the Treasury of the United States. But nothing in this act, or in any other law now in force, shall be construed to authorize any increase whatever of the bonded debt of the United States.

Sec. 2. That the Secretary of the Treasury is hereby authorized to sell and dispose of any of the bonds issued under this act at not less than their par value for coin, and to apply the proceeds thereof to the redemption of any of the bonds of the United States

outstanding and known as five-twenty bonds at their par value; or he may exchange the same for such five-twenty bonds, par for par; but the bonds hereby authorized shall be used for no other purpose whatsoever. And a sum not exceeding one-half of one per cent. of the bonds herein authorized is hereby appropriated to pay the expense of preparing, issuing, advertising, and disposing of the same.

Sec. 3. That the payment of any of the bonds hereby authorized after the expiration of the said several terms of ten, fifteen, and thirty years, shall be made in amounts to be determined from time to time by the Secretary of the Treasury at his discretion, the bonds so to be paid to be distinguished and described by the dates and numbers, beginning for each successive payment with the bonds of each class last dated and numbered, of the time of which intended payment or redemption the Secretary of the Treasury shall give public notice; and the interest on the particular bonds so selected at any time to be

paid shall cease at the expiration of three months from the date of such notice.

Sec. 4. That the Secretary of the Treasury is hereby authorized, with any coin in the Treasury of the United States which he may lawfully apply to such purpose, or which may be derived from the sale of any of the bonds the issue of which is provided for in this act, to pay at par and cancel any six per cent. bonds of the United States of the kind known as 5-20 bonds which have become or shall hereafter become redeemable by the terms of their issue. But the particular bonds so to be paid and cancelled shall in all cases be indicated and specified by class, date, and number, in order of their numbers and issue, beginning with the first numbered and issued, in public notice, to be given by the Secretary of the Treasury, and in three months after the date of such public notice the interest on the bonds so selected and advertised to be paid shall cease.

Sec. 5. That the Secretary of the Treasury is hereby authorized, at any time within two years from the passage of this act, to receive gold coin of the United States on deposit for not less than thirty days, in sums of not less than \$100, with the Treasurer, or any assistant treasurer of the United States authorized by the Secretary of the Treasury to receive the same, who shall issue therefor certificates of deposit, made in such form as the Secretary of the Treasury shall prescribe, and said certificates of deposit shall bear interest at a rate not exceeding two and a half per cent. per annum; and any amount of gold coin so deposited may be withdrawn from deposit at any time after thirty days from the date of deposit, and after ten days' notice and on return of said certificates: *Provided*, That the interest on all such deposits shall cease and determine at the pleasure of the Secretary of the Treasury. And not less than twenty-five per cent. of the coin deposited for or represented by said certificates of deposits shall be retained in the Treasury for the payment of said certificates; and the excess beyond twenty-five per cent. may be applied, at the discretion of the Secretary of the Treasury, to the payment or redemption of such outstanding bonds of the United States, heretofore issued and known as the 5-20 bonds, as he may designate under the provisions of the fourth section of this act; and any certificates of deposit issued as aforesaid may be received at par, with the interest accrued thereon, in payment for any bonds authorized to be issued by this act.

Sec. 6. That the United States bonds purchased and now held in the Treasury in accordance with the provisions relating to a sinking fund, of section five of the act entitled "An act to authorize the issue of United States notes, and for the redemption or funding thereof, and for funding the floating debt of the United States," approved February 25, 1862, and all other United States bonds which have been purchased by the Secretary of the Treasury with surplus funds in the Treasury, and now held in the Treasury of the United States, shall be cancelled and destroyed, a detailed record of such bond so cancelled and destroyed to be first made in the books of the Treasury Department. Any bonds hereafter applied to said sinking fund, and all other United States bonds, redeemed or paid hereafter by the United States, shall also in like manner be recorded, cancelled, and destroyed, and the amount of the bonds of each class that have been cancelled and destroyed shall be deducted respectively from the amount of each class of the outstanding debt of the United States. In addition to other amounts that may be applied to the redemption or payment of the public debt, an amount equal to the interest on all bonds belonging to the aforesaid sinking fund shall be applied, as the Secretary of the Treasury shall from time to time direct, to the payment of the public debt, as provided for in section five of the act aforesaid; and the amount so to be applied is hereby appropriated annually for that purpose out of the receipts for duties on imported goods.

Approved, July 14, 1870.

The outbreak of the war in Europe, soon after the passage of this funding act by Congress, rendered it impracticable to refund the debt. A portion of the paper was manufactured, and the preparation so far advanced that whenever a favorable opportunity might arise the loan may be offered and the bonds delivered without delay. The tendency of the war to increase the demand for money in Europe, and make it doubtful if the four and the four-and-a-half per cent. bonds would be taken, induced the Secretary of the Treasury to request Congress, at its subsequent session, to authorize the issue of three hundred millions additional of bonds bearing interest at the rate of five per cent., payable quarterly.

With regard to the financial policy adopted in connection with the proposed loan, and its operation during the year, the Secretary of the Treasury made the following explanation:

In my annual report of last December (1869), I advised the continuance of the existing system of taxation as an essential condition to the success of the proposed loan. The circumstance that war was declared between France and Prussia simultaneously with the passage of the loan bill put it out of the power of the Department to make the negotiation, as had been expected. The large revenues, however, of the Government continuing without material abatement until the present time, improved the credit of the country, enabled the Treasury Department, by weekly purchases, to reduce the amount of surplus bonds offered for sale, and contributed to depreciate the market value of gold.

I also expressed the opinion that the settled policy of the country should contemplate a revenue sufficient to meet the ordinary expenses of the Government, pay the interest on the public debt, and from twenty-five to fifty millions of dollars of the principal annually. The reduction of the public debt since the 30th day of June last has been so great as to render it certain that the total reduction for the present fiscal year will exceed \$80,000,000. The natural increase of the business of the country, during the next eighteen months, is likely to be such as to show a surplus for the fiscal year ending June 30, 1872, of about \$40,000,000.

The principal of the public debt, on the last day of November, 1870, not deducting moneys on hand, was \$2,418,078,044.43. Of this amount \$295,369,237.08 was represented by United States notes and fractional currency, not bearing interest. The banks of the country, acting within the authority of existing laws, will require about \$393,000,000 of bonds to be placed on deposit as security for their circulation. Should the present system of furnishing a paper circulation for the country, partly by the Treasury and partly by the national banks, be continued, or the entire circulation be furnished by the Treasury, or by the banks, the credit of the United States will be the security for the redemption of the notes. From this view of the policy of the country it follows that about \$300,000,000 of the public debt will remain unpaid, existing either in the form of Treasury notes in circulation without interest, or in bonds owned by the banks and held as security for the redemption of their notes, and that only about \$1,600,000,000 of the principal of the debt is subject to payment.

The financial prospect, although highly favorable, is not such as to warrant important changes in the revenue system at the present session of Congress; but should the result during the coming year meet my expectations, it will be possible, at the December session of the Forty-second Congress, to make a very material reduction in the revenues without impairing

the ability of the Government to make satisfactory payments of the public debt.

In conformity with the views of the Secretary, some measures were adopted by Congress to continue the existing system of taxation with some modifications, and also to increase the circulation of the national banks. The act to increase this circulation authorized an additional issue of \$54,000,000 in notes for circulation to national banking associations, and ordered that a new apportionment of the circulation should be made on the basis of the census of 1870. It was further provided that upon the deposit of any United States bonds, bearing interest payable in gold, with the Treasurer, the Comptroller of the currency should be authorized to issue to any association circulating notes to the amount of eighty per cent. of the deposit, which notes shall bear upon their face the promise of such association to pay them, upon presentation at their office, in gold coin of the United States, and upon such presentation they shall be so redeemed.

The modification in the existing system of taxation consisted in a reduction of internal taxes, as compared with those of the previous year, of \$50,000,000, and of import duties \$27,000,000, making a total reduction of \$77,000,000 in the aggregate. Some of the details of this modification are worthy of notice. The income-tax was modified by a reduction of 2½ per cent., and the amount of exemption increased from \$1,000 to \$2,000. The number of persons who had been assessed for income, in each of the classes named below, as returned by the assessors of the several collection districts, from 1867-'70 inclusive, is as follows:

CLASSES.	NO. OF PERSONS ASSESSED IN				Average No. of As- sessments.
	1867.	1868.	1869.	1870.	
1. Tax of \$20, or less.....	101,219	100,358	107,997	112,423	105,550
2. Tax over \$20, and not over \$50.....	68,680	55,949	67,184	68,501	63,578
3. Tax over \$50, and not over \$100.....	40,839	28,237	41,196	40,584	40,409
4. Tax over \$100, and not over \$500.....	46,035	51,188	45,002	44,490	48,685
5. Tax over \$500.....	9,222	7,965	9,464	9,243	8,968
Total.....	266,135	244,617	272,843	273,245	267,310

These returns were made under the act of March 2, 1867, which provided that the amount of exemption should be \$1,000. The above-mentioned modification entirely relieved from the income-tax the first two classes, by raising the exemption. An estimate made on the basis that the first class paid an average tax of \$15, and the second class an average of \$40, would make this reduction amount to \$4,206,870. Thus:

190,550, at \$15.....	\$1,583,250
68,578, at 40.....	2,633,120

Total..... \$4,206,870

* Eleventh District (N. Y.) excepted.

The operation of the increased exemption on the other classes was equivalent to a deduction of \$50 from the amount to be paid by each person. The gross amount of this deduction is \$4,808,100. This, added to the deduction arising from the entire exemption of the two classes above mentioned, makes the reduction of the income-tax ensuing in consequence of an increase of the exemption to be \$9,010,470.

But the aggregate income-tax collected from individuals has been as follows:

In 1867 on the incomes of 1866.....	\$27,418,000
In 1868 on the incomes of 1867.....	23,320,000
In 1869 on the incomes of 1868.....	27,252,000
In 1870 on the incomes of 1869.....	26,150,000

Average, \$26,077,750.

The tax collected on salaries was:

In 1867.....	\$1,020,922
In 1868.....	1,042,561
In 1869.....	561,923
In 1870.....	1,109,526

Average, \$936,260. This amount is 85 per cent. of \$26,077,750. Assuming that the loss on salaries of United States officers and employés is proportionate to that on incomes from other individuals, \$327,691 are lost from this source. (\$936,260 × .85 = \$327,691.) This sum added to \$9,010,470 gives \$9,338,161, the total loss on incomes from individuals, by the raising of the exemption from \$1,000 to \$2,000. Deducting this amount from \$26,077,750 (the average of the aggregate tax collected), we have \$16,739,589, and, after reducing this one-half for the change in the rate of tax, there remains \$8,369,794 as the aggregate of tax from individuals under the act of July 14, 1870.

The aggregate five per cent. tax returned on the dividends and additions to surplus funds of banks, railroad companies, etc., was as follows:

For 1867.....	\$7,942,797
" 1868.....	8,324,426
" 1869.....	9,204,824
" 1870.....	9,551,301

Average, \$8,771,087.

One-half this sum, or \$4,385,543, would then be the aggregate tax from this source. This, added to \$8,369,794, gives in round numbers \$12,755,000 as the approximate receipts from incomes under the act of July 14, 1870, and a gross reduction of \$22,098,498. From all the sources of internal revenue there has been during the year 1870 a steady and regular increase over the previous year at the rate of 15½ per cent. So that, while the act of Congress of July 14, 1870, contemplates a reduction of \$50,000,000 by the release of certain items of taxation, yet this annual increase will make the amount of money received by the Treasury nearly as large as before, and really cause a very small diminution in the amount of funds at the command of the Government.

The following table shows the increase and decrease, and the increase and decrease per cent., between the aggregate receipts of internal revenue for the fiscal years ending June 30, 1869, and June 30, 1870:

SOURCES OF REVENUE.	Increase.	Decrease.	Increase per cent.	Decrease per cent.
Spirits.....	\$10,555,197 44	25
Tobacco.....	7,920,000 31	34
Fermented liquors.....	219,347 28	4
Banks and bankers.....	1,064,394 61	33
Gross receipts.....	508,801 17	9
Sales.....	630,555 94	8
Special taxes not elsewhere enumerated.....	819,505 50	9
Income, including salaries.....	2,984,017 73	9
Legacies.....	437,745 98	34
Successions.....	229,486 35	19
Articles in Schedule A.....	24,581 36	3
Passports.....	\$6,997 00	23
Gas.....	197,411 55	9
Sources not elsewhere enumerated.....	556,873 68	43
Penalties.....	49,184 07	6
Adhesive stamps.....	123,338 05	4-5 of 1
Total.....	\$25,509,378 48	\$612,754 75	15.7

In the following table there are shown the receipts from the several general sources of internal revenue from September 1, 1867, to February 28, 1869, and from March 1, 1869, to August 31, 1870, with the aggregate increase or decrease from each source:

SOURCES OF REVENUE.	RECEIPTS.		Increase.	Decrease.
	From Sept. 1, 1867, to Feb. 28, 1869—19 months.	From March 1, 1869, to Aug. 31, 1870—18 months.		
Spirits.....	\$41,678,684 34	\$33,417,419 85	\$40,738,735 51
Tobacco.....	29,337,575 20	46,504,065 64	17,176,490 44
Fermented liquors.....	8,549,416 83	10,054,086 41	1,504,619 58
Gross receipts.....	9,455,570 20	10,078,319 31	622,649 01
Sales.....	9,630,963 95	12,866,660 30	3,235,697 35
Income, including salaries.....	41,980,359 00	68,074,778 33	26,094,519 33
Banks and bankers.....	4,330,819 10	6,073,819 89	2,638,960 79
Special taxes.....	10,994,435 26	17,185,168 43	6,190,743 18
Legacies.....	2,094,367 89	2,437,642 70	343,474 81
Successions.....	1,833,607 98	2,163,033 50	330,415 57
Articles in Schedule A.....	1,081,583 68	1,714,966 74	633,404 06
Passports.....	31,684 00	37,135 00	5,501 00
Gas.....	3,010,933 57	3,437,045 50	426,111 93

Adhesive stamps.....	22,963,343 06	25,296,396 63	2,313,054 57
Total from all sources.....	\$341,330,765 93	\$391,493,897 01	\$103,318,917 60	\$52,646,856 51

The modification in the import duties related to a few articles only. The rate of duty on tea and coffee was reduced to fifteen and three cents per pound respectively, and a reduction made on raw sugar, and some qualities of iron. The real modification, however, was insignificant.

Of all the industrial interests of the country there is no one which has suffered so great a decline comparatively as the American tonnage engaged in the carrying trade. The subject was referred to a special committee in Congress, who visited New York, Philadelphia, Boston, and Portland, and received the statements of merchants, ship-builders, ship-owners, and insurance agents. Various other measures were adopted to obtain the most complete information possible. The conclusions of their labors were laid before Congress, and, although no results have followed as yet, the facts which they present are too important to be overlooked.

The following table shows the amount of American and foreign tonnage entered the ports of the United States from foreign countries in 1830, 1840, 1850, and from 1860 to 1869, both inclusive:

FISCAL YEARS.	American tonnage.	Foreign tonnage.	American in excess of foreign tonnage.	Foreign in excess of Am. tonnage.
1830....	997,237	131,900	865,337
1840....	1,576,946	712,363	864,583
1850....	2,573,016	1,773,623	797,393
1860....	5,321,395	2,853,911	2,467,374
1861....	5,023,917	2,217,554	2,806,363
1862....	5,117,685	2,945,378	2,172,407
1863....	4,614,698	2,640,378	1,974,320
1864....	2,066,494	3,471,319	404,785
1865....	2,943,661	3,216,967	273,306
1866....	3,373,060	4,410,434	1,038,354
1867....	2,453,039	4,318,673	866,631
1868....	3,550,550	4,495,465	944,915
1869....	3,402,668	5,547,694	7,945,033

The estimated value of the tonnage of the United States engaged in the foreign carrying trade was, in 1861, \$108,847,748; the estimated gross yearly earnings of which was 83½ per cent., or \$86,115,916. In 1869 the estimated value of the same tonnage was \$70,488,945, and the estimated earnings, \$23,496,315; a net loss, in yearly earnings of this interest, of \$12,619,601. The increase in gross earnings of this class of tonnage, from 1860 to 1869, was \$14,719,897, or 72 per cent. Taking the same ratio of increase from 1860 to 1869, say 65 per cent., and there is, in 1869, \$57,417,643. The actual amount of gross earnings is \$23,496,315,

or a net annual loss, in consequence of the decline of our ocean commerce, of \$38,921,928. Add to these the table showing the relative proportion in value of the imports and exports by American and foreign vessels to and from the United States, and we have a complete epitome of the condition to which the shipping interests have been reduced. The following shows the total foreign commerce of the United States in 1850, 1855, 1860, 1865, and 1869:

FISCAL YEAR.	Exports and Imports in American vessels.	Exports and Imports in foreign vessels.	Total.
1850.....	\$329,373,064	\$30,746,954	\$360,087,038
1855.....	405,485,463	131,139,904	536,625,366
1860.....	507,347,757	255,040,793	762,388,550
1865.....	167,402,373	437,010,134	604,412,506
1869.....	289,950,373	536,492,013	876,442,384

It will be seen by the foregoing that in 1850 75 per cent. of the total exports and imports were shipped in American vessels. In 1855, 75 per cent. in American, and 25 per cent. in foreign vessels. In 1869, 34 per cent. in American to 66 per cent. in foreign vessels. The exports have doubled since 1853, while the percentage carried in American vessels has fallen from 67 per cent. to 34 per cent.

The following are the values of imports into the district of New York during the fiscal year ending June 30, 1869, with estimated proportion in sailing and steam vessels:

Total value of imports.....	\$295,137,415
Of which estimated proportion in sailing-vessels.....	57,967,035 or 19 607-1000 per ct.
Proportion in steam-vessels.....	237,170,380 or 80 393-1000 per ct.
Total.....	\$295,137,415

Estimated proportion in American steamers....	\$5,441,606
Estimated proportion in foreign steamers.....	\$201,898,784

Total in steamers...\$207,340,390

Nearly 70 per cent. of the imports at the chief commercial city of the country were in foreign steamers. At the commencement of 1870 there were 89 steamships running regularly to and from the port of New York, the aggregate tonnage of which was 205,888 tons. Estimating the freights paid at 8 per cent. of the value of the cargoes, and these paid to foreign carriers of goods to a single port, in round numbers, \$16,000,000, while the amount paid to outward cargoes will probably reach half that sum, making a grand total of \$24,000,000 annually, to support the steamships of foreign nations, which constitute the naval reserve of those powers.

The remedies proposed by the committee did not look to such complete relief from legislative burdens as existed during the period when the national commerce was the most prosperous. They were, however, as follows:

1. The remission of the duties imposed upon the raw material entering into the construction of vessels and steamers, limiting the amount to the minimum of duties per ton collected on the material required

for certain classes of vessels, and, where American iron is used in the construction of iron vessels, an amount per ton equivalent to the duties on a like amount of imported raw materials, limiting the amount to be paid.

2. That all stores to be used by vessels sailing to foreign ports may be taken in bond free of duty.

3. Further to encourage investment in shipping, and to extend the aid to ships already built, and which have been sailed during and since the rebellion at great disadvantage, allowing to all sail vessels and to all steamers running to the British North American Provinces, \$1.50 per ton; on steamers to European ports, \$4 per ton; and on all other steamers running to foreign ports \$3 per ton.

In view of the fact that the tax upon tonnage cannot be removed without relieving the vessels of all foreign nations of the same, while no such exemption is extended to American vessels in foreign ports, and in view of the further fact that the shipping interest of the country is to receive some relief by the passage of the proposed measures, the committee recommend only the removal of all tonnage, harbor, pilotage, and other like taxes imposed upon shipping by State and municipal authority (which taxes have been declared by the Supreme Court unconstitutional), and the readjustment of the present tax upon tonnage, so that it will fall more equitably upon the different classes of vessels affected thereby.

The following comparative distances between London and New York, and some of the principal ports of Eastern Asia, were reported by the committee, to illustrate the advantages of our position:

London to Yokohama, Japan, <i>via</i> Suez Canal.....	11,509
London to Yokohama, Japan, <i>via</i> New York and San Francisco.....	10,000
New York to Yokohama, Japan, <i>via</i> Pacific Railroad and San Francisco.....	7,530
San Francisco to Yokohama, Japan, per steamer..	4,530
London to Shanghai, <i>via</i> Suez Canal.....	10,469
New York to Shanghai, <i>via</i> Pacific Railroad and San Francisco.....	8,555
San Francisco to Shanghai, per steamer.....	5,555
Chicago to Yokohama.....	6,900
St. Louis about same distance as Chicago.	

They consider that nothing in the future is more certain than that the foreign importations of the West are to be made directly to her chief commercial cities, and distributed therefrom from ports on the Atlantic as they now are from the ports of the seaboard. The railways which are to supply them in part are but in their infancy, and, by means of improvements yet to be introduced, may, ere long, be able to compete successfully with steam transportation by water. Through such improvements, the routes across our continent, already the most direct, may become the cheapest routes from London to China and Japan. Between the western termini of these routes and the lands that are washed by the Pacific and Indian Oceans, Nature has provided free of cost a great highway, which we have only to occupy with vehicles of transportation. No mountain-barriers are to be scaled or levelled to reach them.

The following table shows the tonnage of United States and British registered vessels employed in the foreign trade of each country during the years respectively, 1830, 1840, 1850, and from 1860 to 1868, both inclusive. It also includes Channel Island vessels, but not those of British plantations:

FINANCES OF THE UNITED STATES.

Year.	UNITED STATES.			GREAT BRITAIN.					
	Registered sail.	Registered steam.	Total registered.	In the Foreign Trade.			Partly in Home and partly in Foreign Trade.		
				Registered sail.	Registered steam.	Total registered.	Registered sail.	Registered steam.	Total registered.

FLAHAUT DE LA BILLARDERIE, AUGUSTE CHARLES JOSEPH, Count de, a French general, diplomatist, Senator, and Grand Chancellor of the Legion of Honor, born in Paris, April 20, 1785; died there April 24, 1870. The son of a general of the first Revolution, he enlisted at the age of fifteen years in a volunteer cavalry corps to accompany the First Consul into Italy. He rose rapidly in military rank. He was successively aide-de-camp to Murat, to Berthier, and to Napoleon; he fought with distinction in Portugal, Germany, and Russia, and was promoted to be both brigadier and major general in 1813, with the added title of count, being at this time only twenty-eight years old. During the "hundred days," he was made a peer of France, and opposed with great warmth the proposition of Lucien Bonaparte in favor of Napoleon II. The Prince de Talleyrand was adroit enough to secure the omission of his name from the list of exiles at the second return of the Bourbons, but he preferred to absent himself from the country. In 1830 he returned, again took his place in the army, and was raised to the dignity of a peer of France. He was made an officer of the household of the Duke of Orleans, and specially attached to his person, until his untimely death. Subsequently he was assigned to diplomatic duties, and from 1842 to 1848 was ambassador to Vienna. After the *coup d'état*, he was made a Senator, December 31, 1852. As major-general, he was in 1849 placed on the reserved list. Count de la Billarderie was promoted to be a Grand Cross of the Legion of Honor in 1838, and in January, 1864, as a representative of the first and second empires, was made grand-chancellor of the order.

FLORIDA. The population of this State, according to the census of 1870, is 189,995. In 1860 it was 140,424; showing an increase within the last ten years of little less than 50,000, or nearly 40 per cent. This increase does not equally belong to all the sections of the State, some having gained more, some less, during that period; while several among them, instead of gaining, have sustained considerable loss in the number of their inhabitants, respectively.

The State encourages immigration by offering such advantages to people abroad as to induce them permanently to settle upon her soil. The framers of the new constitution inserted a provision in it, creating the office of "Commissioner of Immigration." He is the head of a "Bureau of Immigration," designed to "make known the merits of the State in regard to climate and the productions of her soil."

On the meeting of the General Assembly on January 4, 1870, the commissioner submitted his annual report. He makes the following statement: "The eastern portion of East Florida is inferior to the western part of the same section, and the whole of East Florida, as a whole, is inferior to Middle and Western Flori-

da. And, were equal facilities of access given, there can be no doubt that the superiority of the central and western sections of the State for the raising of all the staple crops, and for all ordinary farming, would have attracted a much larger share of immigration." It is well known that the middle and western portions of Florida have some of the finest lands for agricultural purposes, and, withal, a climate unsurpassed for delightfulness and salubrity.

The following are the returns of the census of 1870 by counties:

The aggregate amount of the bonded and floating debt of the State, on January 1, 1870, was scarcely one million dollars, which sum includes all claims acquired against her before and since the late war, for principal and interest up to that date. Concerning the outstanding liabilities of Florida, and her various resources to meet them, besides some other matters, more or less directly relating to her finances, it seems proper to subjoin the following statement which Governor Reed, in the spring of 1870, caused to be published:

NEW YORK, March 23, 1870.

On January 1, 1870, the State of Florida had an outstanding bonded and floating debt of but \$708,711.12. This includes the bonded debt prior to the war, the interest on the debt during and since the war, the expenses of two Constitutional Conventions held since the surrender, and all unpaid claims against the government. Of this amount the Indian Trust Fund at Washington holds \$205,880, and the remainder is held principally within the State. In addition to this; there is due from the general fund, to the

School, Seminary, and Internal Improvement Funds of the State, \$303,045.08 for moneys absorbed during the rebellion and since. We will suppose all this debt funded in 7 per cent. bonds, and we have—

Due to State Creditors.....	\$708,711 13
Due State Trust Funds.....	303,045 08

Total.....	\$1,011,756 20
The interest on this debt would be.....	\$70,322 23

The new constitution requires that an annual tax sufficient to defray the current expenses of the government, and pay the interest upon the public debt, shall be levied. Before, the assessed value of property, including slaves, was, according to my recollection, about \$110,000,000. Under the old law the property-owner valued his own property, and after the war the people generally returned their real estate at less than a quarter of its value, and hundreds of thousands of acres of lands held by foreigners and non-residents were not returned at all, so that the aggregate valuation was only about \$25,000,000. Under the new constitution and laws, all the property is required to be assessed by sworn assessors, appointed by the Governor and Senate, and not subject to the caprice of unwilling tax-payers.

Under a proper assessment, such as will now be made, it is safe to place the valuation at \$50,000,000. The law specifies that one-half of one per cent. shall be levied as a State tax. This will yield \$250,000, in addition to the revenue from specific taxes for polls, licenses, etc., which will amount to from \$80,000 to \$50,000 more. This will afford ample revenue, without any increase of the rate of taxation, to defray the current expenses of the government, pay the annual interest, and allow a liberal amount to the sinking fund for the ultimate payment of the State debt.

I have shown that the immediate resources of the State are sufficient to meet all its obligations. In addition to this, we have 400 miles of railroad in operation, which, under existing laws, pay no tax; 1,000 miles of telegraph paying no revenue; oyster-beds and fisheries along 1,000 miles of coast, and equal to the best in the world, yielding no State revenue; foreign corporations doing business in the State, insurance companies, steamship companies, etc., pay no tribute. When these and other resources, now latent, are brought into requisition, as in other States, the State can carry ten times her present public debt without additional burden to the people in the rate of taxation. About \$150,000 of our floating debt is receivable for public lands, of which the State has about eleven millions of acres already, and when the public surveys are completed will be entitled under existing laws to receive over five millions more. In addition to this, the State of Florida has a valid unliquidated claim against the Federal Government for expenditures in the Seminole War of \$100,000 or \$200,000.

The railroad policy is the same as that of the States of Georgia and Alabama. To complete her system as projected, it will require about 400 miles more of road, and the Legislature, at its late session, authorized, by a nearly unanimous vote, the loaning the State credit in aid of the railroad companies to the amount variously of \$8,000, \$14,000, and \$16,000 per mile, to be issued as the works are completed, in sections of 20 miles, upon securing the State by first-mortgage liens conditional upon the payment by the company of principal and interest. In no case is aid promised in advance of the work, and the falsehoods which have been so widely circulated, of loose legislation and lavish issue of bonds, have no further basis than the malice and vindictive hatred of disappointed corruptionists, who have in vain sought to fasten themselves upon the financial and railroad systems of Florida for purposes of personal aggrandizement at the expense of the State. Having failed to rule, they seek now to ruin the credit of the State.

Under the new system of government, Florida is entering a career of prosperity hitherto unknown in

her history. Her slave population, as freemen and citizens, are worth fourfold more to the State in enhancing its wealth and prosperity than as slaves. Immigration and capital from the North are rapidly developing the resources of the eastern portion of the State, while the opening of the railroad to Pensacola from the North is commanding for that beautiful city unparalleled prosperity. No State in the South has less obstacles to overcome than Florida, and there is no substantial reason why her bonds should not be as valuable as those of South Carolina, Georgia, and Alabama. I am sir, with high respect, your obedient servant,

HARRISON REED, Governor of Florida.

A peculiar feature of the financial system of Florida seems to be, that the medium most used in making payments by the State, as well as by the people of all classes and for all purposes, consists in Treasury certificates, or scrip of various descriptions valued at seventy-five cents, or less, on the dollar. This circulating medium is made an object of speculation itself, in which, as in all other transactions wherein it is employed, the loss generally falls more or less heavily on him who sells the scrip, or buys any thing else with it. In an official document, dated June 10, 1870, the Governor avers: "The State is now paying on all, save the salaries fixed by law, at least twenty-five per cent. more than would be required if money were realized, and the Treasury replenished." Another circulating medium in Florida is "railroad money."

During the regular session of the Legislature, which commenced on January 4th, and closed on February 19th, a bill was introduced, and, notwithstanding opposition, passed both Houses, providing for the emission of State scrip bearing interest, and divided into a greater variety of denominations than that then current. Under the circumstances, people looked upon the measure with favor as an improvement, regarding the division of the scrip into divers sums as more convenient to the holders for use, and the accruing interest as some compensation for the loss on the principal. But, the bill not having been regularly enrolled, the act was deprived of its practical operation. The non-enrolment was attributed to the agency of such members as were opposed to the measure.

Other bills relating to the State's finances were passed at that session, but were not, for various reasons, carried into effect. One of them was the Tax Bill, the amendments to which the Legislature failed to pass, whereas the benefit that should have been derived from the bill depended on its amendments.

Among the acts of that session having reference to works of internal improvement may be mentioned the bill in behalf of the "Suwannee and Inland Railroad Company," and that "relating to certain privileges to be granted to the Florida Railroad," giving it State aid by indorsement of its bonds at the rate of \$16,000 per mile. These two measures passed, not without great opposition, especially the latter, on the ground that the words of the

bill seemed to warrant a doubt whether the grant was limited to the line mentioned in the title, or extended to all other roads of which that company might become possessed.

A bill of a mixed character was passed at the same session, which seems worthy of notice for its apparent irregularity, its title being "To enable indigent persons to obtain credit, and to secure the lender."

A large share of the attention of the Legislature was bestowed upon the mode of treating judicial cases. The result was the passage of a bill entitled "An act to simplify and abridge the practice, pleadings, and proceedings of the courts of the State." This "Code of Practice" was published, and went into effect on the 1st day of July.

Of all matters of a public character on which the Legislature acted during the session, the impeachment of the Governor was regarded and followed with the most intense interest by the members of that body, as well as by the press and people at large. Not long after the opening of the session, charges of malfeasance and appropriation of public moneys to personal use having been preferred against Mr. Reed before the Assembly, with a view to his impeachment, that body took cognizance of the matter, and appointed a special committee of five "to investigate the official conduct of his Excellency, Harrison Reed, Governor of Florida." The investigation lasted for about two weeks, during which time the committee inspected official books and private documents bearing on the charges under inquiry; examined the officers of various State departments and other witnesses; heard also Mr. Reed, whom they required to give his explanations. On the 4th of February they submitted a report, signed by four among them, embodying the evidence adduced to substantiate the charges, together with their own remarks, and concluding by recommending the passage of the following resolution: "Resolved by the Assembly, That Harrison Reed, Governor of Florida, be impeached of high crimes and misdemeanors, malfeasance and incompetency in office." On the same day, the fifth member of the committee presented to the Assembly a separate report, signed by himself alone, in which he reviews the evidence produced, shows its insufficiency to warrant an impeachment, and concludes with recommending the adoption of the following preamble and resolution:

Whereas, By resolution of this House, grave charges of incompetency, malfeasance, and criminality, were formally preferred against Harrison Reed, Governor of Florida, a committee of this House was duly commissioned to make investigation, and report in regard to the evidence upon which such charges were made; and

Whereas, After full examination of the evidence adduced and due consideration given to the explanations of Governor Reed, said committee have reported, that while there was evidence of irregular and indiscreet action on the part of Governor Reed, which may be considered reprehensible, and not deserving of approval, yet that, taking into consider-

ation the circumstances under which such action occurred, and the many difficulties encountered, no proof is found of any corrupt or criminal intention on the part of Governor Reed that warrants impeachment: therefore, be it

Resolved, That in view of the charges made, the evidence presented, and the explanations offered, and in consideration of attending circumstances, no sufficient evidence appears to warrant the impeachment of Harrison Reed, Governor of Florida.

Both of these reports were received and read, and a motion "to refer them to the Committee of the Whole" was then adopted. The deliberations upon this matter lasted until eleven o'clock at night. Motions were successively made and carried, and acted upon, whereby the proceedings of the special committee of investigation, together with the written and oral evidence produced before them, were read. The majority and minority reports were also read to the Assembly a second time, when a long and most animated debate ensued, in which the members of the investigating committee took a prominent part. The subject under consideration having finally been put to the vote, the Assembly refused to adopt the majority report—yeas 31, nays 29. The adoption of the minority report was moved, upon which the vote was—yeas 27, nays 22. The minority report was adopted.

As the originators and most prominent supporters of his impeachment were Republicans, members of the State government included, many of that party deplored these proceedings as foreboding no good for it. They held a caucus at Tallahassee, on February 5th, the object of which was to make an "effort to harmonize Republicans, and to concentrate Republican effort." All the speakers, who were numerous, urged the attainment of that object. Several members of the legislative body, well known to have been prominent among the impeachers, were also present, and addressed the meeting: "They acknowledged that they had misunderstood the wish of the party. * * * They had been fairly, thoroughly whipped. * * * Accepting the result both as a finality and as directory of the wishes of the Republican party," they pledged themselves "to sustain the administration of Harrison Reed, coöperating with other Republicans in obtaining necessary and proper legislation."

By a message dated January 24, 1870, Mr. Reed notified the Senate that, on that day, he had appointed Edmund C. Weeks Lieutenant-Governor of the State, "to fill the vacancy occasioned by the judgment of the Supreme Court," which message was referred to a select committee. The vacancy here alluded to had occurred several months before, in this wise: William H. Gleason was elected Lieutenant-Governor of Florida, at the same time when Reed was elected Governor; but in a suit subsequently instituted, it having been shown to the satisfaction of the court that at the time when the people were voting for him he was ineligible according to the law of the

State, the Supreme Court awarded a judgment of ouster against him, declaring him "not to have been properly elected, and not to be Lieutenant-Governor of the State." He brought the matter before the Supreme Court of the United States, and still continued to preside over the Senate, signing as Lieutenant-Governor the acts passed by that body.

On the 16th of February, 1870, a resolution was offered to the Assembly by one of its members, "that James T. Maybee, Judge of the Circuit Court of the Sixth Judicial Circuit, be impeached of high crimes and misdemeanors, malfeasance and incompetency in office." The resolution was adopted, and a select committee of five appointed to inquire into his official conduct, "with power to send for persons and papers, and take testimony under oath." A lengthy report, signed by three of the committee, was presented to the Assembly on the 17th, concluding with offering and recommending the passage of a resolution to impeach the judge. Together with this report, they laid before that body the written and oral evidence produced during the inquiry, and submitted also the draft of five articles of impeachment, wherein Mr. Maybee is substantially charged with arbitrary and vindictive use of his judicial power in fining and punishing certain persons; with arbitrarily removing, or unduly requesting the clerk of the court to remove, from the list of jurors, certain individuals, though competent and willing to serve, and put others designated by him in their place; also, with causing the cost of divers articles, purchased for his private use, to be charged to the State as expenses made for the court—all which was read. On February 18th the resolution to impeach, and the five articles of impeachment offered by the committee, were adopted, by a vote of 24 to 8. On the same day, a committee from the Assembly appeared before the Senate and formally impeached Judge Maybee; and at a later hour another committee presented to that body the articles of impeachment. The Senate entertained the case, and adopted the following resolution:

Resolved, That the Senate of the State of Florida will organize itself into a court of impeachment at its next regular session, for the trial of the case of impeachment this day presented by a committee of the House of Representatives * * ; and that a committee of this Senate be appointed to inform the House of Representatives of the action of this Senate.

The Legislature adjourned on the 19th of February, leaving urgent financial measures incomplete. It was said they had "failed to pass the necessary amendments to the Tax Bill so as to provide for its practical working;" besides that, the passage of the interest-bearing Scrip Bill, which was not enrolled, had produced the effect of depreciating the scrip in circulation, "to a nominal sum of twenty cents." On this account, and because the validity of the acts passed by the Senate, and signed by William H. Gleason as Lieutenant-

Governor, was regarded to be at least exceedingly doubtful, Governor Read issued a proclamation on May 14th, reassembling the Legislature for the 28d of that month. They met, and their sitting continued eleven days, the first four of which they spent in organizing. The Senate began with refusing to allow Lieutenant-Governor Weeks to preside. He called the Senate to order at its first meeting, and caused the proclamation of the Governor convening the Legislature to be read by the Secretary; but, as he ordered the call of the roll, one of the Senators moved to adjourn, declared the motion carried, and left the chamber, followed by many others, among them the Secretary. The Senators who had remained were less than a quorum. On the second day, Mr. Weeks found the chair occupied by one of the Senators, and seated himself beside the acting President, when a motion was offered "That the Sergeant-at-Arms be instructed to arrest Edmund C. Weeks and keep him under arrest until released by the Senate." Two colored Senators having remonstrated against this as indecent, a substitute was proposed and adopted, "That the Senate do not recognize the appointment of Edmund C. Weeks as Lieutenant-Governor, and, consequently, his right to preside over this body." Mr. Weeks retired.

On May 26th, a joint committee of the two Houses informed the Governor that they were organized, and were ready to receive any communication which he would transmit to them. His message was then handed in and read. He enumerates several bills passed at the preceding session, "which were deemed necessary to the appreciation of the State credit, and the sale of her bonds;" but adds:

The first and most important of these measures was lost by non-enrolment before the hour of adjournment; the second was defeated by the strategy which a factious minority frequently find effective during the last hours of a session; the third came to me properly attested by the officers of both Houses, was approved, and became a law so far as all the forms are concerned; and this formed the only available resource from which to realize funds to redeem the bonds then forfeited, and to be forfeited within ten days.

With this single reliance, I proceeded to execute the trust confided to me to save the State credit from further disaster. I filed a copy of the law with the Secretary of the Interior, with a request for immediate action, and proceeded to New York and negotiated a conditional sale of the scrip for a sum sufficient to enable me to redeem 816 of the 416 bonds under hypothecation. This would have enabled me to deposit \$100,000 in bonds in the Agricultural College fund, and given me 216 bonds upon which to raise money to redeem the other \$100,000 under hypothecation, and to secure means to provide for the exigencies created by the Legislature.

On my return to Washington, to realize the scrip, I was advised that allegations of fraud and forgery had been filed in the department by an officer of my Cabinet, then in attendance there, and that in consequence the Secretary of the Interior declined to issue the scrip to which the State was entitled.

Concerning the bill last referred to by the Governor, an informality, or "breach of for-

mality in parliamentary usage," had occurred, sufficient to deprive the act of its legal force. During this extraordinary session, the matter was investigated by a committee of the Senate appointed for that purpose. The result may be briefly stated as follows: On February 17, 1870, a bill, entitled "An Act in relation to the Agricultural Land Scrip," passed both the Senate—by a vote of yeas 14, nays none—and the Assembly—by a vote of yeas 25, nays 2. This bill was not signed, not even enrolled afterward, it being yet in the hands of the Committee on Enrolled Bills. A bill containing the same subject-matter, entitled "An Act to authorize the Governor to ask for and receive the Agricultural Land Scrip from the United States," was enrolled and signed by the proper officers of the two Houses as well as by the Governor, and then filed at the office of the Secretary of State. No bill under such a title had ever passed either House of the Legislature; so that the bill passed was not enrolled nor signed, and the bill enrolled and signed was not passed. The Governor based his action on the latter bill, and the Superintendent of Public Instruction informed the Secretary of the Interior at Washington how matters stood.

In his message dated March 3, 1870, the Governor touches on other matters of public interest, recommending additional legislation in regard to a school-tax, as the law authorizing it had been repealed, and great confusion ensued therefrom. He urges "the change from a military government to a civil government in control of the penitentiary," and recommends "the passage of a law prohibiting any further issue or indorsement of bonds for internal improvement," limiting the grant of State aid "to lines of railroad from the Atlantic ports of Florida, west to Pensacola, and south to Tampa, Charlotte Harbor, and Key West, * * * which," he says, "will give us all necessary facilities for the rapid and profitable development of the State, without regard to our financial character, and without burden to the people." His chief object, however, is to free the State from her financial embarrassment and to redeem her credit.

During this short session the most important act passed was the Funding Bill, entitled "An Act relating to the Finances of the State," intending apparently to execute the plan suggested by the Governor in his message. The bill authorized the issue of six per cent. State bonds of various denominations, dated July 1, 1870, payable at the capital of the State, at the office of the Treasurer, the principal within thirty years after date, the interest semi-annually, both in gold; the amount of the bonds to cover "the entire indebtedness of the State of every kind and character, whether bonded debt or otherwise, up to and including the first day of July, A. D. 1870," according to an exhibit which the Comptroller of the State was enjoined to make.

This act was vetoed by the Governor. The bill having reached him after the Legislature had adjourned, he embodied the veto in a communication dated June 10, 1870, addressed to the Secretary of State, with instruction to lay it before the Legislature at the next regular session. His disapproval rests on several reasons, all concurring to show that, far from remedying the evils which the State is laboring under, the bill, if its provisions were allowed to take effect, would work injuriously to the State. He characterizes the act as follows: "This bill is of most extraordinary character, and such as it seems to me could not, under existing circumstances, have passed an intelligent deliberative body, with an understanding of its provisions, and a full appreciation of its effects. * * * The principle of the bill is obviously at war with the purpose and intentions of the Legislature in providing for funding the public debt, and reaching a cash basis."

A Republican State Convention assembled at Gainesville on the 17th of August, to nominate a member of Congress, and a Lieutenant-Governor of the State, to be candidates at the election on November 8th. The nomination for Congress was given to Josiah T. Walle, a colored Senator in the State Legislature. For Lieutenant-Governor S. T. Day was nominated, who is not a native of Florida. The following platform was prepared by the Executive Committee, and announced under the signature of its chairman as follows:

Resolved, That the Republican party of Florida hereby reaffirms those sacred principles of equal justice for all men, regardless of race or color, upon which the Republican party was founded, for which it has labored, and by which it must stand or fall; that it is opposed to all class distinctions, and to all class legislation; that it recognizes, in its fullest sense, the brotherhood of man, and aims to secure for all men equality before the law, and an equal opportunity for the quiet and unquestioned enjoyment of all the rights, privileges, and honors of citizenship.

Resolved, That the children of the people are the wards of the State, and therefore the most liberal provision for their education must be made; the common-school system of the State, already so successfully inaugurated, must be perfected and enforced, and the school-tax, required by the constitution and laws, must be promptly collected and faithfully applied to that purpose, and to that purpose alone.

Resolved, That retrenchment and economy should be rigidly practised in every department of the government; that every State and county officer should be held to a strict personal accountability for the faithful performance of his duties, and for the safety and proper application of the public property and public moneys intrusted to his care; that officers and representatives, appointed or elected, should be honest, intelligent, and competent men; that the taxes should be made as light as the reasonable expenses of the State will permit, and that they should be promptly and faithfully collected; and, in all respects, that the State government should be administered honestly and uprightly, and with a sole regard to the interests of the people.

Resolved, That the proper development of the almost inexhaustible resources of this State, the settlement of its now wild and unproductive lands, and the increase of its producing and tax-paying population, require a large and immediate immigration;

that the most liberal policy should be adopted by the State to secure this immigration, and that all industrious and intelligent settlers, who will come to Florida from other sections of the Union, or from foreign lands, will receive a hearty welcome as present co-laborers and future fellow-citizens.

Resolved, That the policy heretofore adopted by this State, of encouraging and assisting the internal improvements of the State, is wise and just; and, in order to secure the speedy completion of our present railroad and canal system, and the construction of new roads and canals wherever these will contribute to develop the State, and to bring in business and population, a helping hand should be extended by the State, by a judicious but liberal policy of State aid.

Resolved, That peace and good order must be maintained throughout the State; the civil and criminal laws must be firmly and impartially administered; criminals and law-breakers must be promptly punished, and life and property must receive certain protection; and, if, in any section of this State, any class of citizens are not secure in their persons and property, and in the enjoyment of their civil and political rights, and if the civil officers, with the means placed at their disposal by the civil law, are not able to afford to them reasonable protection, the administration should adopt any measures which may be necessary to secure this protection, and, in so doing, it will receive the countenance and support of the Republican party.

Resolved, That the Republican party of Florida sincerely sympathizes with the cause of freedom in Cuba; extends to her struggling patriots her heart-felt wishes for their early triumph over the tyranny of Spain, and the speedy establishment of a Cuban republic, and pledges itself to use all legitimate means to encourage and assist them.

Resolved, That the Republican party of Florida is in perfect accord with the national Republican party; that it indorses the present national administration, the fourteenth and fifteenth amendments, and the acts to enforce the same; and that it indorses the State administration in its efforts to execute the laws, and to secure for Florida the benefits of a republican government.

Resolved, That no confidence can be placed in the political professions of those who have opposed the enfranchisement of the colored man, and the subsequent legislation of the Republican party to make his rights secure, yielding only an enforced acquiescence when further resistance became useless, and who are still arrayed, under the name of "Conservatives" and "Reformers," in hostility to the Republican party.

Resolved, That success is a duty, and the Republican party of Florida will do its duty in the coming elections.

The Democratic, styled also "the Reform Conservative," party of Florida, assembled in State Convention at Tallahassee on August 31st, "for the purpose of nominating candidates for Lieutenant-Governor and Congressmen, and taking into consideration the general interests of the State, in view of the present deplorable condition of public affairs." William D. Bloxham "was unanimously nominated for Lieutenant-Governor," and S. L. Niblack was nominated for Congress.

The following is the platform approved by the convention:

The Conservative party of the State of Florida in convention assembled, having for its object a reform of the present corrupt and extravagant administration of the State government, by placing in power capable and honest men, at the approaching fall election, and confidently relying for success upon

the honesty, intelligence, and patriotism of the people, without regard to the dead issues and political differences of the past, pledges itself:

1. To an honest, and economical administration of the State government, in all its departments, holding those who handle the people's money to the strictest accountability for its proper use and application.

2. To low taxes, requiring only what may be necessary to meet the expenses of the State government administered on an economical basis.

3. To oppose all monopolies, plundering rings, and swindling schemes, by which, under the sanction of legislative enactment, a few individuals are benefited and enriched while the whole people are robbed.

4. To provide for the faithful collection of the "constitutional school-tax," and to oppose the diversion or application of moneys or funds, raised or created for the education of the children of the State, to any purposes other than those for which they are created.

5. To the equality of all before the law, the protection of every citizen in the enjoyment of all his rights and privileges, without discrimination or difference, and to discountenance and oppose all violations of law as subversive of the peace and welfare of society.

6. To encourage immigration, assuring to all who shall cast their fortunes with us a cordial welcome, social appreciation according to personal worth, full protection in the enjoyment and expression of their opinions, security in their persons and homes, and a friendly and just participation with us in all the honors and benefits of our State government.

7. To favor the adoption of the constitutional amendments to come before the next Legislature for its action.

8. To favor as liberal a system of internal improvements as the resources of the State may safely warrant.

9. To advocate the removal of all political disabilities.

10. To favor the giving of homesteads, out of such of the public domain of the State of Florida as also can dispose of for this purpose, to actual settlers.

The moral and material prosperity of Florida depending upon the establishment of unity, harmony, and mutual confidence among all classes of her citizens, and the Conservative party being the only party which proclaims the correct basis for such union, we enter the contest with every assurance of victory.

On November 8th the Republican candidates were elected. Although this result was generally known as soon as the election was over, its official notice was deferred till the end of December. The law prescribes that the State Board of Canvassers, composed of the Secretary of State, Comptroller, and the Attorney-General, or any two of them, shall meet at the office of the Secretary of State "on the first Tuesday next to the fourth Monday in November next after any general election, or sooner, if the returns shall have been received from the several counties; and proceed to canvass the returns of such election, and determine who shall have been elected, by the highest number of votes, to any office, as shown by said returns." In obedience to this law, those officers met on November 23, 1870, and began their work. On the 30th, an injunction, issued by the Judge of the Second Judicial Circuit of Florida, on the complaint filed by William D. Bloxham, was served on

the canvassers, "enjoining and restraining them from concluding the canvass, and declaring the result of the election returns now before them for Lieutenant-Governor, member of Congress, and members of the Senate and Assembly for the State of Florida, until the further order of the court."

The canvass of the election returns, with the result of the election in each county, was signed by the Board on December 27, 1870, and published. The whole vote cast (except nine counties, the returns from which were not canvassed, on account, it was said, "of glaring informalities and non-compliance with the law") was 24,278, as follows: for Lieutenant-Governor and member of Congress, Republican, 12,446 and 12,439; Democratic, 11,832 and 11,810, respectively; the Republican majority for either candidate was little above 600. In both Houses of the State Legislature, also, the Republicans were elected by small majorities; in the Assembly, Republicans 23, Democrats 20; in the Senate, Republicans 11, Democrats 10. In the Eleventh, Twelfth, and Twenty-fourth Districts no Senators were elected, the returns from the counties which compose those districts having been informal.

Intimidation to voters during the election, and fraud to change the vote after the election, were openly charged by each of the two parties against the other.

The defeated Democratic candidate for the office of Lieutenant-Governor refused to acquiesce in the result as officially declared. On January 10, 1871, the first day of the January term of the Supreme Court, he appeared before the court and filed a petition for *mandamus* to issue against the members of the Board of Canvassers, requiring them, or any two of them, to canvass and count the returns on file of the recent election for Lieutenant-Governor, particularly the returns from the nine counties not canvassed, and to determine who was elected by the highest number of votes to the said office; also to declare that the said William D. Bloxham was elected to the said office. The court ordered an alternative writ of *mandamus* to issue, returnable on the 16th, commanding the Board to "comply with the petition, or show cause why they should not do so."

On the other hand, Edmund O. Weeks, who at the time of the November election filled the office of Lieutenant-Governor by appointment from Governor Reed since January 24th, did not recognize the legality and, consequently, the validity of the said election, so far as that office was concerned, at all. On January 12, 1871, therefore, "the Attorney-General of the State filed an information in the nature of a *quo warranto* upon the relation of Edmund O. Weeks from which it appears that Mr. Weeks claims to be the Lieutenant-Governor of the State by virtue of a commission from Governor Reed. It further appears that

Samuel T. Day is recognized by the Senate as Lieutenant-Governor, and is exercising the duties of the said office; wherefore E. O. Weeks prays that due process of law issue against S. T. Day, to show by what authority he claims the office aforesaid. The writ was issued by the clerk of the court as a matter of right, returnable on the 16th of January, 1871."

The bonded debt of the State for principal and interest on January 1, 1871, was \$1,012,872.43. The Comptroller states that, with regard to the bonds hypothecated in New York, he has given the amount approximatively. There are, besides, \$276,325.28 of Comptroller's warrants and Treasurer's certificates outstanding.

He avers the State's credit and the value of her scrip to be now lower than they were at the end of 1869. The want of money in the Treasury has subjected the State to enormous loss in meeting her current expenses, chiefly those made to support public institutions.

The annual report of the Treasurer, dated also on January 2, 1871, shows that the receipts of the State during the year 1870 were \$230,764.44; and the expenditures \$208,587.67; leaving a balance on hand of \$22,176.77. In these sums of receipts and expenditures are included \$33,712.88, and \$66,890.96 of Treasury certificates issued and redeemed, respectively.

The Comptroller, in his recent report, repeatedly takes notice that the financial condition of the State is now worse than it was a year ago, when it was not good. The Governor avers that this is attributable chiefly to the agency of the Comptroller himself.

He affirms, however, that Florida has abundant resources, which, if properly managed, will place the State in such a position, with regard to its finances, as to rank with the most prosperous States of the Union. In order to realize this end, he urges a just and equal valuation of the property of the State, amounting, he says, to fifty millions, at least; and specifies for the action of the Legislature eleven measures. Among these are "the levying an annual tax uniformly upon all the property of the State sufficient to meet the current expenses of the government and pay the interest upon the State debt; a tax upon railroad, telegraph, and express companies; a law requiring foreign corporations doing business in the State to deposit with the State's Treasurer bonds of this State to the amount of \$80,000 each, as a guarantee of good faith, and protection against frauds."

Charitable institutions for the unfortunate who must depend on the State for being taken care of, or educated to some useful art adapted to their condition, seem to be wanting in Florida as yet.

Acts of violence against the lives of citizens, and open defiance to the law, appear to have prevailed in some sections of the State, so as

to disturb the public tranquillity. The Governor having been repeatedly applied to and solicited to call out the militia, deemed it prudent to forbear doing so; but on August 12, 1870, he issued a proclamation, in which he appealed to all good citizens, saying that the responsibility and odium of such a state of things rested upon the people themselves, who seemed by their inaction to countenance the offenders. He warned them that, if the outrages complained of were again perpetrated, unless the residents in the respective localities effectually coöperated with him in upholding the authority of the law, by aiding the civil officers in the exercise of their duty to bring the offenders to justice, he should be compelled to "ask aid of the power whose arm he feared was then alone strong enough for protection."

Concerning public instruction, no report for the year 1870 has been submitted to the Legislature, the superintendent having died in September last. In his report for 1869, dated January 8, 1870, he said that the State system of popular education had been successfully inaugurated, and that free schools were gaining in favor with the people. It seems, however, that a great part of the machinery has remained inoperative.

FRANCE. At the close of the year 1870, France was, in consequence of the German-French War, in a greatly-disorganized condition. On the 4th of September the republic had been proclaimed, and a provisional government, called "Gouvernement provisoire de la défense nationale," had its seat partly in Paris, partly in Bordeaux. The Government consisted of General Trochu, President, and commanding general at Paris; Jules Favre, Vice-President; Jules Ferry, Secretary; O. Arago, Crémieux, Gambetta, Garnier Pagès, Glais Bizoin, Pelletan, Picard, Rochefort, J. Simon. The ministry, appointed on September 4th, was composed as follows: Jules Favre, Minister of Foreign Affairs; Gambetta, Minister of the Interior; General Leffé, Minister of War; Fourichon, Minister of Marine; Crémieux, Minister of Justice; Picard, Minister of Finances; Simon, Minister of Public Worship and Instruction; Dorian, Minister of Public Works; Magnin, Minister of Commerce and Agriculture.

Previous to the year 1868 the land forces at the disposal of the French Government consisted of the troops of the regular army alone, from the ranks of which the contingents required in time of war were exclusively furnished. The main object, therefore, of the reorganization of the army, was the formation of a militia or *garde mobile* for garrison duty and for home service, in order that the entire regular army might become available for war purposes. The land forces in 1870, according to the new military law, were composed of the regular active army; the reserve; and the National Garde Mobile. Every able-bodied male inhabitant is liable to serve in the regular army (some excep-

tions are specified by law), but may furnish a substitute. For service in the National Garde Mobile substitutes are accepted in very rare instances. The number of recruits to be drafted is fixed by a special law for each separate year; in 1868 and 1869 the contingent amounted to 100,000 men per annum; while in 1870 it was reduced to 90,000 men. The number of young men who annually attain the age at which they become liable to military duty amounts to about 820,000, of whom about one-half, or 160,000, are generally able bodied and fit for service. Of these 160,000 men, 100,000 are usually taken for active service, while the remaining 60,000 are consigned to the National Guard. The following deductions must yet be made from the above contingent of 100,000: 1. 9,000 men for the marine; 2. 15,000 men who have either previously volunteered or are exempt by law; 3. 20,000 who furnish substitutes, and are thus exempt from service in the regular army, but have to enter the ranks of the National Garde Mobile. Thus, of the above 100,000 men, only 56,000 remain available for the regular army. They are again divided into two classes, of which the first, numbering 48,000 men, have to do continuous service during five years, and are then consigned to the reserve for the ensuing four years. The second class, comprising 18,000 men, are drilled during one month every year for the first five years, but can be called into the ranks at any time during that period in case of emergency. During the remaining four years of their term they form part of the reserve.

The National Garde Mobile is intended for the defense of fortresses, of the coasts and frontiers, and for the maintenance of order in the interior. Its nominal strength is officially computed at 550,000 men, but it has not, so far, exceeded 350,000 men actually available for service. The regular French army at the beginning of the year was divided into seven army corps, each of which was under the command of a marshal of France. The principal divisions of the army were: the Imperial Guard, and the troops of the line. The former consisted of 16,000 infantry, somewhat more than 3,000 cavalry, and 2,500 artillery, with 72 guns. The infantry of the line consisted of 100 regiments of 2,000 rank and file, or 200,000 men; to these must be added three regiments of Zouaves, with 6,000 men; four regiments of African tirailleurs or Turcos, with 9,000 men; twenty battalions of chasseurs, with 14,000 men; one regiment of the Foreign Legion, with 8,000 men; and three battalions of African light infantry, with 1,000 men; or, in all, 233,000 men. The cavalry of the line comprised ten regiments of heavy cavalry or cuirassiers, with 6,000 men; twelve regiments of dragoons and four regiments of lancers, together 12,000 men; and twenty regiments of light cavalry, of which twelve regiments were chasseurs and eight regiments

hussars, together 12,000 men. To these must be added four regiments of Chasseurs d'Afrique, 2,580 men, and three regiments of Spahis, 2,976 men, making a total of cavalry of the line, of 85,556 men. The field artillery of the line consisted of 84,000 men, who, with the corps of engineers and the army train, would make a total strength of the French field army of 343,556 men, namely:

Infantry, 255,000 men, divided into 374 battalions.
Cavalry, 38,586 " " 253 squadrons.
Artillery, 36,500 " " 164 batteries, 964 guns.
Engineers, 7,500 " " 6 battalions.
Train, 6,000 "

The budget for the support of the army,

during 1870, amounted to about \$65,000,000, gold.

At the head of the marine force (in 1870) were two admirals, O. Rigault de Genouilly (January, 1864); F. T. Trehouart (February, 1869); and sixteen active vice-admirals. Minister of the United States in France, E. B. Washburne, appointed May 23, 1869. Area of France, 209,428 square miles; population, according to the census of 1866, 38,067,064. The Governor-General of Algeria has since handed in an official report to the Conseil Supérieur de l'Algérie (January 1, 1870), from which the following has been condensed:

CIVIL DISTRICT.	Square Miles.	Total Population.	French.	Other Europeans.	Jews.	Mohammedans.
Algiers.....	1,839	904,711	54,965	41,223	10,946	97,578
Oran.....	1,848	138,475	33,876	34,930	14,336	53,764
Constantine.....	2,077	137,156	33,398	21,692	7,585	74,551
Total in Algeria.....	4,764	473,342	121,629	97,913	33,117	235,693

The following territorial changes also took place during the year 1870: After the occupation of the northeastern part of France by the German armies, the Prussian Government took charge of the administration of the conquered territory of Alsace and Lorraine, and created the "General Governments of Alsace and Lorraine," the former of which has an area of 5,823 square miles, and a population of 1,638,546; the latter of 6,700 square miles with 1,081,904 inhabitants. A small portion of the department of Landes, situated at the mouth of the river Adour, and of an area of 1,285 acres, has been transferred to the arrondissement Bayonne in the department of Basses-Pyrénées. The area of the former department has thus been changed to 3,598 square miles, with a population of 306,853; that of the latter to 2,944 square miles, with 435,526 inhabitants. The islands of Toulas and Bergères have been transferred from the department of Loire-Inférieure to the department of Maine-et-Loire; so that the former now has an area of 2,794 square miles, with 598,500 inhabitants; the latter of 2,806 square miles, with 582,423 inhabitants. The population of the larger cities, according to the census of 1866, was as follows:

Paris.....	1,335,374	Orleans.....	49,100
Lyons.....	323,954	Besançon.....	46,961
Marseilles.....	300,131	Le Mans.....	45,320
Bordeaux.....	194,341	Caen.....	41,564
Lille.....	154,749	Grenoble.....	40,484
Toulouse.....	136,936	Boulogne.....	40,251
Nantes.....	111,956	Dijon.....	39,198
Reims.....	100,671	Tourcoing.....	38,323
St. Etienne.....	96,630	Clermont.....	37,690
Straasbourg.....	84,167	Lorient.....	37,655
Brest.....	79,847	Cherbourg.....	37,315
Toulon.....	77,126	Avignon.....	36,407
Havre.....	74,900	Troyes.....	35,678
Rheims.....	60,734	Dunkerke.....	33,068
Nîmes.....	60,340	St. Quentin.....	33,600
Muhlhouse.....	58,773	Poitiers.....	31,034
Montpellier.....	55,606	Roubaix.....	30,091
Metz.....	54,817	Amiens.....	31,063
Angers.....	54,791	Versailles.....	44,031
Limoges.....	53,023	Tours.....	42,450
Nîmes.....	50,180	Rocheport.....	30,151
Nancy.....	49,998	Bourges.....	30,119
Rennes.....	49,231		

The expenditures on the state debt, according to the budget for 1870, were estimated as follows:

	Interest.	Capital.
1. CONSOLIDATED DEBT:	France.	France.
Rents at 4½ per cent.....	37,433,535	833,378,340
" 4 ".....	446,096	11,152,400
" 3 ".....	326,025,213	10,867,540,433
Total.....	363,904,844	11,710,971,173
2. NON-CONSOLIDATED DEBT:		
Floating Debt.....	24,000,000	923,746,900
Securities.....	8,700,000	250,000,000
Abolition of the Sound dues	248,832
Annual payment to Spain for the adjustment of the boundary-line of the Pyrenees.....	20,000
Total.....	33,968,832	1,212,746,900
3. ANNUITIES:		
Of old origin.....	233,631
For the support of veterans.....	5,800,000
Civil and Military Pensions.....	87,294,500
Old dotations to the Mont de Milan.....	311,500
Total.....	93,568,631
Grand total.....	490,463,297	12,923,718,073

The interest payable on the above consolidated debt may be distributed among the several administrations of France as follows:

On debts incurred up to April 1, 1814.....	63,363,743
On debts created through the invasion of the Allies in 1815.....	101,303,000
On debts created during the reign of Louis Philippe.....	12,377,933
On debts created during the Republic of 1848.....	53,923,496
On debts created during the Second Empire.....	133,156,612

Total as above..... 363,924,834

The total state debt, as will be seen by reference to the preceding table, comprised a capital of 12,923,718,073 francs on January 1, 1870; to this must be added a war loan of 750,000,000 francs, authorized by decree of the Empress Eugenie, as Regent of the empire, of August 21, 1870. It was stipulated that the cost of this financial operation, including the discount on anticipated payments, should not exceed 245,000,000 francs. The loan was ac-

cordingly offered at the rate of 60 francs 60 centimes, and the whole sum was immediately subscribed for. Until the end of October the provisional government had not contracted for any loan in the proper sense of the word, while the floating debt has been increased by

the issue of *bons* to an extent which cannot, as yet, be even approximately estimated.

At the outbreak of the war, an act for the budget of 1871 had not been passed. The estimated budget for 1870 was as follows (1 franc = 19 cents):

	Ordinary.	Extraordinary.
	Francs.	Francs.
I. EXPENDITURES.		
1. Interest on the consolidated public debt.....	363,994,834
2. Interest on the non-consolidated public debt.....	23,968,833
3. Rents.....	23,568,631
4. Imperial Household.....	26,500,000
5. Senate and Corps Législatif.....	11,682,020
6. Allowance on dotation for the Legion of Honor.....	11,973,780
Total public debt and dotations.....	539,918,097
7. Ministry of State.....	3,043,400
8. Ministry of Justice and Public Worship.....	23,843,083
(a). for the administration of Justice.....	49,014,581	5,700,000
(b). for Public Worship.....	59,414,345	13,633,000
9. Ministry of the Interior.....	159,154,000
Special Budget.....	13,161,300
10. Ministry of External Affairs.....	18,433,610	4,825,000
11. Ministry of Finance.....	105,335,790
Special Budget.....	24,233,321	1,946,195
12. Ministry of Public Instruction.....	10,846,000
Special Budget.....	97,500,668	53,361,860
13. Ministry of Commerce, Agriculture, and Public Works.....	4,609,900
Special Budget.....	12,151,600	4,900,000
14. Ministry of the Imperial Household and Fine Arts.....
Total Civil Service.....	310,344,735	85,016,045
15. Ministry of War.....	378,001,133	2,975,000
16. General Government of Algeria.....	14,616,000	24,915,765
Special Budget.....	168,230
17. Ministry of Marine.....	163,845,033	10,500,000
Total Military Service.....	550,463,304	38,390,765
Expenditures for collection of taxes and sundries.....	237,941,719
Allowances and reimbursements.....	12,216,000
Grand total of the General Budget.....	1,650,883,748	123,406,811
Grand total of the Special Budget.....	280,338,910
II. REVENUE.		
1. Direct Taxes.....	332,331,800
2. Register Duty.....	303,735,000
3. Stamp Duty.....	88,079,000
4. Import and Export Duty.....	75,114,000
5. Tax on Sugar.....	111,808,000
6. Tax on Salt.....	31,840,000
7. Taxes on Wines, Beer, and Liquors.....	243,433,000
8. Divers indirect Taxes.....	41,535,000
9. Revenue from Monopolies and State Institutions.....	309,990,030
10. Revenue from State Domains.....	55,401,373
Sum total of Ordinary Revenue.....	1,738,467,396
SPECIAL BUDGET.		
Direct Taxes.....	233,739,470
Various.....	46,599,440
Total.....	280,338,910
EXTRAORDINARY BUDGET.		
War indemnity by Cochín China.....	1,080,000
Revenue from Forests.....	3,900,000
Interest due on Austrian debt (Mont de Milan).....	250,000
Instalment from the Société Algérienne.....	16,683,686
Balance of the loan of 450,000,000 francs.....	15,860,000
Total.....	37,253,686
Surplus of Revenue of the Ordinary Budget.....	87,554,645
Total of the Extraordinary Budget.....	124,841,311
RECAPITULATION.

Grand total.....	3,098,000,000	2,656,500,000

The figures marked (*) are those officially reported for 1867, those for 1868 not being made available in detail. There is, however, a report of the entire special commerce of 1868, giving the imports at 3,803,700,000 francs, and the exports at 2,789,900,000 francs, which figures indicate an increase of imports in the respective countries, not specified in the report for 1868, of 205,700,000 francs, and an increase of exports of 133,400,000 francs, as compared with 1867. The entire increase of the imports of 1868 over those of 1867 amounts to 277,200,000 francs, while the entire exports fall short of those of 1867, 88,000,000 francs. The estimates of the special commerce of 1869 are: Total imports, 3,174,200,000 francs; exports, 3,097,400,000 francs. The movement of specie and precious metals during the years 1868-'69 was as follows:

	1868.	1869.
Imports.....	687,000,000	646,000,000
Exports.....	363,000,000	266,800,000

On the 1st of January, 1870, the total length of railroads which were in operation was 10,662 miles; besides, permission had been granted for the construction of 4,028 miles. Of the railroads in operation there were 5,054 miles with double track. The length of telegraphic lines, in 1869, was 26,606 miles, length of wire 72,815 miles; length of lines of electric sema-

* By special commerce those imports are understood which are intended for consumption in France, and the exports of such articles and commodities as are produced in France.

phores, in 1868, 895 miles; length of wire, 1,325 miles; length of submarine cables, 859 miles. Number of telegraph-offices, in 1869, 2,625; number of home and international dispatches received and forwarded, in 1869, 4,213,183. The French blue-book for the administration of the interior contains the following statement of the improvements introduced into the telegraph system during the year 1869: In France and Corsica 225 new telegraph-stations were opened; the improved apparatus of Meyer, which gives fac-similes of the dispatches, was introduced on the Paris-Lyons and Paris-Bordeaux lines. The rates for home dispatches were considerably reduced, while the completion of the Franco-American cable line caused a reduction, in the rate of a dispatch from Paris to New York, from 187 francs 25 centimes to 87 francs 50 centimes. The receipts during the first nine months of the year exceeded the total receipts of the previous year by more than one million francs.

The ministerial crisis which had begun in December, 1869, ended on January 3d by the appointment of a new Cabinet, under the presidency of Emile Ollivier. The new ministry was, according to the *Journal Officiel*, composed as follows: Minister of Justice and Religion, Emile Ollivier; Foreign Affairs, Count Napoleon Daru; Interior, Chevandier de Valdrome; Finances, Louis Joseph Buffet; War, General Edmund Lebœuf; Marine, Regault de Genouilly; Public Instruction, Emile Alexis Legris; Public Works, Marquis de Talhouet; Agriculture and Commerce, Charles Louvet; Fine Arts, Maurice Richard; the Emperor's Household, Count Vaillant; president of Council of State, Esquiron de Farien. Only two of the members, the Ministers of War and Marine, had been members of the preceding ministry; all the others were new men. A novel feature in the composition was the separation of the ministry of Fine Arts from that of the Emperor's household. The press of France, on the whole, showed itself favorable to the new ministry, which, it was expected, would unite the moderate wing of the Liberal opposition with the Government party for the support of the dynasty and the gradual introduction of some of the most urgent reforms. The organs of the radical party had, of course, no confidence in the ministerial promises, and some ultra-conservative papers made their support of the new Cabinet dependent upon the condition that the policy "be not too bold." Among the earliest steps of the new Cabinet, which were regarded as concessions to public opinion, was the abolition of the censorship of foreign papers by an order of the Minister of the Interior, and, on the 5th of January, the removal of Baron Haussmann, who, as prefect of the department of the Seine, was succeeded by Chevreau, and the appointment of Odillon Barrot as President of the Committee of Decentralization. On the 15th of January, the new Prime Minister gave in the

Senate the following explanation of the policy of his Cabinet:

For the last five or six years there has existed, in the country and in the political bodies which represent it, a very great divergency of opinion as to whether the Emperor's government was consistent with a *régime* more liberal than that of 1852. On the one hand, it was said, the Government cannot and should not abandon the institutions of that year; it cannot depart with impunity from its origin, which is the principle of authority. All preceding governments fell because they had the weakness to make concessions when it would have been more wise and politic to resist; experience shows that all the governments which abandon themselves to those chimerical fancies will meet the same fate. To that thesis it was replied that the Imperial Government might and could accord a wide extension of political rights, because it had its origin in a particular fact unknown to any other government, and which was universal suffrage. Moreover, history shows that governments have never been saved by resistance; their strength and welfare are always due to timely concessions. For twelve years we have always in our counsels to the Emperor's government affirmed that it could and should grant the widest extension to the public liberties. That language was heard, and the sovereign, showing that rare example of a man who is sufficient for two tasks, after having accorded every thing to authority, generously abandoned himself to liberal principles, and instituted a constitutional government. That is why we are here. We are the representatives of that idea. We were asked, at a moment not critical, but serious, to put it into practice by the union of the principle of authority with the most complete liberty. The task was difficult, we do not deny. The conflict continues, but the character of it has been changed. Liberty now exists, but a second combat has commenced. A new party, composed of audacious men, earnest and respectable, have risen up to oppose that Empire founded on liberty. "We do not accept you," they say; "we will oppose you without mercy and without ceasing; you are a constitutional, parliamentary, and *bourgeois* liberty; we are the revolution, radical, indefatigable, and inflexible, and we open the conflict." We accept the challenge, and our mission, I say to our honor, will be not only to maintain the conflict, but to triumph. We will triumph while continuing with jealous care to represent faithfully the legitimate desires of public opinion. We will triumph by employing, if necessary, resistance, but never reaction.

The replies made by the Emperor to the usual New-Year compliments presented no points of importance. The President of the Corps Législatif was addressed by the Emperor with the following words:

The assurances of devotion which you address to me in the name of the Corps Législatif render me happy. Never was our good understanding more necessary. New circumstances have augmented your prerogatives without diminishing the authority given me by the nation. In sharing the responsibility with the great bodies of state I feel more confident of overcoming the difficulties in the future. When a traveller has gone a long journey and lays aside a portion of his burden, he is not weakened, but gains new strength to continue his march.

The strength of the new Cabinet was soon to be put to a severe test. A member of the imperial family, Prince Pierre Bonaparte, had sent to Henri Rochefort, the editor of the *Marseillaise*, a challenge, for a very violent attack upon him in the columns of that journal. In return, one of the writers of the *Marseil-*

laise, Grousset, sent a challenge to the prince through two of his friends, Victor Noir and M. de Fonvielle. Noir and Fonvielle went to the house of the prince at Auteuil, and, in consequence of an excited conversation which followed the presentation of the challenge, Noir, it is reported, gave Bonaparte a blow in the face. The prince, who has long been known to be a man of ungovernable temper, drew a revolver and inflicted upon Noir a wound which soon proved fatal. This act threw Paris into the wildest excitement. The leaders of the radical papers endeavored to rouse the wrath of the masses, and, if possible, to raise the standard of revolt. Rochefort, in the *Marseillaise*, made a ferocious attack upon the Emperor, and called on Paris to rise and annihilate all the Bonapartes at once. An immense concourse of people attended the funeral of Noir, January 12th, at Neuilly; but the advice of Flourens, to traverse Paris with the coffin and to defy the Government, which had put the garrison of Paris, 80,000 strong, under arms, was not approved by Rochefort, and not adopted by the people. The ministers decided to bring Rochefort to immediate trial for his seditious conduct, and, as he was a member of the Corps Législatif, asked the latter for permission to do so. The permission was given January 17th, by 226 against 34 votes; and, on January 22d, Rochefort was sentenced to six months' imprisonment and a fine of 3,000 francs. The arrest, on February 7th, of Rochefort, who refused to obey a notice served upon him, and surrender himself, led to revolutionary rioting in Paris, which was, however, soon and easily suppressed. Of the persons arrested during the riots, those convicted of carrying arms were condemned to three and four months' imprisonment, and those convicted of uttering seditious cries to fifteen and thirty days' imprisonment. Gustave Flourens was sentenced to six months' imprisonment and 100 francs fine, and M. Deveau, publisher of *La Marseillaise*, to two months' imprisonment and 500 francs fine for publishing false news.

The Chamber of Accusation of the High Court of Justice, on February 18th, gave judgment in the case of Prince Pierre Bonaparte. The judgment decided that Prince Pierre Bonaparte be sent before the High Court on the double charge—1. Of *meurtre* (homicide) on the person of Victor Noir, with the aggravating circumstance that the crime was preceded, accompanied, or followed, by the second offence, viz.—2. An attempt to take the life of M. Ulric de Fonvielle. Those crimes are provided for by article 304 of the Penal Code, worded as follows:

Meurtre is punished by death when it shall have preceded, accompanied, or followed any other crime; also when it shall have had for its object to prepare, facilitate, or execute a misdemeanor, or to favor the flight or assure impunity of the authors or accomplices of that offence. In all other cases the punishment shall be hard labor for life.

On the following day, February 19th, an imperial decree convoked the Chamber of Judgment of the High Court of Justice for March 21, 1870, at Tours. The court met at the appointed time, and the trial terminated in the acquittal of the prince from the charge of voluntary homicide. He was, however, sentenced to defray the expenses of the trial, and to pay an indemnity of 25,000 francs.

On March 22d the Emperor addressed to Prime-Minister Ollivier the following important letter, in which the ministry is requested to prepare a *senatus-consultum*, for dividing the legislative power between the two Chambers:

I think it opportune, under present circumstances, to adopt all reforms required by the constitutional government of the empire, in order to put an end to the immoderate desire for a change which prevails in certain minds, and also not to leave public opinion unsettled by creating instability.

The first place I accord to those reforms which refer to the Constitution and the prerogatives of the Senate. The Constitution of 1853 had, above all things, to provide the Government with the means of establishing authority and order, but it remained to be perfected. But it was necessary that it should remain perfectible, as long as the state of the country would not permit the establishment of public liberties on solid bases. At the present time, when successive changes have gradually created a constitutional *régime* in harmony with the bases laid down in the *plébiscite*, it is important to replace, in the domain of law, all that more specially has reference to the preservation of legislative order, to impress a definite character upon the latest reforms, to place the Constitution above all controversy, to call upon the Senate—that grand body which contains so many brilliant men—to lend to the new *régime* their most efficacious concurrence.

I therefore request you to come to an understanding with your colleagues and lay before me the draft of a *senatus-consultum* which shall firmly fix the fundamental dispositions derived from the *plébiscite* of 1853, and which shall divide the legislative power between the two Chambers, and restore to the nation that portion of constituent power it had delegated to me.

NAPOLEON.

On March 28th, Ollivier laid before the Senate the draft of the *senatus-consultum*, together with a very full *exposé des motifs*. The following extracts from the *exposé* are of special interest, as a review of the Napoleonic speculations on, and experiments in, constitutional government:

The existence of a second Chamber is considered by publicists as an axiom of political science; and, by free nations, as a guarantee of social stability.

The downfall of constitutions, monarchical or republican, which have refused to admit that necessity, is not less significant than the duration of those which have adapted themselves to it. The powerlessness of the Constitutions of the 3d September, 1793, and of the 4th November, 1848, does not prove less than the energetic vitality of those of England or the United States. Who, indeed, could reasonably deny that every thing should not be accorded to the force of impulsion, that, in nature as well as in science, an allowance should be made for the force of resistance, and that progress is only certain when it is the result of such a double action? Single assemblies are, doubtless, not necessarily hostile to a conservative spirit; they have often served it with courage; sometimes, nevertheless, subject to the pressure of the people, "whose nature is," according

to the expression of Montesquien, "to act with passion," they have subordinated permanent interests to impulses of the moment. Therefore it is desirable that a second assembly, with more control over itself, and less subject to passing influences, should prevent, or at least moderate, precipitate or unreflecting movements.

A second Chamber, composed of all those men who have made themselves illustrious in a civil or a military career, would be useful if it had no other effect than to accustom to habits of respect a society which has not always sufficiently remembered how much worship of the past renders a nation worthy of the good fortunes of the future. But, in a monarchy, a second Chamber has not only a moral action; it is the natural intermediary between the hereditary and the elective powers; it foresees, appeases, moderates shocks, and assures an additional protection to the monarch, who is already covered by the ministerial responsibility.

Under the present organization two Chambers cannot be said to exist. The Senate and the Legislative Body move in two different spheres; constitutional laws are reserved for the one, and ordinary measures for the other, so that there exist a constitutional assembly and a legislative one in juxtaposition, rather than two legislative chambers.

The Emperor saw the inconveniences of that *régime*, and has already granted to the Senate certain participation in the legislative power; in 1867 by the suspensive veto, and in 1869 by the absolute veto. But such a share is not sufficient. The efficacy of it is seen when the Legislative Assembly adopts measures vainly opposed by the ministers; the Senate may then come to the aid of the Government.

But what would the Senate do if the Legislative Assembly systematically rejected the bills presented by the crown? Of what use would its veto be? What it would require in such a case is a right of approval, and how could it exercise such a prerogative with respect to laws not submitted to it? The situation would be very different if the Government could, as it pleased, lay its propositions before either Assembly.

The right of choosing the members of the second Chamber is, in France, one of the attributes of the crown. The nation, in instituting the dynasty, delegated to the sovereign that right as well as that of appointing the judges; immobility has in each case appeared a sufficient guarantee for the independence of the authority. The Councils-General have been erroneously compared with the American Legislatures. The former bodies, even when their powers shall have been extended by a law of decentralization, will only bear a very distant resemblance to the American Assemblies, which are in reality Parliaments. Besides, in the United States, the organization of the Senate, in all its parts, is only the consequence of the Federal *régime*. None of the elective systems proposed, down to this day, have appeared to us more satisfactory. They would weaken the Senate instead of strengthening it, and would reduce it to the state of a pale imitation of the Legislative Body. Moreover, why in a great country of universal suffrage abandon every thing to the chances of election? Why not reserve a means of rewarding eminent services, of grouping together the illustrious men of the country, of utilizing their experience, and at the same time of introducing into public life, of forming, by study, by discussion, and the conduct of affairs, distinguished men, who, having neither the local influence nor the popular favor which assures electoral successes, would remain all their lives excluded, unemployed, and impatient, if power had not been given to the Emperor to remark them, to call them, and to place them in communication with the country? There, however, exists in the organization of the Senate a void which requires to be filled up. The Legislative Chamber restrains the sovereign by the voting of supply and bills, and by the ministerial

responsibility; it is itself restricted by the control of the Senate and by the right of dissolution possessed by the Emperor. But the Senate is subject to no moderating power. Suppose that a conflict should arise between it and the other Chamber, or the sovereign, as occurred in France with respect to the conversion of *rents*, or in England relative to electoral reform, there exists no means of overcoming the difficulty, and one alone of the powers might paralyze indefinitely the action of the two others. There was, consequently, a necessity to introduce into the Constitution a principle which should fill the place, with respect to the immovable Chamber, of the right of dissolution to which the temporary Assembly is exposed. With that view we propose to you to decide that the Emperor shall have the faculty of increasing the number of the Senators. Thus the influence of the nation may be exercised in a direct manner on a body which would escape all control if it remained firm. But the number of Senators shall never be allowed to exceed two-thirds of the Deputies, nor shall more than twenty be appointed annually. If, from a fear of being subject to the preponderance of the Senate, its individuality were destroyed, such a step would be going from one extreme to another; and, instead of improving the institution, would compromise it.

As soon as the Senate shall have been associated in the legislative power, it cannot be allowed to retain the exclusive right of modifying the Constitution; for, instead of being a moderator, it would become a dominating authority. But to whom should that mission be confided? We think that there is cause to make a distinction between the different articles of the Constitution. Some are only a textual reproduction, or an intimate or necessary consequence of the dispositions of the *plebicite*; others are organic rules of lesser importance. We propose to you to declare that these latter shall belong to the legislative power; that consequently the elective body, as well as the Senate and the Emperor, shall have the right of demanding a revival of them, and that none of the modifications thus effected by one of the three powers shall be valid until after the vote or sanction of the two others.

As to that part of the Constitution which reproduces the plebiscitary dispositions, or is closely connected with them, we have already made it the very substance of the constituent power; and, in order that the sharing should have an authentic and definite character, we have summed up in an annex all the clauses of the present Constitution, which, retaining their primitive nature, will form that of the empire; all the rest will only have the value of a law. Thus restricted, the Constitution only contains that which is attached to the right of the dynasty and the organization of the public powers. Under such circumstances we found that there would be no impropriety in protecting it against too facile or too frequent changes; we have returned to the rigor of principles; we have restored the constituent power to the whole nation; the country only can henceforward modify the fundamental pact, on the proposition of the Emperor. The Constitution will not be unchangeable; but a *plebiscitum* alone will have the faculty of bringing it to perfection. A direct legislation by the people was claimed in former times by the democratic party. This pretension, chimerical for ordinary laws, is well founded in respect of those of a constitutive character, referring only to a few simple points easy to be apprehended. The necessity of proceeding by way of *plebicite* does not render progress impossible, as the voting of one does not present greater difficulties than the summoning of a constituent assembly or a convention; the only effect is that of rendering longer and more serious the preparation that will precede reforms. And all this is desirable. Constitutional controversies, too much prolonged, irritate, sow divisions, and form an obstacle to the daily task of governments. While people

are in altercation about the equilibrium of powers, they cannot study practical reforms, or devote themselves to the moral, intellectual, and material amelioration of the greatest number, the supreme object of all political science.

And, after all, where is the advantage of passing such a multitude of laws? As Joseph de Maistre said excellently well about the government of our neighbors, "The true Constitution is that public spirit, admirable, unique, infallible, above all praise, which conducts, preserves, and saves every thing—what is written is nothing."

We can now take an account of what has happened since 1852.

In principle, as we have already pointed out, the constituent power, as being the very essence of sovereignty, resides in the whole nation. But, in reality, this faculty has rarely been exercised by the country itself. In ancient times it was delegated to a single individual, to a legislator, according to the expression of Rousseau. Since the Revolution of 1789 it has been confided to Assemblies, called Constituent, or Conventions; in 1852 the people pronounced directly, and fixed personally their own destinies. But the *plebicite* only regulated the fundamental principles of the new Government. The task of drawing from them the practical conclusions, the necessary consequences, was intrusted by popular suffrage to the sovereign, assisted by a Senate composed of the most notable persons in the country. Thus, in 1851 and in 1852, the people did two things—it used directly one portion of the constituent power, and delegated the other to the Emperor. It returned *plebicite* and authorized *senatus-consulta*.

The limit within which the *senatus-consultum* was to operate was fixed by the terms and motives of the delegation agreed to. There would be no mistake about the matter. The public had just emerged from a revolution; every man might have convinced himself, by personal experience, of the danger of sudden innovations, and of the risk incurred by violent transformations. Order was demanded before every thing else. But whether that old traditions had not been stifled in some hearts by present fears, or that the logical clear-sightedness which is the appanage of our race, surviving the impulses of a reaction, did not allow men to forget that a perpetual dictatorship would be the gravest and most humiliating of disorders; thanks also to the sagacity of a prince, who, being master of every thing, chose to command nothing, the people did not delegate their constituent power to be used against liberty; on the contrary, they confided to the sovereign they had taken for their chief the mission of establishing freedom, but, wishing that liberty to be solid, they only asked for it to be progressive; and, being cured by events of the thirst for startling novelties, and the taste for absolute systems, they left to the man of their choice the power of determining the hour when the development of each immunity would become opportune.

Such was the compact concluded in 1851 and 1852 between universal suffrage and the heir of the name of Napoleon. This treaty has been executed. Numerous *senatus-consulta* have been passed, and there is not one of them that has not consecrated a conquest of some free institution. The preference was first given to civil liberties; but, after 1860, political ones had their turn, and they have never since lost it. One need only recall to memory the days of January 19th and September 8th. From progress to progress, France has arrived, without any convulsion, and through a series of beneficial struggles in which no parties were defeated, at the point of giving herself a strong and free government, which, without weakening any of the essential mainstays of authority, discourages no hope of improvement, and which, independent alike of those who seek to urge it onward and of those who strive to keep it back, secures the destinies of democracy by the establishment of a constitutional government.

The text of the *senatus-consultum* was as follows:

ARTICLE 1. The Senate shares the legislative power with the Emperor and the Lower Chamber. It has the initiative of bills; nevertheless, every financial measure must first be voted by the other House.

ART. 2. The number of Senators may be raised to two-thirds of that of the Deputies, without including those who are members by right of that high assembly. The Emperor cannot name more than twenty in each year.

ART. 3. The constituent power attributed to the Senate by articles 31 and 33 of the Constitution of January 14, 1852, ceases to exist.

ART. 4. The dispositions annexed to the present *senatus-consultum*, which are comprised in the *plébiscites* of December 14 and 21, 1851, and December 21 and 22, 1852, and which sprang from it, form the Constitution of the empire.

ART. 5. The Constitution can only be modified by the people.

CHAPTER II.—OF THE IMPERIAL DIGNITY AND THE REGENCY.

II. The imperial dignity conferred on Napoleon III. by the *plébiscite* of November 21, 1852, is hereditary in the direct and legitimate heirs of Louis Napoleon Bonaparte, from male to male, in the order of primogeniture, and to the perpetual exclusion of women and their descendants.

III. Napoleon III., if he has no male heir, can adopt the children and legitimate descendants in the male line of the brothers of Napoleon I. The adoption is interdicted to the successors of Napoleon III., and their descendants. If, after the adoption, Napoleon III. should have any male heirs, the children so adopted cannot be called to succeed him until after his legitimate successors. Such act of adoption is interdicted to the successors of Napoleon III. and their heirs.

IV. In default of a legitimate or adopted heir, are called to the throne Prince Napoleon Bonaparte and his direct heirs, natural and legitimate, from male to male by order of primogeniture, and to the perpetual exclusion of women and their descendants.

V. In default of a lawful or adopted heir of Napoleon III., and of the successors in the collateral line taking their rights from the preceding article, the people nominates the Emperor and regulates in his family the hereditary order from male to male, to the perpetual exclusion of females and their descendants. The draft of the *plébiscite* is successively discussed in the Senate and Legislative body on the proposition of the ministers formed into council of government. Up to the moment when the election of the new Emperor is terminated, the affairs of the state are directed by the ministers in office, forming a council of government and deliberating by a majority of votes.

VI. The members of the family of Napoleon III., called eventually to the chance of inheriting, and their descendants of both sexes, form part of the imperial family. They cannot marry without the Emperor's authorization; and their marriage without that permission entails the privation of all claim to the succession, both for the person contracting the said union and for his descendants. Nevertheless, if there should not be any issue from such marriage, in case of a dissolution caused by decease, the prince who has contracted it recovers his right of succession. The Emperor fixes the titles and conditions of the various other members of the family; he has full authority over them, and regulates their duties and rights by statutes.

VII. The regency of the empire is regulated by the *senatus-consultum* of July 17, 1856. However, in cases provided for by paragraph three of article five, the Legislative Body is convoked at the same time as the Senate. In the case foreseen in the paragraph

which follows, the votes of the Legislative Body co-operate with those of the Senate in the election of regent.

VIII. The members of the imperial family, called eventually to the succession, take the title of French princes. The eldest son of the Emperor takes the title of Prince Imperial.

IX. The French princes are members of the Senate and of the Council of State when they have attained the age of eighteen years completed; but they cannot sit in them without the consent of the Emperor.

CHAPTER III.—FORM OF THE EMPEROR'S GOVERNMENT.

X. The Emperor governs with the aid of the ministers, the Senate, the Legislative Body, and the Council of State.

XI. The legislative power is exercised collectively by the Emperor, the Senate, and the Legislative Body.

XII. The initiative of laws belongs to the Emperor, the Senate, and the Legislative Body. Nevertheless, every bill imposing a tax must first be voted by the Lower Chamber.

CHAPTER IV.—OF THE EMPEROR.

XIII. The Emperor is responsible to the French people, to whom he has always a right to make an appeal.

XIV. The Emperor is the chief of the state. He commands the land and sea forces, declares war, contracts treaties of peace, alliances, and commerce, nominates to all posts, and fixes the regulations and decrees necessary for the execution of the laws.

XV. Justice is administered in his name.

XVI. He has the right to grant pardons and to accord amnesties.

XVII. He sanctions and promulgates the laws.

XVIII. The modifications to be hereafter made in the laws, customs tariffs, or postal charges by international treaties, will only be obligatory after having been voted by the Chambers.

XIX. The ministers depend only on the Emperor. (Reproduction of the *plébiscite*.) They deliberate in council, with his Majesty presiding, and are responsible.

XX. The ministers can be members either of the Senate or of the Legislative Body. They can enter either assembly when they please, and have a right to be heard whenever they think proper to speak.

XXI. The ministers, Senators, Deputies, persons composing the Council of State, officers of the army and navy, judges and public functionaries are to take the following oath: "I swear obedience to the Constitution and fidelity to the Emperor."

XXII. The *senatus-consulta* of the 12th of December, 1852, and 23d of April, 1856, relative to the civil list, remain in force. In future, the allowance to the crown shall be fixed for the whole duration of the reign by the Legislature which meets after the Emperor's accession.

CHAPTER VI.—OF THE LEGISLATIVE BODY.

XXVIII. The basis of election is the population.

XXIX. The Deputies are returned by universal suffrage, and are to be voted for individually.

XXX. They will be chosen for a period which cannot be less than three years.

XXXI. The Lower Chamber discusses and votes laws and taxes.

XXXII. It chooses, at the commencement of each session, its president, vice-presidents, and secretaries.

XXXIII. The Emperor convokes, adjourns, prorogues, and dissolves the Chamber. In the latter case his Majesty is bound to summon a new one within six months.

XXXIV. The sittings are public, but at the request of five members they can be held in secret.

CHAPTER VII.—OF THE COUNCIL OF STATE.

XXXV. The Council of State is charged, under the direction of the Emperor, to draw up the bills and regulations of the public administration, and to solve any difficulties that may arise in the conduct of affairs.

XXXVI. It sustains, in the name of the Government, the discussion of bills in the Senate and Legislative Body.

XXXVII. The ministers hold rank in the Council of State, and have a right to sit there and vote.

CHAPTER VIII.—GENERAL PROVISIONS.

XXXVIII. Petitions can be presented either to the Senate or to the Legislative Body.

In April, two of the ministers, Buffet and Count Daru, who belonged to the party of the left centre, resigned, because the Government did not agree to their demand so to change the *senatus-consultum* as to allow an appeal to the *plébiscite* only in cases when the draft of the *plébiscite* shall have been agreed to by both Chambers. At the request of the Government, the Legislative Body adjourned until the Thursday following the vote on the *plébiscite*. The Senate approved the draft of the *senatus-consultum* on April 20th. A few days later (April 23d), an imperial decree convoked the people for May 8th to vote on the following *plébiscite*: "The people approves the liberal reforms which the Emperor, with the assistance of the great bodies of state, has carried through in the Constitution of 1860, and adopts the *senatus-consultum* of April 20, 1870." The Emperor, on the same day, issued the following proclamation:

PALACE OF THE TUILERIES, April 23, 1870.

FRENCHMEN: The Constitution of 1852, drawn up in virtue of the powers which you conferred on me, and ratified by the eight millions of suffrages which reestablished the empire, has given to France eighteen years of calm and prosperity which have not been without glory; it has insured order, and left a way open for all possible ameliorations. Thus, the more that security has been consolidated, the larger has been the share given to liberty.

But successive changes have altered the plebiscitary bases, which could not be modified without an appeal to the nation. It becomes, therefore, indispensable that the new constitutional compact shall receive the approbation of the people, as did formerly those of the republic and of the empire. At those two periods the opinion prevailed as I myself believe at this day, that every thing done without you is illegal.

The Constitution of imperial and democratic France, reduced to a small number of fundamental dispositions which cannot be changed without your assent, will have the advantage of rendering definitive the progress already accomplished, and of putting the principles of the Government beyond the reach of political fluctuations. The time too often lost in violent and sterile controversies may henceforward be more usefully employed in seeking out the means of promoting the moral and material welfare of the greatest number.

I address all of you who, on the 10th of December, 1848, surmounted all obstacles to place me at your head; all who for twenty-two years have unceasingly enlarged my position by your suffrages, sustained me by your cooperation, and recompensed me by your affection. Give me now a fresh proof of confidence. In bringing to the urn an affirmative vote you will dissipate the menaces of the revolution, you

will establish order and liberty on a solid basis, and render more easy in the future the transmission of the crown to my son.

You were almost unanimous eighteen years ago in conferring on me the most extended powers: be as unanimous at present in agreeing to the transformation of the imperial *régime*. A great nation cannot attain its full development without the support of institutions which guarantee at once both stability and progress.

To the request which I address to you, to ratify the liberal reforms realized during the last ten years, reply Yes. As to me, faithful to my origin, I shall inspire myself with your ideas, fortify myself by your resolves, and, trusting in Providence, will not cease to labor unremittingly for the prosperity and grandeur of France.

NAPOLEON.

The *plébiscite* was opposed in the most decided manner by the democratic opposition. An "Anti-Plebiscitary Address" was issued by the Democratic Committee in Paris, in which they say to the people:

Will you, under the semblance of a parliamentary system, consolidate personal government? If you wish to do so, vote "Yes." But, if you bear in mind the teaching of events, if you have not forgotten the eighteen years of oppression, of outrages to liberty, nor Mexico, nor Sadowa, nor the debt increased by five milliards, nor the budgets exceeding two milliards, nor the conscription, nor the heavy taxes, nor the enormous contingents—then you cannot vote "Yes." For all these evils—the traces of which France will be unable for a long time to efface—are the result of two *plébiscites* taken eighteen years ago similar to that which is now submitted to you. For it is a signature in blank that is required from you, the alienation of your sovereignty, the infestation of the popular right in the hands of one man and one family, the confiscation of the imprescriptible right of future generations. In the name of the sovereignty of the people and of the national dignity, in the name of order and social peace, which can only be obtained through the conciliation of interests and classes in a system of free democracy, reject by your vote the new Constitution. Protest by a negative vote, by blank votes, or even by abstention; all forms of protest will contribute to the advantage of liberty. For ourselves, we shall resolutely vote "No," and we counsel you also to vote "No."

The document was signed by seventeen Deputies, namely, MM. Emanuel Arago, Bancel, Crémieux, Desseaux, Dorian, Esquiros, Jules Ferry, Gagneur, Gambetta, Garnier Pagès, Girault, Glais Bizoin, Grévy, Magnin, Ordinaire, E. Pelletan, and Simon. It was also signed by eight representatives of the Paris and provincial press.

The interest of the people in the election was intense. The number of voters inscribed was over 10,400,000; the votes cast nearly 9,000,000. The majority in favor of the Government was overwhelming, 7,886,434 votes being cast for, and only 1,560,709 against the Government. The following is the official vote, as verified by the Corps Législatif on May 18th:

YES.	
Eighty-nine departments.....	7,016,327
Army at home.....	943,492
Navy.....	23,759
Civilians in Algeria.....	10,791
Army in Algeria.....	86,165
Total.....	7,886,434

	NO.
Eighty-nine departments.....	1,426,144
Army at home.....	40,181
Navy.....	5,874
Civilians in Algeria.....	13,481
Army in Algeria.....	6,020
Total.....	1,560,700

Most of the large cities voted, as on former occasions, against the Government. The following list gives the vote of some of the cities which voted in the negative:

	No.	Yes.
Paris.....	184,246	139,538
Lyons.....	85,769	22,304
Bordeaux.....	18,469	10,127
Toulouse.....	12,534	9,112
Nantes.....	10,193	6,463
Lille.....	8,793	6,405
Brest.....	5,595	2,426
Toulon.....	5,389	4,306
Le Creusot.....	3,733	1,837

As a considerable number of soldiers in Paris had voted *No*, the Emperor addressed a letter to Marshal Canrobert, in which he says: "Such absurd and exaggerated rumors have been repeated concerning the vote of the army in Paris, that I am inclined to beg you to say to the generous officers and soldiers that my confidence in the army has never been shaken."

On May 21st the Emperor met the Legislative Bodies in solemn assembly in the *Salle d'Etat*, and received from a deputation of the Corps Législatif the result of the vote on the *plebiscitum*. M. Schneider addressed the Emperor on behalf of the Legislative Bodies. The Emperor, in reply, made a speech, in which he said:

Universal suffrage, the elements of which change unceasingly, nevertheless accomplishes its purpose always. It has for guides its traditions, the certainty of its instincts, the fidelity of its sympathies. The *plebiscitum* had for its sole object the ratification by the people of constitutional reform. But, amid a conflict of opinions, and in the struggle with its opponents, its purpose became greater. Let us not regret this. The adversaries of our institutions have made the question one between the empire and a revolution. The nation has settled the question in favor of that system which guarantees order and liberty. To-day the empire is strong; but it will show its strength by its moderation. My government will execute the laws without partiality or weakness. It will not deviate from the line marked out for it.

Respecting all the rights of its subjects, it will protect them all, and all their interests, without the thought of dissenting votes or hostile manoeuvres. But it will also cause the national will to be respected, and will hold it above all controversy. Freed from the constitutional questions which have kept them apart, its best spirits will now have but one purpose—to rally round the constitution which the country has sanctioned. Honest persons of all parties will now unite to soften the asperities of partisan passion, to preserve social interests from the contagion of false doctrines, and to augment by all lawful means the grandeur and prosperity of France. We shall labor to diffuse instruction, to simplify administrative measures, to introduce into the code ameliorations in favor of the agricultural interest, and to develop public works. We shall give our time to the reduction and best distribution of taxation. Such is our pro-

gramme, which, if realized, will increase the progress of civilization.

I thank you, gentlemen, for the aid you have given me on this occasion. The votes, which ratify those of 1848, 1851, and 1852, reaffirm your powers, and give you, like me, new force to work for the nation. Now, more than ever, may we be fearless of the future; for who oppose the progressive march of the *régime* which a great people founded amid political troubles, and which is thus fortified in an era of peace and liberty?

A new modification of the ministry took place on May 15th, when the Duke de Gramont was appointed as Minister of Foreign Affairs, M. Mége, a deputy in the Corps Législatif, as Minister of Public Instruction, and M. Plichon, also a deputy in the Corps Législatif, as Minister of Public Works. The relations of France to foreign countries had, up to this time, been of the most amicable character. On June 20th the ministry, in reply to an interpellation of M. Mouy, who regarded the railroad over St. Gothard as involving a danger for France on the part of Northern Germany, declared that the road was entirely harmless.

On June 30th, during the discussion of the military contingent for 1871, M. Ollivier declared in the name of the Government that "the preservation of peace at no time had been more certain than just now." But, only a few days after this declaration, the offer of the Spanish crown to Prince Leopold of Hohenzollern precipitated the country into a terrible war with the whole of Germany, in the course of which France was invaded by a powerful German army, the Emperor captured, his dynasty overthrown, and a republic improvised. The progress of this war, with which the history of France during the second half of the year is to a large extent indissolubly interwoven, will be treated in the special article on the GERMAN-FRENCH WAR.

FREEDMEN, REFUGEES, AND ABANDONED LANDS (THE BUREAU OF). President Lincoln having signed the Proclamation of Emancipation, January 1, 1863, a bill to establish a Bureau of Emancipation was introduced into Congress, January 12th, but failed to pass. A new bill was presented, December 14, 1863, and was passed in the House, March 1, 1864, by 69 yeas to 67 nays. The Senate amended this bill by putting the Bureau under the charge of the Treasury; and, before any agreement of the two Houses, Congress adjourned. On the 2d of February, 1865, a new bill was agreed on in committee, which passed the House, but was rejected by the Senate. A conference was ordered; and March 3, 1865, a new bill was reported, passed by both Houses, and approved by President Lincoln on the same day. By the terms of this act, the Bureau was to continue "during the present war of rebellion, and for one year thereafter;" and to it were committed the supervision and management of all abandoned lands, and the control of all subjects relating to refugees and freedmen from insurrectionary States, or from any district

of country within the territory embraced in the operations of the army. It was to be under the management of a commissioner to be appointed by the President, with a salary of \$8,000, who was to be aided by ten clerks. The commissioner was to give bonds in \$50,000, and his chief clerk in \$10,000 more. The President was also authorized to appoint assistant commissioners, not exceeding ten in number, for each of the States declared to be in insurrection, each of whom was to give bonds in \$20,000, and was to receive a salary of \$2,500. Military officers could be detailed and assigned to duty under this act without increase of pay or allowances. As no money was appropriated, it was evidently intended that all the Bureau officers should be taken from the army. And the Secretary of War was empowered to direct such issues of provisions, clothing, and fuel, as he should deem needful for the immediate and temporary shelter and supply of destitute and suffering refugees and freedmen, with their wives and children.

The act further provided that the commissioner should be authorized to set apart for the use of loyal refugees and freedmen such tracts of land within the insurrectionary States as should have been abandoned by the owners, or to which the United States should have acquired title; and to every male citizen, whether refugee or freedman, forty acres of land were assigned; and the refugee or freedman was to be protected in the use and enjoyment of the land for three years at a rental of six per centum on its taxable value. And at the end of three years the lands could be purchased by the occupant upon payment of its value, receiving such title as the United States could convey.

There is no mention of education in the act. It was intended for the support and protection of refugees and freedmen, and to insure them a home out of confiscated lands.

On the 2d of June, President Johnson issued an order that all officers of the Treasury Department, all military officers, and all others in the service of the United States, should turn over to the officers of the Bureau all abandoned lands and property contemplated in the original act, now in their possession; they were also to turn over to them all funds collected by tax, or otherwise, for the benefit of refugees or freedmen, or arising from abandoned lands, or from property set apart for their use.

A further bill, to continue the Bureau for two years after its passage, was enacted July 16, 1866, passing both Houses by a two-thirds majority over a presidential veto. This bill greatly enlarged the scope of the Bureau, giving the commissioner discretionary power over its funds, and extending "to all loyal refugees and freedmen, so far as the same shall be necessary to enable them as speedily as practicable to become self-supporting citizens of the United States, and to aid them in making the freedom conferred by proclamation of the

commander-in-chief, by emancipation under the laws of States, and by constitutional amendment, available to them, and beneficial to the republic." The same act authorized the commissioner to appoint as many agents, clerks, and assistants, as he should deem necessary; and military officers, or enlisted men, could be detailed for this purpose. And power was given to the commissioner to seize, use, lease, or sell, all lands and buildings formerly held under color of title by the late so-called Confederate States, and appropriate the proceeds to the education of the freed people; and, when the Bureau should cease to exist, such of the Confederate States as should make provision for the education of their citizens, without distinction of color, were to receive all sums remaining unexpended from such sales or rentals. The commissioner was also authorized to cooperate with private benevolent associations of citizens in aid of freedmen, and to hire buildings for their schools when such associations provide the teachers; and he was to furnish protection for the safe-conduct of such schools. And, wherever the ordinary course of judicial proceedings was interrupted by the war, the commissioner was authorized to extend military protection to, and have military jurisdiction concerning, the free enjoyment of all immunities and rights over all citizens of the insurrectionary States without respect to race, color, or previous condition of slavery, especially in regard to the right to make and enforce contracts, sue, and be parties to suits, own real estate, and bear arms.

By the act of March 2, 1867, making appropriations for the army, \$500,000 was appropriated for schools and asylums, including their construction, rental, and repairs.

In July, 1868, Congress enacted that the Bureau should continue in force for one year from and after July 16, 1868, and the Secretary of War was directed to reestablish said Bureau where the same has been wholly or in part discontinued, provided the personal safety of the freedmen should require it. This act was presented to the President for his approval, and, not being signed by him, nor vetoed, was declared by the Department of State to have become a law without his approval. By this law the Secretary of War was ordered to discontinue the operations of the Bureau in any State restored in its constitutional relations and represented in Congress, unless, on consultation with the commissioner, he should be of the opinion that the further continuance of the Bureau would be necessary. But it was provided that the educational division of the Bureau should not be affected or interfered with, until the State should have made suitable provision for the education of the children of the freedmen. The law also provided that unexpended balances in the hands of the commissioner might, in the discretion of the commissioner, be applied to the education of freedmen and refugees.

On the 8d of August, 1868, Congress passed a law, over the presidential veto, that the duties and powers of the commissioner should continue to be discharged by the then commissioner (General O. O. Howard); and, in case of his death or resignation, the vacancy was to be filled by the President on the nomination of the Secretary of War, by the advice and consent of the Senate; and army officers were forbidden to enter upon the duties of commissioner, unless appointed by the advice and consent of the Senate. In case of vacancy of the office during the recess of the Senate, its duties were to be performed by the acting assistant adjutant-general of the Bureau; and the commissioner was ordered to withdraw the Bureau from the several States after the first day of the next January, 1869; but its educational department, and the collection and payment of moneys due soldiers, sailors, and marines, were to be continued. The educational work of the Bureau was therefore continued till July 1, 1870; but its collection of the pay of colored soldiers and sailors still goes on, under a law that all moneys due them shall be made payable to the order of the commissioner.

Abandoned Lands.—The bill organizing the Bureau became a law in March, 1865, and in the subsequent June Mr. Johnson directed all officers of the Treasury Department, all military officers, and all others in the service of the United States to turn over to the Bureau all abandoned lands, and all funds collected by tax or otherwise, for the benefit of refugees or freedmen, or acquired from abandoned lands. But the rapid use of the pardoning power soon placed the late owners in a position to demand their real estate; and the commissioner did not think it advisable to locate refugees or freedmen on lands which he was likely to be called on to restore so soon; no guarantee of possession could be given to the occupants. In 1865, 768,590 acres of land had been taken possession of; but before another year 496,869 acres had been restored to the pardoned owners. In 1867-1868 only 132,684 acres remained under the control of the Bureau; and orders were then issued for the restoration of this land, or for dropping it from the returns, except in cases where Government had perfected its title by due process of law. As a means of benefiting the refugee and the freedman from the abandoned lands of the Southern States, the Bureau has been useless, except that it collected \$400,000 from rents.

Transportation.—The abolition of slavery so disturbed the relations between the late master and slave, that the blacks deserted their plantations in large numbers, and crowded into cities and around centres of population. Over 20,000 found their way into Washington alone. The labor-market of all Southern cities was overstocked, while there was a great call for labor from the country. Orders for transportation were therefore issued, removing the laborer to the place of demand; but in the

subsequent year these orders were restricted to those unable to work, except in extreme cases, and to prevent actual suffering. Teachers were carried free to and from their schools, and food was transported wherever suffering existed. The following statistics show the total amount of transportation furnished by the Bureau:

	Refugees.	Freedmen.	Teachers.	Total.
To Sept. 30, 1866..	2,204	8,509	111	10,824
" " 1867..	773	16,981	2,264	19,978
" " 1868..	541	8,962	1,975	6,481
To Mar'h 30, 1869..	369	128	1,121	1,618
Total.....	38,406

In addition to the transportation of the laborer, the officers of the Bureau were constantly called on to arbitrate between the employer and his workmen. In the short space of three months, General Whittlesey, Superintendent for North Carolina, reported 8,405 cases where there were complaints of cruelty and of refusal to pay wages on the one side, or to adhere to the original terms of the contract on the other; and Mr. Elliott, Chairman of the House Committee of Freedmen, thought that one hundred thousand such cases were heard and acted on in a single year. Contracts were drawn up between the two parties; in one State, and in a single year, not less than 80,000 such contracts were executed in duplicate. The rights of the black man were guarded by the Bureau as a military arm of the Government.

Claims and Bounties.—When colored men were first called into military service, their ignorance exposed them to great frauds in the collection of their pay and bounties; Government was also defrauded by false papers and personations. A Claim Division was therefore established in March, 1866, and all officers and agents of the Bureau were directed to forward all claims of the blacks against the Government without charge. In March, 1867, Congress enacted a law that "all checks and Treasury certificates * * * to be issued in settlement of claims for pay of bounty or prize money, or other moneys due to colored soldiers or marines, or their legal representatives, now residing or who may have resided in any State in which slavery existed in the year 1860, the claim of which has been or may be presented by an agent or attorney, shall be made payable to the Commissioner of the Freedmen's Bureau." Nearly all the colored troops collected their pay through this channel, and to them were paid, in but little more than three years, and without expense, \$7,688,618.61. In March, 1870, the Adjutant-General of the Army notified the Bureau that, in consequence of the frauds committed by attorneys and claim-agents in certain States lately in rebellion, in connection with claims of colored soldiers for commutation for rations while prisoners of war, and owing to the difficulty of identifying the claimants, and in order

to secure to them the full amount of such claims, all such claims in the future would be referred to the Bureau for evidence to perfect the same, to be obtained through its officers and agents stationed at or near the residences of the claimants; and that payment would be made through the same channel, the officer or agent making the payment to be required to pay the amount due to the claimant in person. In this way fraud upon both Government and soldier was greatly prevented. As far as possible all colored pensioners are now paid through the Bureau.

Supplies of Food.—In issuing rations for the suffering, the Bureau supplied all worthy applicants, irrespective of age, sex, or color. The issue of rations commenced as early as June, 1865. Officers of the Bureau were instructed to hold each plantation, county, parish, and town, responsible for its own poor; but, with very few exceptions, State and municipal authorities refused to provide for old and infirm freedmen, many of whom were blind, deaf, or too aged to labor. Deprived of their masters' support, they must have been left to perish, but for the kindly offices of the Bureau. The issue of rations in 1865 was quite large, that for the month of September alone being 1,450,648. In August, 1866, a circular was issued, ordering the discontinuance of rations, except to the sick in hospitals and in orphan asylums. In March, 1867, when a general cry came up from the South for aid, owing to the failure of the crops, the Senate requested General Howard to report his information as to cases of extreme want, and to submit his estimate of the amount of funds necessary for the purchase of food. He reported 82,612 whites and 24,238 blacks suffering from lack of food; and that to supply them for five months, till the new crop should come in, eight and a half million rations would be required, valued at \$2,138,750. It was, therefore, enacted that the Secretary of War should, through the Bureau and out of its appropriations, issue supplies of food to the destitute and helpless, sufficient to prevent starvation and extreme want; and General Howard applied \$500,000 for this purpose. The relief granted from this fund consisted of one bushel of corn and eight pounds of meat per month for each adult; one-half that amount for children under fourteen; and the total amount that year was 850,388 pounds of pork and bacon, and 6,809,296 pounds of corn; the total expense was \$445,993.86, or about eight dollars a head for four months. The following table shows the issue of over twenty million rations to dependent refugees and freedmen:

	Refugees.	Freedmen.	Total.
In 1865.....	1,115,977	4,134,438	5,250,415
1866.....	3,669,233	5,787,249	9,456,482
1867.....	457,443	3,110,190	3,567,633
1868.....	248,314	2,374,537	2,622,901
Total.....	5,490,967	15,406,464	20,897,431

At a subsequent period, Congress transferred \$50,000 for the purchase of seeds for the South; and three appropriations, amounting to \$55,000, were made for the poor of Washington; and these four appropriations were distributed through the agency of the Bureau.

Medical Supplies.—The organization of the Bureau found the blacks of the South suffering fearfully from epidemics. In some crowded and unhealthy localities the death-rate was as high as 80 per cent. In 1865-'66 fifty-six hospitals, with a capacity of 4,422 beds, ten hospital-camps, and five orphan asylums, were under its charge. The following year the hospitals were generally changed into dispensaries, with out-door relief. In 1868-'69 all the hospitals but two, and all the 48 dispensaries, were closed. These two hospitals contained 541 patients, all totally helpless. The records of the Bureau show about half a million of recorded cases of medical treatment, and it is estimated that at least an equal number were unrecorded; making a total of a million persons who received assistance during the existence of the Bureau.

Education.—After the first year or two of the Bureau's existence, its work became chiefly educational. It early allied itself with the benevolent societies of the North, the Bureau building or hiring school-houses, the societies furnishing the teachers. The amount paid by Government for this educational work has been found to be about equal to that contributed by benevolence. At one time the American Missionary Association had six hundred teachers in the Southern States, and England sent over half a million dollars for colored education. Schools were established in all large towns, and in many villages. So great was the desire of the blacks for education, that at the close of each term the schools have generally been kept open through the vacations by teachers for extra tuition, or by the older pupils. In 1868, 178 schools were continued in Louisiana through the hot summer vacation; 75 in Mississippi; 80 in Kentucky; in all, over 600 schools were kept open that summer during the vacation. In 1869, 1,200 schools were carried on through the summer vacation. Half a million of scholars have been enrolled in the schools under the charge of the Bureau, and it is estimated that as many more have received instruction elsewhere. There are eleven so-called colleges or universities, seventy-four high, and sixty-one normal schools, specially designed for the higher education of the children of the freedmen. Twelve hundred and eighty school-houses have been erected, at an average cost of \$1,900, of which the Bureau still controls 180; educational and other societies, 606; and the freedmen themselves, 552. Appropriations have been made for the construction, in whole or in part, of 334 school-houses, for the repairs of 198, and for the rental of 598; the Bureau paying a

GAS-WORKS.

rent of \$120 per annum where there were not more than thirty scholars. The educational statistics of the Bureau show the following number of schools, teachers, and scholars:

	Schools.	Teachers.	Scholars.
1865.....	740	1,814	90,599
1866.....	1,809	1,658	90,513
1867.....	1,875	2,908	100,467
1868.....	1,961	2,367	103,966
1869.....	2,571	3,263	116,110

The financial statistics show the following receipts and expenditures from March, 1865, to August 30, 1870:

RECEIPTS.	
Congressional Appropriations.....	\$10,780,730 00
Bounties, etc.....	214,000 00
Hospitals.....	50,000 00
Poor of Washington.....	55,000 00
Refugees' and Freedmen's Fund.....	1,843,653 21
School Fund.....	79,903 06
Total.....	\$12,023,304 27
EXPENDITURES.	
Salaries and Running Expenses.....	\$2,369,430 78
Charitable Purposes.....	5,345,503 96
Education.....	3,572,365 94
Transportation.....	259,903 68
Collection of Bounties.....	379,555 14
Balances on hand (August 31, 1870).....	200,146 03
Total.....	\$12,023,304 27

GAS-WORKS. During the year 1870 the greater portion of the Bechtol Chartered Gas Company's Works has been completed, which will manufacture for the (London) City Gas-Works, the Victoria Dock Gas-Works, and for themselves. This establishment is a great engineering work; one thousand tons of coal per day will be distilled in the retorts when in full operation. The coals are landed on a curved pier 400 feet in length, bending into the river, and laid with rails, which connect with railways running all round and through the works. There are four retort-houses, each 360 feet long and 90 feet wide, and the two chimneys connected with the retort covers are 100 feet high. The coal-stores are 770 feet long and 120 feet wide. The four buildings for the purifiers and scrubbers are each 250 feet square, the two boiler-houses are each 52 feet by 33 feet, the two meter-houses 80 feet by 30 feet, the engines and exhausters occupy two similar-sized buildings, and in the rear are well-built sheds, 850 feet long by 100 feet deep, for the manufacture and storage of ammonia, etc. On the left of the works are four gasholders, each 180 feet diameter and 40 feet deep, with a storage capacity of one million feet each. The gas is conveyed to the city through eight miles of 48-inch pipes, whence it will be conducted to Westminster through three miles of 36-inch pipes. This is the largest gas-works in the world, and, when in full work, will produce 10,000,000 cubic feet of gas per day.

GEOGRAPHICAL EXPLORATIONS. 317

This does not include \$2,330,788, which was taken from stores on hand at the close of the war, and furnished in the shape of rations to the poor and the hungry. Had these stores been sold, they would not probably have realized one-third of their cost. But, charging them at their cost price, the whole expense of the Bureau has been \$15,359,092.27, and the amount expended for charitable purposes, \$7,677,590.96.

In a debate in the Spanish Cortes, Señor Castellar pointed to the work of the Freedmen's Bureau as a triumphant refutation of the assertions of the superiority of a monarchy to a republic. And in his report to the authorities of France on public instruction in this country, M. Hoppin says that nothing reflects more honor on the United States than the zeal which the Government and private associations displayed during the most terrible periods of the great war of secession to assure to the negroes of the South the means of existence, and to erect schools for them and their children. Without doubt, the foundation which has been thus laid will secure the intellectual improvement of a large portion of the present youthful colored generation.

G

GEOGRAPHICAL EXPLORATIONS AND DISCOVERIES IN 1870. The record of geographical discovery, in 1870, is less fruitful in great events, or even great enterprises, than any year of the previous decade. More, perhaps, may have been accomplished than is now known, for some of the expeditions undertaken in the previous year required a long time for their completion; but, so far as intelligence has been received, most of the various enterprises attempted or projected in 1869 had either failed utterly, or remained without result at the close of 1870. The great war between France and Germany, and the threatening condition of political affairs throughout Europe, are responsible for a part, though by no means the whole of this. The war and the downfall of the French Empire prevented the starting of the French Arctic Expedition, and the recall of General Faidherbe from Senegambia, and of some of the ablest French officers from Algeria, effectually checked the projected African expeditions which were preparing to go out under the protection and direction of these officers. The same cause also effectually hindered all explorations in Cambodia and Southeastern Asia generally, which promised to be so fruitful in interesting observations.

The German as well as the English, Swedish, and Russian efforts to reach the high latitudes of the Arctic regions, and even the Pole itself, proved failures, mainly from an unpropitious season; and, though the summer and

autumn of 1870 were remarkably favorable, the war prevented any expeditions from attempting further discoveries. The American expedition was deferred to the summer of 1871, and Captain Hall, instead of Dr. Hayes, is to be its leader. Congress has made an appropriation for the purpose sufficient to secure fair probabilities of success. Still, so stubbornly has the icy North refused for these four hundred years past to reveal its secrets, that we need not be surprised if this expedition should be added to the already long list of failures.

Explorations in Northern Central Africa have not been prosecuted with much zeal during the year, or, if they have, the results are as yet unknown. Sir Samuel Baker's geographico-military expedition toward the sources of the White Nile was delayed a twelvemonth, in consequence of the condition of the stream, and the obstruction by a tropical growth of reeds and cane, which had completely blockaded all progress, but at the latest accounts was again making slow and painful progress. Dr. Livingstone has been heard from, but not directly. There is reason to believe he is living, but he has undoubtedly suffered much, and is strangely silent in regard to his plans, if he has formed any. The diamond-fields in South Central Africa have attracted much attention, and a large emigration to the region where they are found. Opinion is greatly divided as to their value, some regarding them as merely superior quartz crystals, while others contend that they are genuine gems of remarkable purity and lustre. The truth probably is that some diamonds have been found there, but that generally they are not of the finest quality, and in some, perhaps many cases, quartz crystals have been mistaken for diamonds.

In Asia the principal interest has centred around the Pamir Steppe, and the efforts of Mr. Hayward, a retired English officer, to penetrate to it. Under the appropriate head we shall give a summary of what he has accomplished. Australian explorations have not been active during the year, and the accessions to our knowledge of that great continent have been unusually meagre. On our own continent, there have been explorations in some of the new territories, in Manitoba, the old Red River country of British America, and especially in the various isthmuses of Central America, where at any time a ship-canal has been deemed possible. The United States Government has had parties of zealous explorers at work at two points, the Isthmus of Darien and the Isthmus of Tehuantepec. Thus far their explorations indicate that locks will be necessary to overcome the elevation, which, though not in itself very great, is sufficiently so to make the construction of a canal on a dead level, either by deep cuttings or a tunnel, impracticable, except at an expense too great to be warranted by the benefits which would accrue from it.

Remarkable as the year 1870 was for the number of its illustrious dead, there were very few of them identified with geographical science. The most eminent of these few was Baron Charles Alexander Anselme Hugel, an Austrian nobleman, who, nearly forty years ago, at his own cost, undertook a tour of exploration in Asia and Africa, which lasted six years, and was conducted on a scale of liberality at that time unprecedented. His narratives of his travels are yet some of the most valuable of our geographical authorities. (*See HUGEL*, in this volume.) He died on the 2d of October, at the age of seventy-five years.

Mr. James Macqueen, F. R. G. S., an English geographer, specially devoted to African geography, and identified with the exploration of the Niger or Quorra River, died in Glasgow, May 14th, at the advanced age of ninety-two.

Mr. Marcus Williams, a citizen of Newark, N. J., but for many years past engaged in travel and exploration in South America, and who had contributed much to geographical science, died in Maranhão, Brazil, on the 15th of February.

But if the deaths of eminent geographers have been few, their books, recording their past explorations, have been many. One of the most remarkable and elaborate of these is the "History of the Discovery of Maine," prepared for the Maine Historical Society by the distinguished German traveller, J. G. Kohl, of Bremen. It is an exhaustive work on the discoveries on the east coast of America from the time of the Northmen in 990 to the Charter of Gilbert in 1578. It is illustrated with twenty-three maps, the latest of which is that of Mercator in 1569. The "Voyage across South America" of M. Paul Marcey, profusely illustrated with landscape views, and pictures exhibiting the appearance, dress, habits, manners, and dwellings, of the various races with whom he came in contact, is more than a mere illustrated book of travels, and deserves to be considered as a valuable contribution to South American geography. It has not been republished in this country, but some portions of it have been translated for literary periodicals. The "Japon Illustré" of M. Humbert, the Swiss minister to Japan, is another valuable addition to our knowledge of that extraordinary people. Three American gentlemen, connected with the Russian-American Telegraph Company's staff, in 1866-'67, have given interesting descriptions of the regions they visited, viz.: Mr. W. H. Dall, who confined his observations mainly to Alaska and our new possessions there; Mr. George Kennan, in his "Tent-Life in Siberia," who gave a very interesting description of the people and country of Eastern Siberia, of which so little is known; and Colonel Thomas W. Knox, who described the circumstances and perils of a journey across the two continents.

Major F. Millingen, of the British Army, has

given, in his "Wild Life among the Koords," a graphic description of the scenery and inhabitants of the remote and hitherto almost unknown districts of Koordistan and Upper Armenia; and Mr. Douglas W. Freshfield, an accomplished geographer, has thrown much light on the neighboring and little explored regions of the Caucasus in his "Journey in the Caucasus, and Ascent of Kasbek and Elbruz."

One of the finest contributions made in modern times to archæology and ancient geography is "The Recovery of Jerusalem; a Narrative of Exploration and Discovery in the City and the Holy Land." It is the report, or rather the reports, of Captains Wilson and Warren, of the Palestine Exploration Fund Commission, with dissertations, from actual explorers, on the Hauran, the Moabite Stone, etc. The work, admirably illustrated, has been republished in this country, and will take rank with Robinson's "Biblical Researches," and Thomson's "The Land and The Book," as authentically settling many of the vexed questions of the geography of the Holy Land. In other parts of the world the enterprise of geographical writers is equally manifest. In addition to Prof. Agassiz and Mrs. Agassiz's books on the exploration of the Amazons, and Prof. Orton's "Andes and the Amazons" previously published, two young gentlemen, of Williams College, Messrs. H. M. and P. V. N. Myers, who were sent out by the Williams College Lyceum of Natural History, and associated with Prof. Orton in the exploration of the northern portion of the South American Continent, published at the close of the year a narrative of their journey of discovery through the Orinoco region, and along the course of the northern affluents of the Amazons. The work, without making any parade of scientific attainments, is really a valuable addition to our somewhat limited knowledge of the geography of this region.

The European war, though its principal seat has been in one of the best known regions of Central Europe, has yet produced some interesting treatises on the geography, productions, and history of Alsace, Lorraine, and the Vosges and Argonne mountains and forests; but, though it impeded and delayed many geographical enterprises, it performed one great service for geographical science, in demonstrating the absolute necessity of a minute knowledge, on the part of military officers, of the physical geography and topography of the regions in which military operations are to be conducted. The thorough and minute attainments of Baron von Moltke in the physical geography and topography of France were as important an element in his extraordinary successes as his superb strategical skill; and the gross ignorance of the French officers, of the geography of their own country, contributed largely to their disastrous defeats. With these preliminary remarks we pass to the consideration of the several fields of geographical exploration.

I. ARCTIC AND ANTARCTIC REGIONS.—The existence of an open water-passage and probably of an open polar sea, north of the American Continent, received additional confirmation in the early autumn of 1870 by the capture of a right whale north or rather northwest of Behring's Straits, which had in its body a harpoon belonging to a ship at that time in the Greenland seas. As the Arctic right whale is never found below 30° N. lat., it is obvious that it must have passed in a very short time across the open waters north of our continent, and it is not unreasonable to conjecture that in an open sea there, of a temperature such as would be produced by the coming to the surface of the equatorial current, there may have been its breeding-place.

The numerous polar expeditions which were sent out from Germany, Scotland, Norway, Sweden, and Russia, all failed to reach any very high latitudes, or to make or preserve any discoveries of great importance to geography. This result was due to the exceptional severity of the season, the formation of unusually large ice-fields, and impenetrable ice-barriers to an approach to the precipitous shores of almost all these lands in the extreme north, especially in their aspects oceanward. Some, finding the ice-fields so extensive and unbroken, turned back after reaching latitude 75° N., or thereabout; others, sailing past long reaches of ice, and attaining to the open ocean, were caught in the ice as they endeavored to approach the land, and, though they reached 75° 31', were forced southward by the ice, in one case as far as 61° 18'. Of the whole Arctic fleet, consisting of nine vessels, all returned safely, though some of them much battered by the ice, except the *Hansa*, one of the two vessels belonging to the Petermann Expedition, which sailed from Bremerhaven, June 15, 1869. She was a sailing-vessel of 242 tons, under the command of Captain Koldevey, who, the previous year, had commanded the little steamer *Germania* on a similar expedition. The *Germania* parted company with the *Hansa*, July 20, 1869, and reached the eastern coast of Greenland, lat. 74° 32' N., long. 18° 50' W., August 5th. By September 20th, lat. 75° 31' was attained, and the ship was frozen in, in Sabine Bay. During the winter sledge-journeys were made to 77° 1' N. and 18° W., but deep snows defeated every attempt to explore the interior of the land. The greatest cold was — 32° Réaumur (— 40° Fahr.). July 11th the ship was freed from ice bondage, and a new effort was made to push northwestward, lat. 75° 20' being reached, where the ice again became impenetrable. Steaming southward from that point, a deep fjord was discovered August 6, lat. 78° 18', into which the ship penetrated seventy-two sea miles, or to long. 26° W. The temperature of the water here was 4° Réaumur. (41° Fahr.), and of the air 10° Réaumur. (54° 50° Fahr.). This inlet branched off in the distance, and in the interior mountains were to be seen,

the height of which was found to measure up to 14,000 feet. August 15th the boiler sprang a leak, the season was far advanced, and the return was decided upon. The ship was free from ice, August 24th, 72° N., 14° W. Deep-sea soundings were made in 1,300 fathoms water, and after a stormy passage the German iron-clad fleet was sighted in the mouth of the Jahde. Bremerhaven was reached September 11th.

The *Hansa* was less fortunate, and, though she accomplished even less than the *Germania* in the way of geographical discovery, yet the narrative of the misfortunes and heroic fortitude and endurance of the crew of fourteen men is one of the most interesting chapters in the history of scientific explorations. The vessel was ice-bound on the east coast of Greenland in latitude 75° as early as September 6, 1869. Fearful storms coming on, the ship was urged near the coast and driven some degrees farther south, amid such turmoil and crushing of the ice, that the company forsook her, and in the night of October 22d she went down with all her freight of collections and observations, the results of months of hard work and much sacrifice. For one hundred and ninety-three days the little company of fourteen men voyaged on an ice-floe, which, from a circumference of seven miles, was reduced at length to a mere cake of hardly two hundred paces' circuit.

Such was the brief telegraphic record of the misfortune; but the incidents of this long voyage on an ice-island are deserving of somewhat more particular description.

The *Hansa's* first attempt to penetrate the ice failed. Another was made August 10th, in latitude 74° 46' N., and longitude 10° 28' W. On the 24th the ship was within 24 miles of the coast, and the boats went 8 miles farther in; but, though only 16 miles east of Besbrow Island, no coast-water could be seen from the top of a high ice-block. In this situation the captain hoped for a storm which might break up the ice; but when it came the wind blew from the northwest, and the ship was driven so far in the opposite direction that the hope of reaching the coast was gone. Still the ship lay, September 7th, in open water, which appeared to reach to the coast, with the exception of one great field of ice, and by a lucky chance something might yet be effected. Two days after another northwest wind broke up the ice completely, and sent the ship driving farther southeast than ever, and surrounded her with whirling masses of ice that more than once endangered her safety. September 19th, the ship was completely frozen in. Precisely one month after, during a heavy snow-storm and northwest wind, the ice began to shove, and the field which protected the ship was by little and little broken up. Finally, the young ice immediately about the vessel, four feet thick, broke on the starboard side; the bow was forced up, and would have risen higher had

not high blocks of ice prevented. Caught in this way, it had to withstand the full pressure of the floe. The decks were sprung, but the hull seemed to be sound. After a pause the ice began to shove harder still. The *Hansa* was pushed up 14 feet out of her old position, but in the succeeding pause the ice retired, and the ship glided again into the water, and lay leaning over and resting on a tongue of ice under water. At first a foot of water was found in the hold, and after three hours' work this was pumped out. But, after a ten minutes' pause, during which the men took some food, the pumps were sounded again, and two feet four inches of water was found in them. The temperature was 20° R. (—18° Fahr.); the water froze in the scuppers, and, though the bulwarks were cut through, the outlets kept freezing up. The deck was covered with an increasing sheet of ice, the water from the pumps partly ran back into the hold, the pumps themselves began to freeze up, and the leak was uncontrollable. This is the history of three days of hard struggling. The hold was full of water, and the ship appeared to have broken her keel and leaked in every seam. Measures for future safety had been early taken—provisions accumulated on the ice, the masts taken for fuel, the boats placed in safety. October 23, 1869, the fourteen men stood by and saw the ark of their safety sink into the water in spite of anchors and stays. As near as they could determine it, the place of their shipwreck was latitude 70° 50' N., and longitude 21° W. The Liverpool Island coast was not more than five miles distant; its cliffs and hills, Holloway Bay, and Glasgow Inlet, were plainly to be seen; but no way of escape to it through the ice could be found. This first part of the voyage had occupied one hundred and thirty days, or from June 15th to October 23d.

Already in September a house had been built of coal, in order to store provisions for the boats. This now became their home, and in it they lived for eighty-three days, or, rather, double that number of nights. It was far from uncomfortable, being 30 feet long, 14 wide, and 4½ high in the walls, and 6 in the centre. There was no lack of provisions or fuel. Under these circumstances the ship's company began their enforced voyage. In clear weather the coast was nearly always visible; bears and foxes came off for an occasional visit; and it would not have been impossible for the men to have reached the land, but only by leaving behind provisions and boats.

The drift southward went steadily on. By the end of December, 1869, they were in the 67th degree, three degrees in six weeks. With true German fidelity to home feelings, Christmas was not allowed to go by without burning an extra light or two, and raising a tree decorated with paper ornaments and cookies. The only "presents" spoken of are a knapsack and revolver-case for the captain. Certain tin cases which had been given them were opened, a

glass of port was drunk, and the old papers re-read. January 2, 1870, the ice-field was in latitude $67^{\circ} 47' N.$, and longitude $84^{\circ} 1' W.$, close to the coast in a bay which they had good reason to name Schreckensbucht, "Bay of Horrors." Suddenly, during the night and amid a heavy storm, a horrible groaning was heard, and all rushed out of the house, though they were not merely snowed up, but the house lay buried more than a foot deep in ice. Nothing was to be seen through the storm, and, returning to their beds and laying their ears to the ground, they heard in the ice a noise "like the singing of the ice when it is hard pressed, and like the rubbing of the ice when it goes over cliffs." After a most anxious night, as soon as there was some diminution in the force of the wind and the amount of the falling snow, some went out to explore. Two hundred paces from the door the heaped-up fragments of their floe were found. In every direction it had been broken up, and they had reason to be thankful that the block on which they rested remained the largest of all. Hurrying back, they seized provisions and clothing, and prepared for the further breaking up of their ice-raft, if it should come. But, at a time when they sank to the hips in snow at every step, such preparations appeared to be only a mocking at death. They were not forced to commit themselves to the fortunes of such a struggle. The breaking up of the ice ceased for a time, though that night was but the first rehearsal of many similar ones. Their ice-field gradually diminished in size, and on the night of January 11th they divided into two parties, took leave of each other, and stood by the two boats in which they expected to seek further safety. The weather was such that a crust of ice formed over their faces, and could be removed only with the knife, which had to be done whenever they would eat. No clothing could keep out either snow or cold. Some froze their limbs; and several of the journals are interrupted for days because the writers had not fingers to hold the pen.

January 14, 1870, the house was abandoned, and for five days the men lived in the boats, while a new house was building from the remains of the old one, with snow for mortar. Their new home was, however, very much smaller than the old, being only 14 feet long, and 8 wide, and with room for only six persons. The others slept in a small cook-house, and in the boats. Eighty-three days had passed in the first hut, and now a hundred and ten days went by while the company were divided between the houses and their boats. Their great floe had become a block of drift ice not 500 feet in circuit. But this smallness was to their advantage. Not only did their lighter weight preserve them from further breaking up by collision against the icebergs, but they wound their way among these ice-mountains as if steered by some guiding hand.

It was on May 7th, in latitude $61^{\circ} 12' N.$,

longitude $42^{\circ} W.$, that the ice-block was abandoned, after having rendered them good service for a hundred and ninety-three days. In this time they had drifted nine and one-third degrees southward. They had three boats, King William, Bismarck, and Hope, and in these they pushed forward toward the coast. Surrounded by ice, they could make but five hundred paces a day, and it was June 8th before they reached the little island Idluiddick. From that point the voyage round Cape Farewell to the German mission station Friedrichsthal took five days.

Finally, on June 18, 1870, or a year less two days from the day of their departure, they were in friendly habitations, and soon after they reached Bremen.

No particulars have yet been received of the results of the land expedition for the exploration of the northeastern coast of Siberia, sent out by Baron Mädel, under the patronage of the Russian Geographical Society, but, as the ground to be traversed was the same which was explored by Messrs. Kennan, Dodd, etc., of the Russo-American Telegraph Company in 1867, there can be hardly very much that will be new in their report when it shall come to hand.

The projected voyages of Captain Lambert of the French Navy, who proposed to make an attempt to reach the open Polar Sea by way of Behring's Straits, was, as we have already intimated, relinquished in consequence of the Franco-German war; that of Captain Sherrar Osborne was decidedly negated by the British Admiralty; and Dr. Hayes found such difficulties in obtaining the requisite Government assistance for his enterprise that this, and the precarious condition of his health, induced him to relinquish his project; Captain Hall was more fortunate, but was compelled to delay his expedition to the summer of 1871.

Considerable discussion was had during the year 1870 at the meetings of the Royal Geographical Society of London, over the narrative of a voyage of exploration made by Captain Benjamin Morrill, a New-England whaling-master, in 1828, in the Antarctic seas. The narrative was published in 1832, in a volume bearing the title of "Morrill's Four Voyages," and had long been in the library of the Geographical Society, but had not attracted much attention. Captain Hamilton, of the Royal Navy, brought it forward as throwing much light on the question of the real extent of the lands already discovered in the Antarctic zone. But its credibility was strongly disputed by several of the most eminent naval officers who were members of the Society, and some of those who had been connected with the explorations of Ross, and others, denied that Morrill had ever entered the Antarctic zone. The discussion was interesting, as showing how difficult it is to put down a fiction in geography or history. Confute it to-day, and in a year or two it will come up again with new claims for credence,

and the process will be repeated again and again. Morrill's "Four Voyages" has long been recognized in this country as belonging to a class of publications somewhat popular thirty or forty years ago, narratives of voyages of discovery, or adventures in savage countries, in which fiction and fact were intimately blended. Riley's "Narrative," Niel's Klim's "Journey under Ground," Captain Semmes's "Story of the Inner World," and half a dozen more works of a similar character, will be readily recalled by our older readers. Benjamin Morrill had possibly entered the Antarctic zone, but his account of his discoveries there was undoubtedly drawn almost wholly from his own imagination.

One of the most interesting contributions to geographical science made during the past year is a volume of Notes on Iceland and the Icelanders, by Mr. Jón A. Hjaltalin, a native Icelander. He gives, in a plain and unpretending way, but with great clearness, the history, ethnology, manners, customs, and political, educational, and social condition of the people, with a very full account of the climate, seasons, volcanoes, natural curiosities, and productions, animal, vegetable, and mineral, of the island. He adduces conclusive evidence that the climate is much more severe than formerly; that 800 years ago wheat and other grains were abundantly produced there; that sheep and cattle, as well as horses, were able to browse for themselves throughout the winter, and that the fall of snow was much less than now. To what cause these climatic changes are to be attributed he does not attempt to say. That they have taken place in Northern Europe and Asia, and probably also in the northern portion of our own continent, does not admit of a question. Are these countries susceptible of restoration to their former climatic conditions? How far are they affected by changes known to have taken place in ocean-currents, and what would be the effect of a possible diversion of the Gulf-Stream by the cutting of a ship-canal through the Isthmus of Darien? These are questions of importance not only to the geographer and political economist, but to the governments which may attempt to change the natural course of ocean-currents, and, without intending to do so, may effect such changes.

II. THE NORTH AMERICAN CONTINENT next claims our attention. In *British America* little has been done for geographical science during 1870. A more careful survey of the route, part railway and part steamer, from Ontario to British Columbia, has been made, and measures proposed to quiet the restless uneasiness of the Western provinces; but the road is not likely soon to be built, and the Northern Pacific, now in progress under the energetic management of Messrs. Jay Cooke & Co., will probably obviate its necessity by connecting British Columbia with the States of the Mississippi Valley and the Atlantic. The Red River coun-

try, Winnipeg, or, as it recently has been named, Manitoba, has been somewhat more fully explored the past year than before, in consequence of an insurrection there, but we have as yet no evidence that the explorations have inured to the benefit of geographical science.

United States.—There have been a few items of interest to geographers in the Atlantic States and the Mississippi Valley. On the Reading Railroad near Phoenixville, Pa., a bone-cave was discovered near the close of the year. The animals whose remains were entombed in the cave lived before the epoch of the great northern drift. Among them were a mastodon with tusks eleven feet long, the great cave bear, the megalonyx, or gigantic sloth, thought to be a different species from that found in Virginia, a rhinoceros, and a very singular little horse, supposed also to be a new species. No human remains nor any implements fashioned by human hands were found in the cave.

A cave has also been discovered in Iowa, on the line of the projected Dubuque and Minnesota Railroad, which seems to be the work of human hands, and is rather a series of chambers hewn in the solid rock, as a mausoleum or temple, than any adaptation of a natural cavern. The workmen, while engaged in excavating for the road-bed in limestone, came, at the foot of a bluff, upon a flat stone covered with strange characters. This being removed, opened the way into a passage about four feet wide and six feet high, leading directly into the heart of the bluff. At the distance of about fifty feet from the entrance, another stone, similar to the first, had to be removed, when a large chamber revealed itself, cut out of the solid rock, about twenty-five feet square and twenty feet high. The floor was hard and smooth, while the walls and roof were carved, in a sort of rude *basso-relievo*, with figures of birds, trees, stars, serpents, and chariots. The south wall was adorned "with a representation of the sun, and immediately below this the figure of a man in the act of stepping out of a boat, and holding in his hand a dove." So far the revelations were not very different from many previous ones in similar caves and rock-chambers throughout our Western country. But the most curious part of the discovery was yet to come. A flat slab in the floor of the cavern, being raised, revealed below a vault filled with skeletons of unusual size, the largest being seven feet and eight inches high by actual measurement. By the side of each skeleton was set a small vase filled with yellow earth, beneath which were found animal bones and particles of animal matter. The skeletons were placed in a semicircle toward the southwest. This rock-chamber points with great positiveness to the Oriental origin of the people who hewed it out of the rock, and while there would seem to be a marked reference to the deluge, the figures of chariots, serpents, etc.,

and the representation of the sun, may intimate a connection with the Assyrian or other Mesopotamian nations, all of whom under one name or another (Baal, Apollo, Chamos, Helios, or Bel) worshipped the sun-god, and the gigantic stature of the skeletons would agree with what we know of the early Hamite or Himyaritic races.

The Corps of Topographical Engineers of the United States Army have been engaged since the war in the preparation of careful and very complete maps of all the battle-fields of that great conflict. Those east of the Alleghanies were published in 1870, and are worthy of notice as the best illustrations of the regions fought over which have been or probably will be made. There have been also carefully-prepared geological maps of some of the Eastern States, and notably that of New Jersey by Prof. Cook, published within the year. The geological survey of Ohio now in progress, of which the first official report made its appearance in December, 1870, though mostly occupied with facts and investigations appertaining rather to geology than geography, has yet some statements of geographical interest.

The Geological Corps consisting of Profs. Newberry, Orton, Andrews, and Wormeley, and Hon. J. H. Klippart, with their assistants, have found abundant and conclusive evidence that nearly the whole surface of Ohio, the beds of its rivers and lakes, and its plains, valleys, and hills, were once from a hundred to a hundred and fifty feet below their present level; and that the lakes occupied a much wider area than now, and that Lake Erie, which formerly was connected with Lake Huron by a broad though not very deep channel, formerly extended southward through the State in a long valley, excavated by the glaciers of that early period.

The productive coal area is estimated at about 10,000 square miles, or about the same as Great Britain, but as yet produces annually only about three million tons. It is all of a bituminous character.

West of the Mississippi there has been an unusual amount of geographical and geological exploration, in part by government commissions, and in part by private companies and individuals. The careful preliminary surveys for the Northern Pacific Railway; the Northwestern Boundary Commission's survey of the 49th parallel from the Rocky Mountains to the Pacific Ocean; the geological and geographical surveys of the United States geologist Hayden, and his corps, in Nebraska, Kansas, Colorado, Wyoming, and partial surveys in Idaho, Montana, and Dakota, especially to the sources of the Yellow Stone, the visit of Langford and others to the Geysers of Montana, the private expedition of Prof. Marsh and his twelve companions from Yale College, in Nebraska, Wyoming, and Colorado, and along the upper tributaries of the Colorado of the West; the full results of the Powell expedition, and of Prof. Newberry's expedition, both of which

though made in previous years, were for the first time fully given to the public during the year 1870; and yet farther west, the work of the California Geological Survey, vigorously and steadily prosecuted during the year; the United States survey of the 40th parallel under Clarence King; the researches of Parry and Engleman, and of Whitney and Brewer on the peaks and parks of Colorado, and the survey of the Harvard mining-school party of the lofty summit region of Colorado, form together a mass of geographical labor and exploration which has rarely been equalled in any one country in a single year.

We have space for only a glance at a few of the more extraordinary discoveries made by these numerous explorers. The most remarkable sections visited by any of the exploring parties were the regions around the headwaters of the Yellowstone, and the Madison, Jefferson, and Gallatin, the primal sources of the Missouri in Montana. The Langford expedition which visited this region consisted of nineteen persons, and the Hon. N. P. Langford, who has resided in Montana since 1862, and was appointed, by President Johnson, Governor of the Territory, was its leader. The party ascended the Belt Range from Fort Ellis, and found the ascent exceedingly tedious and difficult, leading through narrow defiles, up sharp acclivities, and over numerous peaks, before the summit was attained, at an elevation of 8,000 feet. From this point an amphitheatre of mountains, 400 miles in circumference, enclosing a valley as large as New Hampshire, with all its detail of pinnacle, peak, dome, rock, and river, was comprehended at a glance. Following the range to the right for forty miles, the eye rested upon the singular depression where, formed by the confluent streams of Madison, Jefferson, and Gallatin, the Missouri began its meanderings to the Gulf. At the left were the towering peaks of the Yellowstone, their summits half enveloped in cloud, or glittering with perpetual snow. In front, carpeted with verdure, was the magnificent valley of the Gallatin.

The explorers were much impressed by the beauty and grandeur of the valley of the Yellowstone River, in which they found cañons rivalling those of the Colorado. They proceeded directly up the valley, encountering many wonders on the way, such as immense water-falls, columns of pillar basalt, like the "Giant's Causeway," and hot, cold, and sulphur springs, until, in a few days, they reached the summit, from which they obtained a fine view of Yellowstone Lake, and to visit it left the well-defined Indian trail and passed through a region never before traversed by civilized men.

The Yellowstone Lake was reached twelve miles beyond the mud-volcano, and many days were spent in exploring the country in its vicinity. The lake was ascertained to be 8,380 feet above the level of the sea. It is an ex-

pansion of the river, and is about twenty-five miles long by fifteen wide. It abounds in speckled trout of the finest quality, and vast flocks of geese, ducks, swans, and pelicans, resort to it. It is surrounded by stupendous mountain-ranges, which are approached on all sides by undulating plains and grassy foothills. Forests of pine touch its banks, at intervals, and its beautiful margin presents every variety of sand and pebbly beach, glittering with crystals, cornelian, and chalcedony. Indians rarely approach it, on account of the superstition inspired by the volcanic forces of the vicinity. The journey around it was attended with difficulty and distress. One of the party, Truman C. Everts, was lost, and left to his fate, after a long search, by his comrades. After thirty-seven days, during which he nearly perished, he was rescued by two trappers, who found him one hundred and ten miles from the place where he had been missed. Snow had fallen to the depth of twenty-six inches, when the explorers turned homeward. They aimed to strike the head-waters of the Madison, and succeeded in doing so, after struggling slowly through the snow for several days, and suffering very much. The desire for home had taken the place of all their interest in the explorations. They had, as they supposed, seen, in the amphitheatre already described, the greatest natural wonders of the continent. They were convinced that there was not on the globe another region where, within the same limits, Nature had coupled so much of grandeur and majesty with so much of novelty and beauty. What, then, was their astonishment, on entering the basin of the Madison, weary and exhausted, and with a feeling of the utmost indifference and listlessness, at seeing just before them an immense body of sparkling water projected suddenly and with terrific force into the air, to the height of 125 feet! They had found a real geyser. In the valley before them there were 1,000 hot springs of various sizes, and 500 craters throwing out vapor. The geysers were seen in action in every direction, projecting water to various heights. The one first referred to was throwing from an irregular crevice, about seven by three feet, a column of water of corresponding dimensions to a height of 125 feet. Various names were given to the geysers. One was called the "Fan," as it threw up to a height of 60 feet two radiating sheets of water, resembling a feather fan. Forty feet from this geyser is a vent, connected with it, and two feet in diameter, which during the eruption expels, with loud reports, dense masses of vapor. One of the party crawled into the "Grotto" from curiosity, not supposing it to be a live geyser, and, as he emerged, he was followed by an eruption of boiling water, which, if it had overtaken him, would have cooked him. The "Giant" is a rugged deposit, presenting in form a miniature model of the Coliseum. It has an opening six feet in

diameter. A remarkable peculiarity of this geyser is, the duration of its discharges, which continued for three hours, in a steady stream, five feet in diameter and 145 feet high. Opposite their camp was a symmetrical cone, like a bee-hive, about five feet in diameter at the base, and with an orifice at the top, of twenty-four by thirty-six inches. They had not suspected it to be a geyser, till one morning there suddenly shot up from it a column of water, which was found, by triangulation, to be 219 feet high. The "Giantess" throws up a column, six inches in diameter, to a height of 250 feet. This is the highest of all. The rays of the sun falling upon the geysers in action produced an infinite variety of prismatic hues, like broken-up rainbows.

The descent of the Colorado River by the Powell Expedition, of which some account was given in the *ANNUAL CYCLOPEDIA* for 1869, was attended with great peril and some loss of life; three of the party, having become discouraged and determined upon making an overland journey across the plateau to the Mormon settlement, were killed by the Indians within a few miles of that settlement, while those who remained with Major Powell came through safely, though not without much anxiety and peril. The scenery was generally gloomy, but sometimes grand and sublime. The practical results of the expedition are mainly negative. The settlement of the plateau, through which the Colorado and its affluents, the Grand, Green, Colorado Chiquito, and other streams, have eroded for themselves channels, seems impossible as well as undesirable unless some system of irrigation could be devised which would restore to these lands their ancient fertility; and situated as it is in the great Colorado Basin, on which little or no rain falls, and with the river-beds from one thousand to six thousand feet below their surface, any scheme of irrigation which should be at all effective would be so costly as to render it impossible. On some portions of the plateau it is possible, that the planting of the seed of forest-trees of quick growth and great tenacity of life, such as the alantus, the locust, the mezquit, or the post-oak, might, with the natural fertility of the soil, eventually induce a forest-growth which would attract a larger rainfall, and so restore the plateau to a habitable condition. Such has been the result in other portions of what was formerly known as the Great American Desert, large districts of which are now among the most fertile lands in the world.

The measurement of the altitude of the summits of the Rocky Mountains, the Sierra Nevada, and the Coast Range, has been prosecuted with much activity during the year and very few of them remain whose height is not known. The peaks of Colorado and the "High Sierras" of California have been especially examined of late, and their height ascertained both by means of the barometer and by triangulation.

The highest summits in Colorado exceed 13,000 feet, and those of the High Sierras approach 16,000 feet.

III. MEXICO has presented no explorations of importance the past year, the country having been in too unsettled a state to admit of any scientific explorations. The attempted settlement of the peninsula of Lower California under the auspices of an American company has proved an almost entire failure, and the company has been severely denounced for alleged misrepresentations. It is very possible that the emigrants thither may have expected greater advantages than they received, and that the climate and productiveness of the soil may have been painted in more glowing colors than proved to be just; but any emigrant who consented to go to that mountainous, volcanic, and arid region, and banish himself from all civilized society, must, if he knew the character of the country to which he was removing, have been sadly in want of a retired and quiet home.

CENTRAL AMERICA.—In this whole region there has been active exploration going on throughout the entire year, and several volumes and reports of previous explorations have been published. Beginning with the Republic of *Guatemala*, which adjoins Mexico, we have just at the close of the year a very spirited translation, by Mrs. E. G. Squier, of Morelet's "Travels in Central America," which were mostly confined to the Republic of Guatemala and to Campeachy. M. Arthur Morelet is a French gentleman of fortune and of remarkable attainments in the physical sciences, who, some twenty-four years since undertook to explore the interior of Guatemala, at his own expense, but under the general patronage of the Institute of France. His journeyings occupied nearly three years, during which he penetrated into the interior of Guatemala, and explored more fully than any white man had done, at least in modern times, the course and navigability of the great river of that republic, the Usumasinta, a river as large as the Red River of Louisiana, and in many respects similar to it. He collected a great number of choice specimens of the plants, minerals, animals, insects, and birds of the country, which he arranged scientifically, and presented to the Museum of Paris, and the narrative of his travels he caused to be privately printed, and distributed a few copies among his nearest friends, but declined to publish it. It is this narrative, which gives by far the most full and complete account of the geography of Guatemala, which Mr. Squier has obtained his consent to have translated and published in the United States, and which Mrs. Squier has rendered into most admirable English. It is a valuable contribution to American geographical science, as valuable as any of the works on that region which have yet appeared, while it occupies for the most part entirely new ground. The Spanish-American states change but little, in a score of years, either physically or politically; the ever-recurring

revolutions leave them much as they find them, and Nature, though prolific in its tropical vegetation, does not change materially the aspect of mountain, river, or plain, except when some new volcano upheaves a savanna, as at Jorullo, or reduces by its internal fires the height of some mountain-peak. We may thus accept Mr. Morelet's descriptions of the physical geography of Guatemala as being, in the main, as true to-day as when they were written, and his word-pictures of the inhabitants are too evidently drawn from the life to be doubted.

The adjacent Republic of *Honduras* has come into prominence within the past two or three years from the construction of a railway across it from the Atlantic to the Pacific, to be completed in 1872, which will, it is said, reduce the time for a trip by sea, from New York to San Francisco *via* the Honduras Railway, to thirteen, or, at the most, fourteen and a half days. This is, indeed, twice as long as by railway, but the route is to many travellers more pleasant. That portion of Mr. E. G. Squier's very able work on the states of Central America which related to Honduras has been reprinted in London, with additions by the author, bringing it down to the present time, for circulation, to promote the interests of this great enterprise. It is the testimony of the best-educated citizens of Honduras that no work published is so full and accurate in regard to the geography of that republic. The railway in course of construction is 200 miles in length, and the route to San Francisco is 4,160 miles. It is a part of the plan, however, to have the steamships, on the Atlantic side, leave and return to Charlotte Harbor, on the west coast of Florida, which is in direct communication with Charleston, Norfolk, Baltimore, Philadelphia, and New York, by rail, and the voyage by sea will thus be shortened to about 2,900 miles, or little more than the distance from New York to Southampton. Communication with South American, Sandwich Islands, and Australian ports, from Fonseca, the port on the Pacific, will be as speedy and desirable as from Panama, while the Honduras isthmus is less affected by malaria than that of Panama. As a route for heavy freight and second-class passengers, this Honduras Interoceanic Railway must prove superior both to the Pacific Railway and the Panama route.

We have purposely reserved to this place the consideration of the different routes and plans for interoceanic communication which within the year have assumed new prominence (although one of them passes across Mexican territory), because it was more convenient to consider them all together. With the completion of the Pacific Railway, there arose a conviction that, while, for first-class passengers, the more valuable articles of freight, those which in small bulk comprised large values, for the Government business and transportation, the shipments of the precious metals,

and the way traffic, this route was preferable to any other, yet for heavy and bulky freights, for emigrants and second-class passengers, for the large and increasing trade of the Central-American states, the west coast of South America, Australia, the Sandwich Islands, and the more bulky Chinese and Japanese goods, there was need of water transit, which, though a little longer, should not require any transshipment of the goods, and yet should not encounter the dangers and long delay of the voyage around Cape Horn. The Panama route, requiring a double transshipment, did not meet this want, nor will the Honduras Railway fully satisfy it, since, though materially shorter and cheaper, the cost of transshipment is still incurred. No possible route, which consisted in part of railway, could answer the purpose, for though there might be an advantage to passengers in having several competing routes, from the better accommodations and the cheaper price of passage which would ensue, and the local trade of the Central-American states with the Atlantic and Pacific ports might be sufficient to sustain one or more lines, yet the great point was still unreachd, that goods once shipped must not break bulk till they reached their destination, if they were to be carried cheaply and safely. It was obvious that there must be a ship-canal across some one of the isthmuses which exist on that portion of the continent. Over and over again, for two hundred years and more, has the question been agitated, where this canal *should*, or rather where it *could*, be constructed. England, France, and the United States, have each explored many times different sections, but had failed to find a point where such a canal would be possible, except at an expense too great to be safely hazarded by any one nation. There were several routes, indeed, through which it might be possible to cut a canal, but only at an expense of two hundred or three hundred million dollars. At Panama the route was not long, but it would require a tunnel of from seven to twelve miles through the solid granite deep enough and high enough to permit the largest vessels to pass two abreast, with masts all up.

At first it seemed that the Nicaragua route afforded all necessary advantages for a canal; but good harbors on both oceans were as necessary as any other consideration, and, though the canal itself and the slack-water and lake navigation could be accomplished for a comparatively moderate sum, the expense of artificial harbors on both sides and of structures for entrance to and exit from the lake involved a probable expense nearly or quite equal to that of the Panama tunnel. A route across the Isthmus of Chiriqui offered some advantages, but there were no good harbors on either side, and no possibility of making them except at an enormous expense. Through nearly the whole of 1870, and into 1871, Commander Selfridge, of the United States Navy, has

been engaged in careful exploration of the Isthmus of Darien, and, after many disappointments and hardships, he succeeded in discovering a route with good harbors on both sides, and an altitude so moderate as to admit of an open canal with but few locks, and a sufficient supply of water to fill them. The greatest altitude of the summit is under three hundred feet, and this is but for a short distance. The route begins with the Cacarica, a tributary of the Atrato River (up which latter river there is good navigation for large steamers for twelve miles), and turns gradually southwestward, striking a navigable river on the Pacific side. The distance is considerably longer than the Panama Railroad, but the route is more practicable than any yet discovered.

Attention has also been called during the year to the feasibility of a ship-canal across the Isthmus of Tehuantepec, over which a railway is already located, though not built, and a Government commission has been sent out to explore it, under command of Captain Shufeldt, of the United States Navy. The length of the canal and slack-water navigation would be 173 miles, and it would require, according to the statement of Colonel J. J. Williams, the chief engineer of the Tehuantepec Railway Company, 130 lifting locks, each of 10 feet lift. The summit is 684 feet above the sea, but can be supplied with all the water it needs, and, if the cuttings are made 60 feet in depth at the summit, the number of locks might be reduced to 118. The harbors on both sides can be made good at no very heavy expense. The number of locks seems an objection for a ship-canal, as they must necessarily materially enhance the tolls and delay the passage. Colonel Williams estimates the cost of such a canal as under \$32,000,000, in which are not included, however, the harbor improvements, nor the construction of the locks on the double transit plan, which is preferable. These would probably bring the cost up to \$50,000,000—and in the actual construction it would be safe to add 50 per cent. to this estimate.

IV. SOUTH AMERICA.—The narrative of Messrs. Myers, "Life and Nature under the Tropics," to which we have already referred, gives a very graphic and interesting account of the geography, inhabitants, customs, manners, productions, etc., of the interior of *Venezuela*, as it appeared to these young but careful observers in 1867-'68. Their explorations were mostly confined to the course of the Upper Orinoco and its vicinity, to an overland journey from that river by way of Javita and Moroa to the Rio Nigro, and the descent of that river to the Amazons at Manaoa. They also visited *Ecuador* and explored some portion of its territory, on which Mr. Hassaurek had previously been almost our only authority. The portion of Venezuela which they traversed had not before been visited by any North-American traveller, and, indeed, Humboldt and Bonpland, and much later the naturalist

Wallace, are almost the only Europeans who have explored it during the present century, and even they had not penetrated through the entire region visited by our youthful explorers. Their narrative is replete with interest, and throws much light upon the natural history as well as the physical geography of this tropical region. The great cataracts of the Orinoco at Atures and Maypuras are remarkable for their rugged grandeur and sublimity. The scarcity of animal life on and around the black waters of the Rio Negro, while it is so abundant and annoying in almost every other part of this tropical region, is a singular fact, but has been previously noted on the lower portion of that river. To what cause it is attributable seems uncertain. The soil along the banks of the river is extremely fertile, the foliage abundant, and the country not unhealthy.

In *British Guiana*, in April, 1870, a remarkable cataract was discovered by Mr. C. B. Brown, chief of the Geological Survey of British Guiana. It was on the Potaro, an affluent of the Essequibo River. The river just above the fall is 184 yards in width and makes a single leap at this point of 817 feet, blossoming soon after leaving the edge of the precipice into a fine foam, or spray, in which all semblance of water disappears, and descending in the well-known rocket-like forms of the Staubbach and the cataracts of the Yosemite. Between this fall and the entrance of the Potaro into the Essequibo, there are five other cataracts, all of considerable size, two of them inaccessible. The Kaieteur fall above described was visited, in July, 1870, by a party of scientific gentlemen from Demerara, and its height and volume carefully ascertained.

The *Peruvian Government*, not satisfied with its progress and communications on the Pacific slope, is seeking an outlet for its commerce, and productions through the affluents of the Amazons. For several years it has been shipping a portion of its products by this route, but it has not intermitted its explorations to discover some navigable tributary of the great river which should approach nearer to its capital than those as yet in use. The region in which these streams became navigable, though within from 150 to 300 miles of Lima, is occupied by wild Indian tribes, some of whom are warlike and ferocious, and all, or nearly all, are averse to any intercourse with the whites. In several of these exploring expeditions the parties have been attacked by the Indians and some of them killed, while others were seriously wounded. It was therefore very gratifying to the Peruvian Government when, on the 26th of October, 1870, they received a favorable report from the commanding officer of the expedition to examine the capabilities of the River Perene, and the country adjacent. The Perene is a tributary of the Ucayali, and is navigable for steamers to a point only 58 leagues from Lima, and reached by a route available for railway construction.

The report of the exploration states that the soundings in the Parana gave from 8 to 5 fathoms in depth and 100 yards in width. It traverses the country of the Chunchumayos, a large family of Indians, many of the tribes of which are hostile and little known. In the valley of the Chunchumayo the forests consist of trees of an extraordinary size, the population is numerous, and, according to Padres Amieh and Sobreviela, two Catholic missionaries among those Indians, belongs to the tribe of the "Amages." One of the objects of the expedition was, to find out and fix the situation of the Salt Mountain. Following a path which seemed to lead in that direction, they came upon an Indian camp, in which was a house 20 yards long, 16 yards broad, and 15 yards high. In this they found an oven for melting iron-ore, of a square form, about 2 yards high, and 1½ yard wide each way, constructed of bricks half a yard long. The fire was furnished with double bellows, the fuel used being coal and wood mixed with pounded ore. The anvils had been removed from the trunks of trees, which still remained. There were from twenty to thirty quintals of cast-iron, two tanned hides, tanks for water, which was brought from a height in canals made from the bark of trees. They also found a variety of other objects, all of which excited admiration that Indians, called barbarians, should possess so much skill and industry. They were not molested by the Indians, who seem to have retired farther back. The party that was sent out to discover the salt-mountain followed a path leading northeast from the foundry above described. On the way they observed many huts and plantations of cocoa and Indian corn. On the banks of the river they found fishing-huts, nets, and apparatus, evidently for catobing and salting fish. Farther on they came to some huts on an elevated spur of the mountain, from which they could see that the course of the river was very tortuous. To the northeast were various bare hills, one of which was thought to be the Hill of Salt (Cerro de Sal). From this point of observation they noticed that they were standing on a stratum of soft sandstone, and, supposing that this might be a portion of the ramification of the vein of salt, which, according to Padre Sobreviela, was three leagues in extension, they examined its formation and found it consisted of earth, with particles of salt and some crystals of quartz. Digging still deeper, they found the salt to increase. Beyond this the path ceased, and the party returned, though they felt assured the "Cerro de Sal" could not be far off.

The Indians use the bow and arrow, but seemed much afraid of fire-arms.

Prof. O. F. Hartt, who was attached to Prof. Agassiz's expedition to the Amazons, has revisited *Brazil*, and during the summer and autumn of 1870 was engaged in the exploration of some of its southern affluents and the rivers which discharge their waters into the

delta of the great river. One of the most remarkable of these is the Tocantina. Its source is in the mountains in the southern part of the province of Goyaz, and it runs almost due north till its union with the Araguaya, when it turns eastward and winds through the swamps and silty deposit of the delta of the Amazons, and, indeed, forms a delta of its own, with eight or ten channels through the ooze. These channels are lined on either bank with Muriti palms, mangroves, and a giant arum, which gives them the appearance of being substantial land covered with fruits, but they are really only vast swamps where the mire is of great depth. Above this miry delta is the region of the India-rubber tree (*Siphonia elastica*), and Prof. Hartt had the opportunity of observing the method of preparing it for market.

The French lawyer and adventurer Tonnens, who some years since ingratiated himself with the independent Indian tribes of Southern Chili, and took the title of Aurelie Antoine I., King of the Araucanians, is yet, it seems, operating for mischief through these tribes. He left Southern Chili for Europe in 1867 or 1868, and, after spending some time there, it is said in the study of military science and in procuring arms and ammunition, returned to Auroco, the principal town of the Araucanians, at the close of 1869, and soon after sent a note to General Pinto, President of Chili, informing him of the installation of his government, its officers, his army, etc., and declaring that he would suffer no more Chilian aggression. He also notified General Pinto of his intention to found two new ports on the coast, and invited him to send him a peace commission. General Pinto refused to notice Tonnens's communication, but wrote to the Indian caciques, allowing them a certain time within which to lay down their arms. The chiefs declined politely, and asserted their faith and confidence in their new king, and their determination to make war upon Chili. Somewhat unwisely, General Pinto replied, denouncing Tonnens as an outcast and a lunatic. Thus the matter rested in the autumn of 1870.

V. EUROPE.—The studies of the topography, climate, and population of Alsace and Lorraine, made with reference to their probable absorption by Germany, have had some interest for geographers; but, though making us somewhat better acquainted with a region part of which has not been much visited by travellers of late years, they hardly merit the title of geographical discoveries. A more important enterprise, and one in which long and patient labor has at last been crowned with success in the union of two great nations by railway communication, is the completion of the Mont Cenis Tunnel through the Alps, thus connecting Italy and France. The tunnel is seven and four-fifths miles in length, bored through the solid rock, granite, quartz, slate, etc., and the work has been prosecuted for thirteen years

without cessation. It is twenty-five feet both in vertical and horizontal diameter, and at some points the mountain-surface is more than a mile above it. The cost is said to have been about \$34,000,000.

Prof. Ansted has made, during the year 1870, a very careful and interesting study of the basin of the Po, and the rivers which, entering its delta, have contributed to form those extensive lagoons of which the site of Venice is the best known example. He finds in this formation—the torrential rivers descending the southern and steeper slope of a great mountain-range, and forming wide and marshy lagoons, while the northern and more gently descending slope gives rise to great rivers which discharge their waters without extensive deltas—the expression of a law of physical geography of universal application. He also demonstrates that the peculiar growth, civilization, and artistic culture of Venice, were natural and inevitable outgrowths of its geographical position and condition.

The recent abrogation of some of the provisions of the Treaty of Paris, relative to Russian occupation of the Black Sea, has led to an investigation of the nationalities of Turkey, with reference to the possibility of realizing the dreams of the Greeks, of a Pan-Hellenic empire. On the authority of Göhlert, a recent German geographer, it is stated that there are in European Turkey, of Greeks and Albanians (both originally of the same stock), 2,700,000 souls; in Greece, 1,830,000 souls; in the Grecian Archipelago, 2,500,000; and on the shores of Asia Minor, 2,000,000 men, making in all 8,530,000 Greeks, while European Turkey has only 700,000 Turks, the remainder of the population being Wallachians, Bulgarians, Bosnians, Croats, Servians, etc. A Greek empire might be formed of crescent shape along the two shores of the *Ægean*, including the islands of the archipelago between its horns, which would contain a population of about 18,000,000, of whom two-thirds would be Greeks.

VI. ASIA.—From European to *Asiatic Turkey* is only a brief journey, but one which leads to much that is interesting to the geographer; for portions of this vast region have been undergoing careful explorations during the year 1870. We have already alluded to the report of the Palestine Exploration Fund Expedition, in the volume entitled "The Recovery of Jerusalem." Besides their very carefully conducted excavations in and around Jerusalem, they gave considerable time and labor to the investigation of geographical and archaeological questions in other portions of Palestine. To some of these allusion has been made in the volume of the *ANNUAL CYCLOPEDIA* for 1869. In regard to one of them, the "Moabite Stone," their report is very full and interesting. The impressions taken from the stone while it was yet perfect (it has been broken in pieces by the Arabs since that time) have been translated, and, although there are

portions yet illegible, and some considerable *lacunæ*, yet there is sufficient preserved to indicate its great value as the earliest record, outside of the Scriptures, of the national history of any of the tribes of Palestine. The inscription has been deciphered and translated by two eminent Oriental scholars, M. Clement Ganneau and Prof. Schlottman, and from different squeezes or impressions taken from the stone. They agree substantially in all important particulars. The record is one of those chronicles on stone in which Oriental monarchs were so fond of recounting their own deeds and achievements. The narrator is Mesa, king of Moab, a contemporary of Ahab, king of Israel, and a worshipper of Chemosh or Chamos, the Bel or Baal of the Syrians. He records the death of Omri, the long reign of Ahab, and ascribes the defeat and death of the Israelite king and his own capture of several Hebrew cities, and massacre of their inhabitants, to the favor of his god Chamos. The whole inscription is a remarkable corroboration of the accuracy, even in minute details, of the Scriptural narrative.

We have already alluded to Mr. Douglas W. Freshfield's interesting narrative of his explorations in the Caucasus, and in the *ANNUAL CYCLOPEDIA* for 1869 a brief account of his discoveries was given. He has made us acquainted with a region almost wholly unknown for the last thousand years.

A still more interesting exploration is that now in progress in regard to Yarkhand and the Pamir Land, an elevated desert plateau, of Eastern Toorkistan, in which the Oxus and the Zerushan have their sources, and which the Orientals call the "Bamidunya, or Upper Floor of the World." Eastern Toorkistan, or, as it was formerly called, Chinese Tartary, is similar in formation to, though of greater extent than, the basin of the Colorado River in our once famous Great American Desert. Eastern Toorkistan lies between the Himalaya mountain-system on the south and the Thian-Chan on the north, and its western boundary is formed by the elevated plateau which connects the two mountain-systems and forms the wall of division between Western, or Russian, and Eastern Toorkistan. This plateau is the Pamir Steppe, or Pamir Land, and ranges in altitude from 18,000 to 17,000 feet above the sea. The five successive ranges which form the Himalayan system arrest the clouds which rise from the plains and rivers of India and Burmah, and drain them of their moisture before they reach this lofty table-land; the complicated chains of the Thian-Chan do the same for the evaporation from the northern rivers and streams; while a lower chain of mountains, the King-Chan, and the enormous distance to the China Sea, act as a bar in the eastern direction. Hence this vast tract is almost entirely rainless, and much of it is a desert. The Pamir Steppe is especially sterile and forbidding, though there are not wanting evidences that it was once fertile, and its pro-

ductions so abundant that the Orientals declare it to have been the site of the Garden of Eden. The really populous and productive portion of Eastern Toorkistan, of which the kingdom of Yarkhand is a part, is in shape much like a horseshoe: southward, westward, and northward, the lofty mountain-tops, and the less lofty but equally sterile table-lands, form its walls, and in the central concavity of the horseshoe there is another desert of sand and alkali—the Great Desert of Gobi. The crescent-shaped territory sloping down from the mountains to this vast desert is, however, highly fertile, and yields abundantly of all the fruits and grains of temperate climates, the lack of rain being supplied by very thorough irrigation, the mountain-streams which would otherwise lose themselves in the desert being diverted for this purpose, and their whole supply of water, in many cases, exhausted.

This region had been under the sway of the Chinese Emperor till 1864, though not without frequent insurrections and revolts; but at that time Yakob Beg, a petty governor of a town in Khokand, assisted the native Mussulman rulers, who had been dispossessed by the Chinese, in regaining their power, and then seized upon it himself. He is evidently a man of great executive ability, has established himself very firmly upon the throne, and is implicitly obeyed by the Yarkhandis, who seem to be naturally a peaceful and industrious people. He has within the last two years assumed the title of Ataligh Ghazi, or "Leader of the Faithful." It was to this monarch that Mr. Douglas Forsyth, British resident in Cashmere, sent a horse-load of tea, grown in Assam, as a present. The Yarkhandis and their rulers are passionately fond of tea, and since driving out the Chinese they had only been able to obtain it from Russia. The present was, therefore, very acceptable. In 1869 Mr. Shaw, one of the British cultivators of tea in Assam, having made up a caravan cargo of tea, set out with it for Kashgar the capital of Yarkhand, and arrived there about the same time with Mr. Hayward, who had been sent out by the Royal Geographical Society to explore the Pamir Steppe, but, being unable to penetrate to it, had visited Yarkhand. The Ataligh Ghazi received both very cordially, though at first with some suspicion; but, eventually becoming fully satisfied, desired to enter into friendly relations with the British Government; and a large traffic will undoubtedly ensue. Mr. Hayward returned to British India, but set out again in 1870, on his perilous and difficult journey to penetrate the Pamir Steppe, which is only inhabited by nomadic tribes of fierce Kirgheez, who have little regard for human life. He had great difficulty in reaching the frontiers of Cashmere, and the passes which led to this elevated region, but at the last report was pushing forward. The Kirgheez of this region are very different from their neighbors the Yarkhandis in temper, disposition, and civilization. The latter have attained to a

greater measure of intelligence, refinement, and substantial wealth, than any other nation of Central Asia.

There have been several surveys and explorations of the great river-systems of China within the year 1870, especially of the Yangtse-Kiang and the Yellow River—but not many new or interesting facts have been elicited.

VII. AFRICA.—The year has not been prolific in the results of geographical exploration on this great continent. In the Upper Nile region, Sir Samuel Baker, at the head of the grandest expedition ever undertaken for discovery, had been delayed by various hinderances, and, on attempting to ascend the White Nile, found that it was not navigable in consequence of the dense mass of cane and reeds which, in the form of floating islands, completely choked up the passage. He cut his way through for 82 miles, but was then obliged to return to latitude $9^{\circ} 26' N.$, where he would remain till November, 1870, when, at the high-water stage of the river, he hoped with great labor to be able to force a passage through, and with a portage of moderate extent to succeed some time in 1871 in floating his fleet of steamers on the Albert Nyanza, and settle the questions hitherto in doubt.

Dr. Livingstone has been heard from, but only indirectly, but is supposed to have received his supplies sent to Ujiji for him, and to be prosecuting his discoveries relative to the connection of Lake Tanganyika with the ultimate sources of the Nile, and perhaps also with those of the Congo River.

In the region of the *Limpopo* and in territory claimed by the *Transvaal Republic* there have been great excitement and large emigration in consequence of the discovery of diamonds there. Very many supposed gems have been discovered, but there is still a grave doubt in regard to the real character of most of them, some eminent lapidaries pronouncing them quartz crystals of unusual purity and brilliancy, while others have been equally confident that some of them were genuine gems of great value. The region in which they are found, hitherto almost unexplored, is likely to be very thoroughly traversed, and to a considerable extent by men who are capable of making proper scientific investigations.

Mr. Winwood Reade has explored the upper waters of the *Niger* or *Quorra*, a region hitherto not visited by Europeans, but presents very few new facts, the country being similar, in most particulars, to that so vividly described by Lieutenant Magé.

Some new contributions have been made to the geography and natural history of the Island of *Madagascar*, which is now becoming a familiar ground for explorers.

VIII. AUSTRALASIA. 1. *West Australia*.—The loss of the exploring party under the command of Dr. Leichhardt, in 1849-'50, has been to the Australian colonists, and especially to those of West Australia (from which colony he

set out), one of those disasters like the loss of Sir John Franklin in the Arctic regions, in which they were slow to believe; and, though twenty-one years have elapsed since the expedition set out, the colonists have not yet entirely given up the hope of finding some of its members, or more definite traces of them. The last searching expedition for the missing explorer was sent out in 1869. Mr. F. Roe, a government officer, had been informed by some of the native bushmen that, at a point thirteen days' journey north of Koblyanobing, there were still the bones and guns of some white men who had been killed there twenty years before. They gave the details of the place and circumstances connected with the finding so minutely, that he was convinced of their truthfulness, and, at his instance and that of Dr. Müller, the Colonial Government sent out a small expedition to visit the point designated. Mr. John Forrest, Surveyor-General of the colony, commanded the party, to which two of the natives who had told the story were attached. As they drew near the point indicated, the natives began to waver in their statements, and it finally appeared that it was the bones of some horses, lost by Captain Austin in 1854, which they had seen or heard of. The Australian natives are universally notoriously untruthful. Mr. Forrest, however, pushed on as far as his provisions would allow, in the hope of making some further discoveries, and found another of those great salt-lakes which abound in the interior of Australia, and which, partly dry during the dry season, extend over vast areas during the rains. He reached a point in latitude $28^{\circ} 45' S.$, longitude $122^{\circ} 50' E.$, from Greenwich, but found the country barren and worthless.

2. *South Australia*.—This colony has been granted by the British Government a tract running through to the north coast, on the Gulf of Carpentaria and the Timor Sea, so that North Australia is, in fact, a part of South Australia, though separated from it by a terrible and almost impassable desert. The South Australian Government has attempted to plant colonies on this north coast. The climate is very hot from October to April, and is thought to be insalubrious. Recently Mr. Goyder, the Surveyor-General of South Australia, has been carefully exploring the country, and recommends the location of a colony at Port Darwin.

3. *Papua, or New Guinea*.—This great island, 1,030 miles in length, and with a mean breadth of 800 miles, is inhabited by a robust, powerful race, distinct in their characteristics from the Australians or the Malays. Captain Delargy, of the schooner *Active*, an English vessel engaged in the *bêche-de-mer* fishery, did, however, succeed, in November, 1869, in opening friendly intercourse with the Papuans at Sybee, a village in Torres Straits, and found them kind and friendly when they were convinced that his intentions were peaceful.

GEORGIA. An act of Congress was approved by the President on the 23d of December, 1866, authorizing the Governor of the State of Georgia "to summon all persons elected to the General Assembly of said State, as appears by the proclamation of George G. Meade, the general commanding the military district including the State of Georgia, dated June 25, 1868, to appear on some day certain, to be named in said proclamation, (at Atlanta,) in said State, and thereupon the said General Assembly of said State shall proceed to perfect its organization, in conformity with the Constitution and laws of the United States, according to the provisions of this act."

On the same day Governor Bullock issued his proclamation in pursuance of the provisions of this act, summoning the persons designated to assemble at Atlanta on the 10th of January following, and, on the 24th of December, General A. H. Terry was assigned to the military command of the District of Georgia, in addition to his duties as commander of the Department of the South. On the 2d of January, the new commander informed General Sherman, by telegraph, that he had assumed the command, and intimated that it would be expedient to confer upon him all the powers originally given to the military commanders by the reconstruction acts. Thereupon the following order was immediately issued:

General Orders, No. 1.

HEADQ'RS OF THE ARMY, ADJ.-GEN.'S OFFICE, }
WASHINGTON, January 4, 1870. }

By direction of the President of the United States, so much of General Orders, No. 103, dated Headquarters Third Military District (Department of Georgia, Florida, and Alabama), Atlanta, Georgia, July 22, 1868, and so much of General Orders, No. 55, dated Headquarters of the Army, Adjutant-General's Office, Washington, July 23, 1868, as refers to the State of Georgia, is hereby countermanded. Brevet Major-General Terry will, until further orders, exercise within that State the powers of the commanders of a military district, as provided by the act of March 2, 1867, and the acts supplementary thereto, under his assignment by General Orders, No. 83, dated Headquarters of the Army, Adjutant-General's Office, Washington, December 24, 1869.

By command of General SHERMAN:

E. D. TOWNSEND, Adjutant-General.

Instead of allowing the persons originally elected to the General Assembly in 1868 to meet and select their own temporary officers, and then proceed in their own way to effect a permanent organization of the two Houses, Governor Bullock, on the 8th of January, directed one A. L. Harris, not a member-elect of the Legislature, but an employé of the State Railroad, to act as Clerk *pro tem.* of the House of Representatives, and effect the organization of that body. He applied at the same time to Colonel J. P. Farrow, the Attorney-General of the State, for his opinion regarding the disabilities of the men elected to the General Assembly, and especially as to whether persons who had held the positions of State Librarian, road commissioner, notary public,

and afterward taken part in the rebellion, were disqualified for taking the oath prescribed in the act of December for promoting the reconstruction of the State. The apparent intention of the Governor was, to prevent certain members-elect from taking their seats in the Legislature, on account of their avowed hostility to the course of the existing administration of the State, and an opinion was obtained from the Attorney-General entirely in accordance with his wishes, that official declaring that, in his view, the classes of persons designated by the Governor were disqualified by the acts of Congress and the fourteenth amendment of the Constitution of the United States. As soon as this opinion was rendered, an advertisement appeared in several newspapers of Atlanta, notifying members-elect that if they should take the prescribed oath, and afterward be found disqualified by the law as thus construed, they would immediately be arrested and prosecuted for perjury.

The members elected to the Legislature in 1868, including the colored members and those who, it was claimed by the Governor and his party, were not qualified to take the oath, assembled at Atlanta on the 10th of January, in accordance with the Governor's proclamation. Mr. A. L. Harris took the Speaker's desk in the House of Representatives, and was proceeding to organize the House, when Mr. Scott, a member from Floyd County, arose, and reminded him that Irwin's code, which had been made the law of the State by the constitution, provided that each branch of the Legislature should be organized by the Clerk or Secretary thereof, and, in the absence of such officers, by a chairman appointed by a vote of the members; and, furthermore, that the oaths of office should be administered by a judge of the Supreme or Superior Court. In violation of the law, he said, the Governor had appointed one of his own employés on the State Road to organize the House, and a registrar in bankruptcy had been called in to administer the oath. He wished to know if there was any thing improper in the House proceeding to organize according to the law which the members were sworn to support. Mr. Harris refused to give the desired information, and ordered the gentleman to take his seat. One or two other inquiries relating to the organization of the House were made, but Mr. Harris peremptorily refused to listen to them, until the House was organized. A protest against this method of proceeding was made, but no attention was paid to it by the "Clerk *pro tem.*," who proceeded to have the members sworn in. After the first one had taken the required oath, a motion was made that the correspondence between the Governor and the Attorney-General be read for the information of the House, which was accordingly done, in spite of several objections and protests. Mr. Bryant objected to the reading on the ground that it was "intended to intimidate and prevent some persons

from taking the oath, in violation of section five of the act of Congress." He was peremptorily ordered to take his seat, whereupon he declared, with some warmth, that he was a duly-elected member of the House, that he had been a loyal Union soldier, who had perilled his life for his country, and that he had a right to speak, and, furthermore, that Mr. Harris had no right to preside over or organize the House. Whereupon, Mr. Harris ordered the Sergeant-at-Arms to arrest Mr. Bryant. That officer attempted to execute the order, but met with resistance, and a scuffle ensued, in which pistols appear to have been drawn on both sides. As soon as the commotion had subsided, Mr. Bryant made a motion, and put it himself, that Mr. Caldwell take the chair as Speaker *pro tem*. This motion was pronounced to be carried amid great confusion, and an attempt was made to install Mr. Caldwell in the chair, but, meeting with resistance, that gentleman withdrew, and Mr. Bryant himself was chosen Chairman *pro tem*. Mounting a desk, he put a motion to adjourn, which was carried, and then, requesting all the members to remain in their places, appointed a committee of three to wait on General Terry, to inquire whether the proceedings in the House were meeting with his approval. The military commander requested the members to allow Mr. Harris to proceed with the organization. This request was taken as equivalent to a command, and all opposition to the course of the Governor's Clerk *pro tem*. ceased.

General Terry appears to have been somewhat doubtful of his authority, and several times telegraphed to Washington for instructions. On the 12th of January, General Sherman sent him the following: "Your dispatches have been shown to the President and Secretary of War, and the result is in these words: 'Exercise your own discretion if a flagrant case arises. When a disqualified person proposes to take the oath, investigate the question of eligibility, and determine, for the time being, his right.' I will maintain you in all exercise of any authority that will maintain substantially good order until the State of Georgia is recognized by the Executive and Congress under the congressional act. Some lawful means will be found probably. We can defend our friends against the Ku-klux or bands of assassins."

As Mr. Harris and the President of the Senate proceeded to the organization of the Legislature, the question of the disability of certain members to take the required oath naturally attracted attention. Several presented themselves who, it was claimed, were excluded by the provisions of the law. General Terry, at the solicitation of Governor Bullock, determined to appoint a commission, composed of military officers, to determine the qualifications of those whose right to sit in the Legislature was questioned. For this purpose, he appointed a Board consisting of Brevet Major-General T. H. Ruger, colonel of the 18th United States

Infantry, Brevet Brigadier-General Haines, Commissary of Subsistence, and Major Henry Goodfellow, Judge Advocate of the United States Army, and directed them to hear the evidence and determine upon the qualifications of such members-elect of the Legislature as should be brought before them for the purpose. The questions of fact to be examined into were, whether the persons brought before them had held an office prior to the secession of the Southern States, such as was designated in the act of Congress of December 23, 1869, and taken an oath to support the Constitution of the United States, and had afterward supported the Confederate cause, or given aid and comfort to the enemies of the country. The commission sat for about ten days, and the case against the members brought before it was conducted by the Attorney-General of the State, Mr. Farrow, while several prominent lawyers appeared as counsel for their defence. Notices were served upon fifteen persons who had been elected to the House of Representatives, and five who had been elected to the Senate, to appear before the commission and answer to the charge of ineligibility. The specifications consisted mainly of allegations that the accused persons had held some inferior official positions, such as had been brought within the scope of the act of Congress, by the opinion of Attorney-General Farrow, and had afterward taken part on the Southern side in the civil war. The defence was generally a denial of these declarations, and in one or two cases it was shown that the accused had been stanch Unionists throughout, to the great detriment of their persons and property.

While these investigations were going on, the Legislature was adjourned from time to time, by order of Governor Bullock, to await the result. The first order, dated January 13th, and endorsed with the approval of General Terry, directed the Clerk *pro tem*., as soon as the calling of the roll was completed, to adjourn the House until the 17th, as an investigation into the "right of certain persons to seats under the reconstruction acts was then in progress." On the 17th the Clerk *pro tem*. was ordered, "after making announcement and giving ample time, for such persons as desire to do so, to take the oaths prescribed in the act to promote the reconstruction of the State of Georgia," to declare a recess until the 19th. At the same time the Treasurer was ordered to pay to each member, "against whose eligibility no objection has been made," the sum of \$50 on account of *per diem* and mileage. On the 19th a further recess was ordered till the 24th, and on that day it was again extended to the 25th.

Meantime the members of the Legislature opposed to the course of Governor Bullock and his adherents were not idle, but, under the lead of J. E. Bryant, J. H. Caldwell, and other conservative Republicans, determined to do all in their power to restore the affairs of

the State to what they believed to be their legitimate and constitutional channel. They held a meeting, and appointed a committee to prepare a protest, and appeal to General Terry. This was unanimously adopted, and was in the following words :

Whereas, We, members-elect to the General Assembly of this State, assembled in this city on Monday, the 10th inst., in answer to a proclamation by his Excellency R. B. Bullock, Governor of Georgia, issued in accordance with the provisions of a bill recently passed by Congress, "to promote the reconstruction of Georgia;" and

Whereas, The said bill provides, section 1, that the Governor is authorized to summon all persons elected to the General Assembly, as appears by the proclamation of General George G. Meade, dated June 25, 1868, to appear, on some day certain to be named in said proclamation, at Atlanta, and that thereupon the said General Assembly is authorized to proceed to perfect its organization in conformity with the Constitution and laws of the United States, according to the provisions of said act; and,

Whereas, The Governor, as we believe in violation of the provisions of said act, directed one A. L. Harris, not a member of said General Assembly, but an appointee of the Governor on the Western and Atlantic Railroad, property of the State, to organize the House of Representatives; and,

Whereas, Said Harris has acted arbitrarily, and has assumed, in violation of law, to dictate to members, duly elected as aforesaid, what they shall and shall not say and do, and has refused to allow them to proceed to perfect the organization of said House of Representatives in accordance with the provisions of said act, and has wilfully hindered and interrupted the organization of said House, by adjourning it from day to day, against the will of a majority of the members thereof, and in violation of said law of Congress; and,

Whereas, The said law provides, section 2, that said members, when convened, shall take certain oaths, which most of the members of said House duly qualified under said act have already done, and all who were present, who think themselves qualified, have presented themselves, and demanded to be sworn in accordance with said act; and,

Whereas, The said Harris, in direct violation of the said act of Congress, has dismissed the said members, who were ready and willing to organize in accordance with the provisions of said law of Congress, and has wilfully hindered and interrupted the said members from participating in the proceedings of said House of Representatives, after having taken the oaths prescribed, and otherwise complied with said act:

We therefore present the following protest, and appeal to the general commanding the Third Military District.

The law of Congress, under which we are convened, being thus overridden, the constitution and laws of the State thus disregarded, and desiring, at this hour, to advance no political purposes, but earnestly wishing an organization of this General Assembly in accordance with law, that the quiet of our homes may be secure, and our little property saved from depredation; we, divided politically as Republicans and Democrats, but united in this effort, protest against the proceedings already had, and the action now being had in the organization of the General Assembly, because it is in direct violation of the law of Congress itself, which now affords the warrant for our assembling as a Legislature; because it is designed, as we believe, for the purpose of defeating a fair organization of the two Houses, until corrupt and dangerous men shall so shape affairs that the State may fall helpless into their hands, for plunder and oppression; because it takes the power of determining qualifications of Senators and Representatives

from the forum which the law of Congress does not interfere with, and which the constitution provides.

Thus truthfully and earnestly expressing our desires, and making this our protest, we appeal to the general commanding, as a soldier of unsullied honor, a servant of the Republic, to exercise the power to him by the Federal Government intrusted, to rescue the people of Georgia from the violence and outrage with which they are threatened by boldly wicked men.

The colored members also, anxious lest measures should not be taken to secure them in the possession of their newly-gained honors as legislators, held a meeting and addressed the following to the commanding general:

In behalf of ourselves, and of the 93,000 colored voters and the 500,000 colored citizens in Georgia whom we represent, we, the colored members of the General Assembly, feeling from our past experience a deep interest in the proper organization of the Legislature under the reconstruction acts of Congress, have met together to consider the present emergency, with the facts which are apparent, alleging that disqualified persons are not to be excluded, and loyal men who were legally elected to be awarded their seats, do hereby adopt the following preamble and resolutions;

Whereas, No city shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, and by admitting illegal persons to the power of legislation our rights will be abridged; and whereas our expulsion from the Legislature on account of our color, in violation of the civil rights bill and the fourteenth article of amendment to the Constitution of the United States, was accepted by disloyal persons as evidence that colored men and women in Georgia had no rights that white men were bound to respect, and was followed by the whipping, robbing, and murdering of our people for no reason but our helpless condition; and whereas it is reported that the Government is disposed to regard the protestations of disloyal persons as being worthy of consideration, when we know that they are not to be trusted and should not be believed; Therefore, be it

Resolved, That as loyal citizens we request the Government to look at the past, and be controlled by it for the future, and therefore demand a rigid execution of the law by the exclusion of disqualified persons, and the giving their seats to eligible persons who were legally elected, which will aid us in maintaining our rights, protect our wives and daughters from insult and infamy, and our property from the despoiler.

Resolved, That a committee be appointed to present these resolutions to General Terry, and request him to send them to the President of the United States as the prayer of the poor, oppressed colored men of Georgia.

The conservative members followed their appeal with a request that, after the investigations of the military commission had been completed, and a record of the facts in the several cases made up, "the same be submitted to the judges of the Supreme Court of Georgia (the highest judicial tribunal in the State), for their opinion as to the eligibility of members whose seats are questioned." Accompanying this was a statement, signed by Mr. Bryant, chairman of the committee of Conservative members, containing the following declarations, with regard to the wishes and intentions of those whom he represented:

I believe that I can safely say, in behalf of all who are known as Democrats and anti-Bullock Repub-

licans in the Legislature, that it is their intention to submit, in perfect good faith, to the requirements of Congress in the reorganization of the General Assembly.

It is their ardent desire to see peace, prosperity, and good government restored in the State, and I believe they intend to do all in their power to produce that result. They will neither offer factious opposition to the Government of the United States, nor will they countenance or encourage such opposition in others. It is, I believe, their settled determination to use all their influence to suppress disorder and crime of every character, and to aid in the enforcement of the laws, for the protection alike of all persons, without regard to race or color.

I further state that I believe it is not their intention to encourage any member to take his seat who cannot conscientiously take the oath prescribed by the late act of Congress; but they avow with equal candor that it is their wish to see every member who can take the oath occupy his seat. One of the chief reasons which prompt this desire springs from the candid conviction that it is the deliberate purpose of certain persons, who are prominent in urging the exclusion of members, to procure such an organization of the Legislature, and of such materials, as will enable them to consummate their favorite scheme of involving the State in an immense debt, for their own improper use of the public funds of the State, which will not bear the test of impartial investigation. I do not intend to impugn the motives of those members of the General Assembly who sustain these men, but such is their power that they are able to control the Republican organization, and force men, by the use of the party lash, to do things and sustain measures that they would not do if they acted independently. Hence the pertinacity with which they push forward their proscription policy, so as to exclude as many native white citizens of Georgia as possible, whose entire interest is in the State, and who expect to remain upon her territory, from the Legislature, till they have been able to mortgage our estates for the payment of public obligations, created for the purpose of filling their own private purses. I candidly state that these convictions have much more to do with our anxiety for a fair and just organization of the Legislature than any political considerations do or can have.

The following is General Terry's reply to the committee:

HEADQUARTERS THIRD MILITARY DIST. OF GEORGIA, }
ATLANTA, GEORGIA, January 22, 1870. }
Colonel J. E. Bryant, Chairman, &c.

SIR: After giving to your letter of the 17th inst. a careful consideration, I have decided that I ought not to submit the questions of law, which have arisen in regard to the qualifications of certain members-elect of the Legislature, to the justices of the Supreme Court of Georgia. I have the highest respect for the character and attainments of the gentlemen who compose the court, and have no doubt that they would endeavor to give me an impartial opinion; but I have learned from several sources that they, or at least some of them, have been consulted individually as to the eligibility of several of those whose cases have been investigated, and have given opinions on the facts as submitted to them. I think, therefore, that, in justice to all parties, the ordinary rule of law, which forbids a justice to decide upon a matter on which he has been consulted as counsel, should be followed here.

ALFRED TERRY, Brevet Major-General.

It was true that the committee had submitted the question to some of the judges of the Supreme Court; and Joseph E. Brown, the Chief Justice, had given an opinion at some length, in which he argued that the offices of State Librarian, notary public, and road

commissioner, held by some of the accused members prior to the secession movement, did not constitute them executive or judicial officers within the meaning of the act of Congress of December, 1869, and declared that the "position insisted upon for the exclusion of the class of officers mentioned" was "simply absurd." His conclusion was, that there was "no legal reason why a person who held the position of State Librarian, notary public, road commissioner, officer of the militia, or officer of a municipal corporation, if in the latter cases they had no general civil jurisdiction, to administer a general law of the State, or to administer justice, may not safely take the oath prescribed by the late act of Congress for members of the Legislature of this State."

This opinion, however, seems to have had no weight with General Terry or the military commission. The general had several times consulted, by telegraph, with the authorities at Washington, and was assured that he had the support of the Administration, and must continue to use his own discretion. The language of General Sherman to him, on the 22d of January, was: "Decide all questions as they arise, and do not depend on us. You are to determine absolutely the questions of doubt, for the Attorney-General thinks you are the only power there other than that reserved to itself by Congress."

The President had at one time expressed his disapproval of the method adopted in organizing the Legislature, and determining the eligibility of members; but, after receiving an extended report of proceedings from General Terry, and consulting with Attorney-General Hoar, he withdrew all objection, and assured the military commander that he would be sustained by the Administration.

On the 26th of January, General Terry transmitted to the House of Representatives the result of the military investigation. Five persons were declared ineligible, and "prohibited from taking part in the organization of the House, and from attempting to exercise the functions of members thereof." Sixteen other persons, who had been elected in 1868, were also prohibited from taking their seats, although their cases had not been brought before the military commission, on the ground that they had "refused, declined, neglected, or been unable to take one of the oaths prescribed by the act of December 22, 1869." The other members were allowed to qualify and take their seats, and the House was ordered to proceed, under the direction of Mr. Harris, to elect its officers, the names of the persons designated as ineligible being in all cases omitted in the call of the roll. Mr. McWhorter, a staunch supporter of Governor Bullock, was elected Speaker, and the House adjourned. On the next day, a message was received from the Governor, recommending that the persons receiving the next highest vote to that of the excluded members, in the

election of 1868, be admitted to the vacant seats. These in all cases belonged to the party of the Governor, and in several instances were negroes. A strong effort was made by the Conservative members to prevent their admission, and the excitement which ensued at one time culminated in a violent personal assault upon Mr. Bryant. After a very stormy discussion, the gentlemen recommended by the Governor were sworn in, and the organization of the House completed. Meanwhile, the Senate had proceeded in a quiet and orderly manner, adjourning from day to day to await the action of the House. Three members had been excluded on the decision of the military commission, and the persons receiving the next highest vote admitted in their stead. On the 31st of January, a joint committee of the two Houses waited on Governor Bullock, and informed him that their organization was complete, and that the Legislature stood adjourned to the 2d of February. This information was transmitted to General Terry, and he signified his opinion that "the Houses are now properly organized for the purpose of assenting to and complying with the conditions imposed by Congress for the restoration of the State to its original relations with the nation."

On the reassembling of the Legislature, on the 2d of February, the Governor submitted his message, in which he reviewed the whole course of reconstruction in the State and the action of Congress relating thereto, subsequent to March 2, 1867. He then submits the fourteenth and fifteenth amendments of the national Constitution, and recommends their ratification, but reminds the Legislature of the decision of the Attorney-General, that "it is not entitled, and could not, without violation of law, be allowed to transact any business, pass any act or resolve, or undertake to assume any other function of a Legislature, if the test-oath has not been required of its members." A recess was therefore recommended till the 15th, when the election of United States Senators might be proceeded with. After eulogizing the Republican party, and condemning its opponents, the Governor closes with the following appeal:

The wrongs which have been done, the lawless outrages which have been committed in many parts of the State, are the acts of a few irresponsible persons. When all good citizens exert their influence in favor of justice, lawlessness will cease. Let us, therefore, unite in a complete recognition of the rights of men, irrespective of birth, color, or condition, and frankly admit that, under and before the law, all men are equal, that all are responsible, and see to it that by future legislation the requirements of our constitution are recognized—that free schools are established and maintained, and that protection is secured for person and property, and for the free expression of political opinions. Let party lines be extended so as to welcome and include all who are in favor of impartial suffrage and universal amnesty. Under our State constitution no man is disfranchised, and, under the Constitution of the United States, no man will be disqualified from holding office who is ready to maintain and uphold the Government.

In the Senate, after some discussion on the Governor's message, in which certain charges of lawlessness against the people of Georgia, and a declaration that all legislative action since July, 1868, had been illegal, were severely commented upon by several Conservative members, the fourteenth amendment was ratified by a vote of 25 to 10. A resolution assenting to the act of Congress striking out the relief clauses of the State constitution was adopted by a vote of 28 to 8, and the fifteenth amendment adopted, 26 to 10. In the Lower House the resolution ratifying the fourteenth amendment received 71 votes, no one voting against it. The Democratic and Conservative members generally refrained from voting. Among these was Mr. Bryant, who submitted the following in writing as the reason for his course: "It is well known that the fourteenth amendment to the Constitution of the United States has been ratified by both Houses of the General Assembly of this State. I believe we have already legally ratified the said amendment, and, therefore, I now decline to vote for its ratification. I also believe that this House has been illegally organized, and I therefore decline to vote for the ratification."

On the resolution assenting to the expunging of the relief provisions of the constitution the vote was 71 to 1, and the fifteenth amendment was ratified, 55 to 29. The following protest was made by a Democratic member: "A proposition to adopt the fifteenth amendment meets with the uncompromising reprobation of the noble, true, and brave people whom I represent, and also with the feeling of their Representative, and I can but, in this as well as in all other hours of trial, remain true to them and true to the principles on which they elected me. And, though it may be passed over my head, I shall leave for them to behold, spread upon the journals of this House, my determined protest against this crowning act of radicalism and treason against all good people of the South."

Having completed this action, the Legislature took a recess till the 14th.

During the recess, Governor Bullock and others of his party were at Washington urging upon the Judiciary Committee of the Senate the propriety of allowing an election of Senators in Georgia on the reassembling of the Legislature. Messrs. Joshua Hill and H. V. M. Miller had been elected at a previous session, though never admitted to their seats, and it was claimed by some that they were the legal members-elect, only waiting for the action of the Senate on their admission, and that another election would be improper. No action was taken on this question at Washington, and when the Legislature came together on the 14th a resolution was adopted, in the face of considerable opposition, to proceed on the following day to elect one Senator, whose term should expire on the 4th of March, 1871, one whose term should expire in 1873, and one to hold for

the full term from March 4, 1871 to March 4, 1877. On the 15th a resolution was offered in the Senate, declaring that Dr. Miller had been regularly elected for the unexpired term, and no further election could take place, but this was ruled out of order. A protest was then presented, signed by nine Senators, declaring that the proposed election was illegal and unauthorized, inasmuch as United States Senators had already been elected in accordance with the requirements of the constitution, and had not resigned, and the "Senate of the United States had not informed the Legislature of Georgia that from any other cause there was a vacancy in the representation of the State in that body." After the reading of the protest, an election was at once proceeded with, and Foster Blodgett was chosen for the full term, H. P. Farrow for the term ending in 1873, and R. H. Whitely for the term ending in 1871. The House of Representatives concurred in this action on the same day, though a vigorous opposition was made, and a similar protest offered. On the following day a message was received from Governor Bullock, expressing the opinion that the ordinary laws passed in 1868 and 1869 had not been rendered invalid by the act of Congress of December 22, 1869, but at the same time recommending that no further general legislation be undertaken until the "action to complete the reconstruction of the State is accepted by Congress." Accordingly, on the 17th, both Houses adjourned for sixty days, after adopting the following resolution:

Resolved, By the General Assembly, that all proceedings in the several courts of this State, founded on any debt, or contract, made or entered into prior to June 1, 1865, and all levies and sales by virtue of any execution so founded, shall be, and are hereby, stayed until twenty days after the recess taken by this General Assembly shall have expired.

Resolved, That the General Assembly, in compliance with the just demands of the people, earnestly appeal to Major-General Terry to sanction and enforce the above resolution after its approval by the Provisional Governor.

The Legislature was in session again for a few days during the latter part of April and the first part of May. A message was submitted by the Governor, recommending "that by joint resolution the appropriation act of 1869 be, in proper proportion, continued for the first and second quarters of this year; that the Comptroller-General be authorized to proceed under the tax act of 1869, and that your honorable body then adjourn until such time in the future as will be most likely to embrace the action of Congress for the recognition of the State, and her admission into the Union," and suggesting the first Wednesday in July as a convenient time for reassembling. His reasons for these recommendations are given in the following terms: "The recommendation in regard to the resolution for appropriations, etc., is made because we have the assurance of the general commanding this district that, owing to the pressing necessity for such action, he will

give validity to the resolutions, and authorize them to take effect. And the adjournment pending the action of Congress is recommended because of the peculiar political condition in which we are placed. The government of the State being provisional, subject in all respects to the district commander under the reconstruction acts, the Legislature cannot proceed to general legislation, unless it shall organize by administering the test-oath to its members."

A resolution was adopted in accordance with the first recommendation, after a long debate, and against a vigorous opposition on the part of the Conservative members. The substantial groups of this opposition were set forth in a protest signed by over forty members of the House of Representatives, and containing the following declarations:

1. The constitution of this State requires that "all bills for raising revenue and appropriating money shall originate in the House of Representatives," giving to the Senate only the power to "propose or concur in amendments, as in other bills." The act of yesterday, by which this House concurred in the measure which originated in the Senate, to pass laws by mere resolution to raise and appropriate money, was so clearly in violation of the constitution that no argument is necessary to prove it. It is without a precedent in the history of legislation in any country where constitutional liberty is established.

2. When the report of the committee containing the recommendations of his Excellency, on which this action was based, was under consideration, some members voted for the adoption of that report on the assurance of the Speaker that the Appropriation Bill could (or should) be introduced and acted upon in the usual way, after three regular readings; that it could (or should) be considered section by section, in Committee of the Whole, according to the rules of the House, and amended in any way that a majority of this body might determine.

But when the resolutions were brought from the Senate to the House, and a member proposed to introduce an appropriation bill, he was overruled by the Honorable Speaker, who, instead thereof, entertained, contrary to his former ruling, a motion to concur in the resolutions which originated in the Senate. A member then raised a point of order, insisting upon the first ruling of the Speaker, who replied that, in consequence of instructions from General Terry, he had changed his mind, and ruled to entertain the motion to act on the Senate resolutions, and adopt them as a whole. This latter ruling we hold to be in violation of the constitution of the State of Georgia.

But, according to the statement of the Speaker, made to this House, General Terry is alone responsible for setting aside the constitution of Georgia, in matters pertaining to the vital interests of the people. It thus appears that he has arrogated the sole right to determine the manner in which the General Assembly shall raise and disburse the money of the people, and has assumed to set at naught the most sacred rights of a free people, as recognized in all representative governments.

The Governor, in his message, had also renewed a recommendation made in February, that three committees be appointed: the first, "to investigate the indirect charges made by the Treasurer, through the public prints, against the Executive, as well as any and all charges he may now have to present;" the second, "to inquire as to the Treasurer's use of the public money for his own personal benefit, and

into the system of book-keeping in the Treasurer's office;" and the third, "to inquire into the financial condition and operations of the Western and Atlantic Railroad." The charges and counter-charges of corruption made against each other by Governor Bullock and Treasurer Angier were of long standing, and will be found noticed at some length in the *ANNUAL CYCLOPEDIA* for 1869. The Western and Atlantic Railroad is the property of the State, and the Governor and his appointees were accused of mismanaging its affairs and applying its revenues to improper uses. The investigating committees, as requested, were appointed, and the Legislature adjourned until the first Monday of July. During the recess a large amount of testimony was taken in the several investigations and long reports prepared by the committees. These show a good deal of laxity in the management of financial affairs in the State and give ground for the suspicion, to say the least, that public funds and public patronage were employed in various ways to forward the political objects of those who had the power in their hands. The matter is not of sufficient general interest to warrant an intelligible abstract of the proceedings of the committees.

The condition of affairs in Georgia, and the question of readmitting the State to her place in the Union, occupied the attention of Congress from the time of her ratification of the fourteenth and fifteenth amendments, early in February, down to the adjournment of that body in July. The irregular method adopted by Governor Bullock and his followers in organizing the Legislature was first of all brought to the notice of the Senate, and resolutions were adopted directing the Judiciary Committee to inquire into the matter, and report "whether the Legislature of Georgia has been reorganized in accordance with the provisions of the act passed at the present session to promote the reconstruction of that State, and whether further legislation is necessary upon the subject of the organization of the Provisional Legislature in Georgia."

The committee gave a patient hearing to both parties. Governor Bullock appeared before them to defend the course pursued in organizing the Legislature, and to condemn the conduct of his political opponents; and Messrs. Bryant and Caldwell, Conservative Republican members of the Lower branch of the Assembly, gave their testimony on the other side. The report of the committee was submitted on the 2d of March. After reciting the facts and circumstances as they were brought out in the various statements which had been made before them, they condemn the action of the Governor, and declare the course of the military authorities "not authorized by law." They think it due to the general in command, however, to say "that circumstances justify the committee in reporting that his whole conduct in the affair was under the sincere belief that

he was acting within the scope of his lawful authority, and that, under the circumstances of much difficulty and delicacy, he conducted affairs, although outside of the law, in such a manner as to command the personal respect and confidence of all parties concerned. The committee also believe that the persons excluded who desired to qualify would have violated the act by taking the oath, so that there was no actual injustice done."

Their general conclusions with regard to the organization of the Legislature are that they were not warranted by law in the following respects:

1. In the control and direction of its proceedings by Harris.

2. In the exclusion, from taking the oaths and from seats, of the three members-elect who offered to swear in.

3. In the seating of the persons not having a majority of the votes of the election.

With regard to the necessity for further legislation the report says: "As the representatives of those who contended that the proceedings in organizing the Legislature were illegal and irregular had expressed their willingness that Congress should refrain from further interference with the organization and composition of the Legislature, and leave it to proceed in the exercise of its legislative functions, and the other party justified what had taken place, and, of course, objected to any action on the subject, and inasmuch as the errors of the general in command of the State do not appear to have worked any serious injustice in point of fact, and as the error in seating the minority candidates was committed by the House of Representatives in the exercise of a right ordinarily belonging to it in the first instance; and inasmuch as it appears certain that the terms of office of the Georgia Legislature, and of its State government, will expire at the same time that they would have done had the State been fully restored to its place in the Union, in July, 1868, and did not commence or run from the date of its future admission to representation, without reference to what might be the legal or literal construction of the last clause of the second subdivision of the first section of the third article of the constitution, the committee feel justified in omitting to recommend any further legislation on the subject of organizing the Legislature."

A bill had been reported from the Committee on Reconstruction of the House of Representatives on the 23d of February, providing for the restoration of Georgia, similar in its terms to that admitting the State of Mississippi (*see* MISSISSIPPI). A long debate followed, in the course of which an amendment, offered by Mr. Bingham, of Ohio, was adopted and the bill passed. The Bingham amendment had reference to the terms of office in the State and the holding of the election, and will be found incorporated in the bill as finally

passed (*see* CONGRESS). In the Senate a large number of amendments were offered and debated, a portion of the Senators desiring to impose conditions and require guarantees of the State before admitting it to representation, and others being in favor of a simple act, admitting the State precisely as it stood, without further provisos of any kind (*see* CONGRESS). The bill, as passed by the Senate, differed materially from that passed by the House, and was sent back for concurrence in the changes. This was not, however, granted, but several new modifications were made. The two branches could not agree to each other's amendments, and on the 8th of July a committee of conference was appointed, who reported a new bill embodying the Bingham amendment and certain other provisions which had been suggested during the long debate. This was adopted by both Houses without a division on the 14th of July, and was approved by the President on the following day.
